Bibliographical Abbreviations

All bibliographical abbreviations used in this dictionary are listed below, following the typography used in the text of the dictionary. Broadly, *italic* type is used for periodicals and for reference works; roman type is used for anthologies, series etc. (titles of individual volumes are italicized).

Full bibliographical information is not normally supplied in the list below if it is available elsewhere in the dictionary. Its availability is indicated as follows: D – in the list of 'Dictionaries and encyclopedias of music'; E – in the list of 'Editions, historical'; and P – in the list of 'Periodicals'; these lists are located in vol.28. For other items, in particular national (non-musical) biographical dictionaries, basic bibliographical information is given here; and in some cases extra information is supplied to clarify the abbreviation used.

Festschriften and congress reports are not generally covered in this list. Although Festschrift titles are sometimes shortened in the dictionary, sufficient information is always given for unambiguous identification (dedicatee; occasion, if the same person is dedicatee of more than one Festschrift; place and date of publication; and name(s) of editor(s) if known). For fuller information on musical Festschriften up to 1967 see W. Gerboth: *An Index to Musical Festschriften and Similar Publications* (New York, 1969). The published titles of congress reports are generally reduced to their essentials, but sufficient information is always given for purposes of identification (society or topic; place and date of occurrence; journal issue if published in a periodical; editor(s) and publication details in unfamiliar cases). A comprehensive list of musical and music-related 'Congress reports' appears in vol.28. Further information can be found in J. Tyrrell and R. Wise: *A Guide to International Congress Reports in Music, 1900–1975* (London, 1979).

Library Sigla

The system of library sigla in this dictionary follows that used by Répertoire International des Sources Musicales, Kassel, as listed in its publication *RISM-Bibliothekssigel* (Kassel, 1999). Below are listed the sigla to be found; a few of them are additional to those published in the RISM list, but have been established in consultation with the RISM organization. Some original RISM sigla that have now been changed are retained here.

More information on individual libraries is available in the libraries list in volume 28.

In the dictionary, sigla are always printed in *italic*. In any listing of sources a national sigillum applies without repetition until it is contradicted.

Within each national list, entries are alphabetized by sigillum, first by capital letters (showing the city or town) and then by lower-case ones (showing the institution or collection).

A: AUSTRIA

Siglum	Library
A	Admont, Benediktinerstift, Archiv und Bibliothek
DO	Dorfbeuren, Pfarramt
Ed	Eisenstadt, Domarchiv, Musikarchiv
Ee	——, Esterházy-Archiv
Eh	——, Haydn-Museum

A Note on the Use of the Dictionary

This note is intended as a short guide to the basic procedures and organization of the dictionary. A fuller account will be found in the Introduction, vol. l, pp.xix–xxix.

Abbreviations in general use in the dictionary are listed on pp.vii–xi; bibliographical ones (periodicals, reference works, editions etc.) are listed on pp.xiii–xviii and discographical abbrevations on pp.xix–xx.

Alphabetization of headings is based on the principle that words are read continuously, ignoring spaces, hyphens, accents, bracketed matter etc., up to the first comma; the same principle applies thereafter. 'Mc' and 'M'' are listed as 'Mac', 'St' as 'Saint'.

Bibliographies are arranged chronologically (within section, where divided), in order of year of first publication, and alphabetically by author within years.

Cross-references are shown in small capitals, with a large capital at the beginning of the first word of the entry referred to. Thus 'The instrument is related to the BASS TUBA' would mean that the entry referred to is not 'Bass tuba' but 'Tuba, bass'.

Signatures where the article was compiled by the editors or in the few cases where an author has wished to remain anonymous are indicated by a square box (□).

Work-lists are normally arranged chronologically (within section, where divided). Italic symbols used in them (like *D-Dl* or *GB-Lbl*) refer to the libraries holding sources, and are explained on pp.xxi–xxxvii; each national sigillum stands until contradicted.

Contents

P

[continued]

Paliashvili, Zakharia (*b* Kutaisi, 4/16 Aug 1871; *d* Tbilisi, 6 Oct 1933). Georgian composer and folklorist. Brought up in a Catholic family in which music occupied an important place, he sang in the church choir at the age of eight and at an early stage learnt to play the organ. In 1887 he moved to Tbilisi, joining a choir founded by the folk-music enthusiast L. Agniashvili. A few years later he entered the Tbilisi Music School, where he studied the horn and started to compose; he then went on to study with Sergey Taneyev at the Moscow Conservatory (1900–03). Returning to Tbilisi (1903), he taught at the Music School and the Georgian Grammar School, and helped to establish the Georgian Philharmonic Society (1905), under whose auspices he later founded a choir and orchestra. He also directed the society's music school (1908–17) and became a member of the governing body of the Association for the Staging of Operas in the Georgian Language. During an eight-year period he travelled throughout almost the whole of Georgia, notating approximately 300 traditional songs. He took an active part in the country's musical life, and from 1919 was a professor at the Tibilisi Conservatory, at various times serving as its director (1919, 1923, 1929–32). In 1925 Paliashvili was named 'People's Artist', the first Georgian composer on whom this Soviet title was conferred. His operas were staged by the leading opera theatres of the former Soviet Union and were also performed in Europe and America. The Opera and Ballet Theatre in Tbilisi was named after him, and a monument in his honour was erected in front of the building. The Z. Paliashvili Prize of the Georgian Republic was established in 1971.

Paliashvili's strikingly original work constitutes the first significant body of Georgian music composed in the Western art music tradition. He succeeded in creating a cogent and highly original fusion of national tradition with the styles and genres of European music. Although his musical language remained traditional, often resembling that of the 19th-century national schools, his understanding of vernacular sources and their potential for integration into the professional sphere opened up enormous possibilities for Georgian musical art. He recognized the importance of mastering European musical traditions and addressed this task rapidly and purposefully, testing his strengths in almost every vocal genre. He selected and cultivated in his music those aspects of folk and church tradition that were in harmony with the aesthetic and social needs of early 20th-century Georgia. His works often reflect an interest in mythical and historical subject-matter.

Paliashvili produced a significant corpus of chamber-vocal music but is known principally for his operas, in which he laid the foundations for a Georgian national musical language. His finest achievement in the genre was *Abesalom da Eteri* ('Abesalom and Eteri', 1918), an exceptionally integrated conception combining folk-epic and lyric-dramatic elements and displaying the thematic, dramatic and stylistic tendencies evident elsewhere in his operatic output. Characteristic of this monumental operatic tragedy is a broad canvas of well-rounded numbers, oratorio-like choruses and a fluid beauty of melodic material reminiscent of bel canto. The chorus plays an active role in the drama, drawing together each strand of the action. Although the foundation of the music lies in rural Georgian folk traditions, Paliashvili also draws on Georgian urban songs and ancient religious melodies. Their influence is evident in the severe diatonicism, in the originality of the polyphonic texture, and in the harmony with its combination of 4ths and 5ths. His later opera *Daisi* ('Twilight'), with its introspective concentration and elements of psychological drama, reveals a new direction. The story unfolds against the lively and colourful backdrop of the *Khatoba* festival, and the musical language is richly melodious, closely linked with everyday genres and with folksong. Particular prominence is given to solo numbers based on monodic urban song and the romance, while the various choral episodes display stylistic affinities with the Georgian folk tradition of polyphonic choral music.

Throughout his life Paliashvili tirelessly studied the works of Bach, Palestrina, Handel and the composers of the polyphonic schools. However, the fundamental source of his artistic inspiration remained old Georgian church music, to which he devoted many years of careful study. Although this was evident in works as early as his six-part Mass (1900), the most interesting example of a synthesis between the Western and Eastern Church traditions remains his *Kartuli Liturgia* ('Georgian Liturgy', 1911), a set of canticles for the Liturgy of St John Chrysostom.

WORKS
(*selective list*)

Ops: Abesalom da Eteri (4, P. Mirianashvili, after Eteriani), 1909–18, Tbilisi, 1919; Daisi [Twilight] (3, V. Gunia), 1923, Tbilisi, 1923; Latavra (4, after S. Shanshiashvili), 1927, Tbilisi, 1928

Vocal: Mass, E♭, chorus, org, 1900; Dges mertskhali [Today a Swallow] (A. Tsereteli), chorus, 1908; Mravalzhamieri [Many Years of Life] (P. Mirianashvili), T, chorus, orch, 1908; Sazejmo kantata [Triumphal Cant.], solo vv, chorus, orch, 1927; Iavnana [Lullaby] (Tsereteli), a cappella chorus

Orch: Kartuli suita [Georgian Suite], 1928

Songs (1v, pf; all dated 1908): Akhalagnago sulo [In love with youthful spirit] (D. Tumanishvili); Miqvarda [I loved] (I. Grishashvili); Nana shvilo [Lullaby] (I. Chavchavadze); Nu tvaltmaktsob [Don't tempt [me]] (Grishashvili); Ristvis miqvarkhar [Why do I love you] (Chavchavadze)

Other works: arrs. of traditional songs; incid music; Kartuli Liturgia [Georgian Liturgy], choral arr. of 22 church anthems for the Liturgy of St John Chrysostom, 1911

Principal publishers: Muzfond Gruzii (Tbilisi), Muzgiz, Muzïka, Sovetskiy kompozitor (Moscow and Leningrad)

LEAH DOLIDZE

Palindrome. A piece or passage in which a RETROGRADE follows the original (or 'model') from which it is derived (*see* MIRROR FORMS). The retrograde normally follows the original directly. The term 'palindrome' may be applied exclusively to the retrograde itself, provided that the original preceded it. In the simplest kind of palindrome a melodic line is followed by its 'cancrizans', while the harmony (if present) is freely treated. The finale of Beethoven's Hammerklavier Sonata op.106 provides an example. Unlike the 'crab canon', known also as 'canon cancrizans' or 'canon al rovescio', in which the original is present with the retrograde, a palindrome does not present both directional forms simultaneously.

Much rarer than any of these phenomena is the true palindrome, where the entire fabric of the model is reversed, so that the harmonic progressions emerge backwards too. Byrd's eight-voice motet *Diliges Dominum* is a polyphonic example in which at the halfway point the two voices of each pair exchange parts and present them backwards. It may be that the text's exhortation to 'love thy neighbour as thyself' suggested to Byrd the reflexive reprise to bring the music back to its starting-point.

The two known examples in 18th-century music are both minuets. C.P.E. Bach's Minuet in C for keyboard (H216) has two eight-bar sections, the second a reversal of the first. The minuet of Haydn's Symphony no.47 (which appears also in the Piano Sonata HXVI:26 and the Violin Sonata HVI:4), composed in 1772, only a year or two after C.P.E. Bach's, is so exactly and proudly palindromic that Haydn wrote out only the first section, followed by the instruction 'Menuet al reverso'. Minuets, with their tendency to less sophisticated textures and harmonic rhythm than other genres of the Classical period, lent themselves more readily to such contrivances; hence, paradoxically, a tradition of simplicity and relaxation co-existed with one of intellectual devices in this context.

When it is observed that only one 19th-century composer is known to have written a true palindrome, the reader's guesswork may begin with Brahms, or even Schumann, but probably not with Schubert. The true palindrome in Schubert's opera-melodrama *Die Zauberharfe* (1820) is not only a surprise but constitutes a technical tour de force. The harmonic thinking is far more venturesome than that in the Haydn minuet, as ex.1 reveals (the example shows part of the original and the equivalent part of the retrograde); and the orchestra is now a Romantic one complete with trombones. A further innovation is the structural separation of the retrograde from the original, with 309 bars of music between them. In forming his retrograde, Schubert was compelled to allow himself some licence in the ordering of pitches and rhythms within a bar or half-bar. (A detailed commentary on this example appears in B. Newbould: 'A Schubert Palindrome', *19CM*, xv, 1991–2, pp.207–14.)

With the abandonment of tonality by the composers of the Second Viennese School, the stringent harmonic demands of the palindrome were considerably eased. Berg's Lyrische Suite, Kammerkonzert and the film music in *Lulu* all make use of palindrome, and in Webern's Symphony op.21 the development of the first movement is a palindrome, with the succession of instrumental timbres reversed accordingly. In the music of these and later serialists, palindromic excursions have become, if not commonplace, less infrequent and less awesome as technical feats. A more remarkable 20th-century example is found in Hindemith's *Ludus tonalis* (1942), where the substantial Postludium is not merely a palindrome (or horizontal mirror image) of the equally lengthy Praeludium, but a vertical mirror image too, in which each strand within the texture appears in melodic inversion while the texture itself is also inverted so that the topmost strand becomes the lowest and the others migrate accordingly. Part of an extended multi-movement work which displays other symmetrical features too, this

framing 'mirror palindrome' is a substantial example embracing several sections in different tempos.

BRIAN NEWBOULD

Paling. Dutch family of musicians. Jan Hendrik Paling (*b* Woerden, 14 Dec 1796; *d* Rotterdam, 23 Feb 1879) was a carillonneur, organist and piano maker. In 1826 he opened a piano factory in Rotterdam and quickly gained a wide reputation for the quality of tone produced by his instruments. He was also active as a music publisher. His son Willem Hendrik Paling (*b* Rotterdam, 1 Sept 1825; *d* Sydney, 27 Aug 1895) studied the violin and piano under Bartholomeus Tours and taught at the Rotterdam music school for three years (1844–7). In 1855 he emigrated to Australia and, after considerable success as a violinist and teacher, he started the firm of W.H. Paling & Co., piano manufacturers. Willem's brother Anton Adriaan Paling (*b* Rotterdam, 14 Sept 1835; *d* Nijmegen, 12 Oct 1922) was a pupil of his father and joined him in the piano factory, becoming head of the firm in 1879. After his death the business was incorporated into that of C. Quispel.

HERBERT ANTCLIFFE/JAN TEN BOKUM

Palisca, Claude V(ictor) (*b* Fiume [now Rijeka, Croatia], 24 Nov 1921). American musicologist. He studied music at Queens College, New York (BA 1943), musicology with Kinkeldey at Harvard University (MA 1948), where he took the doctorate in 1954 with a dissertation on the origins of Baroque music in 16th-century theory and polemics, and composition with Piston, Rathaus and Randall Thompson. After teaching at the University of Illinois (1953–9), he joined the faculty of Yale University, where he was appointed professor of music history (1964) and chairman of the music department (1969–75, 1992); he was named Henry L. and Lucy G. Moses Professor of

Music in 1980 and retired in 1992. He has also held appointments as visiting lecturer at the universities of California at Berkeley, Princeton, Michigan, Western Australia, Zagreb, Granada and Barcelona.

Palisca is one of the leading scholars of his generation, admired for his searching work in his own subject areas and for his breadth of knowledge. His main interests are late Renaissance and Baroque music and the history of music theory. His monograph on Baroque music (1968) emphasizes stylistic development; his discussion of the music is supported with citations from writers of the period and shows how Baroque practices grew from those of the Renaissance. As co-translator of Zarlino's *Istitutioni harmoniche*, he has been praised for an accurate and idiomatic text. His other writings include a lucid explanation of the theoretical basis of the Artusi–Monteverdi dispute and a discussion of the relationship between 17th-century scientific empiricism and contemporary developments in harmonic theory and musical temperament.

Palisca has also pursued an interest in musicology as a discipline and its relation to music education in the USA. His contribution to the volume *Musicology* (1963) traces the development of musical scholarship in America, stressing the humanistic aspects. As director of the seminar on music education, sponsored by the American Office of Education and Yale University, he was responsible for the preparation of its report; he is also director of research for the Yale Music Curriculum Project. His educational concerns include the music education syllabus of state schools, undergraduate training for musicological research, and the direction that research might most profitably take at graduate and postgraduate levels. Palisca has served as president of the AMS (1970–72) and the National Council of the Arts in Education (1967–9); as senior fellow of the National Endowment for the Humanities (1972–3); on the council of the Renaissance Society of America (1973–4); and with the IMS as a director (1972–7) and as vice-president (1977–82).

PAULA MORGAN

Palladius, David (*b* Magdeburg; *fl* 1572–99). German composer and writer on music. He may have been a pupil of Gallus Dressler, who was Kantor of the Lateinschule at Magdeburg from 1558. From 1572 to 1599 he was Kantor at the Martineum, Brunswick, and as such was responsible for the music at the church of St Martin, where Johann Zanger had been appointed pastor in 1571. He is not heard of after 1599 unless he was the David Palladius who was Kantor at Stade from 1605 to 1625. He was a typical German composer of the Lassus school. His principal work is the *Nuptiales cantiones*, a collection of 22 wedding pieces, mostly for six voices. The 16 motets based on biblical texts bear witness to his solid, workmanlike training, while the settings of the six metrical texts, which include an ode by Horace, show in addition one or two individual features. Compared with earlier composers of humanist odes Palladius loosened the musical fabric: instead of having all the voices declaim the text homophonically, he added counterpoints, set one group of voices against another, inserted polyphonic sections and created lively rhythms by means of syncopation.

His *Isagoge musicae* is in the tradition of school song compendia but differs from them in both content and form. Using as examples the openings of several motets, especially by Lassus, Palladius explained how to use the key signature to find the first note and which solmization syllables are to be chosen. For the practising of solmization he wrote, instead of the notes, only the solmization syllables between the lines of the staff. A treatise announced in the preface from which the pupils were to learn the correct method of setting a text evidently never appeared.

WORKS

VOCAL

Ein newe Lied dem Hochwirden ... Herrn Hinrico Julio ... und der löblichen Stadt Brunswig zu Ehren ... gemacht, 6vv (Magdeburg, 1590)
Nuptiales cantiones, 4–7vv (Wittenberg, 1590–92)
Der 122. Psalm neben 2 anderen Sprüchen aus dem 41. Psalm und aus dem 4. Buch Mosis (Helmstedt, 1595)
Motet, 4vv, 1597[8]; ed. in *Handbuch der deutschen evangelischen Kirchenmusik*, i/2 (Göttingen, 1942), 115
4 motets (incl. one in 1597[8]), 4vv, *D-Lr* KN 144
Motet, 6vv, formerly Biblioteca Rudolfina, Liegnitz (now ?*PL-WRu*)

MARTIN RUHNKE

Pallandios, Menelaos G. (*b* Piraeus, 11 Feb 1914). Greek composer. He studied the piano at the Piraeus League Conservatory (1925–30) and was a pupil of Economides in harmony, counterpoint and composition. His education was continued at the Athens Conservatory (1930–36), where he studied form with Mitropoulos, and with Casella in Rome (1939–40). From 1936 he taught harmony and counterpoint at the Athens Conservatory where he was appointed director in 1962 and chairman of the administrative board in 1986. He was general director of the National State Opera, Athens (1964–7), and in 1969 was elected to the Athens Academy, later becoming its president (1983–4) and its general secretary (1984–90). Pallandios is a composer of the national school, and some of his best work has been suggested by ancient Greek subjects. Until the mid-1950s he employed a chromatic style influenced by Franck, Wagner and early Schoenberg; thereafter his music was freely diatonic, colourfully orchestrated and reminiscent of Prokofiev and Les Six. For many years his administrative work has left him little opportunity for composition. He has, however, found time for literary writing, publishing a series of philosophical reflections on music, art and other matters.

GEORGE LEOTSAKOS

Pałłasz, Edward (*b* Starogard Gdański, 30 Aug 1936). Polish composer. He studied musicology with Lissa at Warsaw University (1959–64) and is self-taught as a composer. He taught at the Warsaw Drama School (1969–75), was president of the association of Polish authors (1988–93) and in 1995 was appointed director of Polish Radio's Second Programme. He has won many prizes, especially in Poland for his folk music arrangements and pieces for children.

Pałłasz's many masterly folksong and carol settings belong to an antiquated if honourable Polish tradition, though sometimes the chosen material is developed to create a more abstract form, as in *Łado, łado*. Here and elsewhere, there is a strong natural lyricism, allied to an amalgam of pre-war styles and modernist ideas of a less radical nature. His orchestral writing eschews grandiose statements, preferring to weave delicate filigrees of short motifs – textures which are especially subtle in fast tempi, as in the outer movements of *Symphony '1976'*. Several of his works point to his ability to blend and mobilize a wide range of harmonic idioms.

ADRIAN THOMAS

Pallavicini, Vincenzo [Vicenzo] (*b* Brescia; *d* after 1766). Italian composer. His birthplace is known only from a superscription on his composition exercise for admission to the Accademia Filarmonica of Bologna in 1743 (*I-Bc*). Gerber's suggestion that he may have been a son of the more illustrious Brescian composer Carlo Pallavicino (*d* 1688) seems unlikely on both temporal and stylistic grounds. His motet *Ave maris stella* (also 1743) was cited by Fellerer as a prime example of the modern 'mixed' style which employed so much declamatory and harmonic freedom that it obscured the contrapuntal structure. He was a friend of Padre Martini (four of his letters, from 1750 to 1766, survive in *Bc*). A serious opera of his, *Il Demetrio*, was performed at Brescia in 1751. Gerber's assertion that about this time he was *maestro di cappella* of Venice's Ospedale degli Incurabili has not been substantiated. He did, however, live in Venice between 1756 and 1766. Before that (1743–56) he had been *maestro di cappella* of S Clemente, Brescia. During the 1750s and 60s, according to his letters to Martini, he had hoped to be appointed *maestro* in Udine and in Iesi. Pallavicini's principal claim to historical notice derives from the fact that he set the first act of Goldoni's libretto *Lo speziale* (Domenico Fischietti wrote acts 2 and 3), first performed in Venice at the Teatro S Samuele on 26 December 1754 (scores, *A-Wn*, *B-Bc*; one aria, *I-Gl*). This work was both a critical and a popular success, achieving performances throughout north Italy as well as in Dresden, Vienna, Munich, London and St Petersburg (sometimes under the title *Il botanico novellista* or, in German, *Der Apotheker*). The libretto, according to its preface, had been written three years earlier; Ortolani suggested that Pallavicini might at that time have been commissioned to write the whole opera but left it unfinished, and that completion was left to Fischietti. The Breitkopf supplement for 1767 lists a 'sinfonia accomodata per il cembalo solo' by Pallavicini.

JAMES L. JACKMAN (with MARCO BIZZARINI)

Pallavicino, Benedetto (*b* Cremona, *c*1551; *d* Mantua, 26 Nov 1601). Italian composer.

1. LIFE. According to Giuseppe Bresciani (1599–1670), Pallavicino was an organist in his youth in various churches in the district of Cremona; he may have studied there with Marc' Antonio Ingegneri. His first publication, a book of four-voice madrigals, was dedicated to the Accademia Filarmonica of Verona in 1579, and from this year until at least 1581 he seems to have been in the service of Vespasiano Gonzaga at the ducal court of Sabbioneta. By 1583 he had joined the nearby court of the Gonzagas of Mantua, where he was to remain for the rest of his life in the company of such musicians as Giaches de Wert, Giovanni Giacomo Gastoldi, Salamone Rossi and Claudio Monteverdi. The earliest known record of his presence in Mantua is a letter of 29 October 1583 (in *I-MAc*), in which he is described as a singer and composer; the following year he was sent to Venice to report on the abilities of a singer in S Marco. He was in Venice again in 1586, to supervise the printing of Guglielmo Gonzaga's *Magnificat* settings; the dedication of Pallavicino's 1587 book of madrigals for six voices, addressed to Guglielmo, declares his admiration for these works.

Guglielmo Gonzaga died in August, 1587, and was succeeded by his son Vincenzo. In 1588 Pallavicino dedicated his fourth book of five-voice madrigals to the new duke in enthusiastic terms, but it seems he was not immediately appreciated, for a payroll of around 1588–9 (*I-MAc*) shows that he was receiving less money than most of the other musicians at the court. Perhaps for this reason he applied in 1589 for the newly vacant position of *maestro* of the Scuola degli Accoliti and the cathedral choir of Verona; the post was given to the Veronese musician Giammateo Asola. Pallavicino may have been reconciled to his continuing employment at Mantua by a gift of 50 gold scudi made by Duke Vincenzo in January 1590 in recognition of his faithful services to the Gonzaga family.

Little documentation survives of the last decade of Pallavicino's life. A payroll of around 1592–3 shows that his salary was by then double that of four years earlier,

although it was still considerably inferior to many others, and especially to that of Monteverdi, who had joined the Mantuan court around 1590. Nonetheless, on the death of Wert in 1596, it was Pallavicino and not Monteverdi who was appointed Wert's successor. This appointment is not surprising, for by that date he had been employed at the court for at least 13 years, and had produced seven books of madrigals. The preface of his sixth book of five-voice madrigals, addressed in 1600 to Count Alessandro Bevilacqua, suggests that he also found frequent patronage from the Accademia Filarmonica of Verona. A letter of 7 September 1601 requests that he be excused from a debt of 80 scudi, pleading other debts and children to support. A little over two months later he died of fever at the age of 50, and was succeeded in his position by Monteverdi. Pallavicino's son Bernardino, who had entered the Camaldolense order of S Marco in Mantua with the assistance of Vincenzo Gonzaga, published posthumous editions of his father's seventh and eighth books of five-voice madrigals in 1604 and 1612, along with two collections of sacred music. A similarity of name between father and son has lead some scholars to suppose that Pallavicino was still alive in 1612, but the discovery of his death notice (*I-MAc*) leaves no doubt of the exact date of his decease.

2. WORKS. Pallavicino was a prolific composer of madrigals, producing ten books (including the two published posthumously) of four-, five- and six-voice works. His early five-voice works are written in a dense imitative style and show considerable mastery of counterpoint; purely structural techniques, such as the simultaneous development of two or more motives, seem to have taken primacy over depiction of the text through word painting or expressive devices. The six-voice *Tirsi morir volea*, published in his first book for five voices, is an example of Pallavicino's ability to combine and develop a number of motives simultaneously and to unify a multipartite composition by the use of recurring motivic cells. At the same time it ignores the latent dramatic possibilities of the text, making little textural distinction between narrative and dialogue passages; from this point of view it is conservative compared to the setting by Wert, published in the same year.

Pallavicino's second book, published in 1584 shortly after he moved to Mantua, reflects the influence of composers at the courts of Mantua and nearby Ferrara. In some madrigals of this book the emerging luxuriant style is apparent in Pallavicino's new use of extensive melismatic passages on key words of the text. His approach to diminution at times seems indebted to Wert, whose diminution figures are thematically conceived and worked. Wert's influence is heard in the two-part setting of Petrarch's sonnet *Passa la nave mia*, where descriptive words such as 'vento', 'dolci' and 'onde' (with its rapid succession of parallel 6-4 chords), call into play the florid word painting typical of Wert's pastoral settings. The diminution in madrigals such as *Deh, cara vita mia* and *In dir che sete bella*, show the influence of Ferrarese composers such as Lelio Bertani and Paolo Virchi; in these works the diminution is often restricted to a single voice or pair of voices, with no clearly defined melodic shape, and found mostly in the final measures of the madrigals, for structural emphasis.

By the publication of Pallavicino's fourth book of madrigals in 1588, his musical style had undergone a considerable change. Taken as a whole, the fourth book is representative of the main trends of the madrigal at Mantua in the late 1580's. The influence of Wert is very much apparent in these compositions, above all in their new concern with the expressive possibilities of the texts. *Hor lieto il pesce* is full of the musical impressionism characteristic of Wert's pastoral madrigal *Vezzosi augelli* (1586), while others, such as the setting of Guarini's *Con che soavità*, show that Pallavicino had learnt the expressive and dramatic possibilities of parlando homophony. Another technique perhaps derived from Wert is the use of sudden contrasts of rhythm and texture to achieve expressive effect: the opening passage of *Arsi, piansi e cantai*, in which each word is set separately with appropriate imagery and texture, has precedent in Wert's *Giunto a la tomba* (1581). Other madrigals show the influence of Ferrarese composers; the setting of Guarini's *Tutt'eri fuoco, Amore*, with its diminution on key words of the text, written out ornamentation at places of structural importance and concertante exchanges of voices within repeated sections, is similar in form and concept to some of Luzzaschi's *Madrigali* composed for the *concerto di donne* of Ferrara.

Pallavicino's fifth book of madrigals, published in 1593, is surprisingly conservative. There are few if any new elements of style to be found in these works. The texts, which are light lyric pieces, are set in an unexceptional manner; the music has an easy lyrical quality, while the frequent use of sequential passages creates a strong sense of tonal direction. Some features, such as the sustained bass notes supporting duets in the upper voices outlined in parallel thirds, resemble the madrigals of Monteverdi's second book for five voices. Pallavicino's setting of Tasso's *Dolcemente dormiva la mia Clori*, for example, is closely related to Monteverdi's madrigal on the same text.

Pallavicino's sixth book of madrigals, published in 1600 but composed over some five years prior to its publication, shows once again a radical change of style. A new seriousness of mood prevails throughout this book. The poetic texts, mostly by Guarini, are epigrammatic works full of evocative imagery and witty conceits; Pallavicino's settings belong to the tradition of the *seconda pratica* and are as up-to-date as any of the madrigals by his contemporaries at the Mantuan court. For the most part the madrigals are in a declamatory homophonic style which carefully mirrors the natural rhythms of the texts. The poetic imagery is conveyed through a wide range of expressive techniques: false relations, harmonic and melodic diminished intervals and wide leaps in the melodic line, are now all fundamental features of his style. His use of dissonance is the most important innovation in this publication: the major 7th that opens the fine setting of Guarini's *Cruda Amarilli*, for example, is an effective gesture that was later quoted by Sigismondo d'India in his madrigal on the same text.

The contents of the seventh book of madrigals, published posthumously in 1604, are varied in style and would seem to have been composed over the last twelve years of the composer's life. There are some examples of the canzonetta-madrigal popular at Mantua during the early 1590s. Others must have been written quite late in the decade: *Una farfalla*, for example, with its spectacular contrast of florid concertante trio sections, together with the clear-cut sequential movement of the parts, has no precedence in Pallavicino's works but has a counterpart

in Monteverdi's *Io mi son giovinetta* (1603). A few pieces in this book recall the madrigals of the sixth book in their expressive intensity, but are distinguished by their brevity and discontinuity of style and form. They rely for effect on abrupt contrasts of tempo and texture, juxtaposing declamatory passages which exaggerate the natural rhythms of the text with rapid imitation at close rhythmic intervals. A good example is the setting of Guarini's *Tu parti, a pena giunta*, which was cited by Banchieri in his *Conclusioni nel suono dell'organo* (Bologna, 1609). It is certainly these works that Banchieri had in mind when he placed Pallavicino in the company of Gesualdo, Fontanelli and Cavalieri, among those precursors of Monteverdi who were concerned with subjecting music to the expression of the words.

Most of the madrigals of the posthumous *Ottavo libro de madrigali a cinque voci* seem to have been composed around 1589–93, for they share many features of the fourth and fifth madrigal collections. Only *Deh, valoroso un tempo*, *Perché mi lasci in vita* and *Voi ch'a pianto mai* would seem to date from the late 1590's. This book concludes with five eight-voice madrigals for two choirs of approximately equal range. Almost entirely homophonic and with little melodic interest, they rely on the sonorities achieved by antiphonal exchange between choirs, making much use of echo effects. Pallavicino showed slight interest in the lighter forms, and he seems to have written little music for theatrical performance beyond the *Mascherata da Orbi* published in his first book of five voice madrigals, and a long comic madrigal in six parts entitled *Cinque compagni* in his second book of 1584. It is possible that some of the eight-voice works were also intended for some kind of staged performance.

Pallavicino's secular publications enjoyed considerable success: most of his five-voice madrigal books were reprinted in Venice at least twice, while the Antwerp publisher Phalèse brought out a collection of 44 works from his second, fourth and fifth books in 1604, as well as editions of his sixth and seventh books and the six voice madrigals. He is also represented in some 31 secular anthologies published between 1583 and 1624. His music was clearly appreciated in England, since around 20 manuscripts of English origin contain his madrigals, some given English texts but mostly copied without text. The most important single source is the so-called Tregian Manuscript (*GB-Lbl* Egerton 3665), in which Pallavicino is represented by no fewer than 100 madrigals, a contribution second only to that of Marenzio.

Although it is chiefly for his madrigals that Pallavicino is remembered, his output was not confined to secular music alone: his masses were published posthumously in 1603, and the *Sacrae Dei laudes*, a collection of 14 polychoral psalms, in 1605. A number of psalm settings for eight voices have also survived in manuscripts (*I-Bc*). There is no evidence to show that any of these works were written for the ducal chapel of S Barbara. The inventories of music in S Barbara drawn up in 1610 and 1611 include no music by Pallavicino, and there are no manuscript sources of his music to be found in the archive of S Barbara. An inventory of 1623 lists his masses, and the same date on the cover of the cantus partbook suggests that they were purchased that year. It is likely that Pallavicino's appointment as *maestro di cappella* 'et della camera et della chiesa' in 1596 did not involve more than nominal supervision of the music of S Barbara, since Gastoldi was made permanent director of its music in 1592 and held the position until 1609. The dedications of Pallavicino's sacred works suggest rather that they may have been composed for the use of the Mantuan churches of S Andrea and S Marco.

The masses, in the *prima pratica* style and perhaps early works, include parodies of motets by Wert and Lassus. The polychoral motets of the *Sacrae Dei laudes* are predominantly homophonic and make effective use of the sonorities obtained from the antiphonal exchange and combination of musical material. In the preface to his *Salmi a quattro chori* (Venice, 1612), Viadana cited Pallavicino's 16-voice settings of *Jubilate* and *Laudate* for their use of extensive passages of doubling at the octave between choirs, a distinguishing feature of the polychoral style of the early 17th century whose origins are generally attributed to Viadana himself. The antiphonal psalms for two four-voice choirs (*I-Bc*) are strictly homophonic, the settings of *Miserere mei Deus* and *Confitebor* employing extensive passages of *falsobordone*.

Pallavicino's music was esteemed by many of his contemporaries and was praised by such theorists as Artusi, Cerone and Banchieri. While Banchieri listed him among progressive composers, Artusi placed him in a conservative context which indicates that he cannot have known Pallavicino's later madrigals at the time of writing. The omission of his name from Giulio Cesare Monteverdi's response to Artusi's attack on his brother's madrigals was certainly due to personal animosity between Claudio Monteverdi and Pallavicino. It would seem that there was lively rivalry between the two composers; their practice of reworking each other's madrigals, which can be traced back to 1587 and continued on Monteverdi's part for some years after Pallavicino's death, is more competitive than complimentary. His rival's animosity may have influenced modern scholarly opinion of Pallavicino's music: Monteverdi scholars dismissed him as a conventional if not mediocre composer until as late as 1957, when Denis Arnold examined his later madrigals in relation to Wert and Monteverdi. More recent scholarship has shown him to be an interesting composer whose compositions make use of many innovative techniques; his later madrigals are among the finest examples of the genre to be written at the Mantuan court towards the end of the century.

K. BOSI MONTEATH

Pallavicino [Pallavicini], **Carlo** (*b* Salò, *c*1640; *d* Dresden, 29 Jan 1688). Italian composer. By 1665 he was organist at the basilica of S Antonio, Padua. Towards the end of 1666 he moved to Dresden, where he served under Johann Georg II, Elector of Saxony, as vice-Kapellmeister, replacing Heinrich Schütz on his death in 1672 as Kapellmeister. From June 1673, he again served as organist at S Antonio in Padua, but moved to Venice one year later, where he served as *maestro di coro* (1674–85) at the Ospedale degli Incurabili. During Carnival 1685, Johann Georg III, the son of Pallavicino's earlier employer, visited Venice and offered him the position of *camerae ac teatralis musicae praefectus*. Sources indicate that Pallavicino did not leave for Dresden until the beginning of 1687. In August and September of that year, he again visited Venice and then returned to Dresden; he was reportedly about to return to Venice, to supervise the Ospedale degli Incurabili, when he died.

Pallavicino's first operatic productions in Venice, *Demetrio* and *Aureliano*, were for the small Teatro S Moisè in 1666, before his first departure for Dresden. His association with theatres owned by the Grimani brothers began with his third opera, *Il tiranno humiliato d'amore*, written for the Teatro di SS Giovanni e Paolo and produced in his absence in 1667. After his return in 1673, he contributed to this theatre on a regular basis, and in 1678, when the Grimanis opened the Teatro Grimani a S Giovanni Grisostomo, the most luxurious Venetian opera house of their day, Pallavicino received the commission for the inaugural opera, *Vespasiano*, an emblematic choice since Vespasian, the founder of the Colosseum, was a touchstone for regal theatricality. During the next two decades, *Vespasiano* was often restaged for the opening of theatres; Pallavicino may have supervised the Genoese production at the Teatro del Falcone in 1680, since he signed the dedication of the libretto. In 1679 Pallavicino's *Le amazoni nell'isole fortunate* inaugurated the private theatre of the Procurator Marco Contarini in Piazzola, where Domenico Freschi later became house composer; the *Mercure galant* (December 1679 and February 1680) provides a description and an engraving of this work. For Carnival 1680 he also provided an opera, *Messalina*, for the Teatro S Salvador, where Sartorio was house composer.

After becoming the house composer of the S Giovanni Grisostomo, Pallavicino monopolized seven seasons and provided ten scores during the first ten years. He also continued to write for the SS Giovanni e Paolo. His operas focus on the rapid interaction of characters engaged in lively stage action, and several involve a great deal of spectacle, particularly those for the S Giovanni Grisostomo. Along with Legrenzi and Sartorio, Pallavicino created a style that responded to the audience's insatiable desire for tunefully ingratiating pieces. Their operas are packed with many short arias and recitative is minimal. The arias usually comprise two strophes in da capo form: settings often establish a constant rhythmic and motivic background against which Pallavicino highlighted certain details with word-painting or melismas. The declamatory pattern of the voice and the accompaniment is usually the same. Motto arias are frequent. Recitatives and the vast majority of arias are supported by continuo alone. Upper melodic instruments are used in a strictly compartmentalized manner in arias, mostly in homorhythmic ritornellos after the singer has concluded, thereby prolonging the mood of the aria and covering the singer's exit. Less often, ritornellos precede rather than follow the aria. When upper melodic instruments actually accompany an aria they nearly always alternate with the voice, anticipating and echoing vocal phrases and joining the voice only to add weight to the closing vocal phrase. The use of instruments simultaneously with the voice is limited to certain well-defined situations that invoke a shadowy atmosphere, such as oncoming sleep, foreboding, night and incantation. Pallavicino usually called for five-part strings (two violins, two *violette* and cello) with basso continuo (at least two harpsichords, as well as lutes and several theorbos). Certain scores call for one or two trumpets.

WORKS

OPERAS

drammi per musica in three acts, first performed in Venice, unless otherwise stated

VGG – *S Giovanni Grisostomo*
VGP – *SS Giovanni e Paolo*

Demetrio (G. dall'Angelo), S Moisè, ded. 1 Jan 1666, *I-Vnm*
Aureliano (prol., 3, dall'Angelo), S Moisè, ded. 25 Feb 1666
Il tiranno humiliato d'amore, ovvero Il Meraspe (prol., 3, G. Faustini, rev. N. Beregan), VGP, 12 Dec 1667
Diocleziano (M. Noris), VGP, ded. 10 Dec 1674, *MOe*, *Vnm*, arias *Vqs*
Enea in Italia (G.F. Bussani), VGP, carn. 1675, *Vnm*, arias *Nc*
Galieno (Noris), VGP, ded. 23 Dec 1675, *A-Wn* (?autograph), *I-Nc*, *Vnm*, arias *Vqs*
Vespasiano (G.C. Corradi), VGG, carn. 1678, *MOe*; carn. 1680, *Vnm*, arias *B-Bc*, *I-MOe*, *Rvat* and *Vqs*
Nerone (Corradi), VGG, carn. 1679, arias, *GB-Ob*, *I-MOe*, *Rvat*, *Vqs* and *Mercure galant* (April 1679)
Le amazoni nell'isole fortunate (prol., 3, F.M. Piccioli), Piazzola sul Brenta, Contarini, 1679, *Vnm*
Messalina (Piccioli), S Salvador, ded. 28 Dec 1679, *I-Vnm* (facs. in DMV, viii, forthcoming), arias *MOe*, *Tn* and *Vqs*

Bassiano, ovvero Il maggior impossibile (Noris), VGP, carn. 1682, *MOe*, arias *Tn* and *Vqs*
Carlo re d'Italia (Noris), VGG, carn. 1682, arias *Tn* and *Vqs*
Il re infante (Noris), VGG, 10 Jan 1683, arias *B-Bc*, *F-Pn*, *GB-Lbl*, *I-Vqs* and *Mercure galant* (April 1683)
Licinio imperatore (Noris), VGG, 18–25 Dec 1683

HARRIS S. SAUNDERS

Pallavicino, Germano (*b* Cremona, *c*1545–50; *d* after 1610). Italian organist and composer. According to Santoro he was the brother of Benedetto Pallavicino. Giuseppe Bresciani (1599–1670) said that he was renowned in the district of Cremona as an organist and teacher. Documents (in *I-CRd* and *CRas*) record that in 1568 he received the sum of 26 scudi for his duties as assistant organist at the cathedral. The following year he was witness to Graziadio Antegnati's contract for the new organ of the collegiate church of S Agata in Cremona.

According to the preface of Placido Falconio's *Psalmodia vespertina* (Brescia, 1579), he was responsible, together with Falconio and Costanzo Antegnati, for bringing a music printer to Brescia from Venice: presumably the firm of Vincenzo Sabbio, the publisher of Falconio's psalms. In 1599, Pallavicino was organist at Pizzeghettone, near Cremona; he was called to testify in a dispute between the Carmelite brothers of S Bartolomeo in Cremona and the organ builder Lorenzo Stanga regarding an instrument made for that church. His name is listed among the colleagues of Costanzo Antegnati, in the preface to the latter's *L'arte organica* (Brescia, 1608). In 1610 he was organist at Toscolano, having at some stage been organist at Maderno. The little of his music that survives comprises an incomplete *Secondo libro delle fantasie, over ricercari a quattro voci ... con duo motetti nel fine sopra il canto fermo* (Venice, 1610), three four-part madrigals published in Lindner's *Liber secundus gemmae musicalis* (RISM 1589[8]) and five instrumental works (two ricercars, two fantasias and a toccata, all for four parts, some from the incomplete *Secondo libro*) in a German tablature manuscript (*D-Brd*, ed. A. Carideo: *Anonimi, G. Pallavicino e F. Stivori: opere per organo*, Bologna, 1999).

K. BOSI MONTEATH

Pallavicino [Pallavicini], **Stefano Benedetto** (*b* Padua, 21 March 1672; *d* Dresden, 16 April 1742). Italian librettist and poet, son of CARLO PALLAVICINO. He was educated at the college of the Padri Somaschi at Salò and after completing his studies he went early in 1687 with his father to Dresden, where in 1688, at the age of only 16, he was employed as court poet. From 1695 to 1716 he was court poet and private secretary to the Elector Palatine Johann Wilhelm at Düsseldorf. On the elector's death he returned via Kassel to Dresden, where he again entered the service of the Saxon electoral court. He remained there until his death. From 1701 he was a member of the Arcadian Society. He wrote numerous opera, oratorio and cantata texts and was also the author of a highly regarded translation of Horace. He was one of the leading reformers of the opera libretto at the beginning of the 18th century. At the age of 15 he wrote a libretto, *Antiope*, for his father, who died before completing the score (it was finished by N.A. Strungk). Several other composers set his opera librettos, among them Lotti, Steffani, Wilderer and above all Hasse, who also set three oratorio texts by him. The last of these, *I pellegrini al sepolcro di Nostro Redentore* (1742), was for Johann Georg Sulzer in every respect the ideal oratorio text. A four-volume edition of Pallavicino's works was published two years after his death: *Opere del Sig. Stefano Benedetto Pallavicino*, ed. F. Algarotti (Venice, 1744).

SIBYLLE DAHMS

Pallet [valve] (Ger. *Ventil*). In the wind-chest of an organ, the pallet is the valve which, when brought into play by pulling or pushing away from the mortise it otherwise closes, admits wind to the channel or groove of a particular key and hence, if the stop mechanism allows it, to the foot-hole of the pipe(s) of that stop. The 'pallet box' is strictly the substructure of the WIND-CHEST in which the row of pallets, one for each key in the compass, is housed. The word itself (usually spelt 'palat') was used to mean any of the several kinds of valve found in an organ (bellows pallet, key pallet etc) by James Talbot in his manuscript treatise of *c*1695, probably under the influence of his French sources.

As a tight seal between pallet and grid is crucial to the good working of the key action and the proper speech of the pipework, much technical attention has been paid to the shape and material of the springs (usually of brass alloy until the 19th century, when steel 'piano wire' was introduced) and the covering of the pallet and its opening in the grid. Some early Scandinavian and 17th-century Dutch pallets were made with a self-sealing, inflating leather covering. Most classical organs relied on one or more layers of leather on the pallet together with leather on the grid; Romantic organs came to use pallets with a thick layer of felt between leather and wood. As soundboards became larger and used heavier wind pressures, pallets became more difficult to open; at first, smaller double pallets were used, but by the middle of the 19th century, several methods of alleviating the touch (usually by 'back on back' or 'broken' pallets) were used.

PETER WILLIAMS, MARTIN RENSHAW

Palló, Imre (*b* Matisfalva, 23 Oct 1891; *d* Budapest, 25 Jan 1978). Hungarian baritone. After studying at the Budapest Academy of Music under Georg Anthes, and later in Italy with Sammarco, he made his Royal Hungarian Opera début in 1917, as Alfio, and was soon its leading interpreter of lyric baritone roles. He sang with refined diction and velvety tone, his voice showing good balance in all registers, and he also possessed an imposing stage presence; all these qualities were notably displayed in his Verdi roles, especially Posa, Luna, Falstaff (the first in Hungary) and Simon Boccanegra. His peasant origins were advantageous in Kodály – he created the title role in *Háry János* (1926) and the Suitor in *Székely fonó* ('The Spinning Room', 1932). In 1935 he took part in Rocca's *Il dibuk* in Rome. From 1957 to 1959 he was Intendant of the Hungarian State Opera. (A. Németh: *Palló Imre*, Budapest, 1970)

PÉTER P. VÁRNAI

Pallota [Pallotta], **Matteo.** *See* PALOTTA, MATTEO.

Palm, Siegfried (*b* Wuppertal, 25 April 1927). German cellist and educationist. He studied (1933–45) with his father, Siegfried Palm (a cellist in the Wuppertal city orchestra), then (1950–53) in Enrico Mainardi's masterclass at Salzburg. He was principal cellist in the Lübeck city orchestra (1945–7), the Hamburg Radio SO (1947–62) and the Cologne RSO (1962–7). In 1962 he became a professor with a masterclass at the Staatliche Hochschule für Musik in Cologne, and in 1972 was appointed director there. From 1977 to 1981 he was Intendant of the Deutsche Oper, Berlin. In 1982 he was elected president of the ISCM, a post he held until 1987, and in 1988 he became president of the Deutsche Gesellschaft für Neue Musik.

Palm has played a leading part in the development and extension of cello technique. In the 1950s and 60s he was the first to perform works by Penderecki (Sonata for Cello and Orchestra), Xenakis (*Nomos alpha*) and Zillig (Cello Concerto) which had been considered technically unplayable. He has built an international reputation as a cellist specializing in avant-garde music, and has toured throughout the world. A friend of Zimmermann and Penderecki, he has given first performances of the former's *Canto di speranza* and *Pas de trois*, Sonata and Four Short Pieces for solo cello, and *Intercommunicazione*; and of the latter's Cello Concerto and *Capriccio per Siegfried Palm*. Among his other first performances are concertos by Blacher, Delas, Feldman, Ligeti, Halffter and Medek, and works by Becker, Benguerel, Engelmann, Fortner, Kagel, Kelemen (whose cello concerto he has recorded), Sinopoli, Liebermann, Yun and Rihm.

As a chamber musician, Palm played with the Hamann Quartet, specializing in new music (1950–62); in 1965 he formed a duo with Aloys Kontarsky, and in 1967 succeeded Cassadó as cellist of the Cologne Trio, with Max Rostal and Heinz Schröter. Since the late 1980s he has played in a trio with Bruno Canino and Saschko Gawriloff. He plays a 1708 cello by Giovanni Grancino. He began to teach at the Darmstadt summer courses in 1962, and has also taught at the Royal Swedish Academy of Music (from 1966), Dartmouth College, USA (1969 and 1972), Marlboro, USA (from 1970), the Sibelius Academy, Helsinki (1971), and at the courses at Breukelen, the Netherlands (1972). He is widely sought after as an adjudicator at international festivals, and has published *Pro musica nova: Studien zum Spielen neuer Musik für Cello* (Cologne, 1974), which contains original contributions by leading contemporary composers.

RUDOLF LÜCK/TULLY POTTER

Palma, Athos (*b* Buenos Aires, 7 June 1891; *d* Miramar, 10 Jan 1951). Argentine composer. His initial studies were at the National Conservatory in Buenos Aires with Troiani (piano), Cattaneo (sight-singing) and García Jacot (violin). After a ten-year stay in Europe (1904–14) he returned to Argentina, where he continued studies with Troiani. He also studied medicine for several years and completed the course in philosophy and letters at Buenos

Aires University. Thereafter he devoted himself to composing and teaching music. Isabel Aretz, Carlos Suffern and Abraham Jurafsky were among his students. Palma held positions as vice-president of the board of directors of the Teatro Colón (1932), professor of harmony at the National Conservatory and inspector of the National Council of Education. He wrote two pedagogical works, the five-volume *Teoría razonada de la música* and a *Tratado completo de armonía* (Buenos Aires, 1941).

JOHN M. SCHECHTER

Palma [De Palma, Di Palma], **Silvestro** (*b* Barano d'Ischia, 15 March 1754; *d* Naples, 8 Aug 1834). Italian composer. According to Rosa's *Memorie*, he owed his initial musical education to a patroness, Carlotta di Sangro, daughter of the Prince of Sansevero, and entered the Conservatorio di S Maria di Loreto in Naples at the age of 16. In the late 1780s he studied with Paisiello, whose music he took as a model; contemporary documents often refer to him as 'pupil of Paisiello'. He became well known as a composer of opera, especially comic opera, because of his talent for witty, effervescent and lightly textured music. The Naples *Monitore* (2 May 1810) praised his opera *Lo scavamento* for the naturalness and simplicity of its music and for its avoidance of the contemporary fault of too many notes and too prominent accompaniment. He was, it says, the 'support of the good Neapolitan school', a reference to the close affinity between his music and that of the previous generation of Neapolitan composers. After 1813 his operas disappeared from the repertory. This may have been caused by changing tastes among Neapolitan audiences; Rosa provided another explanation in saying that Palma fell ill, which forced him to cancel contracts for new music and wrecked his chances of a more prosperous livelihood.

WORKS

OPERAS

unless otherwise stated, all are commedie per musica, first performed in Naples, Teatro dei Fiorentini

La finta matta (2, D. Piccinni), 1789
Gli amanti della dote (dg, 2, S. Zini), Florence, S Maria, sum. 1791; arias, *I-Tf*, *Rsc*
Le nozze in villa (int, 2), Rome, Valle, carn. 1792
Chi mal fa, mal aspetti, ovvero Lo scroccatore smascherato (dramma tragicomico, 2), Venice, S Moisè, aut. 1792
L'ingaggiatore di campagna (int), Florence, Palla a Corda, 1792, *I-Fc*
La pietra simpatica (2, G. Lorenzi), aut. 1795, *Nc*; as L'anello incantato (farsetta per musica), Rome, Valle, carn. 1796, *Bc*, *Rsc*, *Rvat*

MICHAEL F. ROBINSON/LUISELLA MOLINA

Palma Ociosa. *See* PETRUS FRATER DICTUS PALMA OCIOSA.

Palmer, Felicity (Joan) (*b* Cheltenham, 6 April 1944). English mezzo-soprano. The daughter of a music master, she studied at the GSM in London (1962–7) and then for a year with Marianne Schech at the Musikhochschule, Munich. In 1970 she won a Kathleen Ferrier Scholarship, and made her Queen Elizabeth Hall début, in Purcell's *Dioclesian*; subsequent appearances in oratorio confirmed her reputation as a singer of quick musicianship and confident projection. After a decade as a soprano (début role, Purcell's Dido with Kent Opera, 1971) and wide experience as Countess Almaviva, Donna Elvira and Pamina, she retrained as a mezzo-soprano. She has won international renown for her magnetic presence and powerful musical command in shaping phrases and projecting words, amply compensating for occasionally edgy tone. Palmer's mezzo-soprano repertory includes the title role in Handel's *Tamerlano*, Juno in *Semele*, Gluck's Orpheus, Fricka, Mistress Quickly, the Countess (*Queen of Spades*), Herodias, Clytemnestra, Kabanicha (*Kát'a Kabanová*) and the title role in the stage première of Gerhard's *The Duenna* (1992, Madrid). In 1997 she sang Strauss's Clytemnestra at Covent Garden. Her many recordings reflect her two vocal 'identities' and her versatility, and include Gluck's *Armide*, Electra (*Idomeneo*), Marcellina (*Le nozze di Figaro*), many works by Handel and *The Dream of Gerontius*. She was made a CBE in 1993.

MAX LOPPERT

Palmer, Frederik. Pseudonym of Emma Sophie Amalia Zinn, Danish songwriter and wife of Johan Peter Emilius Hartmann. *See* HARTMANN family.

Palmer, Geoffrey Molyneux (*b* Staines, Middlesex, 8 Oct 1882; *d* Dublin, 29 Nov 1957). Irish composer. He studied at Oxford, where in 1901 he was the youngest BMus in college history. From 1904 to 1907 he studied composition with Stanford at the RCM. He moved to Ireland *c*1910 where he was active as an organist near Dublin. A victim of multiple sclerosis, he became increasingly dependent on the care of his two sisters.

Palmer was chiefly known for his many folksong arrangements and sentimental ballads, several of which were published in England. His largest scores include the opera *Srúth na Maoile* [Sea of Moyle] (1923). 32 settings of Joyce poems (from the 36 poems in the *Chamber Music*

collection) written between 1907 and 1949 remained unknown and unperformed until the early 1980s. They were discovered in the library of Southern Illinois University, Carbondale, and published in 1993. The songs display a remarkable formal melodic and harmonic freedom that is not characteristic of any of his other works. Palmer appears to have been the first composer to set Joyce's poetry, an effort which gained the praise of the writer. As late as 1934 Joyce wrote: "30 or 40 composers at least have set my little poems to music. The best is Molyneux Palmer. After him are Moeran and Bliss." (Joyce's *Letters*, vol. III, 340).

AXEL KLEIN

Palmer, Henry (*b* ?1590–1600; *d* Durham, 1640). English music copyist, composer and singer. He was sworn in as a lay clerk at Durham Cathedral on 20 July 1627. In 1628 he assumed responsibility for training and supervising the cathedral choristers during the temporary suspension from duty of the organist Richard Hutchinson. He was still at the cathedral in 1639, since he was described as 'laici cler. hujus ecclesiae' at the baptism of his son William on 25 March of that year. He is primarily remembered today as a copyist. He played a significant role in copying the unique and comprehensive collection of church music that was formerly in daily use in cathedral services at Durham and which is now in the cathedral library there. Specimens of his handwriting in the cathedral treasurers' books clearly show that over 150 compositions in three organbooks copied during the 1630s (*GB-DRc* A1, A5 and A6) are predominantly in his hand. He may also have copied some items in the related vocal partbooks. All of his compositions are in manuscripts formerly associated with Durham Cathedral (including the Dunnington-Jefferson bass partbook, *Y*). The verse anthem *Lord, what is man* (*Cu*) is entirely in the composer's hand.

JOHN MOREHEN

Palmer, Robert (Moffett) (*b* Syracuse, NY, 2 June 1915). American composer and teacher. He won a scholarship to the Eastman School of Music as a pianist, but gradually shifted his emphasis to composition, studying with Bernard Rogers and Howard Hanson (BM 1938, MM 1940). He went on to study composition with Roy Harris, Aaron Copland and, most important, Quincy Porter. He taught at the University of Kansas (1940–43) and Cornell University (1943–80). His honours include an American Academy of Arts and Letters award (1946), Guggenheim Fellowships (1952–3, 1960–61) and a Fulbright Senior Fellowship (1960–61). He has received commissions from the Koussevitzky Foundation (1943, for the String Quartet no.2), the Elizabeth Sprague Coolidge Foundation (1950, for the Piano Quintet), the National Association of Educational Broadcasters (1960, for the *Memorial Music*), the Lincoln Center (1965, for the *Centennial Overture*) and Cornell University.

Palmer's distinctive style can be seen as an outgrowth of the styles of his teachers, though it is also connected with the work of Milhaud, Hindemith, Tippett, Petrassi and Bartók. His best-known piece, the *Toccata ostinato* for piano (1945), is an exciting treatment in 13/8 time of a boogie-woogie inspiration, familiar to Palmer from his experience playing jazz duets. The Piano Concerto (1971) is noteworthy for its culmination in a swinging long-breathed tune that incorporates motifs from the first movement, which have been developed fugally and combined with contrasting motifs.

WILLIAM W. AUSTIN

Palmerini, Giovanni Battista (*fl* 1722–8). Italian bass. He was a member of the Elector Palatine's chapel at Düsseldorf in 1723, and probably the Palmerini from Mantua who had sung in Pietro Torri's *Adelaide* at Munich the previous October. In 1726 he performed one of his own motets at a Paris Concert Spirituel (February) and appeared at the Hamburg opera. He sang at the King's Theatre in London during the last two seasons of the Royal Academy between January 1727 and June 1728. Handel wrote small parts for him in *Admeto* (Meraspes, in which he made his début on 31 January 1727), *Riccardo Primo* (Berardo) and *Siroe* (Arasse); he also sang in revivals and in Ariosti's *Teuzzone*. He is said to have been an aging singer whose powers were on the decline, but he may have been the Abate Giambattista Palmerini who sang in a serenata in honour of Maria Theresa at Mantua in 1739. It appears from the few arias Handel composed for him that he was a baritone with a high tessitura and a compass from *G* to *f'*. Another bass singer of this name, Andrea Palmerini of Genoa, sang at the festival of S Croce at Lucca in September 1741.

WINTON DEAN

Palmerini, Luigi (*b* Bologna, 26 Dec 1768; *d* Bologna, 27 Jan 1842). Italian organist, composer and teacher. A pupil of Mattei in Bologna from 1786 to 1790, he was appointed organist at S Petronio in 1817. On 13 June 1838 he succeeded Giuseppe Pilotti as temporary *maestro di cappella* there, and held both positions until his death. He was a member of the Accademia Filarmonica and served as its *principe* in 1804.

According to Fétis, the traditional contrapuntal style of organ playing in Italy ended with Palmerini; this opinion must have been founded on his improvisations, as his only surviving music specifically designated for the organ, a concerto (*I-Bc*), is highly pianistic. 16 sonatas for an unspecified keyboard instrument also survive (*Bc*). Fétis stated that some Bolognese musicians preferred Palmerini's figured bass method, the *Metodo d'accompagnamento numerico* (MS, *Bc*), to Mattei's. Of Palmerini's sacred music, a *Pange lingua*, an *O salutaris*, a *Profezia di Nabucodonosor* for tenor solo and a *Passio in Dominica Palmarum* are extant at S Petronio. The Bologna Conservatory library possesses a *Dies irae* dated 1824, a *Tantum ergo* and a secular aria, *Celebrarla io pur vorrei*.

MILTON SUTTER

Palmgren, Selim (*b* Björneborg [now Pori], 16 Feb 1878; *d* Helsinki, 16 Dec 1951). Finnish composer, pianist and conductor. He was a pupil of Wegelius (harmony and counterpoint) and of Petzet, Melcer-Szczawiński and Ekman (piano) at the Helsinki Music Institute (1895–9), and then studied in Germany and Italy with Conrad Ansorge, Wilhelm Berger and Busoni. Back in Finland he held appointments as conductor of the Helsinki University Chorus (1902–4, 1927–8), for whom he composed several partsongs. From 1909 to 1912 he conducted the orchestra of the Turku Musical Society, after which he worked solely as a composer and pianist. He undertook several extensive European tours, on some of which he was accompanied by his first wife, the singer Maikki Järnefelt (he married the singer Minna Talvik in 1930). In 1920–21 he toured the USA and in 1923 he was appointed to teach composition at the Eastman School. He was professor of harmony and composition at the Sibelius Academy, Helsinki (1936–51), and in 1950 he received an honorary doctorate from Helsinki University.

Palmgren's music for the piano is distinguished by a real understanding of the instrument, a remarkable faculty for suggesting definite and widely contrasted moods and an agreeably proportionate mixture of melodic, harmonic and rhythmic invention. His five piano concertos are in the tradition of Liszt and Rachmaninoff, and the second, *Virta* ('The River', 1913), became an international success following its performance in Berlin by Ignacy Friedman under the composer's baton. Palmgren's gift in catching the essence of an impression or a picture is displayed at its best in character pieces, such as the 24 Preludes (1907). In addition to piano music, Palmgren wrote a large number of partsongs, sometimes with a strong national flavour, though this is not necessary to the expression of his frequently fanciful and individual tone.

ILKKA ORAMO

Palmieri, Eddie [Edward] (*b* East Harlem, New York, 15 Dec 1936). American pianist, percussionist, bandleader, composer and arranger. Following his older brother Charlie, he took up the piano when he was eight, but at 13 he began playing the timbales in his uncle's band, Chino y sus Almas Tropicales. Returning to the piano in 1951, he formed a nine-piece band with timbalero Joey Quijano. He replaced his brother Charlie in Johnny Segui's band in 1955, then joined Tito Rodríguez in 1958. In 1961 he formed the ensemble La Perfecta. Modifying the flute-and-violin *charanga* format popular at the time, Palmieri used trombones in place of violins and coined

the 'trombanga' sound that became his trademark and influenced later salsa bands. In his band were such leading musicians as the timbalero Manny Oquendo, the trombonist Barry Rogers and the vocalist Ismael Quintana. Complementing the group's dynamic swing, Palmieri forged a percussive piano style, incorporating modal jazz influences from contemporary pianist McCoy Tyner. Among his representative tunes from this period are *Azucar*, *Tirándote flores*, *Viejo socarrón*, *Muñeca*, *Café*, *Bomba de corazón* and *Cuidate compai*.

In addition to transforming Latin dance music, Palmieri also began experimental forays into Latin jazz, recording with the vibraphone player Cal Tjader (1966–7). La Perfecta disbanded in 1968, but Palmieri continued to develop his rugged brand of salsa with such classics as *Justicia*, *Lindo yambú*, *Vamonos pa'l monte*, *Palo pa' rumba* and *La verdad*. Dubbed 'El Loco' ('the Crazy Man') and also the 'Sun of Latin Music', Palmieri has been at the vanguard of Latin music from the 1950s. Between 1974 and 1994 he won five Grammy Awards, the only Latin bandleader to have done so. He also helped launch the careers of the vocalists Lalo Rodríguez in the mid-1970s and La India in the early 90s. Palmieri has also recorded notable Latin jazz albums such as *Palmas* (Elek., 1994).

Palm wine. Form of West African guitar band HIGHLIFE music from Sierra Leone. Palm wine music (known in Sierra Leone as *maringa*) takes its name from the alcoholic beverage made from fermented palm sap served in coastal bars, a fairly cheap alternative to bottled beer. Palm wine was first made famous by Ebenezer Calender and his Maringar Band, who were known for their calypso-influenced style that drew heavily on the music of freed Caribbean slaves who had returned to Sierra Leone. Calender recorded extensively in the 1950s and 1960s, singing in the Krio language. The Kru-speaking sailors of Liberia who traded all along the west coast of Africa were accomplished guitarists, and their music may have influenced both Trinidadian calypso and Freetown *maringa* (Ashcroft and Trillo, 634). S.E. Rogie (*d* 1994) helped to popularize a form of palm wine internationally, and bands of expatriate musicians in London continued to maintain the palm wine music tradition.

Pálóczi Horváth, Ádám (*b* Kömlőd, 11 May 1760; *d* Nagybajom, 28 Jan 1820). Hungarian poet and folksong collector. The son of a clergyman, he studied at the Reformed College in Debrecen from 1773 until 1780 and, after a short career as a public servant, devoted himself to farming. He was in close contact with the leading Hungarian poets and language reformers of his day and maintained an intense and many-sided literary activity, writing lyric and epic works, a comedy, and historical, linguistic, philosophical and scientific essays.

In the 18th and 19th centuries the Protestant colleges of Hungary fostered national traditions and opposed the centralizing, German-orientated tendencies of the imperial court in Vienna. Under this influence at the college in Debrecen, Pálóczi Horváth developed a sense of history that later expressed itself in activities as a collector of folksongs and historical and sacred songs. His manuscript collection *Ó es Új, mint-egy ötödfél-száz énekek, ki magam tsinálmányja, ki másé* ('About 450 songs, old and new, composed partly by me, partly by others'), introduced a new era in the history of Hungarian folklore and musicology. Completed in 1813 and recopied in 1814, the manuscript contains 357 melodies, among them 45 of Pálóczi Horváth's own compositions, 23 psalms and mourning songs, 148 old Hungarian folksongs, historical songs and texted Ungaresca dances with text and some fashionable patriotic and sentimental songs from the 1790s. His notation was primitive, giving neither clef, key signature nor tempo indication. To indicate rhythm he used only two symbols; the intervals, on the other hand, were reliably established. As the collection was compiled from oral tradition and contains almost all the popular Hungarian musical genres of its time, it presents a faithful picture of popular national musical culture in upper-middle-class Hungary around 1800.

FERENC BÓNIS

Palol [Palon], **Berenguier de.** *See* BERENGUIER DE PALAZOL.

Palomares, Juan de (*b* Seville, *c*1573; *d* before 1609). Spanish composer and guitarist. The 19th-century writer Baltasar Saldoni mistakenly created a second Palomares with the forename Pedro. Lope de Vega rated Juan de Palomares second only to Juan Blas de Castro as a composer of courtly love laments. In 1623 Hurtado de Mendoza praised Castro for his sweetness, Palomares for his novelty. Palomares's three extant songs are in four manuscript sources. *En el campo florido*, a three-part canción which is a setting of an autobiographical lament of the exiled Lope de Vega, is in three sources (the Turin cancionero, *I-Tn* R.I–14, ed. M. Querol Gavaldá, Madrid, 1986; *E-Mmc* olim 13231; and, as a sacred contrafactum, *Lo mejor de mi vida*, in *E-Mn* 1370–72; ed., after first and third sources, in MME, xviii, 1956, and after the second by J. Bal y Gay, *Treinta canciones de Lope de Vega*, Madrid, 1935). The long melismas closing each of the seven strophes are as expressive as a protracted Andalusian 'ay'. *Sobre moradas violetas* is a three-part romance in the Sablonara cancionero of 1625 (in *D-Mbs*,

ed. in Aroca); it is reduced to a duet in the Turin cancionero. *Hermosa Galatea* is a four-part sonnet setting (in *E-Mmc* olim 13231).

ROBERT STEVENSON/R

Palomino, José (*b* Madrid, 1755; *d* Las Palmas, 9 April 1810). Spanish composer. His skill as a violinist earned him a place in the Spanish royal chapel at an early age. A pupil of Rodríguez de Hita, he had early success composing *tonadillas*, including the popular *El canapé* (1767); these apparently attracted the Madrid nobility and some were listed among the music of the 12th Duke of Alba. In 1774 Palomino emigrated to Lisbon, where he became a member of the S Cecilia brotherhood on 21 March. By 1785 he was a 'virtuoso instrumentalist of the royal chapel'; the fine Portuguese violinist Inácio José María de Freitas was among his students. On 15 June 1785 his *serenata Il ritorno di Astrea in terra*, celebrating the double marriages of the Portuguese and Spanish *infantes*, was produced at the Spanish embassy under the auspices of the ambassador, Count Fernán Nuñez, grandee of Spain. It so delighted his audience that he was given an elegant box containing 4000 duros as well as special pensions. His intermezzos and Portuguese *entremeses* were produced in the theatres for national music, the Teatro do Salitre and Teatro de Rua dos Condes. Despite the insanity of Maria I in 1792, Palomino remained at the court, petitioning for Portuguese citizenship after '28 years of service'. According to contemporaries, he played in one of the best court orchestras in Europe; but in addition he served as orchestral leader at both theatres for national music. He left Lisbon about 1807–8 when the royal family fled the Napoleonic invasion. He accepted the post of *maestro de capilla* in Las Palmas for a salary equivalent to 20,000 reales, and died two years later.

Palomino's vocal writing is characterized by a melodic focus with little polyphony. Frequently, melodies are strung together by small rhythmic motifs. There are prominent ensemble sets, possibly influenced by his comic works such as the popular *Os amantes astutós* (*P-Ln*) and *O enganno aparente* (both 1793, for the Salitre theatre). Another *entremés* (for the Rua dos Condes), *As Regatieras zelozas* (1801; *Ln*), featured a fashionable Brazilian *modinha* (a sentimental art song).

In addition to his *serenata* (*P-Ln*, *La*), his most significant remaining work, three songs were published in the *Jornal de modhinas*, and three duets and six *modhinas* survive in manuscript (in *E-Mn* 2261). Three *tonadillas*, including *El canapé* (ed. in J. Subirá: *La tonadilla escénica*, iii, Madrid, 1930), are identified as his among manuscripts in the Biblioteca Municipal, Madrid, as well as two by Antonio Palomino and five others ascribed merely to 'Palomino'. A four-voice motet, at Lisbon Cathedral, is his only extant sacred work. Of his instrumental works, only a concerto or quintet for keyboard and strings, an incomplete duet for violin and keyboard (both 1785; *P-Ln*) and a piano sonata (*La*) have survived.

ELEANOR RUSSELL

Palotta [Pallota, Pallotta], **Matteo** ['Il Palermitano' or 'Panormitano'] (*b* ?Palermo, *c*1688; *d* Vienna, 28 March 1758). Italian composer. He probably studied music in Naples and had made a name for himself as a composer by 1720. He obtained the doctorate of theology, and became a minor canon in Palermo by 1730. In 1733 he applied for the post of composer at the imperial court in Vienna and stayed there until 1741, when he was dismissed; he was reappointed in 1749 and held the position for the rest of his life. The works composed in Vienna between 1732 and 1750, in the *stylus antiquus*, indicate that J.J. Fux and A. Caldara were his models in both choice of medium and treatment of text. Palotta wrote interestingly on liturgical composition and solmization in his *Gregoriani cantus enucleata praxis et cognitio ... cum notis autographis ipsius in margine adjectis*. The treatise survives only in manuscript (*A-Wgm*) as do the masses, litanies, *Ave regina*, complines, vespers, hymns and sequences of the Vienna period (*A-Wn*, *Wgm*, *D-Bsb*). A four-part *Miserere* appears in *Sammlung ausgezeichneter Kompositionen für die Kirche*, ii (Trier, 1859).

RENATE FEDERHOFER-KÖNIGS

Palsa, Johann (*b* Jarmeritz [now Jaroměřice], 20 June 1752; *d* Berlin, 24 Jan 1792). Bohemian horn player who specialized in *cor alto* playing. He was presumably a pupil of Joseph Matiegka (1728–1804), an eminent horn teacher in Prague (Dlabacž). In Paris in 1770, while still a teenager, Palsa formed a duo with the *cor basse* player CARL TÜRRSCHMIDT thus initiating what would become a lifelong horn-playing partnership. Between 1773 and 1781 Palsa and Türrschmidt played at the Concert Spirituel on at least 14 occasions (Pierre). In 1781 Joseph Raoux made one of his four silver *cors solo* for Palsa.

Palsa was noted for his mastery of cantabile style in the high register and praised for the beauty and purity of his tone. Forkel wrote 'One can not hear anything more beautiful than the little duets that Palsa and his partner Türrschmidt play with each other on two silver horns, especially those that are in minor keys'. As a horn duo the fame of Palsa and Türrschmidt was matched only by that of the brothers Böck. Together with Türrschmidt, Palsa wrote two sets of six horn duos opp.1–2 (Paris, by 1784)

and a set of 50 op.3 (Berlin, 1795); two additional horn duets by Palsa found in *A-Sca* have been edited by J. Brand (Munich, 1990). Upon his death Palsa was replaced by Jean Lebrun (1759–*c*1809) as first horn (*cor alto*) in the duo.

HORACE FITZPATRICK/THOMAS HIEBERT

Palschau, Johann Gottfried Wilhelm (*b* ?Copenhagen, 21 Dec 1741; *d* St Petersburg, 3 June/5 July 1815). German pianist and composer. The son of a musician from Holstein who played in the Royal Opera orchestra in Copenhagen, he travelled abroad on concert tours from an early age, performing in London (1754) and Hamburg (1761), and about 1771 he studied with J.G. Müthel in Riga. In 1777 he settled in St Petersburg, where he quickly found favour at court and pursued a highly successful career as a concert artist with the violinist L.P. Yershov; he was (from 1778) one of the few professional musicians in the New Music Society. As a composer he concentrated entirely on writing for the keyboard; his works include two sonatas (Nuremberg, 1762), two concertos for harpsichord and strings (Riga, 1771) and several sets of variations on Russian folktunes.

Pálsson, Páll P(ampichler) (*b* Graz, 9 May 1928). Icelandic composer and conductor of Austrian birth. He was a pupil of Franz Mixa, Michl and Brugger in Graz and studied conducting at the Hamburg Hochschule für Musik (1959–60). In 1949 he moved to Iceland to conduct the Reykjavík city band and play first trumpet in the Iceland SO, of which he later became assistant conductor; he was made the orchestra's permanent conductor in 1971, a position he relinquished in the late 1980s. He became director of the Reykjavík Male Choir in 1964 and in 1975 toured the USA and Canada with the Iceland Singers. He has also served as conductor and artistic director of the Reykjavík Chamber Ensemble, founded in 1974.

Recognized as an outstanding conductor, he has also distinguished himself as a prolific composer. His works, which reveal a broad range of stylistic and technical interests, include numerous Icelandic folksong arrangements for male chorus, and he shows a predilection for aleatory writing with quasi-improvisatory passages. In 1991 he was awarded the Knight's Cross of the Order of the Falcon; he is also the recipient of the Grand Honorary Medal of the District of Styria (Austria).

AMANDA M. BURT/R

Palumbo, Costantino (*b* Torre Annunziata, nr Naples, 30 Nov 1843; *d* Naples, 15 Jan 1926). Italian pianist and composer. With Beniamino Cesi and Giuseppe Martucci he represented the international success of the Neapolitan piano school. In 1854 he entered the Naples Conservatory, where he studied composition with Mercadante and the piano with Francesco Lanza and Michelangelo Russo.

When still very young he embarked on a brilliant concert career and appeared in the principal cities in Italy and abroad. In Paris he met Rossini and was a regular visitor to his salon, receiving the older man's praise and affection. After returning to Italy he won success for his original style of playing, and as a result was appointed to teach the piano at the Naples Conservatory from 1873, and to be the principal pianist involved in the celebrations in Florence in honour of Bartolomeo Cristofori (1876). He had contacts with the leading musicians of his day, including Francesco Florimo, Thalberg and Boito (who provided the libretto for his opera *Pier Luigi Farnese*), and held an important position in Neapolitan musical life until the end of the century, when he withdrew from public appearances.

His main significance lies in having contributed, through the broadening of his own concert repertory, to a modernization of taste in instrumental music. His repertory ranged from works written for the harpischord (his transcriptions for piano include an otherwise forgotten concerto by Francesco Durante) to the music of the Romantic school – at the time still a novelty for Neapolitan audiences – and the fashionable fantasias on opera themes and salon music. While he owed his popularity to the latter, at the same time he attempted to revitalize his own idiom in compositions involving other forces by taking his inspiration from music from the past or choosing unusual instrumental combinations.

FRANCESCO ESPOSITO

Paluselli, Stefan [Johann Anton] (*b* Kurtatsch, South Tyrol, 9 Jan 1748; *d* Stams, Oberinntal, 27 Feb 1805). Austrian composer and choirmaster. A member of the Cistercian order. His musical talent led him to be accepted as a boarder at the St Nikolaihaus in Innsbruck around 1760, where the students were maintained free of charge and performed as choristers or instrumentalists in the university church choir. At the same time he attended the Innsbruck Gymnasium; after concluding his studies there, in 1768 he probably studied philosophy at the University of Innsbruck. In 1770 his Singspiel *Das alte deutsche Wörtlein Tut* was performed at the Gymnasium theatre. In the same year he entered the abbey of Stams, notable for its cultivation of music. He devoted himself to the study of theology and in 1774 he was ordained a priest in Bressanone. He became violin teacher to the abbey school in 1785 and was promoted to head music instructor and choirmaster in 1791.

About 1790 he developed a solmization system for teaching the choirboys at Stams which resembled the system constructed by Agnes Hundoegger in Germany a century later. However, like his work as a whole, it did not have wide influence.

Paluselli was one of the most notable musical personalities of 18th-century Tyrol. Even his early works exhibit the strong personal style that elevates his music above that of other monastic composers. In his secular and sacred works alike he sometimes followed traditional models but at other times displayed unique approaches to the sequence of movements, internal form and text setting. Both in melodic construction and form he prefers an aggregation of small units to large-scale thematic design and development. His music is occasionally reminiscent of Vivaldi. Other characteristics include passages in a folk idiom, finely nuanced rhythmic writing and a certain musical playfulness for which he had a special gift. He also contributed to the development of programmatic music, in particular with his *Soggetti diversi*.

WORKS

WALTER SENN, HILDEGARD HERRMANN-SCHNEIDER

Paluskar, Vishnu Digambar (*b* Kurundwad, 1872; *d* 1931). North Indian (Hindustani) classical music vocalist. He was the son of a *kīrtankār* (performer of religious discourses) in Kurundwad and was educated in an English-medium school. In 1887 his eyesight was damaged by firecrackers and he was removed from school to begin musical training with Balkrishna Buwa of the Gwalior *gharānā*. He became sensitized to the difference between his social status and that of his teacher and was determined to improve the status of musicians.

In 1897 Paluskar advocated public performance in order to make classical music widely accessible and to provide a means for musicians to earn a livelihood independent of rich patrons. In 1901 he founded the Gandharva Mahāvidyālaya, the first Indian music institution underwritten by public sources. To support it Paluskar lectured and gave concerts, tailoring performances to include patriotic songs, folksongs and devotional compositions along with classical vocal music. He also introduced *tablā taraṅg*, the use of a set of *tablā* drums tuned to a series of pitches.

In 1908 the main school shifted to Bombay and regular syllabuses, texts, examinations and performances were instituted, the latter including public appearances by female students from middle- and upper-class families. Opening music training to 'respectable' females effectively revolutionized the reception of classical music in India. In 1911 Paluskar received the consent of the Governor of Bombay to confer the degrees of *Saṅgīt Praveśikā* after four years and *Saṅgīt Pravīṇ* after five years. The school has grown to incorporate more than 25 branches.

Paluskar's legacy was and is continued by important musicians and teachers such as Narayan Rao Vyas, Vinayak Rao Patwardhan, B.R. Deodhar, Omkarnath Thakur and Vinay Chandra Maudgalya.

BONNIE C. WADE

Paminger [Päminger, Panninger], **Leonhard** (*b* Aschach an der Donau, 25 March 1495; *d* Passau, 3 May 1567). Austrian composer, poet and theologian. He was the son of a court official of the Count of Schaumburg. From 1505 he received a humanist education in Vienna, and after staying briefly in Aschach and Salzburg he matriculated at Vienna University in the summer of 1513. During his three years' study he earned a living as a bass in the Stadtkantorei of the Stephansdom and taught himself composition. In 1516 he settled in Passau, where he became schoolmaster of St Nikola in about 1517 and Rektor in 1529. At about this time, he copied the choirbook *D-Bsb* Mus.ms.40024. He apparently lost the position of Rektor in 1557 because he had adopted Lutheran beliefs, but he remained as secretary until his death. He was held in high esteem by his contemporaries and was closely associated with influential figures of the Reformation including Martin Luther and Philipp Melanchthon. At Passau he came into contact with theologians, physicians and philosophers. In this milieu he established a reputation not only as a composer, but also as an author. Three of his sons – Balthasar (*b* ?Passau, *c*1523; *d* ?Passau, 23 Jan 1546), Sophonias (*b* Passau, 5 Feb 1526; *d* Nuremberg, July 1603) and Sigismund (*b* Passau, 1539; *d* Seitenstetten, Lower Austria, 24 Feb 1571) – were also writers and composers.

Paminger was one of the most important of the early Lutheran composers who combined the style of Josquin's successors with the native German style. He won international recognition early in his career and his works were included in French and Italian anthologies. Apart from a few German secular songs, his works consist mainly of settings of Latin antiphons, responsories, psalms, hymns and Propers, and German Protestant hymns. Most numerous among his works are the cantus firmus free motets, in which passages of free counterpoint alternate with imitative polyphony. The use of paired imitation anticipates *cori spezzati* techniques. Traces of the technical virtuosity of composers such as Ockeghem and Josquin are found in, for example, the 16-voice canon in *In profunditatem*. Several motets on biblical texts include quodlibets, a compositional practice that evidently formed part of the Lutheran liturgical tradition. The five-voice setting of the Gospel narrative of the Nativity *Exiit edictum a Caesare Augusto*, for example, incorporates five Christmas hymns. In the cantus firmus motets, canonic techniques and imitation are less widely used; a notable exception is the double crab canon on *Vexilla regis prodeunt*. The adoption of portions of the Proper into the Lutheran liturgy accounts for Paminger's settings of introits, alleluias, sequences and *prosae*. Here too canonic techniques are evident. In the songs, the replacement of the original Latin texts with German texts is indicative of Paminger's stance towards the Reformation. Four volumes of his projected ten-volume edition of Protestant hymns were published after his death; they contain over 680 works. The remaining six volumes were to have included masses, *Magnificat* settings, biblical stories, dedicatory pieces, bicinia and tricinia; these unpublished compositions are lost.

WORKS

Primus tomus ecclesiasticarum cantionum, a prima dominica adventus, usque ad passionem ... Jesu Christi, 4–6 and more vv (Nuremberg, 1573)

Secundus tomus ecclesiasticarum cantionum, a passione ... Jesu Christi, usque ad primam dominicam post festum Santa Trinitatis, 4–6 and more vv (Nuremberg, 1573)

Tertius tomus ecclesiasticarum cantionum, a prima dominica post festum Santa Trinitatis, usque ad primam dominicam adventus ... Jesu Christi, 4–6 and more vv (Nuremberg, 1576)

Quartus tomus ecclesiasticarum cantionum, 4–6 and more vv (Nuremberg, 1580)

12 motets, 1537^{1}, 1538^{2}, 1538^{3}, 1538^{6}, 1539^{6}, 1542^{6}, 1553^{4}, 1553^{5}, 1558^{4}, 1559^{1}, 1559^{2}, 1560^{2}, 1564^{5}, 1568^{7}

9 Ger. hymns, 1560^{2}

3 Ger. songs, 1544^{19}, 1544^{20}, 1556^{29}

OTHMAR WESSELY/WALTER KREYSZIG

Pampani, Antonio Gaetano (*b* Modena, *c*1705; *d* Urbino, Dec 1775). Italian composer. Until the late 1730s librettos and other sources often identified him as Pampino or Pampini. While Eitner's belief that these spellings designate two composers is probably incorrect, the existence of an older Antonio Pampini might explain the occurrence of a Pampini in Fermo as late as 1748 (according to Paolucci) when the composer under consideration was already engaged at the Ospedaletto in Venice. On the other hand, Fétis's statement that Pampani died in Venice in 1769 is without foundation. That his birthplace was Florence (Paolucci) or Romagna (*La BordeE*) may be rejected; printed librettos of several Venetian works indicate Modena.

The earliest reference to Pampani relates that when elected *maestro di cappella* of Fano Cathedral on 18 July 1726 he was unable to assume duties promptly because he was engaged at the opera in Urbino. How long he had been in Urbino is not told, but the Fano documents mention that he studied with [?Filippo] Salviati there.

Some time after coming to Fano, he began directing the orchestra of the Teatro del Sole in Pesaro and providing occasional arias (e.g. for Bononcini's *Crispo*, 1730) as well as intermezzos (*Delbo mal maritato*, 1730). After his resignation from Fano Cathedral in late July 1734, he conducted in Pesaro at least until autumn 1737, and composed two operas for Venice (1735, 1737) and three oratorios for Fermo and Macerata (1739, 1740). Between 1740 and 1746, when he again wrote an oratorio for Fermo, he seems to have stopped composing: no known works belong to the intervening years while he was, possibly, *maestro di cappella* of Fermo Cathedral (as an aria of 1738 in *I-Tn* and the libretto of 1746 indicate).

Pampani's acceptance as member of the Accademia Filarmonica of Bologna in 1746 marked a turning-point in his career. A considerable number of major works appeared during the ensuing decade. For the opera houses of Venice and major theatres of Rome, Milan and Turin he wrote an *opera seria* annually. As director of the celebrated chorus and orchestra of the Poveri Derelitti (also known as the Ospedaletto) in Venice he composed oratorios, groups of solo motets (for solo soprano and solo alto with orchestral accompaniment), and other sacred music for women's chorus, along with violin and cello concertos for performance at vesper services (often marked specifically for the Assumption) between 1749 and 1764. The libretto for a revival in 1765 of his oratorio *L'innocenza rispettata* at the oratorio of S Filippo Neri in Venice still identifies Pampani as *maestro* of the Ospedaletto, but in the following year Tommaso Traetta directed his own oratorio (*Rex Salomon*, 15 August 1766) as the institution's new *maestro*. On 27 December 1767 Pampani was named *maestro di cappella* of Urbino Cathedral but was excused from duties until 1 July 1768 in order to supervise the production in May of *Demetrio*, his last opera for Venice. Giuseppe Gazzaniga assumed his position at Urbino in late December 1775, shortly after Pampani's death.

Almost nothing is known about Pampani's personal life. The manuscript score of a symphony (*B-Bc*) identifies him as 'abbate' but no other source so names him. A certain Teresa Fortunata Pampino, who appeared in his first opera for Venice (*L'Anagilda*, 1735), may prove to be a relative, perhaps his wife.

WORKS

SVEN HANSELL (with LUISELLA MOLINA)

Pampanini, Rosetta (*b* Milan, 2 Sept 1896; *d* Corbola, nr Rovigo, 2 Aug 1973). Italian soprano. A pupil of Emma Molajoli, she made her début in 1920 at the Teatro Nazionale, Rome, as Micaëla in *Carmen*. She was then heard at the S Carlo, Naples (1923), at the Comunale, Bologna (1923–4) and at La Scala (1925) in *Madama Butterfly*, conducted by Toscanini; she returned there until 1930 and again between 1934 and 1937. She sang in the leading Italian theatres and appeared at the Colón, Buenos Aires (1926), at Covent Garden (1928) in *Madama Butterfly* and *Pagliacci* and as Liù in *Turandot*, returning there in 1929 and 1933, at the Berlin Städtische Oper (1929), at the Chicago Civic Opera (1931–2) and at the Paris Opéra (1935). Pampanini's pure, natural voice was full of warmth and brilliance, with a strong, resonant top register; she was considered one of the world's leading Puccini sopranos between 1925 and 1940, partly because of the variety of colour and inflection she brought to the utterances of Mimì, Cio-Cio-San and Manon, partly because of the grace and simplicity of her bearing. She was also admired in *Andrea Chénier*, *Iris* and *Tosca*. After she retired in 1946 she taught singing in Milan; Amy Shuard and Victoria Elliott were among her pupils.

RODOLFO CELLETTI/R

Pamphili, Benedetto (*b* Rome, 25 April 1653; *d* Rome, 22 March 1730). Italian patron and librettist. His immense wealth was largely derived from a pension granted by his great-uncle, Pope Innocent X, his salary as Grand Prior in Rome of the Knights of Malta from 1678, and his benefices as a cardinal from 1 September 1681. His literary gifts are reflected in his post as *principe* of the Accademia degli Umoristi in Rome (by 1677) and his 'acclamation' as Fenicio Larisseo in the Arcadian Academy (12 May 1695). His fascination with oratorios is manifested by his protectorship of two organizations that produced them, the Collegio Clementino (1689–1730) and the Arciconfraternita del SS Crocifisso (1694–1724). Pamphili's *maestri di musica* were Alessandro Melani (*c*1676–*c*1681), Lulier (1681–90) and Cesarini (1690–1730). From 1684 to 1690 his most highly paid instrumentalist was Corelli, who (like Lulier) chose not to follow him to Bologna, where he was papal legate from August 1690 to October 1693. Pamphili's financial records name many other instrumentalists and composers whom he regularly employed, including Pasquini (1677–*c*1710), Amadei (1685–1708) and Handel (1707). His musicians played for the occasional oratorios and weekly 'academies' that he began to sponsor in 1677.

During Pamphili's creative years all the popes except Alexander VIII (who sent him to Bologna) successfully restricted or banned public opera performances in Rome. This may well explain why Pamphili wrote mainly oratorios and cantatas. His oratorio productions in Rome were sumptuous, as witnessed by the number of instrumentalists: 32 for Scarlatti's *Il trionfo della gratia* (1685) and 60 for Lulier's *S Maria Maddalena de' pazzi* (1687). The same was true for oratorios he sponsored. He is never named as librettist in Roman editions, but those printed elsewhere between 1678 and 1729 sometimes do name him. His 88 cantata texts (in *I-Rvat* Vat.lat.10205–6) range widely in subject matter and were undoubtedly written for his weekly academies. Among the composers who set his cantata and oratorio texts are G.M. Bononcini, D.F. Bottari, C.F. Cesarini, V. Chicheri, Severo De Luca, C. Foschi, Francesco Gasparini, G.F. Handel, G.L. Lulier, Alessandro Melani, F.A. Messi, Bernado Pasquini, N. Romaldi, C. Rotondi, D.N. Sarri and Alessandro Scarlatti.

LOWELL LINDGREN

Pamphilon, Edward (*b* before 1615; *fl* *c*1660–90). English violin maker. Although most authorities place his workshop on London Bridge, there is no clear evidence of this. The Pamphilon family, which includes four other violin

makers, was active in the Essex villages of Widdington, Little Hadham and Clavering in the 17th and 18th centuries. Edward Pamphilon's instruments certainly found their way to the shop of the music seller John Miller on London Bridge, where they were labelled and sold. Original labels are rare, and do not specify the place of origin; one gives a date of 1684, and another is very precise, specifying a date of 3 April 1685. Most labels were presumably removed by later dealers to facilitate the resale of Pamphilon's violins as more valuable Brescian instruments. The instruments do, in fact, bear a close resemblance to earlier Brescian work, having a high build and rather crude workmanship, but they differ in several features: the ribs are set into a slot cut around the inner edge of the back, the belly and the sides of the neck root; and the neck root protrudes into the soundbox. This construction method is also characteristic of Flemish makers of the time. The scroll is distinctive, decorated with small punch marks around the turns of the volute. The instruments sometimes have a very high-quality varnish, at first glance easily mistaken for Italian.

JOHN DILWORTH

Pan. God of the Greeks and Romans. He was native to Arcadia, a mountainous rural region in the Peloponnese, where shepherding was a major occupation. His father was Hermes, the only other important Arcadian god and the mythological inventor of the lyre. He had the torso and head of a man and the legs, tail and horns of a goat. His attributes were primarily musical and amorous, the latter association stemming from the shepherd's desire for flock fertility. In the 5th century BCE his cult spread to Athens, and subsequently to other urban areas of Greece and Rome, where he symbolized pastoral love, revelry and musicality. Pictorially he was shown in the company of nymphs, satyrs, Dionysus and the Muses, sometimes dancing and at other times playing the aulos or more often the syrinx. Cassiodorus and Isidore of Seville attributed to him the invention of a wind instrument called the pandoura.

In mythology he was the subject of two musical myths, both of which are related in Ovid's *Metamorphoses*: the story of his invention of the panpipes (i.689–712; *see* SYRINX) and the story of his musical contest with Phoebus Apollo (xi.153–79). In the latter, a variant of the musical contest between Apollo and Marsyas (*see* AULOS), Pan with his syrinx brashly challenges Apollo with his kithara. Apollo's art is superior, but Midas, one of the judges, prefers Pan's and as a punishment is made to grow ass's ears. Bach celebrated the myth in his *dramma per musica Der Streit zwischen Phoebus und Pan* BWV201.

JAMES W. McKINNON

Pan playing the panpipes, with a sackbut and recorder (right) and racket, cornett and bass recorder (left): ivory carving (1618–24) by Christoph Angermaier (Bayerisches Nationalmuseum, Munich)

Pan-African Orchestra. Orchestra founded in 1988 in Accra, Ghana, under the leadership of its conductor and founder Nana Danso Abiam. The orchestra of approximately 28 instrumentalists is guided by a creative and practical philosophy that calls for a return to indigenous traditions and resources. The leader integrates music, musical instruments and performers from various ethnic groups and from various African countries; financial limitations constrain the hiring and use of musicians and musical instruments from several African countries, however. The Ghanaian government, especially the Commission on Culture, actively supports both the ideals of the former President Kwame Nkrumah, a leader in the Pan-African and African Personality movement, and the related philosophy and objectives of the Pan-African Orchestra. Abiam composes and arranges most of the music, which is closely related to indigenous practices. Instruments of the orchestra include a variety of original African instruments: KORA (21-string plucked chordophone), *gyilli* (xylophone), *axatse* (shakers), *adawuro* and *gankogui* (bells), *gonje* (one-string, bowed chordophone), assorted drums, flutes (*atentenben*, *wia*), animal horns and others. Minimal notation is used, and the leader has devised a form of notation for players who cannot read musical notation. The conductor employs a fly swatter in place of a baton and a pair of strung concussion toy instruments found in several West African societies, which he plays in the traditional manner as a time regulator. The orchestra has performed in the UK, Germany and in the USA. The 1995 compact disc recording titled *The Pan African Orchestra, Opus 1*, Real World Records, CAR2350 (1995) was the first commercial release of the orchestra (all selections composed or arranged by Abiam).

The creative musical interests of the conductor had been nurtured at the Institute of African Studies, University of Ghana, where he had helped redesign and mass-produce the vertical *atentenben* bamboo flute. He had

then spent several years in Germany and the UK, returning to Ghana and assuming leadership of the Ghana National Symphony Orchestra. Due to internal problems, Abiam had resigned and began to explore the possibilities of an orchestra of indigenous African instruments with a repertory deriving from indigenous musical traditions; the Pan-African Orchestra was the product of this effort.

DANIEL AVORGBEDOR

Panagiotes the New Chrysaphes [Panagiotēs Chrysaphēs ho Neos] (*b* ?1620–25; *d* after 1682). Romaic (Greek) composer, cantor and hymnographer. As *prōtopsaltēs* of the Ecumenical Patriarchate of Constantinople from about 1655 to 1682, he helped bring to fruition the revival of Byzantine chanting initiated by his predecessor, Theophanes Karykes. He was a student of the patriarchal *prōtopsaltēs* Georgios Raidestinos, at whose suggestion he claims to have embarked on the recomposition of the late medieval stichērarion popularly attributed to Manuel Chrysaphes. This task, described by Panagiotes as 'beautification' (*kallopismos*), was accomplished through the incorporation of novel melodic formulae (*theseis*) hitherto transmitted orally in the patriarchal chapel. He also revised in similar manner the entire anastasimatarion and excerpts from the heirmologion. Among his other chants for the Divine Office are a modally ordered series of eight *kekragaria* for Hesperinos, responsories, acclamations, *troparia*, *idiomela* and *megalynaria* for Orthros, and a modally ordered series of eight *pasapnoaria* for Lauds ('Hoi ainoi'). For the eucharistic liturgies, he wrote Cherubic Hymns, and numerous communion verses for Sundays, weekdays and feasts of the liturgical year. His miscellaneous chants include several kalophonic *stichēra*, and a didactic song, *Ho thelōn mousikōn mathein* ('He who wishes to learn music'), that illustrates the performance of common *theseis*. (For a fuller list of works see Stathis, 1995.)

Panagiotes' musical achievements, which his contemporaries regarded as comparable to those of late Byzantine masters, led to his becoming known during his own lifetime as 'the New Chrysaphes'. Nearly all musical manuscripts transmitting his works – including his eight surviving autographs – employ this sobriquet to the exclusion of his Christian name, which is attested only by his student Dionysios the Hieromonk. Whereas Panagiotes' Stichērarion was soon overtaken in popularity by that of his pupil GERMANOS OF NEW PATRAS, his Anastasimatarion remained in widespread use until it was replaced a century later by the collections of PETROS PELOPONNESIOS and PETROS BYZANTIOS. The few works later printed in Chrysanthine editions include an Easter Sunday *doxastikon* (ed. Phōkaeus) and four kalophonic hymns transcribed by Gregorios the Protopsaltes (ed. Lampadarios and Stephanos the First Domestikos).

Critical assessment of Panagiotes' works is complicated by scholarly disagreements over their realization in performance. According to Stathēs, his *theseis* were interpreted melismatically in a manner congruent with the transcriptions made by CHOURMOUZIOS THE ARCHIVIST of his Stichērarion (*GR-An* MPT 761–5) and Anastasimatarion (*An* MPT 758). However, this view has been challenged by Karas and Arvanitis, who generally favour a less florid approach to their realization.

ALEXANDER LINGAS

Panama (Sp. República de Panamá). Country in Central America. The most southerly state of Central America, it is bordered by Costa Rica to the east and Colombia to the west. It has the Caribbean Sea to the north and the Pacific Ocean to the south, connected by the Panama Canal. Panama covers an area of 75,517 km² and has a population of 2.86 million (2000 estimate).

I. Art music. II. Traditional music.

I. Art music

Little documentation of musical activities in the Cathedral of Panama City during the colonial period is available. It is known that Juan de Araujo (1646–1712), who ended up as *maestro de capilla* in La Plata (today Sucre, Bolivia) Cathedral, was active at Panama Cathedral from 1676 to, presumably, 1680, the year he was appointed at La Plata. No work composed in Panama during the colonial period or the 19th century is extant.

Only in the 20th century did the cultivation of art music develop in Panama, mostly centred in and around the National Conservatory (beginning in 1911), first known as Escuela Nacional de Música (founded in 1904). Narciso Garay (1876–1953) directed the institution from 1904 to 1918; in 1921 it closed due to lack of official support. During its early existence the conservatory trained a good number of musicians who contributed to an incipient music education in various institutions. In 1941 the central government reopened the National Conservatory under the direction of the renowned Panamanian violinist Alfredo de Saint-Malo (1898–1984), who sponsored the publication of the conservatory's journal *Armonía*. At the same period, the National SO was founded under the conductor Herbert de Castro, who was succeeded by the cellist Walter Myers in 1944. Through regular concerts in both the capital and various cities and towns, the orchestra contributed to the

knowledge and cultivation of classical music. In 1952 it was reorganized as the National Orchestra, with Herbert de Castro returning as its main conductor. The conservatory changed its name to the National Institute of Music in 1953, and inaugurated a mixed chorus and an orchestra made up of students and teachers.

The main venue for concerts, operas and other performances by local and visiting groups in the capital city has been the Teatro Nacional, inaugurated in 1908. Larger concert halls followed, such as Teatro Central, Teatro Presidente and Teatro Bellavista. The state also sponsored the Banda Republicana (founded in 1904) and the Banda del Cuerpo de Bomberos (the Firemen's Band, 1909) that gave weekly concerts in the main public squares of Panama City. Beginning in 1909, music has been taught in elementary and secondary schools, and in 1953 the government created a department of musical culture and education in the ministry of education. Among the few private initiatives supporting art music have been the Unión Musical, whose orchestral ensemble was organized in 1934 by Pedro Rebolledo, a band director and composition student of Julián Carrillo in Mexico, the Sociedad de Conciertos Daniel, and the Sociedad Pro-Arte Musical de Panama. A number of choral groups have developed in the capital and other cities.

The most important composers in Panama have been Santos Jorge (1870–1941), organist at Panama Cathedral and author of the country's national anthem, Alberto Galimany (1889–1974), composer of the popular *Marcha Panamá* and the orchestral suite *Vasco Nuñez de Balboa* (1941), Carlos Arias Quintero (*b* 1903), composer of sacred works and piano pieces, and Ricardo Fábrega (1905–73), composer of works of popular character. The most significant Panamanian composer of the 20th century is Roque Cordero (*b* 1917), who has won international recognition for his original and substantial creative output. Prominent among the subsequent generation of composers are José Luis Cajar and Marina Saiz Salazar.

II. Traditional music

The traditional music of Panama is the result of a mixture of three cultures. During the colonial period African slaves were brought to Panama, and their music and dances were added to the music already developing from a mixture of Spanish and Amerindian music. These three elements combined to form a new music that is rich in rhythmic and melodic variety. Although today only popular international music is heard in the ballrooms and night clubs of the principal cities of Panama, traditional music is still an important part of the national heritage. Since the 1940s folklore groups have been formed in secondary schools and their activities encouraged through competitions. Other groups have been organized to perform national dances as part of the tourist industry. In inland towns performances of the songs and dances described here take place during national and regional celebrations, social activities and religious observances, especially those honouring patron saints.

Recordings of Panamanian traditional music have been made by Myron Schaeffer and are in the Library of Congress, Washington, DC.

1. INSTRUMENTS. Panamanian traditional folkdances are accompanied by string instruments and drums. The most important string instruments are the *mejoranera* and the *bocona*, simple guitars of small and medium size respectively with five gut or nylon strings, used to accompany the dances *mejorana*, *cumbia* and *punto*. The *mejoranera* is tuned *e′–b–a–a′–d′*, although the third and fourth strings are sometimes tuned to *g*, *g′*. Because of this tuning, the tonic chord is usually played in its 6-4 inversion, and the subdominant in a 6-3 inversion. Only the dominant appears in root position. Originally, the melodies for these dances were played on a regional three-string fiddle called a *rabel* (perhaps a descendant of the Arab *rabāb*), but this has been replaced by a standard violin. Sometimes, especially in the *cumbia*, the melody is played on an accordion.

The three native drums most widely used are the *caja* or *tambora* (large), *pujador* (medium) and *repicador* (small). The *tambora* is a double-headed drum made from a cylindrical hollow log 35 to 45 cm long, with a skin 30 to 35 cm in diameter on each end. It is placed on the ground or on a small bench in a horizontal position and the drumheads and body of the instrument are struck with two simple wooden drumsticks. The *pujador* is about 70 cm high, and the *repicador* is about 55 cm high; each has only one skin about 20 cm in diameter on the upper end, and the body tapers down to the other end, which is open. These two drums rest on the ground, held firmly between the knees, and are struck with the flat of the fingers and the palms and ball of the hands. The player of the *pujador* sometimes presses his left elbow on to the centre of the drumhead while striking it with the extended fingers of his right hand, which produces a change in sonority. Other variations in sound are produced by raising the *pujador* or the *repicador* off the floor with the knees.

The *guáchara* or *güiro* is a large hollow gourd with a series of transverse grooves carved on its surface, which are rasped with a small hardwood rod or a piece of heavy wire to accompany the rhythm of the dance. Flutes and double basses, as well as Cuban maracas and claves, have been added to the folk orchestra, but these instruments are not indigenous to Panama.

The Panamanian Indians have a great number of flutes, among which may be mentioned a unique type of panpipe played by the Cuna Indians of the San Blas Islands, called the *kamu-purui*. It is similar to the *antara* of Peru, the *capador* of Colombia and the *rondador* of Ecuador, but although each of these has tubes tied together to form a single body, the *kamu-purui* has its seven bamboo tubes tied to form two groups, of three and four tubes. The tuning of the tubes is also distinctive, as is the manner in which they are played. The group of four tubes is tuned in ascending perfect 5ths and the group of three in descending perfect 5ths, with the higher notes of each group separated by an interval of a major 2nd, or a major or minor 3rd (ex.1*a*). The performer holds the group of four tubes in his left hand and the group of three in his right, with the smallest tube of each group touching in the

Ex.1

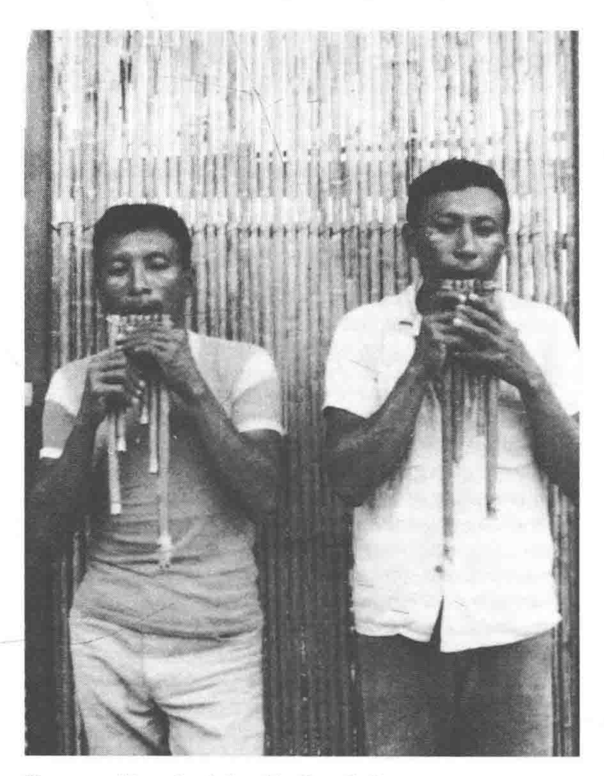
(a) *Kamu-purui* tunings; transcr. R. Cordero

(b) *Kamu-purui* melody; rec. and transcr. R. Cordero

centre to form a solid row of tubes (see illustration). Sound is produced by blowing between two tubes and producing two notes simultaneously in an interval of a perfect 5th. The space between the two groups is not used, as it does not produce a perfect 5th.

The *kamu-purui* are constructed in pairs, as are nearly all flutes of the Cuna Indians. They are designated male and female, with the female tuned a major 2nd, minor 2nd, or, occasionally, a minor 3rd higher than the male. The male and female instruments are played alternately, thereby producing a composite melodic line in parallel 5ths (ex.1*b*).

Three or more pairs of musician–dancers (usually men, but sometimes mixed pairs) play the *kamu-purui* while dancing. The instruments are not perfectly tuned to each other, so that unusual sonorities are produced. Several women join the dance, each shaking a *nasis* or *nasisi* to accompany the music. These are dried gourds, into which small seeds have been inserted, with handles of deer bone wrapped with waxed braided cord.



The *kamu-purui* is the only flute of the Cuna Indians in which the female instrument has as many notes as the male instrument. Contrary to Narciso Garay's statements, other female instruments of the Cunas, such as the *suppe* and *tolo* , have only one or two notes and are used to accompany melodies played on male instruments with up to four finger-holes. Music performed on the *kamu-purui* , as well as all music of the Cuna Indians, is handed down orally from generation to generation by the *kantule* (sometimes called *kamoturo*) or official musician, whose function it is to perform and teach the traditional songs of the tribe. In his work the *kantule* is helped by his assistant, the *kansueti* , who is the only person authorized to cut, in a special ceremony, the bamboo cane from which the different flutes of the tribe are made.

Differing from the music of the Cuna Indians, in which there are few traces of polyphonic music, that of the Guaymi Indians of the central provinces combines several instruments of individual timbres and specific melodic patterns to form polyphonic combinations. Some of the Guaymi instruments are: small drums (not found among the Cunas); the *tólero* or *toleró*, a vertical flute made from the leg bone of a deer or jaguar; the *drúbulo*, or shell trumpet; the *niví-grotu*, a trumpet made from a bull's horn; and ocarinas of different shapes.

These instruments are used, along with singing, in ceremonial dances such as the *chichada del cacao*, celebrating a girl's puberty, in which participants consume a fermented drink made with roasted cacao nuts, or in a game with dancing called *juego de balsería* in which two men try, in turn, to hit the other's legs with a long piece of light balsa wood.

2. Songs and dances. The two most important folkdances of Panama are the *tamborito* and the *mejorana*. The former is considered the national dance of the country *par excellence*. Its antiphonally arranged melody, its intricate contrapuntal rhythm on the drums and its precise dance movements reflect both African and Spanish origin. The *tonada* or melody of the *tamborito*, sung exclusively by women, is divided into two parts. The first of these is solo, intoned by the *cantadora-alante* ('front' singer), and allows for improvisation in each repetition. The second part is sung in unison, with little variation, by women clapping their hands in the line of participants encircling the drummers and dancers. The melody is symmetrically distributed between soloist and chorus, with phrases of either two or four bars. The *cantadora-alante* usually has the first phrase and the chorus the second, although this order is sometimes reversed. The two melodic sections are repeated an indefinite number of times. Most *tamborito* melodies are in major keys, although many are in minor keys and there are even some in other modes. The second (choral) phrases sometimes end on the dominant.

The *tonada* is in moderate 2/4 metre, accompanied by the *tambora*, the *pujador* and the *repicador*. Participants of both sexes clap a combination of three rhythms simultaneously in each bar: two crotchets, four quavers and two syncopated quavers. The *repicador* and the *pujador* sustain an interesting contrapuntal rhythm, while the *tambora* establishes rhythmic symmetry with accents

Kamu-purui (panpipes) played by Cuna Indians

Ex.2 *Y orelé, tamborito tonada;* transcr. R. Cordero

struck on the right-hand drumhead in an unvarying four-bar pattern. The left-hand drumhead and the wood, however, are struck in a variety of rhythms. The *tonada* is repeated many times; but when singing is suspended the drums continue to play and the *repicador* and the *pujador* have an animated rhythmic dialogue until the new *tonada* begins.

A further melodic characteristic of the *tamborito* is the syncopated anticipation of the first beat by a semiquaver. This almost always occurs at the end of a phrase or motif, but sometimes appears in almost every bar (see ex.2). The melodic phrase of the *cantadora-alante* is nearly always in a different rhythm from that of the chorus (as shown in ex.2). However, there are infrequent examples in which the two phrases are rhythmically equal. In a few rare cases, instead of changing the rhythm of its phrase, the chorus varies the melodic line, and sometimes there is soloist–chorus overlapping (ex.3; in this case the chorus initiates the *tonada*).

The *tamborito* is danced by one mixed couple at a time; they dance separately into the centre of the circle, present themselves to the drummers with a specific pattern of steps, and then (still separated) demonstrate their choreographic ability for several minutes. When a second man enters the circle dancing and chooses his partner by bowing before her, the first couple retires dancing to join the circle of participants clapping to the music. This pattern is repeated indefinitely.

In certain regions of the country, a type of *tamborito* that gradually accelerates is called *tambor norte*. In other regions, however, the *norte* is more subdued; the livelier version is called *tambor corriente*. When the dance is performed in a house and not in the open air, as is customary, it is called *tambor de orden*.

The *mejorana* is performed in two different forms, one instrumental and the other vocal. The instrumental *mejorana* is danced with the melody played on the *rabel* or violin, and is simply called *mejorana*. The vocal form, called *socavón*, is sung exclusively by men and is not danced. In both, the accompaniment and certain melodic interludes are played on the *mejoranera* or on the *bocona*. The *mejoranera* alternates the tonic chord (in 6-4 position) with the dominant from one bar to the next, occasionally with the subdominant in between.

The *mejorana* is in moderate tempo. The metre is 6/8, maintained in the accompaniment while the melody constantly changes back and forth from 6/8 to 2/4. Another type of instrumental *mejorana*, called *mejorana-poncho*, employs a 3/2 metre in an equally moderate tempo.

The sung *mejorana*, or *socavón*, has an improvisational character; the text comments on local, national and international incidents (political or civil). The *mejorana* singer accompanies himself, or is accompanied by another musician, on the *mejoranera*. Two singers may alternate, improvising questions and answers, a form called *desafío* (duel, or challenge). The literary style of the *mejorana* is of Spanish origin and is common to almost all Latin America. It begins with a *cuarteta* or *redondilla* (quatrain), followed by four *décimas* (ten-line stanzas) of the same metre, each of which ends with a line from the initial quatrain taken in sequence. Before beginning the *cuarteta*, and between one *décima* and the next, the singer improvises a melismatic phrase without words, using falsetto, called *bujeo*. The sung *mejorana* may take one of three different forms: the *zapatero*, which starts and finishes on the tonic (or harmony of the tonic); the *mesano*, which starts and finishes on the dominant (or harmony of the dominant); and the *gallino*, which is in a minor key. The *mejorana-gallino*, in turn, is either *cantar a lo divino*, when texts have religious themes, or *cantar a lo humano*, when they deal with secular subjects.

The *mejorana* is a collective dance in which men stand in a row facing an equal number of women. The two rows of dancers advance until they meet and then recede to their point of departure; this movement is repeated several times. At a predetermined moment, the two rows cross through each other to occupy opposite sides. The dance is divided into *paseo* (strolling) and *zapateado* (foot-stamping in an intricate pattern).

Other important folkdances are the *cumbia* and the *punto*. The *cumbia* is a dance of definite African origin. It is in 2/4 metre, and has a vocal and an instrumental version, both danced; the melody is played on the *rabel* or the violin, although occasionally the accordion is used. The melody usually consists of short phrases, constantly repeated, using the chords only of the tonic and dominant.

Ex.3 *Arriba monteriano, tamborito tonada;* transcr. R. Cordero

It is accompanied by the *mejoranera* or the *bocona* in a constant rhythm of quavers, against semiquavers (with an occasional quaver) which are beaten on the two heads and the wood of the *tambora*. While the more European influenced version of the folk *cumbia* (found especially in the Central Provinces) relies primarily upon string instruments, the more Afro-Panamanian traditional *cumbia* may include more than one drum together with a *churuca* or *guáchara* (scraper) and features an alternation between female solo and chorus singing similar to a call and response pattern. The dance is performed by separate mixed pairs revolving around the orchestra, and each woman carries a lighted bundle of candles.

Like the *mejorana* and the *cumbia*, the *punto* exists in both vocal and instrumental versions, and like those of the *cumbia* both are danced. The melody of the *punto* is also played on the *rabel* or the violin and accompanied by the *mejoranera* or the *bocona*. It is in 6/8 metre with a sustained rhythm of three quavers to a beat in the accompaniment, while in the melody some beats are divided into two quavers. However this does not entail a change to 2/4 metre such as occurs in the *mejorana*. The *punto* is danced collectively by couples, with *paseo* and *zapateado* steps like those of the *mejorana*. It differs from the latter in having a more stylized melodic line with various periods of two phrases, the first ending on the dominant and the second on the tonic. The initial period returns frequently, giving a rondo character to this dance. When the *punto* is in a minor key it is called *coco*.

The *congo* dance and music complex is centred in communities of higher African ethnicity and cultural retention in the Caribbean coastal region. A *congo* performance group includes three or four drummers on *congos*, single-headed wedge-hoop drums; a female chorus; and dancers that act out historical recreations of the slavery period and subsequent emancipation. The *revellín* (lead singer, called *cantalante* outside the *congo* community) engages the chorus in call and response vocals. The *revellín* usually begins a performance, followed by the chorus who also add *palmadas* (handclapping) on the downbeats of phrases, and the drums enter one at a time to create the full complement of musicians to accompany the dance drama. Common themes include passage on slave ships and stories of escaped slaves, as well as more general Christian-derived themes. Although the dancers follow the rhythmic foundation of the musical accompaniment, often two distinct storylines are given simultaneously as the verses may not always exactly coincide with dancers' historical portrayal. Although becoming less common, traditionally *congo* groups pay visits to other *congo* groups' *palacios* (palaces), houses constructed as performance spaces.

Another dance drama, involving different types of devil figures, is one of the most important contemporary public performances. The dances and processions of the *diablos sucios*, found in the interior, are accompanied by various combinations of a *pito* (transverse cane flute), guitar and button accordion. The dancers play castanets and *vejigas*, inflated animal bladders struck by a stick. Their performances on Corpus Christi have elevated their bright red striped costumes and grotesque masks to prominent national symbols of Panamanian cultural identity. A related tradition is the *diablos de los espejos* ('devils with mirrors'), or *gran diablos* ('great devils'), where dancers enact liturgical dramas to an accompaniment that can include accordion and drums similar to *congo* drums.

Other Afro-Panamanian musical traditions include the *bullerengue* and the *bunde*. The accompaniment to both dances consists of several drums, hand clapping and responsorial female singing. The *bullerengue* is found principally in Darién and the dance is closely related to the *tamborito*. Calypso, somewhat modified from its Trinidadian and Jamaican form, is still performed but with Spanish lyrics by descendants of Afro-Caribbean immigrant canal contract workers known as Antillanos. In this community, centred in the canal zone and Colón, many former traditional music practices (such as contradance and cuadrille) have fallen into disuse, and are now relegated to folklore presentations.

The *grito* (field holler or shout), found especially on the Azuero peninsula, probably developed as a means of communication during agricultural work. At present it is also commonly performed by both men and women on social occasions, as a vocal duel.

3. POPULAR MUSIC. The principal form of Panamanian popular music is generally known simply as *música típica*. The earlier rural instrumentation consisted of a two or three row button (diatonic) accordion, a triangle, one or more *tambores* and a *caja* (double-headed drum played with hand and a stick). Extensive urbanization in the latter half of the 20th century brought *música típica* to the attention of urban dwellers. In the 1950s and 60s Yin Carrizo, Victorio Vergara and Sandra and Sammy Sandoval helped to establish *música típica* as a national genre. Related to, and influenced by, the Colombian *cumbia* and *vallenato*, *música típica* has tended to eschew the *cumbia*'s integration of brass sections and other influences from *salsa* and other Caribbean music. In general, *música típica* performers in Panama retain a more folk-rooted style and instrumentation, typically incorporating drum kit, bass, guitar and the indispensable button accordion. The widespread acceptance of the genre is illustrated in the stature of *música típica* performers such as Osvaldo Ayala, who has recorded with the national symphony orchestra as well as with several international artists.

Many Caribbean styles have significantly influenced musical culture in Panama, substantiating the country's claim as the 'crossroads of the Americas'. One important example is the popularity of the Haitian *konpas* band Tabou Combo, who resided in Panama for much of the 1970s and 80s. During the same two decades, Euro-Panamanian Rubén Blades became one of the most influential singer-songwriters and band leaders of *salsa*. While most of his contributions to *salsa* have taken place in New York, more recently his creative activity has been centred on Panama. His Grammy-winning album *La rosa de los vientos* (1996) featured compositions and performances by other Panamanian musicians. Similarly, jazz pianist and composer Danilo Pérez lives primarily in New York but his 1998 album *Central Avenue*, named after Panama City's major thoroughfare, contains some elements of Panamanian music. Also maintaining a residence in New York is Afro-Panamanian 'El General' (Edgardo A. Franco) who has been at the forefront of the type of Spanish-language rap sometimes labelled 'dancehall reggaespañol', an off-shoot of the Jamaican reggae dancehall style. El General's broad bilingual appeal was aided by his recordings of separate versions of the same song in

English and Spanish as well as occasionally mixing both languages in the same song. *Rock panameño* (or *rock nacional*) grew in importance in the 1990s (an international festival has been held since 1996). Spearheaded by the band Equinox, some of the most innovative developments have been in the more experimental style of *rock progresivo*.

GERARD BÉHAGUE (I), ROQUE CORDERO/T.M. SCRUGGS (II, 1–2), T.M. SCRUGGS (II, 3)

Pan American Association of Composers. Organization dedicated to the promotion of experimental contemporary music and its performance in the USA, Latin America and Europe. It was founded by Edgard Varèse in New York in 1928 after the discontinuation of the INTERNATIONAL COMPOSERS' GUILD (1921–7). The association was one of the first to encourage cooperation among composers throughout the Americas and to stimulate performances of American music outside the USA. Henry Cowell was acting president from 1929 to 1933; other composer-members were Antheil, Carlos Chávez, Ives (who gave considerable financial support), Riegger and Salzedo. Membership was small and concerts were managed by the composers themselves. Slonimsky, the regular conductor for the association from 1931, directed the premières of several significant American works, and in 1933 the association sponsored a series of weekly concerts on radio station WEVD, New York. Although it achieved greater success and recognition than the International Composers' Guild, the Pan American Association fell victim to the Depression and was disbanded in 1934.

VIVIAN PERLIS

Panassié, Hugues (*b* Paris, 27 Feb 1912; *d* Montauban, 8 Dec 1974). French writer on jazz. After studying the saxophone he first wrote about jazz at the age of 18. He was one of the founders (in 1932) and then president of the Hot Club de France, and from 1935 to 1946 he was the editor of the journal *Jazz-hot*. With his unrivalled enthusiasm for communication, Panassié wrote hundreds of articles for this and other periodicals and was the author of several books, notably *Le jazz hot*, an important study that was among the first to treat jazz seriously. In 1938 Count Basie dedicated to him and recorded a composition called *Panassié Stomp*. The same year, in New York, Panassié organized a series of small-group recording sessions with Mezz Mezzrow which also included (at various times) Tommy Ladnier and Sidney Bechet; these were highly influential and contributed considerably to the New Orleans revival movement. In 1939 he recorded a swing septet under the leadership of Frankie Newton. However, Panassié's reputation as an articulate advocate of jazz has to some extent been tarnished by his extreme conservatism: from the mid-1940s he expressed the opinion that bop was not jazz, thus denying the evolution of the genre. His private collection is now in the Discothèque Municipale at Villefranche-de-Rouergue.

ANDRÉ CLERGEAT

Panderete (Sp.). *See* TAMBOURINE.

Pandiatonicism [pandiatonism]. A term coined by Slonimsky (*Music since 1900*, 1938, rev. 4/1972; *Thesaurus of Scales and Melodic Patterns*, 1947) to denote the free use of several diatonic degrees in a single chord, the 6th, 7th or 9th being the most usual additions to the triad. Such added notes are usually placed in the treble, so that their positions as natural harmonics are emphasized. Pandiatonicism differs from polytonality in avoiding the superposition of different keys.

□

Pandolfi Mealli, Giovanni Antonio (*fl* 1660–69). Italian composer and violinist. He was among the instrumentalists of Archduke Ferdinand of Austria at Innsbruck when

his opp.3 and 4 were published in 1660. The 1669 volume is attributed only to 'D. Gio. Antonio Pandolfi' but there is little doubt that it is by the same composer. The 1660 sonatas are characterized by rhapsodical, improvisatory outpourings over simple continuo accompaniments. While requiring considerable manual dexterity they never exceed fifth position. The designation 'per chiesa e camera' suggests an all-purpose style, and all 12 sonatas bear dedications, some to such famous musicians as Antonio Cesti, then *maestro di cappella della camera* at Innsbruck. The 1669 collection is remarkable in its choice of instrumentation: besides the 'terza parte della viola a beneplacito' (actually essential), the specified continuo is organ, a common chamber instrument but hardly ever mentioned, as here, in connection with dances. The dedication refers to performances at an academy.

ROBIN BOWMAN/PETER ALLSOP

Pandolfini, Angelica (*b* Spoleto, 21 Aug 1871; *d* Lenno, Como, 15 July 1959). Italian soprano. As the daughter of Francesco Pandolfini, she was brought up with a singing career in view, though she first studied the piano in Paris. She trained as a singer under Jules Massart and made her début in *Faust* at Modena in 1894. Later that year in Malta she became associated with the new *verismo* operas, and was soon known throughout Italy as an outstanding Mimì. 1897 brought her début at La Scala where, in 1902, she created the title role in Cilea's *Adriana Lecouvreur*. Her repertory also included Eva in *Die Meistersinger* (sung in Italian), Desdemona and the heroines of *La traviata* and *Aida*, both of which revealed weaknesses and presaged her early retirement in 1909. She made only five records, all extremely rare in their original form. Among them is Adriana's first aria, sung with tenderness and some endearing personal touches. (*GV*, R. Celletti)

J.B. STEANE

Pandolfini, Francesco (*b* Termini Imerese, Palermo, 22 Nov 1833; *d* Milan, 15 Feb 1916). Italian baritone. He studied in Florence with Ronconi and made his début in 1859 at Pisa as the Count of Vergy in Donizetti's *Gemma di Vergy*. After singing in Genoa, Turin and Rome, in 1871 he was engaged at La Scala, where he sang Don Carlo (*La forza del destino*) and, in 1872, Amonasro in the first Italian performance of *Aida*. He created Arnoldo in Ponchielli's *I lituani* (1874). At Covent Garden in 1877 he sang Rigoletto, Antonio (*Linda di Chamounix*) and Ford (*Die lustigen Weiber von Windsor*), returning in 1882 for Nélusko and Amonasro. He sang at Monte Carlo (1884) as Alphonse (*La favorite*) and Valentin (*Faust*). In 1887 he was engaged at the S Carlo. His repertory included Severo (*Poliuto*), Alfonso (*Lucrezia Borgia*), Riccardo (*I puritani*), Thomas' Hamlet, Macbeth, Don Carlo (*Ernani*) and Alfio (*Cavalleria rusticana*), which he sang at his farewell in Rome (1890).

ELIZABETH FORBES

Pandora [pandore]. *See* BANDORA.

Pandoura (Gk.; Lat. *pandura*). An instrument generally identified with the Greco-Roman LUTE (it is generally classified as a CHORDOPHONE). Lutes made a late entry into the Greco-Roman world, not appearing until after Alexander's Persian conquest. They are represented chiefly on a fairly small number of Greek terracottas and Roman sarcophagi. Organologists distinguish two types among these lutes: one with a roughly rectangular soundbox that is clearly demarcated from the neck, and one with an almond-shaped soundbox that merges with the neck. The instruments are generally pictured played by a female figure (or by Eros) stopping the strings with her left hand and plucking them, often by plectrum, with her right. Pollux referred to the pandoura as *trichordon* ('three-string'), but the sculpted lutes show varying, if small, numbers of strings. Perhaps it is best simply to say that the instruments had fewer strings than either the kithara or the harp.

There was considerable confusion, particularly among later authors, about the identification of the pandoura. Cassiodorus and Isidore of Seville described it as a wind instrument invented by the god Pan, and the *Suda* identified it with the PĒKTIS, a type of harp. More helpfully, Pollux vaguely associated it with the monochord, and Nicomachus actually confused the two instruments; in fact the monochord, with its long narrow fingerboard, is closely related to the lute. 'Pandoura' and the related 'tanbur' are names for lutes found today from the Balkans to the Middle East, and the term 'bandurria' is also derived from 'pandoura'.

Panenka, Jan (*b* Prague, 8 July 1922; *d* Prague, 12 July 1999). Czech pianist. He studied with František Maxián in Prague and with Serebryakov in Leningrad, made his début in Prague in 1944 and in 1951 won the international piano competition there. He was a distinguished chamber musician: he was a member of the Suk Trio (from 1957) and played with Josef Suk, Josef Chuchro, the Smetana Quartet and other groups. In 1959 he was appointed a soloist with the Czech PO. His technique was brilliant, but his playing was devoid of superfluous effects or ostentation. Panenka performed in music centres of Europe, South Africa, Australia, New Zealand, Japan, India and China, and made numerous recordings. His performance of Beethoven's piano concertos won him a state award (1972), and his recording with Suk of Janáček's and Debussy's sonatas a Grand Prix du Disque (1959). He taught at the Prague Academy (AMU) from 1965.

ALENA NĚMCOVÁ

Panerai, Rolando (*b* Campi Bisenzio, nr Florence, 17 Oct 1924). Italian baritone. He studied in Florence and Milan, making his début in 1946 in Florence as Enrico Ashton (*Lucia di Lammermoor*). At Naples (1947–8) he sang Pharaoh (*Mosè in Egitto*), Luna, Germont and Rossini's Figaro. In 1951 he made his La Scala début as the High Priest (*Samson et Dalila*), returning as Enrico Ashton, Apollo (*Alceste*), the Husband (*Amelia al ballo*) and in the title role of *Mathis der Maler* (Italian première, 1957). In 1955 he created Ruprecht in the stage première of *The Fiery Angel* in Venice and sang Mozart's Figaro in Aix-en-Provence. He made his Salzburg début in 1957 as Ford, then sang Masetto, Paolo (*Boccanegra*) and Guglielmo, returning as Ford in 1980. At San Francisco (1958) he sang both Figaros and Marcello. In 1962 he created the title role of Turchi's *Il buon soldato Svejk* (Milan). He sang all over Italy, in Vienna, Munich, Paris and at the Metropolitan. Having made his Covent Garden début in 1960 as Rossini's Figaro, he returned in the 1980s as Don Alfonso, Don Pasquale, Falstaff and Dulcamara. He had a dark-toned, vibrant voice and incisive diction, heard to advantage on his recordings of such roles as Guglielmo, Luna, Ford, Silvio and Marcello.

ALAN BLYTH

Panharmonicon. A MECHANICAL INSTRUMENT of the Orchestrion type. It was invented by JOHANN NEPOMUK MAELZEL and first exhibited by him in Vienna in 1804. The instrument was designed to play orchestral music, and various accounts describe it as capable of imitating the sounds of the french horn, clarinet, trumpet, oboe, bassoon, German flute, flageolet, drum, cymbal and triangle. The sounds were actually produced by various flue, reed and free-reed organ pipes, as well as air-driven percussion devices. The Panharmonicon achieved popularity in a period when such mechanical curiosities had great public appeal and were frequently taken on tour; Maelzel's instrument had many imitators, including a virtually identical instrument (made by a fellow Viennese, Joseph J. Gurk) exhibited in Germany and England in 1810 and 1811.

Maelzel's Panharmonicon was taken to the USA in 1811 and was exhibited throughout the eastern states between June that year and June 1812 by the Boston organ builder William M. Goodrich, after which it was shipped back to Europe. In 1824 Goodrich built a replica of the instrument for a Boston museum, which again was exhibited in various places for a year.

The repertory of the Panharmonicon consisted largely of popular marches and overtures, as well as pastorales, rondos and similar pieces. Music by Haydn, Mozart and Cherubini (as well as many lesser composers) was also performed on the instrument, the most remarkable example being Beethoven's 'Battle Symphony' (*Wellingtons Sieg*, 1813), originally written for Maelzel's instrument and later transcribed for orchestra.

The Panharmonicon was a tour de force of musical instrument technology which later resulted in the ORCHESTRION. Another instrument of this genre was the APOLLONICON.

Pan Huanglong [Pan Hwang-Long] (*b* Puli, 9 Sept 1945). Taiwanese composer and music educator. He graduated from the National Taiwan University (1967–71) then studied composition with Lehmann at the Musikhochschule and Musikakademie in Zürich (1974–6); he continued his studies with Helmut Lachenmann at the Hochschule für Musik and Theater in Hanover (1976–8) and with Isang Yun at the Hochschule der Künste in Berlin (1978–80). Upon his return to Taiwan he became professor of music and composition at the National Institute of the Arts in Taibei and founded the Modern Music Centre there in 1984. This organization became the kernel of the Taiwan branch of the ISCM, which Pan co-founded with Wen Longxin and Zeng Xingkui in 1989.

While making use of the entire array of modernist and avant-garde techniques, Pan's music is often inspired by Chinese philosophical or mythical concepts. *Hudiemeng* (1979) and *Du, ein sterblicher, unnützer Mensch* (1981) are based on texts by the Daoist philosopher Zhuangzi. *Yijing* (1995–6) makes use of the *Classic of Changes* (also an inspiration to Cage), while *Penglai* (1978) is a sonic depiction of a Chinese paradise. His compositions series *Yin-Yang* (1992–5) and *Wuxing shengke* (1979–86) are based on the Chinese philosophy of change in which all parts of the cosmos are said to be in constant flux. These works depict the permutations of the five primary elements as they successively produce and destroy each other: movement generates new movement, or is destroyed by new movement. Each motif is subjected to constant metamorphosis: change may occur in sound colour, texture, structure, dynamics or metre.

BARBARA MITTLER

Paniagua y Vasques, Cenobio (*b* Tlalpujahua, Michoacan, 30 Oct 1821; *d* Córdoba, Veracruz, 2 Nov 1882). Mexican composer. He began his career as a violinist in the Morelia cathedral orchestra, which was conducted by his uncle. When the uncle moved to Mexico City Paniagua joined him, becoming a member of the orchestra of the metropolitan cathedral. He also taught himself composition by reading an Italian translation of Reicha's *Cours de composition musicale*. Through his contacts with Bottesini and other foreign musicians then resident in Mexico, he eventually succeeded in having his opera *Catalina de Guisa* (composed in 1845, to a libretto by Felice Romani) produced in Mexico City on 29 September 1859. Though sung in Italian, it was the first Mexican opera ever staged, and its enormous success brought him a host of followers, thus establishing a true operatic school in Mexico. He also wrote a one-act comic skit, *Una riña de aguadores*, produced in 1859. His second opera, *Pietro d'Abano*, with a libretto by Antonio Boni, produced in 1863, was less enthusiastically received. At that time he had organized a Mexican troupe through which he intended to promote not only his works but also his daughter's career as a singer. The enterprise failed, seriously damaging his career, and in 1868 he moved from the capital to the small town of Córdoba. His later works, which added nothing to his reputation, consisted mostly of religious music, including a cantata *Siete palabras* (1869), an oratorio *Tobias* (1870), a requiem (1882), and about 70 masses. He also wrote dances, marches and other salon pieces for the piano. Paniagua's most important pupil was Melesio Morales.

JUAN A. ORREGO-SALAS/R

Panisorhythm. *See* ISORHYTHM.

Panizza, Héctor [Ettore] (*b* Buenos Aires, 12 Aug 1875; *d* Milan, 27 Nov 1967). Argentine conductor and composer. He began his musical studies with his father Giovanni Grazioso Panizza, an Italian cellist and composer, and continued them at the Milan Conservatory with Giuseppe Frugatta (piano), Amintore Galli (harmony), Michele Saladino (counterpoint) and Vincenzo Ferroni (composition). After graduating with the first prize in composition (1898), he launched an impressive conducting career, becoming the first Argentine opera director to achieve international acclaim. He conducted musical seasons at Covent Garden (1907–14) and at La Scala (1916–17, 1921–32), where he shared the podium with Toscanini (1921–9). At the Metropolitan Opera he succeeded Tullio Serafin (1934–42), and at the Teatro Colón he intermittently directed 20 operatic seasons (1921–55). He was best known for his performances of the Italian lyric repertory, but his interpretations of Wagner and Strauss were also admired.

As a composer, Panizza stands as one of the first in Argentina to write operas and symphonic music with a solid sense of technical mastery. Unlike many native musicians of his day he remained remote from the prevailing nationalist current, preferring to align himself aesthetically with *verismo*. His popular opera *Aurora* (1907), set during the Argentine revolutionary period, initially provoked sharp controversy because of its Italian text (by Luigi Illica, one of Puccini's principal librettists) and its lack of a specifically Argentine musical content. Many, however, acknowledged the work as artistically effective, and it later earned a permanent place in the repertory of the Teatro Colón, where it was performed in a revised, Spanish version.

WORKS

Stage: Il fidanzato del mare (op, 1, R. Carugati), 1896, Buenos Aires, Teatro de la Opera, 15 Aug 1897; Medioevo latino (triptych, 3, L. Illica), 1899, Genoa, Politeama Genovese, 17 Nov 1900; Aurora, 1907 (op, 3, Illica after H. Quesada), Buenos Aires, Colón, 5 Sept 1908, version in Sp., 1945; Bizancio, 1939 (poema dramático, 3, G. Macchi after A. Bailly), Buenos Aires, Colón, 25 July 1939
Orch: Bodas campestres, suite, *c*1892; Theme with Variations, *c*1916

DEBORAH SCHWARTZ-KATES

Pankiewicz, Eugeniusz (*b* Siedlce, 15 Dec 1857; *d* Tworki, nr Warsaw, 24 Dec 1898). Polish pianist and composer. He was the brother of the painter Józef Pankiewicz. He studied the piano at Lublin, at the Warsaw Music Institute (?1875–7) under Józef Wieniawski and at St Petersburg (1878–80) under Leschetizky; he was probably at the Moscow Conservatory in 1880, and studied composition in Warsaw with Władysław Żeleński (1880–81) and Zygmunt Noskowski (1881–3). He taught the piano at the Warsaw Music Institute in the 1880s and 90s (with frequent interruptions, occasioned by travel or illness); these were his most creative years as a composer. He also worked at the Marian Institute and as a private tutor. He performed as a solo pianist, chamber music player and accompanist in Warsaw and elsewhere in Poland, but his chief activity was as a composer. From 1895 to 1898 he underwent treatment in a mental hospital.

Pankiewicz is best known for his solo songs, a field in which he was among the most important composers before Szymanowski. In his vocal compositions he made particular use of variation form and used an extensive range of harmonic as well as polyphonic devices; he also greatly extended the accompanist's role. Some of his songs are no more than modern arrangements of Polish folksongs, notably those of the Tatra mountains, whose original tonal characteristics he managed to preserve; many are declamatory in character and some of these contain elements of recitative. In his original songs, he drew on texts by well-known Polish and foreign poets. He composed 48 solo songs, which were reprinted several times, many of them in the collection *Eugeniusz Pankiewicz: Pieśni zebrane* (Kraków, 1956–7). His instrumental works include a Theme and Variations for string quartet (now lost) and about 40 piano miniatures in which Chopin's influence is apparent; among these works the Variations on an Original Theme in D is the most significant. He left many sketches and unfinished works.

WORKS

MSS of extant unpublished works in family's private collection

Choral: 2 songs, TTBB, op.15: no.1 [Hej do pracy (Hey to Work)] (Warsaw, 1890), no.2 [Krakowiak] in Poźniak; 5 songs, SS, pf, op.16: no.3 (Warsaw, 1898), 3 in Poźniak; Barkarola, S/T, male vv, pf, op.17 (Kraków, 1955); 6 pieśni weselnych ludowych polskich [6 Polish Wedding Folksongs], SA, pf, op.18 (Warsaw, 1917); Ballada (A. Oppmann), S, A, vv, pf, op.21; 3 songs, TTBB, 1 in Poźniak, 2 pubd singly (Warsaw, 1890, 1913)

KATARZYNA MORAWSKA

Pann, Anton (*b* Sliven, Bulgaria, 1796; *d* Bucharest, 2 Nov 1854). Romanian printer and publisher. He studied music in Bucharest (1812–18) with Dionisie Fotino and Petru Efesiu. As a psalm reader and teacher of psalmody, he founded in 1843 the first printing shop in Bucharest to publish traditional church service music in the Romanian language in place of Greek; he also published folklore collections, calendars, almanacs and folk writings. His first printed book, *Bazul teoretic şi practic al muzicii bisericeşti* ('The theoretical and practical basis of church music', 1846), was followed by a number of church service books. He also published a book of carols (1830–54) and collected folk music, which he transcribed into church modes and published in six booklets: *Spitalul amorului sau Cîntătorul dorului* ('Love hospice or the singer of longing', 1850, 2/1852). After his death his printing shop (equipped with music printing presses) became the property of the Bucharest Metropolitan Church.

VIOREL COSMA

Pannain, Guido (*b* Naples, 17 Nov 1891; *d* Naples, 6 Sept 1977). Italian musicologist and composer. He studied the piano with his father and counterpoint and harmony with his grandfather; he continued both subjects at the Naples Conservatory with Camillo de Nardis and took an arts degree at Naples University (1914). Subsequently he was professor of music history at Naples Conservatory (1915–47) and at the Accademia Nazionale d'arte drammatica in Rome. He began his active career as a music critic for the *Corriere del mattino* (1920) and continued at other Neapolitan dailies, including *Battaglia del mezzogiorno* (1922), *Roma* (1928–30) and *Il mattino* (1932–43); he then moved to the Rome daily *Il tempo* (1947) and next to the weekly *Epoca* (1950–57).

Pannain's chief musicological work was the study of Neapolitan music, resulting in surveys of the musical environment created by the oratorio of Filippo Neri and his followers, the various 15th- to 18th-century schools (including a special study of Domenico Scarlatti), Bellini, and the conservatory and its history. Two early articles deal with manuscripts in the Naples Biblioteca Nazionale. With Prota-Giurleo he provided the first penetrating studies of the city's music. Another lifelong interest was the music of Monteverdi, represented by numerous articles in *Rassegna musicale* (1958–68) and by an analysis of the madrigals and sacred polyphony in *Claudio Monteverdi* (1967). His early compositions were influenced by Impressionism but in later works (the operas *Beatrice Cenci*, 1942, and *Madame Bovary*, 1955) he returned to a post-Puccini Italian style. He wrote on contemporary music, an interest probably stimulated by Pannain's own

composing. The concern to arrive at an aesthetic judgment which characterizes his research shows his adherence to Croce's views. He was a member of the Accademia Nazionale di S Cecilia and the Lincei Academy.

CAROLYN GIANTURCO

Pannell, Raymond (*b* London, ON, 25 Jan 1935). Canadian composer. He studied the piano with Steuermann, and composition with Bernard Wagenaar and Vittorio Giannini at the Juilliard School (1954–9). Beginning in the mid-1960s he became increasingly involved with opera. In 1966 he directed an opera workshop at the Stratford Festival, Ontario and during the period 1968–70 served as the assistant director and resident composer of the Atlanta Municipal Theater. He co-founded Toronto's Co-Opera Theatre in 1975 and became its general director, a post he held until 1984. His own opera, *The Luck of Ginger Coffey* (1967) was commissioned by the CBC for Canada's centennial year. The work juxtaposes elements from jazz, serial and popular musics within a traditional operatic structure. *Exiles* (1973) combines an eclectic mix of musical materials with poetry and photography. Pannell's video opera, *Aberfan* (1976), inspired by the Welsh disaster in which a slag heap buried schoolchildren alive, won the Salzburg TV Opera Prize in 1977 and an ACTRA Award in 1978. In the 1980s Pannell turned his creative energies to writing fiction (*EMC2*).

ELAINE KEILLOR

Panni, Marcello (*b* Rome, 24 Jan 1940). Italian conductor and composer. He studied at the Rome Conservatory (conducting with Ferrara, 1963; composition with Petrassi, 1964), and then studied conducting with Manuel Rosenthal at the Paris Conservatoire (1965–8). In 1971 he founded the Ensemble Teatromusica, with whom he performed his musical pantomime, *Klangfarbenspiel*, at the Piccola Scala, Milan (1972), and the 'azione scenica' *La partenza dell'Argonauta* at the Maggio Musicale Fiorentino. He has conducted rarely performed works, such as Pergolesi's *Il Flaminio* (Naples, 1982), for which he also provided a new critical edition, and has given the European premières of works by Berio, Bussotti, Cage, Feldman, Glass and others. He has also appeared as a guest conductor at La Scala, the Metropolitan Opera, the Vienna Staatsoper, the Paris Opéra and elsewhere. Panni held the Milhaud Chair in Composition at Mills College, Oakland, California (1980–84), and in 1993 was appointed principal conductor of the Bonn Opera, becoming musical director in 1995. In 1994 he was appointed artistic director of the Pomeriggi Musicali in Milan. He has recorded Pergolesi's opera *Adriano in Siria* and oratorio *La morte di San Giuseppe*, Paisiello's *Nina, pazza per amore*, Handel's *Giulio Cesare*, Donizetti's *La fille du régiment*, Petrassi's *Il Cordovano* and Berio's *Passaggio*.

Panni's compositions include choral, orchestral and chamber music, works of music theatre and two operas, *Hanjo* and *Il giudizio di Paride*.

RENATO MEUCCI

Panninger, Leonhard. *See* PAMINGER, LEONHARD.

Panny, Joseph (*b* Kolmitzberg, Lower Austria, 23 Oct 1794; *d* Mainz, 7 Sept 1838). Austrian violinist and composer. He studied the violin with his father and the organ and harmony with his grandfather, Joseph Breinesberger. At the age of 19 he became a schoolteacher in Greinberg, where Joseph Eybler chanced to hear a cantata of his; impressed by Panny's talent, he offered to teach him, and by 1815 Panny was in Vienna studying with Eybler. He made his début on 13 April 1825 in a programme of his own works, an overture, choruses, an Adagio and Polonaise for oboe and bassoon, and excerpts from an opera, *Das Mädchen von Rügen*. Undaunted by a review in the *Allgemeine musikalische Zeitung* that found his music full of gaucheries and lacking in originality, he continued to give similar concerts, in June 1827 and February 1828, to audiences comprising mainly complimentary-ticket holders.

As a violinist Panny is remembered less for his own prowess than for his brief association with Paganini, whom he met in Venice and in Trieste in 1824. Paganini played Panny's dramatic sonata 'The Tempest' at his farewell concert in Vienna on 24 July 1828, but before the end of the year had found both sonata and composer unsympathetic. Panny's talent as a performer did not match his ambition, persistence or advance publicity. In 1829 he made an extensive tour of Germany, and in 1830 he toured northern Germany. He was active as a conductor in Bergen during the winter of 1831–2 and in Altona the following year. In 1834 he founded a music school at Weisserling, Alsace. His final tour took him to Berlin, Scandinavia and England where, according to the *Allgemeine musikalische Zeitung*, he did not arouse enthusiasm. In 1836 he settled in Mainz (where Schott had already published many of his works), married, founded a music school and continued to compose. But his health failed in 1837.

ALBERT MELL

Panocha Quartet. Czech string quartet. It was formed at the Prague Conservatory in 1968 from a trio consisting of Jiří Panocha (*b* Kladno, 3 June 1950), Jaroslav Hlůže and Jaroslav Kulhan (*b* České Budějovice, 7 Dec 1950). At the suggestion of their teacher, Josef Micka, they recruited Pavel Zejfart (*b* Prague, 7 May 1952) to make up a quartet. In 1971 Hlůže was replaced on the viola by Miroslav Sehnoutka (*b* Prague, 17 Jan 1952). Having won prizes in several national competitions, they made their US début in 1975 and their German and Irish débuts the following year. In 1980 they toured Japan with the Smetana Quartet, whose members had been among their teachers. Since then they have enjoyed an international reputation. Their repertory, founded on the Czech masters and the Viennese classics, includes the complete cycles by Dvořák and Martinů (both of which they have recorded) and a large number of quartets by Haydn, as well as many 20th-century works. Their playing is admired for its fine tone, stylistic sensitivity, technical address and polish. They have collaborated on record and in concert with the pianists Rudolf Firkušný, Jan Panenka and András Schiff. Jiří Panocha plays a 1743 violin by Carlo Antonio Testore of Milan.

TULLY POTTER

Panofka, Heinrich (*b* Breslau, 3 Oct 1807; *d* Florence, 18 Nov 1887). German singing teacher, violinist, composer and critic. He studied singing with the Kantors Strauch and Förster, and learnt the violin with Joseph Mayseder. His initial career was as a violinist. About 1834 he settled in Paris, as a performer, critic and composer, and editor of and contributor to the new *Gazette et revue musicale*; he was also a correspondent for the *Neue Zeitschrift für Musik*. He was a prolific composer for the violin and of solo songs. After 1840 Panofka's interest turned towards the art and techniques of the great singers he heard in Paris. He studied the methods of Marco Bordogni, and went to London in 1847 and directed the chorus of the Royal Italian Opera under Lumley. He met Jenny Lind there and studied her vocal techniques, as well as those of Lablache, Fraschini and Staudigl. In London he was esteemed more as a singing teacher than as a violinist. His first didactic work, the *Practical Singing Tutor* (London, 1852), was published shortly before he returned to Paris, and his *L'art de chanter* op.81 (Paris, 1854) brought him fame which he could never have achieved as a violinist or a composer. His *Abécédaire vocal* (Paris, 1858), intended for beginners, was equally successful and innovatory, bypassing the interminable *solfège* exercises found in other singing tutors of the time. The *Voix et chanteurs* (Paris, *c*1870), which includes biographical notices of famous contemporary singers, is the product of Panofka's stay in Florence in the late 1860s. Panofka's vocal studies were enormously influential in Europe and America during the second half of the 19th century. They still provide useful practice material; the *Vademecum du chanteur* (the second part of *L'art de chanter*) and two sets of vocalises (opp.85–6) are available in modern editions.

Panormitano, Bartolomeo Lieto. *See* LIETO PANHORMITANO, BARTOLOMEO.

Panormitano, Mauro. *See* CIAULA, MAURO.

Panormo. Sicilian-English family, makers of violins, bows and guitars. Vincenzo Panormo (*b* Monreale, nr Palermo, 30 Nov 1734; *d* London, 19 March 1813) is thought to have made violins before leaving his native Sicily, but it is doubtful whether any instruments have survived from that period. According to his eldest son Francis, Vincenzo taught himself from an early age to make musical instruments of various kinds. However, since he rarely labelled his instruments, most accounts of his life are vague; the story becomes clearer after his arrival in England. He went to France, where he apparently worked profitably until the Revolution drove him to London in 1789. He is believed to have been working in Dublin around 1791, but was resident in London again by 1793, where his shop was first in Bloomsbury and finally in Soho. A printed label shows that in Paris he worked in the rue de l'Arbre Sec in the 1770s; reproductions of this

label have been inserted into all sorts of violins, mostly by other makers. From London only manuscript labels are known, and these are rarely seen, implying that his work was mostly sold unsigned. Sometimes he branded his surname at the top of the back or on the lower rib of an instrument.

Whether or not he had formal instruction in Italy, Panormo's French-period violins are much more akin to those of the contemporary Paris makers than to any of the Italians, although he took most of his ideas from Stradivari. In London he both aided as well as learnt from the leading dealer of the day, John Betts, and one of his first pupils was almost certainly the fine Scottish maker Matthew Hardie. A comparison of Panormo's instruments with those of his London contemporaries shows him to have been the most important maker of his time, perhaps better than the others because of an innate Italian flair for woodworking. His varnish was also superior at times, although not always, for cheaper instruments were also much in demand. Panormo is also famed for his double basses.

Joseph Panormo (*b* Naples, 1767; *d* London, 20 July 1837), Vincenzo's second son, was an able assistant to his father; he continued to make instruments after his father's death, but finally died in St Anne's Workhouse 'in the greatest destitution'. As he apparently never signed his instruments there are some doubts about what he made, but most of those attributed to him come close to those of Vincenzo in quality. With the help of the eminent Spanish guitarist Fernando Sor, Joseph began making guitars, copying Sor's own Spanish-made instrument and incorporating various improvements suggested by Sor. The guitars were made lighter than before, with improved internal bracing, and to a larger model with deeper sides. Despite the success of these improvements, which made the name of Panormo synonymous with the guitar in 19th-century London, many of Joseph's instruments were labelled and sold by dealers rather than himself.

George Panormo (*b* 1776; *d* 3 Jan 1852) was the third son of Vincenzo. He made violins, cellos and bows, in which he was assisted by his son, George Louis [Lewis] (1815–77). Louis Panormo (*b* Paris, 1784; *d* Auckland, NZ, 11 Aug 1862), became the most successful of the family in making and selling guitars of high quality in his workshops in Bloomsbury. He also made instruments and bows of the violin family, the bows stamped L. PANORMO being held in particularly high esteem. In 1854 he emigrated to New Zealand, but his nephew George Louis continued the manufacture of instruments thereafter labelled 'G.L. PANORMO'.

CHARLES BEARE, JOHN DILWORTH, PHILIP J. KASS

Pan-Pacific pop. A term for neo-Polynesian acculturated music with local language texts mostly about love, the beauties of the islands, activities of island life and sad farewells. Western or Western-style tunes are used and the songs are accompanied by guitar, electric guitar, ukelele and often by percussion instruments of island and foreign origin.

In the 1990s, the term 'Pacific Beat' was used by record producers to distinguish groups who pursued popular styles such as rap and techno, in English as well as vernacular languages. Hawaiian adaptations of Jamaican reggae (sometimes called 'Jawaiian') have achieved popularity elsewhere in the Pacific.

AMY STILLMAN

Panperdut. *See* MARCABRU.

Panpipes. Instrument consisting of a number of pipes of graduated lengths, joined together either in the form of a bundle or more commonly in the form of a raft. It is classified by Hornbostel and Sachs as a set of end-blown flutes (*see* AEROPHONE). The pipes lack mouthpieces and are blown across their tops while the lower ends are stopped. The instrument is found in central Europe and in areas bordering the Pacific. In European art music the panpipes have traditionally been regarded as a pastoral instrument. Telemann specified 'flûte pastorelle' in a concert suite in E♭ (ed. A. Hoffmann in NM, no.177) and 'flauto pastorale' in a short piece in E in *Der getreue Music-Meister* (1728–9); these are often played on a recorder, but Hunt ('Fitting the Instrument to the Music', *Recorder and Music Magazine*, 1983, March, p.228) has suggested that panpipes were intended. In *Die Zauberflöte*, Mozart gave Papageno, as a 'child of nature', a set of panpipes to attract birds into his cage.

1. Early panpipes and distribution. 2. South American, Andean. 3. South American, non-Andean. 4. Oceania. 5. Central Europe and Asia. 6. China.

1. EARLY PANPIPES AND DISTRIBUTION. Though the instrument may appear as early as the 6th millenium BCEin drawings of animal dances from Çatal Hüyük in Anatolia, its earliest extant European representations appear on three bronze urns from the Illyrian Hallstatt culture of north-east Italy, dating from the 6th and 5th centuries BCE (fig.1). They show it functioning prominently in scenes from the aristocratic feudal culture of the period, such as offertory processions and festive meals. Panpipes later gained considerable popularity among the Etruscans, who enjoyed a wide variety of wind instruments. In Greece, where it was called the SYRINX, and originally had pipes of the same length stopped at various points with wax, it was an instrument of low status with

1. Panpipes: detail from a bronze urn (c500 BCE), Illyrian Hallstatt culture, in the Museo Civico, Bologna

rustic connotations. Presumably both the Illyrian and Greek instruments had a common ancestor in the Indo-European Iron Age culture of the Danube Basin; today the panpipes are an important feature of Romanian folk music (see §5 below).

The Greek instrument may be the source of the large panpipes on bronze statuettes from Parthia in the early centuries CE. The same may be the case with Sassanid panpipes (the *mushtaq*) which appear in the court orchestra of Khosrow Parviz (Khosrow II, 590–628 CE) in cave reliefs at Taq-e Bostan and on silver cups from Kālār Dasht of the 6th century. But the Sassanid *mushtaq* may equally well be of Chinese origin.

The instrument appeared very early in China (see §6 below), and is also found in Myanmar (formerly Burma), where, among the Kachin and Shan, they are played with *hnyìn* (small bamboo free-reed mouth organs) for dance music, often at times of mourning.

Panpipes are also found in the central Pacific islands and western Latin America (particularly Peru and Bolivia, where, among other names, they are called *antara*, and Ecuador, where they are called *rondador*). They are often strikingly similar to Chinese panpipes in that they are a double instrument in which each half produces a whole-tone scale. An interesting version of the instrument has the two wings entirely separated, bound together only by a cord and blown by two players. Citing such evidence Sachs (1940) argued that Pacific panpipes were all derived from those of ancient China, having spread southwards to Myanmar and eastwards across the Pacific with the aid of the ocean currents.

2. SOUTH AMERICAN, ANDEAN. One- and two-rank panpipes are played throughout the length of the Andean chain, from Colombia, through Ecuador, Peru, Bolivia, northern Chile and north-western Argentina. The Colombian *castrapuercas* or *capador* (the predominant name) receives its name from the 17th-century Spanish gelder who announced his presence with a panpipe. It is a ten-pipe panpipe in a series of five. In Ecuador, the syrinx is made of cane or, more rarely, the thin feathers of a condor or vulture. It appears in three sizes played by Quechuas: eight-tube (highlands; played with a small double-headed drum in pipe-and-tabor fashion); 15-tube (Chimborazo, at Carnival); and 20- to 43-tube (solo or in folk groups with other instruments). The tubes of the Ecuadorian *rondador* are closed at the bottom, and are arranged not in strict staircase fashion, as with south Andean instruments, but in 'zigzag' style, gradually becoming longer (*see* ECUADOR, §II, 1(ii)). In Argentina and the Bolivian altiplano, the widely accepted term for panpipe is the Aymara word, *siku*; in most instances this is a two-rank instrument, of which the second rank, of open tubes, is the same length or half as long as the first, of closed tubes. The open-pipe rank is blown softly to support the closed, melody pipes and to modify the tone colour. Both ranks resemble a raft in shape, with pipes arranged by size in a staircase pattern. The *zampoña* of Gral, Bilbao Province, Potosí Department, on the Bolivian altiplano, has its pipes ranked in joined pairs, one pair having two ranks with eight pipes in each, and the other two ranks with seven pipes in each. One rank in each linked pair is closed. The tubes of the other rank are open and cut, at an angle, to half the length of the closed tubes; they sound two octaves higher. The open pipes sound indirectly when the closed pipes are blown and amplify their sonority. *Zampoñas* elsewhere may have the open tubes the same length as the matching closed pipes, producing notes one octave higher. The Spanish *fusa* prevails in some regions, especially north-west Argentina.

Panpipes, with other native aerophones, play a major role in the festival cycle in the altiplano high plateau zone of Bolivia and Peru. Here the agricultural cycle and the cycle of saints' days determine the choice of musical instruments. The *jula-jula* panpipes (three- and four-tube) are connected with a ritual battle, part of Carnival. The *sikuri* (two-rank, 17-tube panpipes) and *lakita* (single- or double-rank, seven- or eight-tube) are linked to the agricultural cycle. Panpipes of the altiplano generally perform in pairs which share the melodic line; this practice of hocketing has been explained as necessitated by the impossibility of sustained playing at an altitude of 4000 metres. The leading panpipe is called *ira*, the follower *arca*. The number of pipes in the *arca* often differs by one from that of the *ira*. Melody proceeds in parallel organum fashion: some ensembles produce from two to four parallel octaves, other types perform in parallel 5ths and octaves. Panpipes on the altiplano are commonly played in ensembles, rarely as solo instruments. Strings and wind are rarely mixed. All flutes, including panpipes, are typically performed by men; women may dance to panpipe music. Ensembles consisting exclusively of panpipes include the *maizu* (Chipayas), *jula-jula* (Aymaras, Quechuas), and *chiribuano* (Aymaras, Quechuas, Chipayas).

2. *Rondador (panpipes) player, Cuenca, Ecuador, 1980*

3. *Lawa-Sikus (panpipe ensemble) of the Altiplano region, department of La Paz*

The *maizu* ensemble comprises four panpipes, one with three stopped tubes and three with two stopped tubes. The three-pipe instrument (*lutaqa* or *ira*) is considered masculine and the two-pipe one (*mataqa* or *arca*) feminine. They are played in hocketing pairs, as described above; the three two-pipe instruments are played in unison, each by a different performer. The instruments of the *chirihuano* ensemble are made from the *tokoro* reed, harder than the *caña-hueca* reed used for the similar *jula-jula*. Each rank of the typical pair has three or four pipes and there are up to 12 players in an ensemble: two on the lowest panpipes, the *jilawiri* (or *kilawiri*); four on the next highest, the *liku*; two on the next highest again, the *orqo*; and four on the highest, the *sanja*. There is one octave difference in pitch between one size and the next. The ensemble, using hocket technique (*ira* and *arca*), performs duple-metre *wayñus* (dance-songs), the musicians dancing as they play in keeping with traditional practice. The *siku* is a panpipe group with drum(s).

See also BOLIVIA, §II, 1 and PERU, §II, 3.

3. SOUTH AMERICAN, NON-ANDEAN. Among pre-Columbian Peruvian coastal societies, the Paracas Culture (400 BCE–400 CE) had panpipes, each in pairs of six tubes, or (from the Pisco Valley) of three to seven tubes. The south-coast Nazca (400–1000 CE) had clay panpipes (*antaras*) with three to 15 tubes which could produce untempered semitones and which show other evidence of clear tuning intentionality in manufacture. The northcoast Mochica (400–1000) and Chimú (*c*120–1460) had panpipes of three to seven tubes. The Yunca culture from coastal Trujillo and Chimbote had, among other types, two-rank panpipes of six tubes each. Today the Ocaina Indians of the Peruvian tropical forest region play a four-tube panpipe, the Bora of this region a three-tube instrument. To the south, the Orejones play ten-tube instruments and the Yaguas 22- to 32-tube (single row) syrinxes. The Conibo play bamboo panpipes. In Colombia, the coastal Motilón Indians play panpipes of bamboo and feather quills. The Cuna of the San Blas Islands off Panama play pairs of panpipes (*kamu-purui*), each of seven bamboo tubes bound into groups of three and four; the 'male' and 'female' instruments play in hocket, producing composite melodies in parallel 5ths. In the early 20th century, the Uitoto (Witoto) of the Colombian Amazon had panpipes with varying numbers of tubes. The Tucano Indians of the south-eastern Colombian Amazon play cane and bamboo panpipes. Large groups of Tucano men play antiphonally, and men play panpipes as women pound cocoa leaves.

See also PERU, §II, 2.

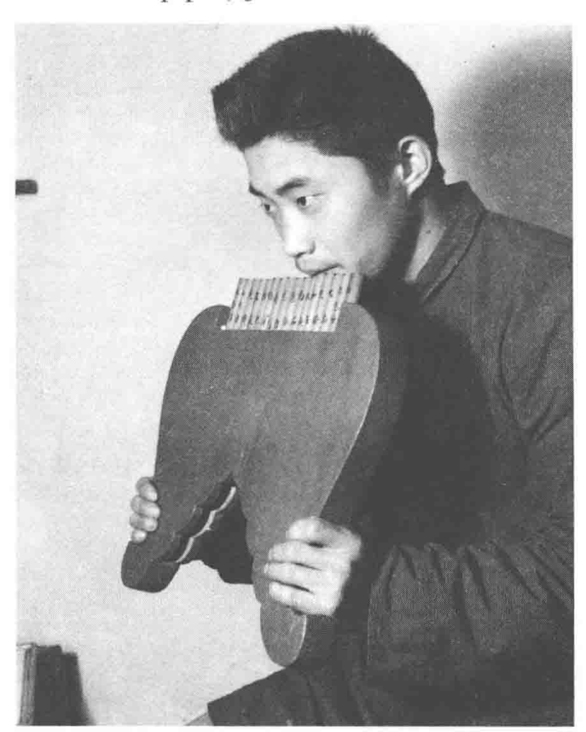
4. OCEANIA. Panpipes have reached a remarkable peak of development in the Solomon Islands, where there are elaborate ensembles played by men and boys. In Malaita there are seven extant types of ensemble, the best known of which are those of the 'Are'are people (*'au keto*, *'au paina*, *'au tahana*, *'au taka'iori*). These panpipes play 'programme music' based upon the sounds and events of nature and of daily activities including the calls of parrots, the swinging motion of a spider, raindrops falling on a leaf, or 'the satisfied cry of the pig when it is fed in the morning'. Some ensembles make use of equiheptatonic scales in which the octave is divided into seven equal steps. The melodic intervals produced by such panpipes are steps of one, two, three or more equiheptatonic units. Each ensemble of panpipes is characterized by a different number of musicians, a different organization of the scale, a particular type of polyphony and a distinctive repertory. Northwards, panpipes are found throughout New Guinea and offshore island groups including the Bismarck archipelago. The distribution of panpipes in New Guinea and the Bismarck archipelago is similar to that of rattles

4. *Rondador (panpipes) player, Cuenca, Ecuador, 1980*

and jew's harps, with a central belt of concentration from the Highlands to Morobe and another area of concentration in southern New Ireland. Both raft and bundle panpipes are found, with the raft form most common. The southern limit of expansion is marked by the Polynesian islands of Tonga (where the instrument is known as *mimiha*) and Samoa (*fa'aili'ofe*), where it is now all but forgotten.

5. Central Europe and Asia. Various types of panpipes are found in Russia, Georgia and Romania. In Russia, the *kuviklï* (*kugiklï*) is a woman's instrument, played in the south-western oblasts (*see* Russian Federation, §II, 4). These panpipes, consisting of two to five stopped reed pipes, may be used for playing dance music, or as accompanying instruments in an ensemble that includes singers. In Georgia, an ancient type of panpipe known as *soinari* or *larchemi* is played in Guri and Megrelia (though its use is dying out); it consists of six reed pipes of various lengths fastened in a row. They are tuned in 3rds from the bass pipes, which are positioned in the middle and are a 2nd apart. The tuning varies according to the piece being performed. Sometimes the pieces are performed by two players who can divide the instrument into two, taking three pipes each.

The earliest evidence for the existence of panpipes (*nai*) in Romania is from archaeological sources; the earliest documentary sources date from the 16th and 17th centuries. From the second half of the 18th century the *nai* appeared frequently in the *taraf* ensembles of the *lăutari* (professional folk musicians) in Romanian principalities. The oldest native names for the instrument are *fluierar*, *fluierici*, *fluierător*, *şuieras* etc.; in addition the term 'muscal' is found, like the *nai*, of oriental origin. These terms, and the fact that both early and contemporary pipes are made of bamboo stems, have led to the hypothesis that a fusion occurred between an ancient, rural instrument and an oriental professional one, the older type giving way to the new.



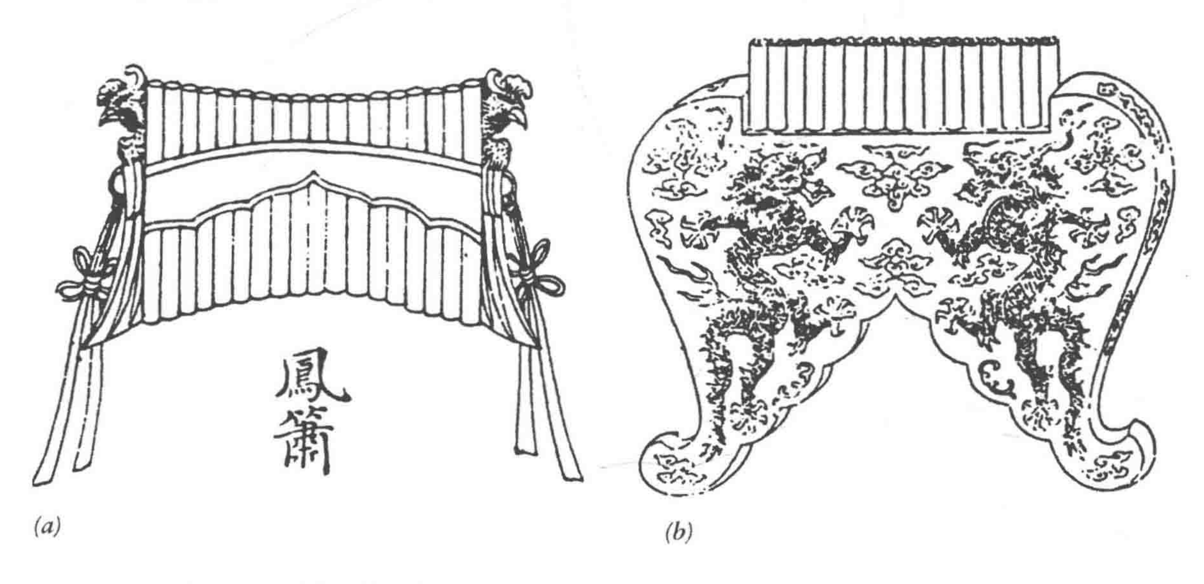
The 'classical' Romanian *nai* consists of a concave row of 20 pipes, of different lengths and diameters, in order of size. The pipes are open at the upper end and glued together; they rest on a slightly curved stick or, more recently, are set into a curved pipe. The lower ends of the pipes are stopped with cork and filled with beeswax; the tuning is regulated by the quantity of wax. The *nai* produces a diatonic scale from *b′* to *g′′′′*, with F♯s. Intermediate notes can be obtained by slightly modifying the angle of the instrument during performance. This leads to the characteristic portamento effects in slow melodies. The *nai* is played by *lăutari*, who have recently introduced additional pipes. Such modified instruments may have 25, 28 or 30 pipes, expanding the lower register.

Between the two World Wars the *nai* almost disappeared but was successfully revived, largely owing to the work of Fănică Luca (1894–1968), who trained many successful young *nai* players.

6. China. The presence of panpipe-type instruments in ancient China is attested by the post-15th century BCE oracle bone pictographs showing two and three tubes bound together with a cord and invention legends ascribed to an even earlier period. When mentioned in the classic texts of the 3rd–2nd centuries BCE, the Chinese panpipe (*paixìao*) was simply known as *xiao* (a name later applied to vertical flutes with finger-holes). The *Zhouli* states that a large one had 24 pipes, a small one had 16 pipes; other sources, however, cite different numbers. While it seems that, most normally, pipes were closed at their lower ends (*dixiao*), a note in the *Erya* states that on some the lower ends were left open (*dongxiao*). Two panpipes with closed ends have been found at different tomb sites in central China dating to the 5th century BCE, one of a white stone (possibly jade), the other of lacquered bamboo. On both there are only 13 pipes, tuned pentatonically. According to the 2nd century CE *Fengsu Tungyi*, their profile

5. *Stone panpipes from Peru*

6. *Paixiao (panpipes)*



'resembles a (single) wing of the phoenix'. Single-wing panpipes (long pipes at one end) are also pictured in the 4th–6th century CE paintings and stone reliefs at Dunhuang, Yungang and Gongxian, suggesting that this shape was the prevailing design for the early period. Morphological, decorative and musical associations with the mythical phoenix would remain a constant theme in the development of the Chinese panpipe.

By the Tang dynasty (618–907), panpipes with pipes of similar lengths appeared more frequently, their bottoms filled to varying depths with wax to govern vibrating lengths. According to Chen Yang's early 12th-century music treatise *Yueshu* (*c*1100), pipe numbers varied widely from one type to another (e.g. 10, 12, 13, 16, 17, 18, 21, 24), some tuned diatonically, others tuned chromatically. An 18-pipe Chinese instrument dating to about the 8th century, preserved at the Shōsōin Repository in Japan, is an example of this style of panpipe, with pipes of similar lengths, bevelled at their blowing ends and closed at their bottoms. As shown by Hayashi Kenzō (1975), this panpipe was tuned diatonically (though including the equivalents of both *fa* and *fa*♯) with a compass of more than two octaves. A detailed line drawing of an 18-pipe panpipe also appears in the *Yueshu* (fig.7*a*). Identified as *fengxiao* ('phoenix *xiao*'), both ends of the frame on this instrument are decorated with carved phoenix heads.

Sometime before the 14th century the Chinese panpipe was called *paixiao* ('row *xiao*'), in an attempt to distinguish it from the popular vertical flute which became known by the borrowed name *dongxiao* ('open *xiao*') or *xiao*. This new panpipe style, which has been pictured in 18th century sources and survives in museum collections, typically has 16 notched bamboo pipes of varying lengths, arranged in a double-wing shape (long pipes at both ends, short pipes in the middle) and enclosed in a red-lacquered wooden case (fig.7*b*). Its pipes are tuned chromatically with a compass of little more than one octave. As shown by Chuang Pen-li (1963), U-shaped notches usually appear at the blowing ends of open-ended pipes as a way to facilitate tone production (a feature not needed on closed pipes which respond readily without notches). As preserved at the Taibei Confucian shrine, the *paixiao* of today is constructed in this same external form; but instead of U-shaped notches at the blowing ends, the pipes are provided with ducts for more consistent tone production.

Pans. The individual instruments of a steel band, made from oildrums whose ends are hammered into a concave shape and tuned. *See* STEEL BAND and TRINIDAD AND TOBAGO.

Pan Shiji [Chew Shyh-Ji] (*b* Taibei, 29 July 1957). Taiwanese composer and teacher. She studied composition with Hsu Tsang-houei and took piano lessons before her family emigrated to Canada in 1974. Pan pursued further composition studies with Robert Turner at the University of Manitoba (1976–80) and with Chou Wen-chung at Columbia University, New York (1980–88). Her interest and expertise in traditional Asian music, stemming from her contact with Chou's music and her work at the Columbia Center for Ethnomusicology, distinguishes her from her contemporaries in Taiwan, where training in ethnomusicology is rare. After her return to Taiwan in 1988, Pan became a professor of composition at the National Academy of the Arts. Asian influence is evident in many of her compositions, for example in her use of Chinese instruments in the series *Configuration – Transformation – Shape* or of Asian poetry in *Paiju sanshou* (1991) and *Three Songs* (1996). Repetitive patterns and restraint in the use of musical material, typical features of Asian music, combine in *Dubai de nigu* (1990). Pan has developed an Asian variety of serialism based on 'linear cells', which she employs in her series of quartets for violin, viola, cello and guitar. The subject of her impressionistic sound painting *In the Dark* (1998) is the massacre in 1947 of Taiwanese indigenous people by Nationalists from mainland China.

BARBARA MITTLER

Panseron, Auguste (Mathieu) (*b* Paris, 26 April 1795; *d* Paris, 29 July 1859). French teacher and composer. He studied music with his father, a teacher and friend of Grétry. In 1804 he entered the Conservatoire, and nine years later won the Prix de Rome with his cantata *Herminie*. He remained in Italy for several years, studying counterpoint with Mattei in Bologna and then singing in Naples and Rome with García and Siboni. At this time he composed a number of small pieces, some masses and an Italian opera, *I Bramini*. The 19th-century writer Georges Bénédit described how Panseron, Rossini and García, all in Rome in 1816, would sing through the ensembles of *Il barbiere* which Rossini was composing at the time. Panseron then travelled in Austria and Germany, meeting Salieri in Vienna and Winter in Munich, and wrote a mass for Prince Esterházy, who also invited him to become the honorary director of his chapel; he also visited Russia.

In the summer of 1818 he returned to Paris where he took up a post as an accompanist at the Opéra-Comique. His opera *La grille du parc* (a collaboration with Ancelot) was performed in 1820 with some success, and published; two more operas followed. However, he feared that he was embarking on a career of 'deception and pitfalls', and thus turned instead to teaching, acquiring a brilliant

reputation. He was appointed professor at the Conservatoire in 1826, and published a number of didactic works which were used in conservatories all over France and, in translation, abroad. He continued to compose, but concentrated on *romances* and chamber pieces which were popular in salons and at concerts. His style was described by the critic Jules Lovy as representing the echo of the distant past (*Le ménestrel*, 7 August 1859). A Pie Jesu improvised on the *jour de service* of his teacher Gossec was admired for its feeling and grace, and was sung at many funeral occasions during the 19th century, including his own. In 1843 he was awarded the Légion d'Honneur, and he also received the Couronne de Chêne in the Netherlands. He died of a respiratory infection; at his funeral his coffin was carried by Auber, Halévy, Thomas, Monnais and Baron Taylor, who also gave a long oration at the ceremony (*FétisB*).

SARAH HIBBERD

P'ansori. Korean operatic form probably dating from the early 18th century. *See* KOREA, §9(i).

Pantaleon (i) [pantalon]. A large DULCIMER invented by and named after PANTALEON HEBENSTREIT (1668–1750). It had 185 double strings of metal and gut and was capable of flexible dynamic variation. For illustration *see* HELLENDAAL, PIETER.

Pantaleon (ii). A term used by several German writers of the second half of the 18th century to designate a small square piano.

Pantaleoni, Romilda (*b* Udine, 1847; *d* Milan, 20 May 1917). Italian soprano. She studied in Milan, making her début there in 1868 at the Teatro Carcano in Foroni's *Margherita*. After singing in Rome, Genoa, Modena, Naples, Turin, Vienna and Brescia, in 1883 she made her début at La Scala as La Gioconda. She sang Anna in the first Milan performance of Puccini's *Le villi* (1884) and created the title role in Ponchielli's *Marion Delorme* (1885). She sang Desdemona in the first performance of Verdi's *Otello* (1887) and created Tigrana in Puccini's *Edgar* (1889). Her repertory included Mathilde (*Guillaume Tell*), Paolina (*Poliuto*), Valentine (*Les Huguenots*), Sélika (*L'Africaine*), Marguerite (*Faust*) and Margherita (*Mefistofele*), as well as many Verdi roles: Leonora (*Il trovatore* and *La forza del destino*), Amelia (*Un ballo in maschera*), Elisabeth de Valois (*Don Carlos*) and Aida. She also sang Santuzza and Elsa. A magnificent singing actress, she retired in 1891 after the death of the conductor Franco Faccio with whom she had a liaison. Her brother, Adriano Pantaleoni (1837–1908), was a baritone who sang regularly at La Scala.

ELIZABETH FORBES

Pantaloncina, La. The Italian dancer Giovanna Cortini, wife of JEAN-BAPTISTE DENIS.

Pantalon stop (Ger. *Pantalonzug*, *Pantaleonzug*, *Cälestin*, *Cölestin*). A device occasionally applied to unfretted clavichords in Germany and Scandinavia from about 1725 to 1800. It was named after the pantaleon or pantalon, a large dulcimer invented by Pantaleon Hebenstreit (1667–1750), the tone of which was characterized by the resonance of undamped strings. The pantalon stop consists of a series of tangent-like brass blades set in a movable bar so that all of them can be raised at once by the action of a stop-knob. When raised, these blades touch the strings immediately to the right or left of the point at which they are struck by the tangents carried by the keys. When the keys are released the strings rest on the pantalon-stop blades, which continue to separate the sounding part of the strings from the cloth damping woven between them at their left-hand end: hence the strings continue to sound instead of having their vibrations damped out as soon as the key is released. In addition, the strings vibrate sympathetically with other notes being played. The effect produced by the stop is essentially that of a hand-operated damper-lifting mechanism like that on many early square pianos, and it is likely that this device on pianos was sometimes also called by the same name.

The first known use of the pantalon stop was not in a conventional clavichord but in a type of CEMBAL D'AMOUR made about 1727 by Johann Ernst Hähnel of Meissen, an associate of Hebenstreit. From 1732 onwards, Jakob Adlung made clavichords with the device and suggested that the blades could be covered with leather or cloth to make the sound die away more quickly. In the several surviving clavichords equipped with a pantalon stop (the earliest dating from 1752, made by Christian Kintzing of Neuwied), it is usually divided so that it may be used in only the treble or bass. While Adlung favoured the 'beautiful and almost heavenly' sound of the stop (a quality reflected in its alternative name, *Cälestin*), D.G. Türk (*Clavierschule*, 1789) wrote that it caused students to acquire a 'hacking' manner of playing. Another disadvantage is that, since the pantalon-stop blades cannot touch the strings at exactly the same point as the tangents do, there may be a detectable change in the pitch of a note after the key is released.

EDWIN M. RIPIN/JOHN KOSTER

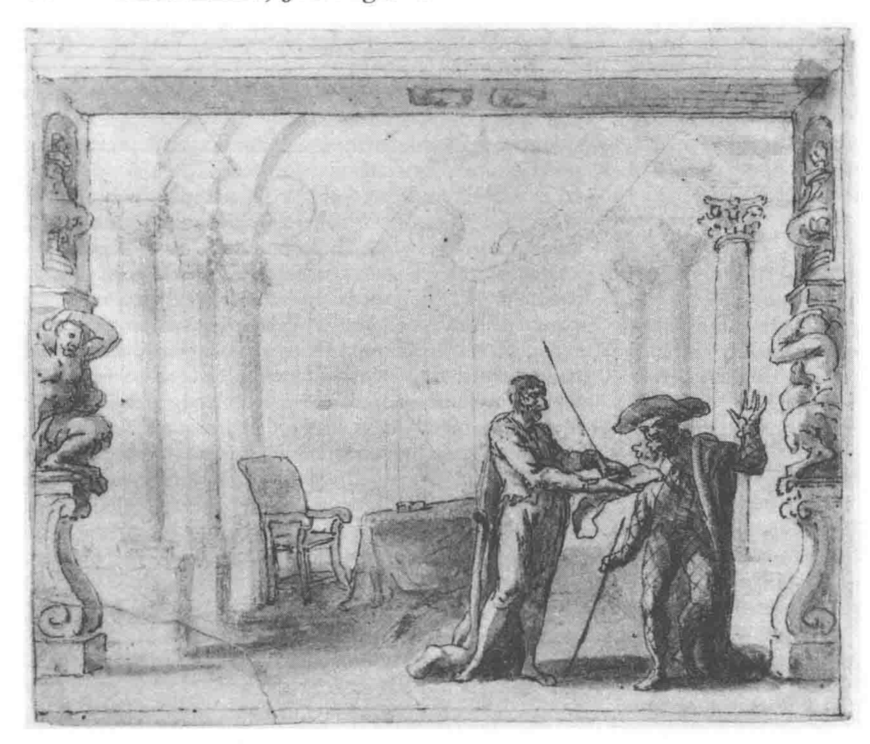
Pantheon. London auditorium, built in 1772 and converted into an opera house in 1791. *See* LONDON (i), §V, 1.

Pantomime (from Gk. *pantomimos*: 'one who does everything by imitation'). A musical-dramatic genre, taking different forms in different periods and places. The Latin

pantomimus originally referred to a Roman actor who specialized in dumb show, supported by instrumental music and a chorus; by extension the word denotes a dramatic representation in dumb show. Normal modern English usage is confined to a theatrical entertainment, usually presented in the Christmas season, which, whilst no longer in dumb show, continues to use music and other spectacular elements to support a children's tale that is often no more than a flimsy backcloth for buffoonery, dancing, topical songs and allusions and, until comparatively recent times, a harlequinade.

1. Ancient Rome. 2. England. 3. Mainland Europe.

1. Ancient Rome. The origins of pantomime are of great antiquity, but it was made fashionable in Rome in 22 BCE by Pylades of Cilicia and Bathyllus of Alexandria. As Horace wrote (*Satires*, i, 5, 64), to dance the shepherd Cyclops in tragic mask and buskins was nothing new. According to Macrobius (*Saturnalia*, ii, 7) Pylades was responsible for introducing instruments and chorus; Bathyllus seems to have specialized in light, satyric themes, and Pylades was in style closer to the tragedy. Pantomime usually took its subject matter from mythology, but also from history and the themes of tragic drama; unlike straight mime, it was not coarse.



The performance took place on a public stage or in a private house. The *pantomimus*, sometimes supported by a speaking actor, wore a graceful silk costume and a fine mask with closed lips. The chorus and instrumentalists stood behind him. The *pantomimus* sometimes appeared in as many as five roles in turn, each with its own mask. There are tributes to the eloquence and directness of a good dancer who could undertake to retell a whole tale with several parts, and to the expressiveness of one performer whose powers of mime, Lucian wrote, were rich enough to overcome the language barrier for a foreign visitor – unable to comprehend the narrative songs, he nevertheless so highly prized the actor's miming that he wished to take him home to his own country to act as an interpreter (a similar tribute was paid to 'Kasperl' Laroche – himself originally a dancer – in Vienna at the beginning of the 19th century, by the Turkish minister Ismael Effendi who, largely ignorant of German, claimed to understand what Laroche was saying, thanks to his mimetic powers; see *Ueberblick des Ueberblicks des neuesten Zustandes der Literatur des Theaters und des Geschmacks in Wien*, by C** X**, 1802, p.78).

The use of steps, posture and especially of gesture ('manus loquacissimae, digiti clamosi') was aided by conventions not unlike those familiar from modern ballet. The role of the songs seems to have been minor; those fragments that survive are in Greek rather than Latin. Lucan and Statius were among poets who were not afraid to abase their talents by earning good money writing pantomimes, for it became a highly popular form of entertainment, not without importance in its effects on morality (especially after females began to appear in pantomimes), and even on the political scene the historian Zosimus attributed the moral decline of Rome to the vast popularity of the *pantomimi*.

2. England. The renewal of interest in ancient forms of drama during the Renaissance led to the birth of various kinds of pantomime, the boundaries between which are often hard to distinguish. In England the title denotes a new form, which, in the early 18th century, looked to many sources for its success. The characters of the *commedia dell'arte* were familiar to audiences; their popularity had increased during the previous century, and the influx of actors from the Paris fairgrounds and the Théâtre Italien provided a new impetus to interval entertainment in dancing and mime. In the second decade of the century visiting foreign troupes and the published scenarios of Gherardi's collections provided a framework for *lazzi*, involving Harlequin and other *commedia* characters, as well as introducing a mythological constituent. By 1715 a pattern assembled from these elements provided a more extended type of 'afterpiece' entertainment. The playhouse managers frequently advertised these as 'Entertainments' and promoted what was clearly beginning to be a popular form which might enliven their stock repertory. The farcical (or 'grotesque') parts, which appear to have had continuous musical accompaniment (the 'Comic Tunes'), began to be interspersed with masque-like interludes sung in the style of Italian *opera seria* (the 'Serious' or 'Vocal' parts), which supplied a foil to the clowning and which scaled down the operatic conventions that might have become tedious for the largely middle-class playhouse audiences. 'Descriptions' were published, providing a libretto for the 'serious' parts but not detailing the buffoonery, which was improvised. The devisers of these afterpieces looked to contemporary Italian opera for recitative and aria in the 'serious' parts, to the French *ballet de cour* for the dances, to the English masque for the scenes, machines and decorations, and to the *commedia dell'arte* for the knockabout. The serious parts are sometimes referred to as 'masque' interludes in playbills and contemporary writing, but continental French influences were strong.

John Weaver developed the first 'Entertainments' in dancing of any length with a story in mime. *The Tavern Bilkers* (1703) was not, as he claimed, the first of its kind but was probably the first to appear in which the dance element was to the fore. His *Loves of Mars and Venus* (1717), which he believed was similar to the Roman pantomimes, was in fact akin to the later *ballet d'action*. It was John Rich, owner and actor-manager of the theatre in Lincoln's Inn Fields, who seized upon disparate elements and moulded them into what became the pantomime tradition. Rich's first pantomimes, always performed as afterpieces, appeared in 1717 in competition with Drury Lane. Often identified by the inclusion of the word 'Harlequin' in the title (e.g. *Harlequin Dr. Faustus*, 1712; see illustration), the pantomimes produced from 1723 to 1728 saw the success of the form as a popular afterpiece. Rich's most successful pantomimes were all devised by Lewis Theobald, and in these he worked closely with the composer John Ernest Galliard, whose familiarity with da capo aria, use of motto openings and predictability of phrase structure and tonality led to a fairly formalized type of melody and harmony, ideal for the easygoing playhouse audiences. In his pantomime music of 1723–6 he favoured a straighforward binary form with little use of ritornello and a shortwinded vocal line; *The Rape of Proserpine* (1727) marks a change in his pantomime style, with more da capo arias, arioso, with fewer binary airs and more use of ritornello.

The 'grotesque' sections, with continuous music, were given titles such as 'Wedding Dance', 'Jigg', 'Clodpole', 'Gardener's Dance', 'The Birth of Harlequin', or 'Quaker's Dance', which indicate the action that accompanied them.

John Rich as Harlequin in John Thurmond's pantomime 'Harlequin Dr. Faustus', performed at Lincoln's Inn Fields Theatre in December 1723: watercolour by an unknown artist in the British Museum, London

They were published as 'Comic Tunes', whether they were for knockabout or dance; some quickly came to be regarded as traditional. The most developed pantomimes consisted of an overture, possibly a dozen airs and a concluding chorus, with recitative and airs in alternation. Most of the airs deal with pastoral subjects, nature and love or joy and sorrow.

In the course of time the pantomime changed in character, becoming a more fully integrated comic play, the characters and action of which were close to the stock elements of the Italian comedy, with young lovers and their resourceful servants outwitting jealous parents and guardians, often with supernatural assistance. Vocal rather than instrumental music dominated, and some of the leading composers provided scores for the pantomimes (Galliard and Pepusch in the early years, and later the Arnes, Dibdin, Linley, Boyce, Shield and others). Suitable instrumental music accompanied the elaborate transformation scenes, though as the emphasis shifted more strongly towards the spectacular elements of the age of the British melodrama, reputable musicians more rarely wrote pantomime scores. In the 20th century, popular songs of the moment were introduced without relevance or apology, and under the influence of the music hall and variety turn little remains but the name and the framework of a moral fairytale.

3. MAINLAND EUROPE. On the Continent too the pantomime was a popular form of entertainment in the 18th and 19th centuries, though the phenomenon varied widely between different centres and periods. In France, where Noverre demonstrated the virtues of Garrick's realistic approach to stage characterization, pantomime tended to be a dignified form of danced entertainment. Rousseau's *Dictionnaire de musique* (1768, p.359) defines the pantomime as an 'Air to which two or more dancers execute in dance an action (which is itself also known under the same term). The pantomime airs ... speak, as it were, and form images, in the situations in which the dancer is to put on a particular expression'. The French tradition of pantomimic scenes and characters in the lyric theatre lived on in the famous mute title-role of Auber's *La muette de Portici* (also known as *Masaniello*, 1828); and though Wagner (who greatly admired *La muette*) had in fact completed the second act of *Rienzi* before he moved to Paris in autumn 1839, the ballet sequence in that act is often referred to as a pantomime because of the thematic and even dramatic relevance of the dances to the story. Adam's *La poupée de Nuremberg* (1852) and the Olympia act of Offenbach's *Les contes d'Hoffmann* (1881) are further French operatic scores that contain important pantomimic elements. Wagner may be held to have written the most successful of all pantomimic scenes in opera, that in Act 3 of *Die Meistersinger von Nürnberg* in which Beckmesser, painfully reminded at every turn of his beating of the night before, finds and misappropriates Walther's Prize Song when he visits Sachs's temporarily deserted workshop.

There was a strong pantomime tradition in 18th-century Vienna, where the presence of a vital popular theatre (including native elements, above all the character of Hanswurst, and elements derived from the *commedia dell'arte*, such as Harlequin, Pantaloon and Columbine) was combined with a marked south German tendency to use music in the theatre. The appellation 'Pantomime' was used in Vienna at least as early as the 1720s. Among authors of pantomime scenarios Kurz-Bernardon is the most important, and Haydn's lost music for Kurz's *Der (neue) krumme Teufel* (*c*1758) includes a pantomime, *Arlequin der neue Abgott Ram in America*. Mozart, with the assistance of distinguished friends, gave a pantomime of his own composition (K446/416*d*; only a fragment survives) at a public rout during Carnival 1783; he gave an account of it in his letter to his father of 12 March that

year. The pantomime tradition continued to be strong in Vienna roughly until the advent of the operetta; elements of its more elevated aspect live on in the Kessler–Richard Strauss collaboration *Josephslegende* (1912–14).

PETER BRANSCOMBE (1, 3), CLIVE CHAPMAN (2)

Pantonality. A term coined by Rudolph Réti (in *Tonality, Atonality, Pantonality*, London, 1958) to explain the continued extension of tonal language in the late 19th century as it had been developed by Wagner, Debussy and others. This harmonic extension had taken some music beyond the point at which it could be said to be in a single key, or to waver among or shift in and out of a number of clearly discernible key centres, without falling into categories defined as bitonal or polytonal (presenting two or more keys simultaneously), or strictly non-tonal or 12-note serial (as in Schoenberg and Webern). Put more positively, pantonality is characterized chiefly by the notion of 'movable tonics'; that is, it recognizes and makes use of tonal relationships in intervals, melodic figures and chord progressions without defining, or even implying, a key centre in any large-scale sense. It may thus be applied to much of the music of Bartók and Berg, and of Stravinsky and Hindemith up to about 1920; a vast repertory of 'pantonal' music followed later in the 20th century from the developments of these composers.

WILLIAM DRABKIN

Pantoum [pantum] (Fr., from Malayan *pantun*). A Malayan verse form consisting of four-line stanzas from each of which the second and fourth lines are repeated to form the first and third of the next; the last line of the final stanza repeats the opening line of the poem. The scheme was made known in France by Ernest Fouinet and adopted by Victor Hugo in his *Orientales* and subsequently by other French and English poets. The second movement of Ravel's Piano Trio is entitled 'Pantoum', and in it Ravel attempted an ingenious synthesis of a musical equivalent of the verse form with that of the traditional scherzo and trio. He may have been prompted to this by Debussy's setting of the pantoum 'Harmonie du soir', the second of the *Cinq poèmes de Baudelaire*.

MICHAEL TILMOUTH/R

Panufnik, Sir **Andrzej** (*b* Warsaw, 24 Sept 1914; *d* London, 27 Oct 1991). Polish composer and conductor, active in England.

1. LIFE. He was the younger son of a celebrated violin maker and writer on violin making, Tomasz Panufnik, and a violinist of partly English descent, Matylda Thonnes. He began his formal musical training in 1932 at the Warsaw Conservatory, taking classes in percussion before transferring to theory and composition, the latter under Kazimierz Sikorski; other influential teachers included Jerzy Lefeld and Maliszewski. His first acknowledged work, the Piano Trio, was composed in 1934. After graduating in 1936, he studied conducting with Weingartner in Vienna (1937–8) before following the well-trodden path of inter-war Polish composers to Paris. There he took lessons from Philippe Gaubert in conducting Debussy and heard much new music, including Berg's Lyric Suite and Bartók's Sonata for two pianos and percussion. He spent the spring and summer of 1939 in London, returning to Warsaw shortly before the German invasion of Poland on 1 September.

During World War II Panufnik stayed in Warsaw and participated in its severely restricted musical life, notably as a duo-pianist with Lutosławski in café concerts and underground events, but also conducting the premières of his *Uwertura tragiczna* (or *Tragic Overture*) and second wartime symphony. In 1944–5 all his manuscripts were inadvertently destroyed by an occupant of a friend's Warsaw apartment. After the war, Panufnik reconstructed several of these lost scores and in the process persuaded the publishers PWM to adopt clearer score layouts – since

Andrzej Panufnik, 1983

universally familiar – which left pages blank of all but the active playing parts. Between 1945 and 1947 he worked mainly as a conductor, firstly of the Kraków PO and then of the Warsaw PO (1946–7). He was also engaged by several leading orchestras abroad (in Berlin, London, Paris and Zürich) and presently became one of Poland's most respected conductors, alongside Grzegorz Fitelberg.

Panufnik was soon acknowledged as an innovatory composer thanks largely to *Krąg kwintowy* ('Circle of 5ths') and the orchestral *Kołysanka* (or *Lullaby*) and Nocturne, all composed in 1947. In the same year he was awarded the Szymanowski Prize for the Nocturne, while in 1949 his *Sinfonia rustica* took the Chopin Prize. His subsequent troubles with the Stalinist dogmas of the Polish United Workers' Party were no different in nature from those experienced by other composers. His arm was twisted to compose socialist-realist mass songs, all of his other music was subject to official scrutiny and partial bans were placed on several works, especially the Nocturne and *Sinfonia rustica*; yet, like other Polish composers, he was awarded state prizes. His own position was exacerbated by the ways in which he was manipulated, as a non-member of the Party, into becoming an acceptable face of the new Polish state. Articles praising the communist system and condemning Western capitalist imperialism appeared under his name; and he was compelled to participate in cultural delegations, including that which he led to China in 1953, accompanied by the folk troupe Mazowsze. On the positive side, his dubiously privileged position allowed him occasionally to conduct abroad, and it was during one of these visits, to Zürich in July 1954, that his escape to the West was engineered. His music was immediately banned in Poland and for over 20 years his name rarely appeared there in print.

Although there was a flurry of Western interest in Panufnik's defection and his open condemnation of the communist system, he soon found himself deprived of critical attention as he settled in England (he became a British citizen in 1961). As he ruefully commented: 'I had leapt from my Polish position of Number One to no one at all in England'. Although he received some financial and moral support (notably from a few British composers, including Vaughan Williams), after the sensation of his defection had subsided he quickly found that he needed to re-establish himself as a conductor, rather than as a composer, in order to make ends meet. Following appearances as a conductor in Birmingham, he was appointed musical director of the CBSO in 1957, the same year in which Stokowski conducted the première of *Sinfonia elegiaca* in Houston, and in which *Rhapsody*, the first of two BBC commissions, was performed in London. From 1959, after resigning from the CBSO, Panufnik concentrated solely on composition. He retained his strong ties with Polish history and culture; indeed, prominent works from the period 1963–7 reinforce the impression of exile. With *Katyń Epitaph* (1967) he even returned to the political fray. He composed this tribute to the 15,000 Polish POWs murdered on Soviet soil in 1943 at a time when the USSR had still not acknowledged that its forces, and not those of the retreating Nazis, had been responsible for the crime.

Winning the Prince Rainier Competition in 1963 for *Sinfonia sacra* marked a turning-point in Panufnik's career. (He would receive the award again 20 years later, this time for his entire output.) In 1970 Stokowski gave the première of *Universal Prayer* in New York and a recording of selected works by Panufnik was released by the LSO under Jascha Horenstein. Others who became associated with his music include Menuhin, who commissioned the Violin Concerto, David Atherton, and the Boston SO under Seiji Ozawa.

In Poland, the ban on Panufnik's music was lifted in 1977, and *Universal Prayer* received its Polish première at the Warsaw Autumn Festival that year. Although many Polish premières of his music were given at subsequent Warsaw Autumns, it was not until a democratically elected government took office that Panufnik accepted an invitation to return to Poland. At the 1990 Festival, 11 of his works were performed in his presence and he himself directed the European première of *Harmony*. That same year he also conducted the première of Symphony no.10 in Chicago. He was knighted in 1991 and posthumously awarded the Knight's Cross of the Order of Polonia Restituta by President Lech Wałęsa. Shortly before his death he completed the Cello Concerto for Rostropovich.

2. WORKS. Many traits of Panufnik's mature style are apparent in works he reconstructed in 1945. The Piano

Trio has Ravelian impulses, both harmonically and rhythmically, *Pięć pieśni ludowych* ('Five Polish Peasant Songs') is permeated with bittersweet juxtapositions and superimpositions of major and minor triads, while the *Tragic Overture* is characterized by nervous energy, tight motivic control and sharply delineated textures and dynamics. In the postwar works Panufnik indulged his fascination for abstract patterns and schematic ideas. For instance, the *Circle of 5ths* contains several early instances of symmetrical procedures (especially in pitch, register and dynamics), while *Lullaby* employs strict contrapuntal layering (the latter is also remarkable for its glissandos articulated by quarter-tones). The Nocturne is the most persuasive of these exploratory pieces and combines acute orchestral textures (anticipating Polish 'sonorism' of the late 1950s and the 60s) with expressive lyricism and subtle realization of arch form. Arguably the most appealing composition of the late 1940s, however, is *Sinfonia rustica*, which draws on the Classical symphonic tradition as well as Polish folk music. Like the much later Third Quartet, the *Sinfonia* was inspired by semi-abstract palindromic papercuts, the kind found in Polish folk art. These patterns have a bearing on orchestration and harmony, as well as form – a symmetrical four-movement model – and the layout of the orchestra.

The years 1949–54 were rather barren for Panufnik, especially with regard to his evolution as a composer. His *Uwertura bohaterska* ('Heroic Overture') especially is narrative (i.e. socialist realist) rather than abstract (or 'formalist'), and to all appearance more bombastic than subtle. That Panufnik later recycled, with minimal changes, the musical content of *Symfonia pokoju* ('Symphony of Peace', 1951) to produce *Sinfonia elegiaca* and *Invocation for Peace* suggests that he was content with its musical aspect. What he discarded in this process, however, were the work's socialist-realist texts and the politically charged context in which it had been written and officially promoted as a worthy example of Polish cultural policy. Nor did his new life in the West produce a stylistic rebirth of the kind experienced by his colleagues in Poland during the late 1950s. Both the *Rhapsody* and *Polonia* are picturesque rather than adventurous, and even when he began to develop in new directions in the early 1960s the BBC Third Programme, which at his stage was thoroughly enamoured of the European avant garde, deliberately ignored his music. But signs that he was regaining confidence are apparent in the characteristically melancholic *Landscape* and *Autumn Music* (both 1962) which combine the sound world and symmetrical shape of the Nocturne with developments in motivic design and sequencing first heard in the *Tragic Overture*.

Sinfonia sacra (1963), written to commemorate 1000 years of Polish Christianity, reinforces this synthesis. Each of the three Visions of the symphony is based on one of three consecutive intervals from the opening of the medieval hymn *Bogurodzica* (a source he would return to for *Sinfonia votiva*), while the first two phrases of the hymn are reserved for the climax of the concluding movement. The symphony's intervallic integrity, cool archaisms, detached formal rituals and directly emotional devices – brass fanfares, militaristic percussion, expansive string cantilenas – are still rooted in his music of the postwar decade. But the intricate formal and motivic designs that were to serve him faithfully throughout his output are also increasingly in evidence.

At the centre of Panufnik's revitalized abstractionism was his development of thematic-cells in works from *Reflections* (1968) onwards. Panufnik's reliance on these three-note cells (the most common is F–B–E) was undoubtedly related to the intensive analytical studies he made, when a student in Vienna, of all the published scores by Schoenberg, Berg and Webern; he was drawn to the latter's music in particular. In his setting of Alexander Pope's poem *Universal Prayer*, Panufnik's focus on limited intervallic content, combined with an extended structural palindrome, slow tempos and alternating textures, is unrelenting to the point of ascetic meditation. Here and in subsequent works, Panufnik invested the organization of pitch, rhythm, dynamics and texture with mystical and alchemical properties in his search for a spiritual dimension. He was in many ways a 20th-century reflection of the medieval belief in the Quadrivium as well as of Pope's dictum: 'Order is Heav'n's first Law'.

Despite his almost hermetic compositional world, Panufnik's aesthetic remained firmly rooted in 18th- and 19th-century practices, drawing on tonal, rhythmic and gestural conventions as a counterweight to his deployment of pitch cells. If some of his more severe works appear over-formulated, others demonstrate a keen ability to harness geometric designs to progressive effect. The pre-compositional planning for *Sinfonia di sfere*, for example, allowed for three overarching, expanding regions of activity, as well as six parametric spheres of influence governing harmony, rhythm, melody, dynamics, tempo and form. Musically, this result is both complex and compelling. From the early 1980s the style becomes gradually more relaxed. Fast sections are less prone to rhythmic or registral sequencing and forms can accommodate passionate lyricism. Sometimes the structures are pared down, as in the slow–fast, two-movement schemes of the *Sinfonia votiva* and Cello Concerto, while Panufnik's love of nature is conjured-up in *Arbor cosmica* in the form of 12 unusually variegated 'evocations', each of which represent a branch of what he calls 'the cosmic tree' (his structural diagram for this work is but one of many which evince his fascination with symbols and symmetries). *Sinfonia votiva* in particular demonstrates Panufnik's command of long-term goals (the work lasts for 40 minutes) and effectively initiates a neo-romantic phase which culminates in the last two symphonies and the final chamber works for strings.

Certain abiding concerns underlie the distinctive linguistic and formal achievements of Panufnik's last three decades. Perhaps unsurprisingly, these stem from music written during periods of crisis in the composer's career: World War II, socialist realism in Poland and the cultural isolation he sometimes experienced in England. The impression formed is of a career dominated by the need to find and secure a compositional world that was safe from outside interference, hence the search for geometric rationale and highly controlled forms derived from cells. The nature of his music was nevertheless programmatic and communicative. There are few works without descriptive titles or subtitles, and many later compositions revisit earlier musical and extra-musical concerns; the Bassoon Concerto (1985), for example, recalls folklike major–minor inflections in its commemoration of the murder of Father Jerzy Popiełuszko by the perpetrators of Polish martial law. The ever-present lyricism is almost invariably set against nervy, aggressive rhythmic impulses (often

articulated by drums), a contrast through which he not infrequently seems to be exorcizing demons from the past in an attempt to evoke a sense of hope, compassion and heightened contemplation. His musical world serves as a powerful testament to his struggle for both abstract perfection and human expressivity.

WORKS

VOCAL

Choral: 5 pieśni ludowych [5 Polish Peasant Songs], unison S/Tr, 2 fl, 2 cl, b cl, 1940, reconstructed 1945, rev. 1959; Symfonia pokoju [Sym. of Peace] (J. Iwaszkiewicz), chorus, orch, 1951, withdrawn; Song to the Virgin Mary, chorus/6 solo vv, 1964, rev. 1969, arr. str sextet, 1987; Universal Prayer (cant., A. Pope), S, A, T, B, chorus, 3 hp, org, 1968–9; Winter Solstice (C. Jessel), S, Bar, chorus, 3 tpt, 3 trbn, timp, glock, 1972

Solo vocal: 4 pieśni walki podziemnej [4 Songs of the Underground Struggle] (Z. Zawadzka, S.R. Dobrowolski, W. Lebiedew-Kumacz), 1v, pf, 1943–4; Pieśń Zjednoczonej Partii [Song of the United Party] (L. Lewin), 1v, pf, 1948 arr. chorus; Warzawski wiatr [Warsaw Wind] (K.I. Gałczyński), 1v, pf, 1949; Suita polska (Hommage à Chopin), 5 vocalises, S, pf, 1949, rev. 1955, arr. fl, str, 1966; Pieśń zwycięstwa [Song of Victory] (S. Wygodzki), 1v, pf, *c*1950; Pokój nad światem [Peace to the World] (Dobrowolski), 1v, pf, 1951; Ślubowanie młodych [Youth Pledge] (W. Broniewski), 1v, pf, 1952 [from film Ślubujemy]; Nowy czas [New Time] (J. Ficowski), 1v, pf, 1954; Love Song (P. Sidney), Mez, hp/pf, 1976, arr. Mez, hp/pf, str, 1991; Dreamscape, vocalise, Mez, pf, 1977; Modlitwa do Matki Boskiej Skępskiej [Prayer to the Mother of God at Skępe] (J. Pietrkiewicz), 1v/unison vv, org/pf/insts, 1990

ORCHESTRAL

Syms.: 2 syms., 1939, 1941, destroyed, 1st reconstructed 1945, withdrawn; Sinfonia rustica (Sym. no.1), 1948, rev. 1955; Sinfonia elegiaca (Sym. no.2), 1957, rev. 1966 [after Symfonia pokoju]; Sinfonia sacra (Sym. no.3), 1963; Sinfonia concertante (Sym. no.4), fl, hp, str, 1973; Sinfonia di sfere (Sym. no.5), 1974–5; Sinfonia mistica (Sym. no.6), 1977; Metasinfonia (Sym. no.7), org, str, timp, 1978; Sinfonia votiva (Sym. no.8), 1981, rev. 1984; no.9 (Sinfonia della speranza), 1986, rev. 1987; no.10, 1988, rev. 1990

Other: Uwertura tragiczna (Tragic Ov.), 1942, reconstructed 1945, rev. 1955; Nocturne, 1947, rev. 1955; Kołysanka (Lullaby), 29 str, 2 hp, 1947, rev. 1955; Uwertura bohaterska [Heroic Ov.], 1950–52, rev. 1969; Rhapsody, 1956; Polonia, suite, 1959; Autumn Music, 1962, rev. 1965; Landscape, str, 1962, rev. 1965; Pf Conc., 1962, rev. 1970, 1972, 1982; Katyń Epitaph, 1967, rev. 1969; Vn Conc., str, 1971; Conc. festivo, 1979; Concertino, perc, str, 1979–80; Arbor cosmica, str orch/12 str, 1983; A Procession for Peace, 1983; Bn Conc., 1985; Harmony, 1989; Vc Conc., 1991

CHAMBER AND SOLO PIANO

ADRIAN THOMAS

Panzacchi [Pansacchi], **Domenico** (*b* Bologna, *c*1730; *d* Bologna, 1805). Italian tenor. He is said to have been a pupil of Bernacchi and sang in *opera seria* from 1746. In Vienna in 1748–9 he first worked with Anton Raaff, who

was to overshadow him in parts of his later career. In 1751–7 he was at Madrid (Raaff arriving at a higher salary in 1755) and from 1760 until his pensioning in 1782 he was in the service of the Munich court (which Raaff joined after 1778), with occasional operatic engagements in Italy. He sang the title roles in Bernasconi's *Agelmondo* (1760), *Temistocle* (1762) and *Demofoonte* (1766), but he is best remembered for creating Arbaces in *Idomeneo* (1781); he was a great favourite with the Munich audiences and Mozart found his singing and acting worthy of respect.

Panzéra, Charles (Auguste Louis) (*b* Geneva, 16 Feb 1896; *d* Paris, 6 June 1976). Swiss baritone. He volunteered for the French Army during World War I, then made France his home. A student at the Paris Conservatoire, he made his début as Albert in *Werther* in 1919 at the Opéra-Comique. There he sang a range of secondary roles, his only significant stage appearance being Pelléas, which he also performed in Amsterdam and Florence; his interpretation was highly praised by Debussy's widow. A born recitalist, Panzéra was one of the foremost interpreters of *mélodies* of his time. In 1922 he gave the first performance of Fauré's last song cycle *L'horizon chimérique*, dedicated to him and suiting to perfection his keen but reserved style, as his recording confirms. Through Europe and the USA, with triumphant success, he championed the art of French song, together with his wife and accompanist, the talented pianist Madeleine Baillot. Panzéra's voice was a perfect example of the baryton Martin, the timbre tenor-like with no heavy overtones. A prolific recording artist, he left superb interpretations of Duparc's songs showing words and tone finely wedded, the expression restrained, never exaggerated. He retired in the early 1950s and taught at the Conservatoire.

Paolo [di Marco] **da Firenze** [Don Paolo Tenorista da Firenze; Magister Dominus Paulus Abbas de Florentia] (*b* Florence, *c*1355; *d* Florence, after 20 September 1436). Italian music theorist and composer of more known pieces than any other Trecento composer apart from Landini.

Most earlier views on his life were superseded by the discovery of an antiphoner (*F-DOU* 1171), dated 1417, with an inscription crediting its organization to Dominus Paulus, abbot of the Benedictine monastery of S Martino al Pino, near Arezzo, and rector of the church of S Maria Annunziata Virgine (generally known by the name of the hospice it occupied and served, Orbatello) in Florence. This antiphoner is beautifully illuminated in the style of S Maria degli Angeli in Florence, namely the style found both in the Squarcialupi Codex and the manuscript *I-Fl* Ashb.999, which contains Paolo's *Gaudeamus omnes*. Further evidence that this is the correct Paolo comes from his will, bequeathing three books of music and 'unum Boetium musicale'.

The will, made in Florence and dated 21 September 1436, names his father, Marco, and three brothers: Domenico, Antonio and Nicolo. Since the act of resignation of Paolo's abbacy, dated 16 June 1433, says he was around 78 years old, a birthdate of around 1355 seems certain. So he is likely to have entered the Benedictine order in about 1380. On 8 March 1401 he was appointed abbot of S Martino al Pino. According to the 18th-century Arezzo chronicler Hieronymus Aliotti, Paolo supported the election of Pope Alexander V at the Council of Pisa in 1409, a detail that would fit well with the text of his madrigal *Girand' un bel falcon*, almost certainly reflecting Florentine antipathy to Pope Gregory XII in that year.

It is not clear how long before 1417 he became rector at Orbatello in Florence, but several documents report his residence there from February 1420 until January 1427. In 1419 and 1423 he acted as papal legate for S Maria degli Angeli. Moreover, the text of *Godi, Firenze* suggests that he was resident in Florence in 1406.

The above documentation (all first presented in Günther, 1987) eliminates earlier identifications of the composer as a singer at S Reparata, Florence, in 1408 and as the Camaldolite Paolo at the Badia del Sasso, near Arezzo, in 1419. (His portrait in the Squarcialupi Codex, see illustration, has him in the black of a Benedictine, not the white of a Camaldolite; since this was done at the Camaldolite monastery S Maria degli Angeli, it can hardly be wrong.) Moreover, no evidence has been found to support earlier theories that he could have been related to the affluent Capponi or Leoni families of Florence; details of his will and reports on the poverty of his brother, Domenico di Marco, suggest that Paolo was from a humble family.

Paolo da Firenze: miniature from the Squarcialupi Codex (I-Fl Med.Pal.87, f.55v)

Far harder to construe is the Paolo, abbot of S Andrea de Pozzo in the diocese of Arezzo (and near to S Martino al Pino), who witnessed a document of Cardinal Angelo Acciaiuoli in Rome on 16 July 1404. The composer was abbot of S Martino al Pino from 1401 to 1433 and seems unlikely to have held another abbacy at the same time; but a document of May 1419 shows him appointing a new rector to S Andrea de Pozzo – in fact the man who eventually became his successor as abbot of S Martino al Pino. Moreover, in 1404 Cardinal Acciaiuoli received a decorated missal from the monastery of S Maria degli Angeli.

That Paolo's name has the suffix 'tenorista' the first time it appears in *F-Pn* it.568 suggests that he was at some stage active as a professional singer, perhaps before he became abbot. The prefix 'Don' (or 'Dominus'), otherwise used only for the Benedictine Donato, endorses the view that he was a Benedictine.

Most of his music survives in *F-Pn* it.568, sometimes with the ascription erased (though in most cases endorsed by other sources) and sometimes with indications in the original index that almost certainly imply his authorship (fully argued in Nádas, 1989). But the other main Trecento sources almost entirely overlook him, which is odd for the second most prolific composer in that repertory. There is nothing in *I-Fn* Panciatichiano 26; just one piece in *GB-Lbl* Add.29987; two at the very end of *I-La* 184; and one in *F-Pn* n.a.fr.6771 (Codex Reina) – a *unicum* (*Perch' i' non seppi*) often doubted on the grounds of its style and the manuscript's non-Florentine origin, though the ascription is one of only four in the entire original layer of the manuscript and should therefore not be taken lightly. Most puzzling of all, two gatherings (16 folios) of *I-Fl* Pal.87 (the Squarcialupi codex) are laid out for his music, each opening headed 'Magister Dominus Paulus Abbas de Florentia', and preceded by a marvellous portrait (see illustration), but no music was entered. An added puzzle in this last case is the coat of arms at the foot of the portrait page as well as on the first page of the manuscript, once identified as that of the Leoni family, but now considered unidentifiable. While the earlier view that Paolo was largely responsible for the Squarcialupi codex was based on much evidence now shown to be untenable, the placing of those arms, and Paolo's demonstrable contacts with S Maria degli Angeli, where it was illuminated, strongly point to some kind of contact yet to be defined.

More recently discovered sources clarify the picture. The 'Lowinsky' fragment (now *US-Cn* Case ML 096.P36, facs. and edn in Pirrotta, 1961) is entirely of his work, though without any ascriptions. The fully ascribed 'Ciliberti' fragment (owned by Galliano Ciliberti; facs. and partial edn in Brumana, 1987) is also devoted to Paolo, this time with ascriptions on each page and adding several new works; it was from a larger manuscript evidently organized by composer. The almost illegible palimpsest manuscript *I-Fsl* 2211, devotes its 14th gathering to his work, endorsing tentative ascriptions elsewhere.

Marrocco's edition of Paolo (PMFC, ix, 1977) contains only 33 of the 61 works listed below, cautiously avoiding those in *F-Pn* it.568 with erased ascriptions (which he put among the anonymous works in PMFC, viii and xi); but although those erasures have not been explained there are now enough supporting ascriptions elsewhere (as also for the erased ascriptions to Landini in the same manuscript) for confidence that these works are indeed by Paolo. What can perhaps be said is that most of them lack the quality and individuality of Paolo's best work, so it is just possible that he later preferred to suppress them; if so, perhaps it was a similar attitude that delayed his decision on which pieces to have copied into the Squarcialupi codex.

The dates of 1406 for *Godi, Firenze* (Günther, 1967) and of 1409 for *Girand' un bel falcon* (convincingly argued in Günther, 1987) must stand as a basis for a chronology, supported by the more tentative date 1397–1402 for *Sofrir m'estuet* (Nádas, 1989). All three are works of high individuality.

The madrigals ascribed with the 'PA' monogram in *F-Pn* it.568 (that is, those in the added gathering 6) seem to show the influence of the Ciconia generation (perhaps after 1400) and to be in a later style than the others, which draw more heavily on the styles of Landini and even Jacopo da Bologna. Similarly, the ballatas ascribed 'PA' (in the added gathering 8) show the most ambitious style, with unexpected textures (*La vaga luce*, *Lena virtù*), notational ambition (*Amor da po'*, *Amor tu solo*), metrical irregularity and unpredictable tonal schemes (*Chi l'agg' i' fatto*), whereas the remainder show strong influence from the later works of Landini.

On such a model, it looks very unlikely that any of his known music could be later than about 1410, despite his having lived a further quarter-century.

WORKS

Editions: *Paolo Tenorista in a New Fragment of the Italian Ars Nova*, ed. N. Pirrotta (Palm Springs, CA, 1961) [P]
Italian Secular Music, ed. W.T. Marrocco, PMFC, viii (1972), ix (1975), xi (1978) [M viii, M ix, M xi]
Italian Sacred Music, ed. K. von Fischer and F.A. Gallo, PMFC, xii (1976) [F]

Because of the unusual situation both of source distribution and authorship for Paolo's music, all sources and ascriptions are given here. The ascription 'PA' in *F-Pn* it.568 is a ligatured sign; ascriptions given as 'implied' are for works only at the bottom of an opening that is headed with an ascription. 'Lw' indicates the Lowinsky fragment, now *US-Cn* Case ML 096.P36; 'Cil' is the fragment owned by Galliano Ciliberti (Perugia).

MADRIGALS

Corse per l'onde già di speme piena, 2vv, M ix, 116; *F-Pn* 568 ('PA'), *I-Fsl* 2211 ('P. Abbas')
Era Venus al termin del suo giorno, 2vv, M ix, 124; *F-Pn* 568 ('PA'), *I-Fsl* 2211 ('P. Abbas')
Fra duri scogli sanz' alcun governo, 2vv, M ix, 127; *F-Pn* 568 ('PA')
Girand' un bel falcon gentil e bianco, 2vv, M viii, 32; *F-Pn* 568 ('Don Paolo': ascription erased), *I-Fsl* 2211 ('P. Abbas'); probably intended to be the first work in the Paolo section of the Squarcialupi Codex and evidently a Florentine invective against Pope Gregory XII, perhaps in February 1409 (Günther, 1987)
Godi, Firenze, poi che se' si grande, 3vv, M ix, 130; *F-Pn* 568 ('PA'); celebrating the Florentine victory over Pisa, 9 October 1406 (Günther, 1967)
Nell' ora ch'a segar la bionda spiga, 2vv (verto and chiuso endings for the ritornello imply missing text), M ix, 144; *F-Pn* 568 ('PA')
Non più 'nfelice alle suo membra nacque, 2vv, M ix, 150; *Pn* 568 ('Don Paolo Tenorista Da firenze': name written out fully as it is the first work by him in the MS)
Se non ti piacque in ingrat' abitare, 2vv, M ix, 167; *Pn* 568 ('Don Paolo'), *GB-Lbl* Add.29987 ('M[adrigale] di don paghollo')
Tra verdi frond' in' isola 'n sul fonte, 2vv, M ix, 174; *F-Pn* 568 ('Don Paolo'); appears again later in the MS, textless and anon.; Senhal: ORSA
Una fera gentil più ch'altra fera, 2vv, M ix, 180; *Pn* 568 ('D.P.')
Una smaniosa e insensata vecchia, 2vv, M viii, 96; *Pn* 568 (anon.), *I-Fsl* 2211 ('P. Abbas')
Un pellegrin uccel gentil e bello, 2vv, M ix, 183; *F-Pn* 568 ('Don Pa.')
Ventilla con tumulto la gran fama, 2vv, M ix, 189; *Pn* 568 ('PA'), *I-Fsl* 2211 ('P. Abbas')

BALLATAS

Amor, da po' che tu ti maravigli, 3vv, M ix, 102; *F-Pn* 568 ('PA')
Amor, de' dimmi se sperar merzede, 3vv, M ix, 105, P 81; *Pn* 568 ('Don Paolo'), *I-Fsl* 2211 ('Abbas Paulus'; 2vv), Lw (2vv)
Amor mi stringe assai più che non sole, 2vv (but empty stave for Contratenor in *F-Pn* 568), M xi, 9; *Pn* 568 ('PA': implied), *I-Fsl* 2211 ('Abbas Paulus')
Amor, tu solo 'l sai, 3vv, M ix, 108, P 78 (preferable); *F-Pn* 568 ('PA'), Lw (2vv)
Astio non mori mai, 2vv, M xi, 11; *Pn* 568 (anon.), *I-Fsl* 2211 ('Abbas Paulus'), Cil ('D.P.')
Benchè partito da te 'l corpo sia, 3vv (text inc.), M ix, 110; *F-Pn* 568 ('Don Paolo')
Ben posson pianger gli ochi e star dolente, 2vv (inc.), ed. in Brumana (1987), 29; Cil ('D.P.')
Che l'agg' i' fatto a questa donna altera, 3vv, M ix, 112; *Pn* 568 ('PA')
Chi vuol veder l'angelica belleza, 3vv, M ix, 114; *Pn* 568 ('PA')
Da tanto disonesto et reo fervore, 2vv (inc.), ed. in Brumana (1987), 30; Cil ('D.P.': implied)
De', dolze morte, cavami di pena, 3vv, M xi, 43; *Pn* 568 ('DP': ascription erased); Senhal: LENA
De', fa per quella speme e fede ch'io, 3vv, M xi, 45; *Pn* 568 ('DP': ascription erased), Cil ('D.P.')
De', passa temp' amaro, 2vv, M xi, 49; *Pn* 568 ('DP': ascription erased), Cil ('D.P.': implied)
Doglia continua per la suo partita, 2vv, M ix, 120, P 75; *Pn* 568 ('Pa.'), Lw (in same hand that copied Ciconia's *Con lagrime* into *Pn* 568); Senhal: ALESANDRA
Dolze mie donna grazios' e pia, 3vv (form unclear; perhaps a sonnet), M xi, 56, P 72; Lw (anon., but from context surely by Paolo)
Donna, perchè mi veggi altra mirare, 2vv, M ix, 122; *Pn* 568 ('Don Paolo')
Donne et fanciulle, chi ha gentil cuore, 2vv, M xi, 65; *Pn* 568 ('DP': ascription erased)
Fatto m'à sdegno partir vie d'amore, 3vv, M xi, 72; *Pn* 568 ('DP': ascription erased), Cil ('D.P.')
In quella parte che si lieva 'l giorno, 3vv, M xi, 83; *Pn* 568 ('Do. Pa.': ascription erased)
Lasso, grev' è 'l partir anima mia, 2vv, M ix, 134; *Pn* 568 ('PA')
La vaga luce che fa invidi' al sole, 3vv, M ix, 136; *Pn* 568 ('PA'), *I-La* 184 (2vv, with more florid discantus); Senhal: NENCIO LISA
Lena, virtù e speranza, ogni cor duro, 3vv, M ix, 138; *F-Pn* 568 ('PA'); Senhal: LENA
Ma' ri' aver di me pietà non veggio, 3vv, M ix, 142; *Pn* 568 ('PA'); Senhal: MARIA
Merzè, per Dio, perchè, 2vv, M xi, 91; *Pn* 568 ('DP': ascription erased)
Mort' è la fe' e lo sperar va giù, 2vv, M xi, 96; *Pn* 568 ('Franciscus': ascription erased), Cil ('D.P.'); Senhal: SARA
Non c'è rimasa fe', 3vv (text of three stanzas), M ix, 148; *Pn* 568 ('PA')
Ome, s'io gli piango, 2vv (form very unclear), M xi, 116; *Pn* 568 ('DP': ascription erased)
Or sie che può com' a vo' piace sia, 2vv, M ix, 154; *Pn* 568 ('Don Paolo'), *I-Fsl* 2211 ('P. Abbas')
Perchè vendetta far or non si po', 2vv, M ix, 156; *F-Pn* 568 ('Don Paolo')
Perch' i' non seppi passar caut' al varco, 3vv, M ix, 158; *Pn* n.a.fr.6771 ('Dompni pauli': ascription sometimes questioned, but the first ascription to appear in the MS and one of only four composer ascriptions in the main body of the MS)
Po' c'ànno di mirar gli occhi mie stanchi, 2vv, M ix, 162; *Pn* 568 ('Don Paolo'), *I-Fsl* 2211 ('Abbas Paulus')
S'Amor in cor gentil à signoria, 3vv, M ix, 164, P 69; *F-Pn* 568 ('PA'; Contratenor added in a different hand), Lw (2vv)
Se già seguir altra che te non volli, 3vv, M xi, 126; *Pn* 568 ('DP': ascription erased), Cil ('[D.] P.'; incomplete); Senhal: SANDRA
Se le n'arà pietà, Amor, ti prego, 3vv, M xi, 128; *Pn* 568 ('DP': ascription erased); Senhal: LENA
Se partir mi convien dal tuo bel viso, 3vv, M xi, 136; *Pn* 568 ('DP': ascription erased), Cil ('D.P.'); Senhal: MADALENA (cf. the 'Lena' of Lena, virtù e speranza)
Se per virtù, Amor, donna m'accese, 3vv, M ix, 170; *Pn* 568 ('PA'); Senhal: NENCIO LISA
Sie mille mille volte benedetta, 2vv, M xi, 141; *Pn* 568 ('DP': ascription erased), *I-Fsl* 2211 ('Abbas Paulus'), Cil ('D.P.': implied)
Sofrir m'estuet et plus non puys durer, 3vv (text partly in French), M ix, 172; *F-Pn* 568 ('PA'); text in *I-Fr* 2735; apparently against the Visconti, who invaded Tuscany, 1397–1402 (see Nádas, 1989)
Tra speranza e fortuna i' pur m'aggiro, 3vv, M xi, 150; *F-Pn* 568 ('Do. Pa.': ascription erased), *I-La* 184 (2vv only, but facing page is lost; immediately after La vaga luce and in same hand)
Uom c'osa di veder tutta beleza, 3vv, M ix, 178; *F-Pn* 568 ('Don Paolo'), *I-Fsl* 2211 ('Abbas Paulus'); Senhal: COSA
Vago e benigno Amor, fammi contento, 3vv, M ix, 186; *F-Pn* 568 ('PA')
. . . dio/Donna da te torra ma' il cor mi[o], 3vv, ed. in Brumana (1987), 31; Cil ('D.P.': implied; fragmentary)
. . . il benigna col nobil aspetto, only 1 inc. voice survives, ed. in Brumana (1987), 33; Cil ('D.P.': implied; fragmentary)
3 unidentified pieces in *I-Fsl* 2211

OTHER SECULAR WORKS ATTRIBUTABLE TO PAOLO
all in F-Pn it.568; see Nádas (1989)

Achurr' uom' soccorri tu, 2vv, M xi, 1
Altro che sospirar non so nè voglio, 3vv, M xi, 2
Amor, merzè, 2vv, M xi, 7
Già la speranza in te giovana perse, 3vv, M xi, 78; Senhal: GIOVANA
Se 'l mie fallir mi t'avie, donna, tolto, 3vv, M xi, 131

SACRED WORKS

Benedicamus Domino, 3vv, F 105; *F-Pn* 568 ('DP': erased, but in index 'PA')
Gaudeamus omnes in Domino, 2vv, F 110; *I-Fl* Ashb.999 ('PAU')

THEORETICAL WORKS

Ars ad adiscendum contrapunctum, ed. in Seay from *I-Fl*; *I-Fl* Ashb.1119 ('secundum paulum de Florentia'), *I-Sc* I.V. 36, ('secundum magistrum paulum de florentia'; with better readings)

DAVID FALLOWS

Paolo Tenorista. *See* PAOLO DA FIRENZE.

Paolucci, Giuseppe (*b* Siena, 25 May 1726; *d* Assisi, 24 April 1776). Italian composer and theorist. He studied in Bologna with Martini during the 1750s and like him was a member of the Franciscan order. Eight sacred works from this period (1752–6) are in the Bologna Conservatory library. About 150 letters from Paolucci to Martini (also in *I-Bc*) are evidence of their close friendship. Between 1756 and 1769 he was *maestro di cappella* at S Maria Gloriosa dei Frari in Venice, and from August 1770 until January 1772 at S Martino in Senigallia. He then worked at S Francesco in Assisi until his death.

Paolucci is best known for his treatise *Arte pratica di contrappunto* (Venice, 1765–72), which served as a model for Martini's *Esemplare ossia Saggio fondamentale pratico di contrappunto* (Bologna, 1774–5). While Martini concentrated almost exclusively on the 16th century, Paolucci used a number of examples from the 18th, including one by Handel, as well as a passing reference to J.S. Bach. There is no detailed study of Paolucci's music, which includes more than 200 sacred works (primarily for chorus, soloists and orchestra) and a few instrumental pieces (in *I-Af*). He published *Preces octo vocibus concinendae in oratione quadraginta horarum* (Venice, 1767).

HOWARD BROFSKY

Papadikē. The usual term for a short elementary manual of Middle Byzantine musical notation, included as an introduction to the AKOLOUTHIAI manuscripts of the 14th century onwards. The adjective *papadikos* (from *papas* presumably not in the sense of 'priest' but rather as an equivalent to *psaltēs*, the soloist or precentor) is also used in other contexts: (1) *hē papadikē*, for the whole collection of the soloist's repertory, corresponding to the earlier psaltikon; (2) *to papadikon genos*, the most melismatic of the three musical styles in modern Greek (neo-Byzantine) chant; (3) *hē papadikē* or *hē papadikē technē*), as an general expression denoting Byzantine chant; similarly the expressions *hē psaltikē technē* or *hē mousikē technē* ('the psaltic art' or 'the art of music') may also be found.

From a typological point of view the elementary papadikē occupies a position between the post-medieval treatises on music theory and the early lists of neumes, of which the oldest known specimen is a table in *GR-AOml* γ 67 (10th century). Alongside the didactic poems of JOANNES GLYKYS and JOANNES KOUKOUZELES it has functioned as a basis for the teachers' oral instruction, surviving even the reform of the 'Three Teachers' in the early 19th century (*see* CHRYSANTHOS OF MADYTOS). It has been commented upon in manuscripts such as *I-Rvat* gr.872, ff.240*v* ff (14th-century; ed. Tardo, pp.164ff). Over the centuries the text has undergone many modifications, according to the needs of the scribes and teachers. (In the absence of a critical edition, however, a full study of the various textual types has not yet been possible.)

The earliest version is found in a sticherarion from the year 1289, *F-Pn* gr.261. Under the rubric 'Here begin the signs of the "papadic" art', the manuscript provides no less than three different lists of neumes (single and grouped neumes; neumes with interval values; and *melē*, rhythmical and group signs), tables of neumes combined into ascending and descending intervals, and a diagram relating the Byzantine modes to those of ancient Greece. Although this version antedates the earliest papadikai of the akolouthiai manuscripts, it already includes a major part of the elements listed below.

In the 15th century there already existed at least four different versions of the papadikē, varying in completeness and order of contents. A papadikē normally consists of lists showing: (*a*) the ascending and descending interval signs, sometimes called *sēmadia phōnētika* ('phonetic signs'), divided into *sōmata* ('bodies' or steps) and *pneumata* ('spirits' or leaps), and their interval value; (*b*) the 'great hypostaseis' (subsidiary, cheironomic signs, called *aphōna sēmadia* or *megalai hypostaseis* or *ta megala sēmadia ta dia cheironomias*); (*c*) the *phthorai*, modulation signs of the modes; (*d*) examples to illustrate how all intervals can be expressed by combinations of *sōmata* and *pneumata*; (*e*) further examples to illustrate how ascending *sōmata* in specific combinations lose their interval value: they are 'dominated' (*kyrieuontai* or *hypotassontai*) by descending *sōmata*, by *pneumata* and by the *ison*.

The most complete type of papadikē includes in addition to these items, a series of paragraphs on the modes (including the 'middle modes', *mesoi*, of the four authentic modes and sometimes the *diphōnoi*, or *mesoi*, of the four plagal modes), giving their ancient and medieval names: Dorian, Lydian etc., *ananes*, *neanes* etc.

After these lists of neumes and neume combinations there may be various diagrams. These were probably intended for use when teachers introduced their pupils to the problems of modulation and orientation within the modal system. Many papadikai also include a list of modal intonations (*enēchēmata*), combined with the incipits of well-known *troparia* from which one could learn how to adapt intonations to melodic incipits by means of a suitable *cauda*.

The core of the papadikē thus consists of lists and diagrams. But many sources also include a varying number of short melodies, made ad hoc, to serve as a bridge between the lists and their application to actual singing.

JØRGEN RAASTED/CHRISTIAN TROELSGÅRD

Papadopoulos, Joannes. *See* KOUKOUZELES, JOANNES.

Papaioannou, Iōhannēs [John] G(eōrgios) (*b* Athens, 23 Jan 1915). Greek architect, pianist, writer on music and administrator. Graduating from Athens Technical University as an architect in 1935, he has had a distinguished career in a number of postwar reconstruction programmes and from 1959 to 1972 as director of research at the Athens Centre of Ekistics (Settlements). His musical training included harmony, counterpoint and composition studies with Felix Petyrek and Petros Petridis in Athens in the late 1920s. As a pianist he has performed complete cycles of Haydn and Schubert sonatas and Mozart piano works and has given premières of many contemporary works. He has also taught music history at the Athenaeon (1952–67) and at the Pierce College in Athens (1966–8). In 1961 he toured the USA in a cultural exchange programme and on his return became co-director of the Studio for New Music of the Athens Goethe Institute and general secretary of the Society of the Friends of Skalkottas. He was appointed general secretary of the Hellenic Association for Contemporary Music in 1965 and of the Greek section of the ISCM in 1965 and 1990; he was also vice-president of the ISCM executive committee, 1978–84.

Papaioannou has devoted much energy to promoting the music both of Skalkottas (whose works as president of the Skalkottas committee he has edited) and of Jani Christou. He has also played extensively in chamber music ensembles, as a soloist in concertos for piano, and as a harpsichordist, organist and percussionist. He has organized many concerts and festivals (42 for the Greek section of the ISCM), and mixed media performances and acted as a producer and programme author for several series of recordings of contemporary music. He has been awarded the Order of the Phoenix in Greece (1985) and the Verdienstkreuz in Germany (1980), and was made a Chevalier des Arts et des Lettres (1985).

DIMITRI CONOMOS

Papaioannou, Yannis Andreou (*b* Cavala, 6 Jan 1910; *d* Athens, 11 May 1989). Greek composer and teacher. Although he studied the piano with Marika Laspopoulou and composition with Alekos Kontis at the Hellenic Conservatory, Athens (1922–34), as well as the piano and orchestration with Riadis in Thessaloniki (1928–9), he considered himself essentially self-taught, especially in 20th-century compositional techniques. In 1949 a one-year UNESCO scholarship enabled him to visit the major European music centres and to become familiar with new compositional developments; in Paris he took lessons with Honegger. For ten years (1951–61) he taught music at the aristocratic National Lyceum of Anavryta, Athens, and from 1953 he was professor of counterpoint and composition at the Hellenic Conservatory. He was the first president of both the Greek section of the ISCM (1964–75) and the Hellenic Association for Contemporary Music (1965–75).

Papaioannou exerted considerable influence as a teacher; alone in Greece before the mid-1970s in teaching atonality, 12-note and serial techniques, he numbered among his many pupils Adamis, Antoniou, Aperghis, Kounadis and Tezzakis. He acknowledged various phases in his creative career. Early Impressionist (1932–8) and nationalist (1939–43) periods were followed by an interest in Hindemithian neo-classicism (as in one of his best pieces, the Suite for violin and piano or orchestra) and the use of Byzantine modes in the First Symphony. Then Papaioannou began to use 12-note (1953–62) and more recent serial procedures until in 1966 he adopted what he described as 'an entirely personal technique'. Though from the late 1950s, stimulated by the example of Skalkottas, he increasingly sought an austere and ascetic but well-wrought atonal counterpoint, his early works reveal him as a spontaneous melodist. That lyrical quality resurfaced in a few of the later works, such as *Paean eis tin eirinin* ('Paean to Peace', 1980).

GEORGE LEOTSAKOS

Papalia, Giovanni Maria (*b* Seminara, Calabria, *fl* Messina, 1589; *d* ?before 1598). Italian composer. According to Paolo Gualtieri (see Martire), Papalia was a Franciscan friar and the author of 'several books of music'. Only one of his publications survives, *Il primo libro de madrigali a cinque voci* (Messina, 1589, inc.). Printed by Fausto Bufalini, it was among the first music books printed in Messina. The volume is dedicated to Cesare Gaetani, who was governor of Messina and several times major of Palermo; his mother's family, the Moncada, counts of Caltanissetta, were patrons of some of the earliest Sicilian madrigalists. Papalia is not represented among the composers in the Sicilian-dominated anthology *Le risa a vicenda* (RISM 1598[8]), suggesting that he may have been dead, or at least no longer active as a composer, by that year.

Of the texts of his 21 madrigals, ten are anonymous, nine are from Sannazaro's *Arcadia* and two are from Petrarch's *Canzoniere*. His music shows the influence of Giovannelli, Macque and Marenzio.

PAOLO EMILIO CARAPEZZA, GIUSEPPE COLLISANI

Papandopulo, Boris (*b* Honnef am Rhein, 25 Feb 1906; *d* Zagreb, 16 Oct 1991). Croatian composer and conductor. He studied composition with Bersa at the Zagreb Academy of Music, graduating in 1929, and conducting with Fock at the New Vienna Conservatory (1925–8). Afterwards he lived in Zagreb, except for three years when he was conductor of the Zvonimir music society in Split (1935–8). He directed the choral society Kolo, the orchestra of the Croatian Music Institute, the Zagreb Opera (1940–45, of which he was director, 1943–5) and the Radio Zagreb SO (1942–5). After the war he conducted opera in Rijeka (where he was director of the Opera, 1953–9), Sarajevo (1948–53), Zagreb (1959–65) and Split (1968–74), and for a number of years was resident conductor at Cairo. Between 1931 and 1938 Papandopulo wrote reviews for the daily press. In 1965 he became a full member of the Yugoslav (now Croatian) Academy of Sciences and Arts.

When he started composing Papandopulo declared himself to be a follower of a national style, but he was one of the first Yugoslav composers to take an interest in neo-classicism. However, he quickly found a means of synthesizing such techniques with the rhythms and melodies of folk music. Papandopulo employed different styles almost concurrently, and so it is difficult to describe his evolution in terms of periods; yet there is a distinct change separating his pre-war and postwar work. In his earlier music a youthful temperament gave rise to an enthusiastic virtuosity in the use of expressive means, involving contrapuntal play, colourful timbres and exterior decorativeness, although at the same time there are pieces of a more solemn and profound character. In the later phase, when his music became richer and more complex, he did not entirely reject the earlier features.

The works couched in a national style range from folksong harmonizations to ritual pieces after the Stravinskian manner that combine traditional with cosmopolitan traits. In such ritual and sacred works, which were particularly important to Papandopulo's development before 1940, the harmony and sometimes the melodic motives are based on folk models. The form of these works relies on the repetition or variation of short, simple themes, as in the chorus *Dodolice* (1932), or their deployment in canonic formations. In the oratorio *Muka gospodina našega Isukrsta* ('The Passion of Our Lord Jesus Christ', 1936) he makes dramatically effective use of the free style of Dalmatian church singing, which contains elements of both Gregorian chant and the traditional folk idiom.

A fine example of his neo-classical style is the *Concerto da camera* (1929), the first of Papandopulo's major works. The use of folk ideas is evident in the central part of the opening Capriccio, while the middle movement is a fugue on a grotesque theme and the fifth a colourful finale of accented rhythms. Other neo-classical works include the Sinfonietta for strings (1938), formed on early Baroque models, the *Hommage à Bach* (1973) and the two concerti grossi (1971, 1990). The Piano Sonata no.1 (1929) is stylistically reminiscent of Prokofiev's first sonata; additionally it is an outstanding example of Expressionism found in the Croatian repertory for piano.

For the remainder of his career Papandopulo divided his time between writing cantatas, concertos, opera, ballet and chamber music. The language of these works includes virtuoso writing, novel technical devices and even 12-note rows, while elsewhere it employs elements of folk, jazz or popular styles.

ZDRAVKO BLAŽEKOVIĆ, KREŠIMIR KOVAČEVIĆ

Papavoine (i) [first name unknown] (*b* ?Normandy, *c*1720; *d* ?Marseilles, 1793). French composer and violinist. His first names may have been Louis-Auguste. Gregoir's use of the initial 'J' for Papavoine's first name is most probably based on the name Jean-Noël Papavoine (possibly his son), a *maître des pantomimes et répétiteur* active in Lille and The Hague. Papavoine is first mentioned early in 1752 in a request for a privilege to publish *Six simphonies* op.1, dedicated to 'le Marquis de la Bourdonnaye, Conseiller d'État, Intendant de Rouen'; the work's title-page called him 'premier violon de l'Académie de musique de Rouen', living in Paris. About 1754 Papavoine married Mlle Pellecier, a musician and composer whose *Six cantatilles* were advertised in the *Mercure de France* in January 1755. During the next three years he composed three collections of orchestral and chamber music. On 19 May 1757 a symphony of his was performed at the Concert Spirituel. From 1760 to 1762 he was leader of the second violins in the orchestra of the Comédie-Italienne, for which he composed two *comédies mêlées d'ariettes*, now lost. From 1764 to 1765 he returned briefly to instrumental composition with two violin sonatas, two violin duos 'à la grecque' and two symphonies for large orchestra. About 1767 he joined N.-M. Audinot in forming the Théâtre de l'Ambigu-Comique, devoted primarily to marionette and pantomime productions with music. He was associated with that theatre as late as 1789. In the *Almanach des spectacles* for 1790 he is listed among the living composers, and according to Gerber he was in that year orchestra director and first violinist at the Marseilles opera. The date and place of his death was supplied by Fétis. He published virtually all of his and his wife's music himself. They appear to have had two children, both of whom he trained as engravers: Angélique (*b* Paris, 1759) and a son (*d* Paris, 1796), possibly the Jean-Noël mentioned above.

Papavoine was one of the first French symphonists to write in the Classical style. The *Six simphonies* op.1 (1752) resemble Sammartini's sinfonias but have more violinistic leaps and embroidery characteristic of the *style galant*. The Symphony in D (*c*1765) shows Mannheim influences. Two of Papavoine's chamber works represent a particular pre-Romantic tendency to idealize the past: the missing *Duos à la grecque*, which employed quarter-tones (see La Laurencie), and two *airs* in imitation of troubadour songs (see Chailley). His op.4 (1757) is lost: its full title, *Grandes symphonies en concerto pour deux violons, alto et violoncelle obligés et deux autres violons et basse que l'on peut supprimer*, indicates that it may have been an early symphonie concertante.

WORKS

all printed works published in Paris

OPERAS

all performed in Paris; music unpublished and lost

Barbacole, ou Le manuscrit volé (cmda, 1, A.-J. Labbet de Morambert, J. de Lagrange and A.-F. Sticotti), Comédie-Italienne (Hôtel de Bourgogne), 15 Sept, 1760, lib *F-Pn*

Le vieux coquet, ou Les deux amies (oc, 3, A. Bret, after W. Shakespeare: *The Merry Wives of Windsor*), Comédie-Italienne (Hôtel de Bourgogne), 7 Nov 1761; also known as Les deux amies, ou Le vieux garçon, lib *Pn*

Le répertoire (comédie, 1, J.-F. Mussot [Arnould]), Ambigu-Comique, 1771

Zélie (pièce mêlée de musique), Ambigu-Comique, 1775

Also music for a large number of plays and pantomimes at Ambigu-Comique, inc. Alceste, ou La force de l'amour et de l'amitié, Les filets de Vulcain, Le fort pris d'assaut, La curiosité punie, Le magicien de village, ou L'âne perdu et retrouvé

BARRY S. BROOK, RICHARD VIANO/JULIE ANNE SADIE

Papavoine (ii) [Pellecier], Mme [first name unknown] (*b c*1735; *fl* 1755–61). French composer. By 1755, she was married to the violinist Papavoine (*d* 1793), the composer of symphonies and comic operas. The *Mercure de France* of January 1755 contains a 'Catalogue des oeuvres de M. et Mme Papavoine', ascribing six *cantatilles* to her as Mlle Pellecier (*Les arrets d'amour*, *La tourterelle*, *Les charmes de la voix*, *La fête de l'amour*, *Issé* and *Le joli rien*) and two as Mme Papavoine (*Le triomphe des plaisirs* and *Le Cabriolet* (*F-Pn*), which requires two violins and contains a tempest movement). The issue also includes a short, 12-bar unaccompanied *air gaiment* (*Nous voici donc au jour*

l'an) by her, and the following year a modest little chanson (*Vous fuyez sans vouloir m'entendre*) appeared in the July issue; lastly, a 'pastoralle' melody (*Reviens, aimable Thémire*) appeared in May 1761. At least one more *cantatille*, *La France sauvée ou Le triomphe de la vertù* (*US-Cn*), has been attributed to her. (*SchmidlD*)

JULIE ANNE SADIE

Pape, Andy [Andrew] **(Jacob)** (*b* Los Angeles, 1 Sept 1955). Danish composer of American birth. He moved to Denmark in 1971 and studied musicology at the University of Copenhagen (1975–7), also undertaking private composition studies with Abrahamsen and Aaquist. In 1985 he took the final examination at the Royal Danish Conservatory, where Nørholm was his teacher. Alongside his studies he taught music at the Bernadotte School in Copenhagen. From 1987 to 1993 he was head of the music department at the College of Art in Holbaek, and he has since composed full-time. He has twice been awarded the three-year scholarship from the Government Art Fund (1985 and 1993).

He has identified himself as a musical dramatist with the operas *Houdini den store* ('Houdini the Great', 1988) and *Bokseren* ('The Boxer', 1994–5), both written in collaboration with the Danish film director, actor and writer Erik Clausen. These operas, the first of which was performed both at the Royal Theatre in Copenhagen and as street theatre, combine entertainment and social criticism, borrowing stylistic features from popular music. Pape's music reflects a strong awareness of his relationship with the audience, and several of his works are best characterized as instrumental theatre, e.g. *Variations on 'Nearer my God to Thee'* (1990), in which brutality, sentimentality, powerlessness and madness are exposed in the interaction between a drunken pianist and a spiteful page turner. Pape likes to confront taboos of the classical concert environment and feels no obligation to the European musical tradition. This is characteristic of *Concerto grosso* for recorder, cello, tuba and orchestra (1996); its title is that of a historic form, but its instrumentation, in a work which emphasizes joy in creating music, avoids the well-proved and well-balanced in favour of the grotesque. In addition to a large amount of percussion music, Pape has composed music for films, including Clausen's *Min fynske barndom* ('My Childhood Symphony', 1993), based on Carl Nielsen's childhood memoirs.

WORKS
(*selective list*)

Stage: Houdini den store [Houdini the Great] (street op, 8 scenes, E. Clausen), 1988, Copenhagen, 1989; Bokseren [The Boxer] (op, prelude, 5 scenes, Clausen), 1994–5, Århus, 1995; Leonora Christine - dronning af blaataarn [The Queen of the Blue Tower] (op, 2, N. Malinovski), 1998, Copenhagen, 1999

Film: Min fynske barndom [My Childhood Sym.] (dir. Clausen), 1993; En loppe kan også gø [Flees Bark Too] (dir. S. Olsson), 1996

THOMAS MICHELSEN

Pape, Heinrich (*b* Ratzeburg, nr Lübeck, 27 July 1609; *d* Stockholm, 25 April 1663). German organist and composer. In 1625 he was in Hamburg as an organ student of Jacob Praetorius (ii). His first position as organist was in nearby Mittelnkirchen. He was then organist at Altona from 1630 to 1662, when he became organist at the Jacobskyrka, Stockholm. He married the sister of Johann Rist.

Pape was one of the most prolific composers of the mid-17th-century Hamburg school of songwriters. He set many sacred and secular verses by Rist, to whom he remained loyal when most members of the Hamburg school abandoned setting his poems: there are 36 settings by him in Rist's *Des edlen Daphnis aus Cimbrien Galathee* (Hamburg, 1642) and a further 23 in three collections published between 1648 and 1652. Two composers called Heinrich Pape, 'the elder' and 'the younger', are distinguished in the 15 melodies they contributed to Jacob Schwieger's second set of *Liebes-Grillen* (Hamburg, 1656). Pape's father was also called Heinrich, but since he died in 1637 'the elder' must refer to Pape himself and 'the younger' to a son of his, who is also represented by eight songs in Schwieger's *Des Flüchtigen Flüchtige Feld-Rosen* (Hamburg, 1655) and of whom nothing further is known. One song 'by Heinrich Pape' is in Georg Heinrich Schrieber's *Neu ausgeschlagener Liebes- und Frühlingsknospen* (Frankfurt, 1664). Pape's settings of Rist's sacred poems are inferior to his secular songs, among which those published in 1642 are particularly notable; it has been suggested that the sacred songs may have been the work of another composer.

JOHN H. BARON

Pape, Jean Henri [Johann Heinrich] (*b* Sarstedt, nr Hanover, 1 July 1789; *d* Asnières, nr Paris, 2 Feb 1875). French piano maker. He arrived in Paris in 1811 and after visiting London helped Ignace Pleyel to organize his new piano factory. By 1819 he was running his own business at 7 rue Montesquieu. Pape's great interest was inventing; hence some of his 137 patents were design achievements but were never put into regular practical use. For instance, he designed a square piano with the keyboard in the middle, although its normal place, near the left, is perfectly satisfactory. Towards the end of his career he built pianos in all kinds of shapes, including round, hexagonal and

oval, for drawing-rooms, but these more unusual instruments were not popular, with the result that Pape, who had once employed over 300 men, died poor.

However, Pape brilliantly solved technical problems in the piano. He designed the down-striking French grand action, and it is largely owing to his influence that interest in this type of action spread through Europe and America. His action avoided the unseating effect on the strings of the more common up-striking actions, and resolved the problem of weakness across the action gap. It took less space and obviated the need for iron braces as the strings were placed lower, in the strongest part of the instrument. Pape is also known for his experiments using felt hammer coverings, first patented by him in 1826, and for his early use of tempered steel wire. Probably his most famous invention was the 'pianino' (patented in 1828; possibly inspired by Robert Wornum), a small upright one metre high in which the earliest use of overstringing is found. The bass strings cross over the treble, giving a longer speaking-length and helping to brace the case. This was the first of a series of pianinos built by Pape, and the type of small inexpensive upright piano which became the domestic instrument *par excellence* in France and England by the mid-century. He also designed a chromatic harp, patented in 1845, in which the strings were arranged in two planes that crossed centrally and distributed the tension. This was further developed by the Pleyel company (*see* HARP, §V, 7(ii)).

After Erard and Pleyel, Pape was the most famous French piano maker during the first half of the 19th century; he was described in the *Musical World* (1836) as the 'Broadwood of the French capital'. Cherubini composed at an 1817 square piano by Pape, and Moscheles, Boieldieu and Auber purchased instruments by him. Bechstein was among Pape's pupils. The mother-of-pearl and ivory square piano made for Queen Victoria is preserved at Osborne House, Isle of Wight.

MARGARET CRANMER

Pape, René (*b* Dresden, 4 Sept 1964). German bass. He was a member of the Dresden Kreuzchor (1974–81) and made his stage début in 1988 at the Berlin Staatsoper, where he has since been a member of the regular ensemble, singing Sarastro, Rocco, Ramfis, Fasolt, Hunding, King Mark and Pogner, among others. His first appearance at the Salzburg Festival was as Don Fernando (*Fidelio*) and in Bach's *St Matthew Passion* in 1990, returning the following year to undertake Sarastro in the Johannes Schaaf-Solti staging. He sang Fasolt at Bayreuth each year from 1994 to 1998. His début at La Scala was in 1991 as Sarastro, and he first appeared at the Vienna Staatsoper as Hunding (1996), at Covent Garden as Heinrich der Vogler (1997) and at the Metropolitan as Fasolt (1997). He is also a notable concert artist. His well-formed, compact bass and refined, shapely phrasing can be heard on disc as Pogner and in *The Creation*, *The Seasons* and Mozart's Requiem, all with Solti.

ALAN BLYTH

Papineau-Couture, Jean (*b* Montreal, 12 Nov 1916). Canadian composer, grandson of GUILLAUME COUTURE. He studied in Montreal with Françoise d'Amour, Léo-Pol Morin and Gabriel Cusson, at the New England Conservatory (BMus 1941), where his teachers included Quincy Porter (composition), Beveridge Webster (piano) and Francis Findlay (conducting), and at the Longy School, Cambridge, Massachusetts (1941–3) with Boulanger, whom he followed to the University of Wisconsin, Madison, and to Montecito, California. In 1946 he was appointed a professor at the Montreal section of the Quebec Province Conservatory, moving from there in 1951 to teach composition at the University of Montreal, where he held the posts of professor (from 1951), secretary (1952) and dean (1968–73). He also served as president of the Montreal centre of the Jeunesses Musicales (1956–70), the Canadian League of Composers (1957–9, 1963–6), the Quebec Academy of Music (1961–3), the Société de Musique Contemporaine du Québec (1966–73), the Canadian Music Council (1967–8) and the CMC (1973–4).

Papineau-Couture has composed extensively in most genres apart from opera. His preference, however, has been for small orchestral and chamber ensembles, as such groups enable him both to expose the contrapuntal writing that has always been an important feature of his style, and to express the intimate nature of his personality. His music makes much use of mirror structures or fan-like expansions and contractions, as indicated by the subtitles of the *Pièces concertantes*, and his liking for counterpoint is evident in his frequent use of such devices as imitation, inversion, retrograde and augmentation. An intellectual fascination with a problem to be solved often serves as the stimulus for a composition. Nevertheless, he has remarked on the necessity for a musical structure to be perceptible to the ear, without requiring consultation of a gloss or score.

Papineau-Couture's early studies with d'Amour brought him into contact with 20th-century French music, in particular with the work of Milhaud and Honegger. This, coupled with the influence of Boulanger, who introduced him to the music of Stravinsky and Hindemith, led him to adopt a neo-classical style in his earliest works (up to 1948), which are often cast in the conventional forms of sonata, suite and so on. Later he replaced tonality with a system of polarity lacking a fixed harmonic hierarchy. In the second movement of *Papotages* (or *Tittle-tattle*), for example, polar pitches act as anchorage points. He then explored atonality on a Hindemithian pattern, often using chords of superimposed 4ths. At the same time he was influenced by Schoenberg's 12-note method, notably in the Violin Suite (1956), marked at once the end of a period of research and the beginning of his maturity. In subsequent works he has built on Hindemith's chord formations and Stravinsky's rhythmic impulse. This phase of consolidation has also seen innovations, sometimes under the influence of Varèse, as in the timbre-orientated, neo-Impressionist tendency of *Viole d'amour* for chorus (1966), the Sextet (1967) and *Paysage* for voices and instruments (1968). In general, however, his music has been firmly planned and classical in conception. His honours include the Quebec prize

(1981), membership in the Order of Canada (1993) and the Canadian Governor's prize for the arts (1994).

LYSE RICHER/MARIE-THÉRÈSE LEFEBVRE

Papini, Guido (*b* Camaiore, nr Lucca, 1 Aug 1847; *d* London, 3 Oct 1912). Italian violinist and composer. He studied with Ferdinando Giorgetti at the Istituto Musicale at Florence. He made a successful début at the age of 13, but subsequently considered giving up music as a career. He returned to Florence at the invitation of Basevi to lead the quartet of the Società del Quartetto. Concerts in Italy and France earned him a reputation as a violinist with an expressive and beautiful tone and brilliant technique. He was court violinist to the Queen of Italy; at Lisbon he received the Cross of Merit. From 1874 he lived in England. In London in that year he played the viola in John Ella's Musical Union concerts, alternating with Sarasate and later with Wieniawski as leader of the quartet. He was soloist at the Philharmonic concerts in 1875, 1877 and 1878 and, in 1876, with the Pasdeloup Orchestra and the Bordeaux PO. Among the distinguished musicians he toured with were Rubinstein, von Bülow and Bottesini. From 1893 to 1896, when illness caused his resignation, he was principal violin professor of the Royal Irish Academy of Music at Dublin and inaugurated important chamber concerts there. During his remaining years in London, despite poor health, he devoted himself to composition and private teaching. He was an examiner of the College of Violinists, which he served for several years as president.

Ephemeral fantasies, transcriptions and salon pieces for violin and piano make up the bulk of Papini's more than 200 works, but he did write a few pieces in the larger forms, such as the Violin Concerto in D minor op.36. His trios (for two violins and piano) and a quartet (for three violins and piano) Cobbett found to be 'light and graceful, but of no permanent interest'. The pedagogical works and editions are of more lasting value: a violin method in four parts, op.57, *L'archet: a Technical Work for the Practice of the Different Bowings Most in Use* op.118, several sets of études and an edition of four Boccherini cello concertos.

E. HERON-ALLEN/ALBERT MELL

Papp, Géza (*b* Budapest, 29 April 1915). Hungarian musicologist and educationist. He studied theory with Bárdos, music history with Bartha and composition with Kodály at the Budapest Academy, where he took diplomas in church choir conducting (1937) and music teaching (1940). He taught in various secondary schools (1941–60) before becoming an editor with a publisher of school textbooks. He worked in a freelance capacity for the Hungarian music history section of the Institute of Musicology, and took the CSc in 1970 with a collected edition of Hungarian 17th-century songs. His principal areas of research were 17th- and 18th-century Hungarian

music history, music education and principles of school textbooks. He edited numerous schoolbooks and collaborated in writing several music educational works.

ANTAL BORONKAY

Pappano, Antonio (*b* Epping, Essex, 30 Dec 1959). American conductor. After early music lessons with his father, he studied the piano, composition and conducting in the USA with, respectively, Norma Verrilli, Arnold Franchetti (a pupil of Richard Strauss) and Gustav Meier. His first engagement was as répétiteur and assistant conductor at the New York City Opera, and he subsequently worked at the Liceu in Barcelona, the Lyric Opera of Chicago, Frankfurt Opera and Bayreuth (as Barenboim's assistant) before being appointed music director of the Norwegian National Opera in 1990. Pappano made his Covent Garden début conducting *La bohème* the same year, and in 1992 became music director of La Monnaie in Brussels. The following year he made an acclaimed début with *Siegfried* at the Vienna Staatsoper, returning there for *I vespri siciliani* in 1998. He has also appeared at the Metropolitan Opera (where he conducted *Yevgeny Onegin* in the 1997–8 season), San Francisco Opera, the ENO, the Berlin Staatsoper, the Théâtre du Châtelet and the Teatro Comunale in Florence, and has worked with many of the world's leading symphony orchestras, including the Berlin PO, Chicago SO, Cleveland Orchestra, LSO and Israel PO, of which he became principal guest conductor in 1997. Pappano's conducting combines refinement of detail with a powerful dramatic sweep, as can be heard in his recordings of Puccini's *La rondine* (which won a 1997 *Gramophone* award) and *Trittico*, and of Massenet's *Werther*. In 1999 he was appointed music director of Covent Garden with effect from the 2002–3 season.

RICHARD WIGMORE

Papua New Guinea. *See* MELANESIA, §III.

Pâque, (Marie Joseph Léon) Désiré (*b* Liège, 21 May 1867; *d* Bessancourt, Val-d'Oise, 20 Nov 1939). Belgian composer who adopted French nationality. An orphan from an early age, he studied at the Liège Conservatory, where he was appointed assistant professor of solfège in 1889. His early compositions, influenced by Russians such as Cui and Borodin, won several prizes, including those of the Belgian Royal Academy (String Quartet op.23), and the Paris Pro Musica (Piano Trio op.46). After a short time spent researching Bulgarian folksong in Sofia, Pâque became professor of piano and composition at the conservatory in Athens (1900–02). Following a brief period working in Brussels and Paris he resided in Lisbon, where he taught composition and organ at the conservatory (1906–9). Before World War I he visited England and taught and conducted in Hamburg, Bremen, Rostock, Berlin and Geneva. While in Berlin he was engaged by the publisher Simrock as a resident composer, receiving an annual salary. From 1914 Pâque lived in Paris and became organist of St Louis d'Antin. He married four times, and a daughter from his third marriage, Désirée Pâque-Sweertz, pursued a career as a concert violinist. During Pâque's final years, spent in Paris and Bessancourt, he became a recluse, making no contact with any noted French composer. Instead he devoted himself to composition and to the writing of many articles concerning his revolutionary musical ideas.

An unrecognized and brilliantly original composer, Pâque formulated theories of composition that anticipated those of Schoenberg. He advocated principles of atonality, referring to the 'mode chromatique moderne', and proposed the abandonment of several musical conventions such as the regular time signature and the traditional approach to development. The latter he replaced with his own system known as 'adjonction constante', whereby development occurs either by attaching new motifs to unchangeable main themes or by juxtaposing material differently against these unaltered themes. Pâque's lack of recognition is a result of his publishing almost nothing about his theories until later in his life. However, he spent much time in correspondence with Charles Lalo, reader in aesthetics at the Sorbonne, concerning his theories, and in 1910 he dedicated to Lalo his *Esthétique musicale d'un*

musicien (published 18 years later in instalments under the title 'Essai sur la mélodie'). The series of articles he wrote for the *Revue musicale* during the 1930s under the general heading *Notre esthétique musicale* define his philosophies established almost 40 years earlier.

Even by 1893 Pâque had published *Vingt leçons de lecture musicale*, exercises that deliberately avoid a definite key, and in 1895 – four years before the *Verklärte Nacht* sextet – he wrote a Sonata for piano trio 'without a fixed and pre-established tonality'. His Symphony no.1 for organ and his first three piano sonatas, dating from the same year as Schoenberg's *Harmonielehre* (1911), make very clear use of 'adjonction constante' and are, to a degree, atonal, foreshadowing works such as Berg's Piano Sonata. The evolvement of his expressive freedom can be seen in the 12 books of *Effusions lyriques* for piano, which were written throughout his life, and his style is at its most focussed in his late works for chamber combinations.

WORKS
(*selective list*)

STAGE AND ORCHESTRAL

Op: Vaïma, op.47, 1903, Ostend, 1904

Syms.: [no.1], op.33, 1895; [no.2] 'La Parisienne', op.52, 1905; [no.3], op.76, 1912; [no.4], op.86, 1916–17; [no.5], op.95, org, orch, 1919; [no.6], op.109, 1925–7; [no.7], op.125, 1934; [no.8], op.129, 1935–6

JOHN SCOTT WHITELEY

Pär, Joseph. *See* BEER, JOSEPH.

Parabosco, Girolamo (*b* Piacenza, *c*1524; *d* Venice, 21 April 1557). Italian composer. He was the son of the Brescian organist Vincenzo Parabosco (*d* 1556) and, according to Zarlino, the pupil of Adrian Willaert by 5 December 1541. Parabosco described himself as a 'discipulo di M. Adriano' in his 1546 madrigal collection and eulogized Willaert in his comedy, *La notte* (1546). He probably studied with Willaert before 1540 when his two ricercares appeared in the anthology *Musica nova* (RISM 1540[22]). Significantly, perhaps in view of his youth and his student relationship with Willaert, Parabosco's name (like that of his fellow pupil, Girolamo Cavazzoni) appears in lower-case letters in the running heads of *Musica nova*. In or shortly before 1546 Parabosco visited Florence briefly as a guest of Francesco Corteccia. Between 1548 and 1551 he made trips to Urbino, Ferrara, Piacenza, Brescia, Padua and Verona. Returning to Venice, he was elected first organist at S Marco on 16 June 1551, retaining this post until his death. Active in literary and musical academies in Venice, he knew Antonfrancesco Doni, Andrea Calmo, Pietro Aretino and Titian. Notwithstanding Parabosco's acquaintance with Titian, the suggestion first made by Molmenti and accepted by others that Titian's *Venus and the Organist with Lapdog* (*c*1545–8; Prado) portrays Parabosco, is probably incorrect. A better case can be made for a 17th-century copy (in *I-Ma*) of a lost 16th-century portrait of Parabosco which bears some resemblance to an engraving in the 1795 edition of his *I diporti*.

The two youthful instrumental works from *Musica nova* differ strikingly. Although using successive points of imitation, the first (no.18) incorporates considerable sequential repetition. The ricercare 'Da pacem' is exceptional, because it is based on a cantus firmus from the antiphon for peace. Each of the antiphon's four phrases appears in the tenor with anticipations by one of the other voices. This work may refer to the war between Venice and the sultan which ended in October 1540, the year in which *Musica nova* was published. Parabosco's motet-like madrigals show his study with Willaert. Their imitative polyphony is often dense and rarely relieved by harmonic episodes; voices are often in contrasting groups. Harmonies are rich, text repetition is frequent and the declamation excellent.

Parabovi, Filippo [Francesco] **Maria.** *See* PERABOVI, FILIPPO MARIA.

Parać, Ivo (*b* Split, 24 June 1890; *d* Split, 4 Dec 1954). Croatian composer. Drawn to Italian art and culture from a young age, he graduated in composition from Pesaro Conservatory in 1923. He also studied privately with Pizzetti, Perosi and Alaleona. After returning to Split he taught briefly in Belgrade; from 1925 until his death (which occurred on the day of the Split première of his only opera) he lived in Split, conducting and teaching (from 1948) at the music school.

Parać's post-Romantic, lyrical musical language grew out of the Italian tradition, although he never used the typical Italian bel canto style. After 1924 his work underwent a change: he discovered the national Croatian tradition and tried to include elements of it in his own musical idiom. His artistic interest was nevertheless always focussed on vocal forms. His opera, *Adelova pjesma* ('Adel's Song'), a romantic lyrical tragedy, occupies an exceptional position among Croatian operas of the time; its musical language shows an individual use of Wagnerian technique, with leitmotifs in the orchestral texture and predominantly declamatory vocal writing. The summit of his vocal works is the cycle of 12 songs, *Musiche Pascoliane* (1930), with its rich vocal nuances and Impressionist-sounding piano accompaniment. As well as a composer, Parać was a gifted and prolific poet.

WORKS

Op: Adelova pjesma [Adel's Song] (3, epilogue, V. Desnica, after L. Botić), Zagreb 1930–34, 7 June 1941, rev. 1951

KORALJKA KOS

Paradeiser, Marian (Carl) [Karl] (*b* Riedenthal, 11 Oct 1747; *d* Melk, 16 Nov 1775). Austrian composer and violinist. From the age of 12 or 13, when he began serving as a choirboy, he spent his life almost entirely at Melk Abbey. He sang soprano and studied the violin under the *regens chori* Marian Gurtler (1703–66) and after 1761 composition with Robert Kimmerling and perhaps with the organist J.G. Albrechtsberger. He took his vows on 11 November 1767 and, after a period of study in Vienna, was ordained on 29 September 1771. Having taught in the lower school at Melk for three years, before taking up his appointment as professor of theology he died at the age of 28.

During his brief 13-year creative span Paradeiser developed a respectable reputation built around a small but valuable corpus of approximately 65 works. This was established early on through the success of large-scale vocal-orchestral works composed for Melk in the 1760s and through his own virtuoso violin playing well displayed in the concertos and the occasional symphonic movement. Later, as he specialized in composing chamber music for strings, he became known for his trios and quartets, as shown by their dissemination, and reports (*AMZ*, Maximilian Stadler) that they were favoured by the imperial director of chamber music in Vienna, Franz Kreibich (1728–97). It has been suggested that Haydn's opp.1, 2 and 9 may have influenced Paradeiser in his divertimento quartet writing (Finscher), but even closer parallels can be found between Paradeiser's and Albrechtsberger's chamber music composed at Melk in 1759–60.

WORKS

in MS at A-M, unless otherwise stated

Cants.: Die nöthigen Sorgen sind glücklich vertrieben (B. Schuster, E. Müller, G. Winnerl), Singgedicht, 4 S, 2 A, 4vv, orch, perf. Melk, 17 Feb 1765; Ecloga Seladon (Schuster), 4 S, A, T, 7vv, orch, perf. Melk, 29 June 1772; Er kömmt heran, der Hochgeweihte, doubtful attrib.

Paradies [Paradisi], **(Pietro) Domenico** (*b* Naples, 1707; *d* Venice, 25 Aug 1791). Italian composer and teacher. He is believed to have studied with Nicola Porpora in Naples, but little is known about his early life. The first documented performance of his music was of the opera *Alessandro in Persia* (Lucca, 1738), on a libretto of the Florentine Francesco Vanneschi. The poor reception of this work marked the beginning of a generally unsuccessful career as a composer for the stage. During the 1739–40 season Paradies moved to Venice, where he was employed by the Conservatorio dei Mendicanti, one of the city's four famous schools for orphaned girls. There his reputation as an opera composer suffered further when his *serenata* of 1740, *Il decreto del fato*, proved unpopular. During this period, however, he was exposed to the vibrant Venetian musical life of the era and the progressive keyboard music of composers such as his contemporary Baldassare Galuppi.

Paradies emigrated to London in 1746 and, shortly thereafter, changed the spelling of his name (from the Italian form 'Paradisi'). He was one of numerous Italian composers, including Galuppi, who worked there during the mid-18th century. His series of operatic failures continued in January of 1747, when his setting of Vanneschi's *Fetonte* encountered negative reaction during its nine performances at the King's Theatre, Haymarket. Charles Burney described the arias as 'ill-phrased' and lacking in '*estro* or grace'. Although Paradies continued to supply arias for pasticcio productions at the King's Theatre, where Vanneschi had become impresario, he never met with success as a composer of opera. He achieved some renown in England, however, as a teacher of harpsichord and composition. His most distinguished student was the elder Thomas Linley, who later became a highly regarded composer of English opera. In 1770, anticipating retirement, Paradies sold his manuscript collection to Richard (later Viscount) Fitzwilliam. He returned to Venice, where he spent the rest of his life.

Although Paradies published a concerto for organ or harpsichord and orchestra and composed numerous other instrumental works, his most enduring fame rests on his 12 *Sonate di gravicembalo*. This collection, published by John Johnson under the protection of a royal privilege in 1754, was reprinted several times in England during the composer's life, as well as by Le Clerc and Imbault in Paris and Roger in Amsterdam. These sonatas quickly achieved widespread popularity in England and on the continent. The letters of Leopold Mozart indicate that they were studied and performed in his household. Although Burney attributed Paradies's failure as an opera composer to inexperience, the sonatas consistently display refined craftsmanship. Several of them appeared in 19th- and 20th-century collections of keyboard music, and the entire set exists in two modern editions. The second movement of the sixth sonata, often published separately, entitled 'Toccata', has remained popular among harpsichordists and pianists.

The 12 sonatas are all in two movements. They display some of the more progressive features of the time along with many that are still firmly rooted in Baroque style. Their most modern attribute is the appearance of Classical formal procedure within many individual movements. The opening movements of the sonatas are the most complex and innovative, with 11 of the 12 recognizable as various versions of sonata form. Five of the closing movements are lively, quasi-contrapuntal studies, characterized by rhythmic regularity and broken-chord figuration. Their binary structures sometimes approximate sonata forms except for the lack of rhythmic differentiation (e.g. the 'Toccata' from Sonata no.6). Three are *gigas* and one is a minuet, all in binary form. The remaining three finales are lyrical rondos in slow or moderate tempos. Although many passages approach the cantabile style of Classical pianoforte music, this music was obviously conceived for harpsichord. Dynamic markings are non-existent. The textures exemplify the transitional state of keyboard composition of the mid-century. Much of the writing, especially in the finales, is in two parts in a style that resembles counterpoint, but in which one voice is normally more harmonic than melodic. Some movements begin with brief canonic passages, but quickly abandon imitative style. The first movements tend to be dominated by the melody in the right hand with various patterns outlining the harmony in the left. The true Alberti bass is used only occasionally. Many passages show the influence of the graceful keyboard idiom of Paradies's Neapolitan predecessor Domenico Scarlatti. In his manipulation of form, Paradies is inconsistent. Of the 11 first movements that resemble sonata form, seven omit all or part of the principal thematic area in the recapitulation in the manner of Scarlatti. Four, however, contain convincing thematic differentiation in the expositions and full recapitulations. Similarly, some of the sections after the central double bar are perfunctory transpositions of opening material, while others contain relatively sophisticated thematic development.

The other instrumental works are less progressive than the sonatas. The two keyboard concertos are in the Baroque style and show little differentiation between solo and tutti material. The sinfonias are typical tripartite Italian overtures. Of the dramatic works, *Fetonte* is unusual in its use of ballet music for chorus. Several excerpts from the operas were published in song collections. Paradies's style in these is competent, but facile and uninspired.

WORKS

DRAMATIC

all MSS autograph

Alessandro in Persia (opera, F. Vanneschi), Lucca, 1738, *A-Wgm*
Il decreto del fato (serenata), Venice, 1740, *GB-Cfm*

DONALD C. SANDERS

Paradis [Paradies], **Maria Theresia** (*b* Vienna, bap. 15 May 1759; *d* Vienna, 1 Feb 1824). Austrian composer, pianist, organist and singer. She was the daughter of the Imperial Secretary and Court Councillor to Empress Maria Theresa, after whom she was named (the empress was not however her godmother, as was formerly believed). Some time between her second and fifth year she became blind; Anton Mesmer was able to improve her condition only temporarily, in 1777–8. She received a broad education from Leopold Kozeluch (piano), Vincenzo Righini (singing), Salieri (singing, dramatic composition), Abbé Vogler (theory and composition) and Carl Friberth (theory). By 1775 she was performing as a pianist and singer in Viennese concert rooms and salons. Composers who wrote for her include Salieri (an organ concerto, 1773), Mozart (a piano concerto, probably K456) and possibly Haydn (a piano concerto, HXVIII:4).

On 18 August 1783 she set out on an extended tour towards Paris and London, in the company of her mother and Johann Riedinger, her amanuensis and librettist. She visited Mozart and his family in Salzburg on 27 August. After concerts in Frankfurt (5 October 1783), Koblenz (30 October 1783) and elsewhere, she reached Paris in early March of the following year. On 1 April she appeared at the Concert Spirituel; the *Journal de Paris* (4 April 1784) wrote of her: 'one must have heard her to form an idea of the touch, the precision, the fluency and vividness of her playing'. Before leaving Paris at the end of October she made 14 public appearances. She also assisted Valentin Haüy, 'father and apostle of the blind', in establishing the first school for the blind, which he opened in Paris in 1785. In November 1784 Paradis went to London, where she performed at court, in the palace of the Prince of Wales (Carlton House) and in the Professional Concert in the Hanover Square Rooms, among other places; her performances were less well received than they had been in Paris, however. After many concerts in other west European cities she returned in 1786 by way of Berlin and Prague to Vienna. Plans to tour Russia and Italy did not materialize, but she returned to Prague in 1797 for the production of her opera *Rinaldo und Alcina*.

During her journey Paradis began composing solo piano music as well as pieces for voice and keyboard. The earliest music attributed to her was a set of four sonatas of about 1777, but these are probably the work of Pietro Domenico Paradies, with whom she is often confused (the Toccata in A sometimes ascribed to her is from a sonata by him). Similarly, the famous *Sicilienne* is spurious, probably the work (after a Weber violin sonata op.10 no.1) of its purported discoverer, Samuel Dushkin. Many of her authentic works of this period are lost. Her earliest extant major work is the collection *Zwölf Lieder auf ihrer Reise in Musik gesetzt*, composed 1784–6. By 1789 she was devoting more time to composition than performance; between then and 1797 she wrote at least five operas and three cantatas. After the failure of *Rinaldo und Alcina*, she increasingly devoted her energy to teaching; in 1808 she founded her own music school where she taught the piano, singing and theory, primarily to young girls. A Sunday concert series at the school featured the work of her outstanding students. She continued to teach up to the time of her death.

Paradis apparently had exceptionally accurate hearing, as well as ready comprehension and a good memory (she is said to have played over 60 concertos by heart). When composing she used a composition board invented by Riedinger, and for correspondence a hand printing machine constructed by Wolfgang von Kempelen. Her songs are representative of operatic style, with coloratura and trills; the influence of Salieri's dramatically composed scenes is especially apparent. Her stage works owe much to Viennese Singspiel, and in her piano style she is indebted to her teacher Kozeluch.

WORKS

STAGE

Ariadne und Bacchus (melodrama, 1, J. Riedinger), Laxenburg, Schlosstheater, 20 June 1791, lost
Der Schulkandidat (ländliches Spl, 3, ?Riedinger), Vienna, Theater in der Leopoldstadt, 5 Dec 1792; *A-LIm* (Act 3 and pt of Act 2 lost); ov. ed. H. Matsushita (Fayetteville, AR, 1992)
Rinaldo und Alcina [Die Insel der Verführung) (Zauberoper, 3, L. von Baczko), Prague, Nostitzsches Nationaltheater, 30 June 1797, lost
Grosse militärische Oper (F. von Niederstradon), ?1805, lost
Zwei ländliche Opern, lost

OTHER WORKS

Cantatas: Trauerkantate auf den Tod Leopolds II (Riedinger) (1792), lost, lib *Wgm*; Deutsches Monument Ludwigs des Unglücklichen (Riedinger), *KR* (orch pts), vs (Vienna, 1793); Kantate auf Wiedergenesung meines Vaters, lost
Other vocal: Lied auf die Blindheit des Frl. M. Th. v. Paradis (Ich war ein kleines Würmchen) (G.K. Pfeffel), in *Wiener Musenalmanach* (1785); 12 Lieder auf ihrer Reise in Musik gesetzt (Leipzig, 1786), 2 ed. in DTÖ, liv, Jg.xxvii/2 (1920), ed. H. Matsushita (Fayetteville, AR, 1987); Leonore (G.A. Bürger), ballade (Vienna, 1790), ed. H. Matsushita (Fayetteville, AR, 1989); Auf die Damen, welche statt Gold, nun Leinwand für die verwundeten Krieger zupfen (?Burger) (Vienna, 1794), ed. H. Matsushita (Fayetteville, AR, 1997); Da eben seinen Lauf (Mlle Jerusalem), rev. as aria (Vienna, 1813); Auf Brüder, auf, geniesst des Lebens Wonne (Riedinger), chorus (Vienna, 1813), lost; other lieder, lost
Inst: 2 pf concs., g, C, lost; 12 pf sonatas, opp.1–2 (Paris, 1792), probably by D. Paradies, lost; Pf Trio (Vienna, 1800), lost; Fantasie, G, pf (Vienna, 1807), ed. H. Matsushita; Fantasie, C, 1811; Variations, kbd, lost; An meine entfernten Lieben, pf, lost

Paradon. *See* BARYTON (i).

Paradossi, Giuseppe. *See* TROILI, GIUSEPPE.

Paraguay (Sp. República del Paraguay). Country in South America. It has an area of 406,752 km² and a population of 5·5 million (2000 estimate). The river Paraguay marks the divide between two geographically and culturally distinct areas, populated since ancient times by indigenous peoples. To the east is sub-tropical jungle, inhabited by horticulturalists belonging to the Tupí-Guaraní linguistic group. To the west is the northern Chaco, whose inhabitants are hunter-gatherers belonging to the Maskoy, Mataco-Mak'á, Guaycurú and Zamuco groups. The population of both regions also includes peasants of creole and foreign descent. The only common link between the indigenous cultures of the two areas is that they exist in the same country, where Guaraní-Spanish bilingualism is well established both in practice and, since 1992, by law, according Paraguay singular status in Latin America. The spread of Guaraní was encouraged by the mingling of races in the early days of the Spanish conquest. It was also later adopted by the Jesuits in order to avoid contact between the Spaniards and the natives living in 'reductions', as the stable communities established by the missionaries were known. Sources of information about musical activity in Paraguay are sparse and unfortunately imprecise. Juan Max Boettner's book (*c*1957) remains unsurpassed, although it contains several obvious errors as regards indigenous music. Various researchers have collected indigenous music *in situ*, including Carlos Vega and Isabel Aretz, who also documented creole music; and Jorge Novati and Irma Ruiz, ethnomusicologists at the Instituto Nacional de Musicología of Argentina, whose archives also contain recordings made by Vega of a Mak'á group from Paraguay brought for other purposes to Buenos Aires in 1939.

For various historical and cultural reasons, art music was a late development. During the colonial period the antagonistic relationship between Paraguayans and Jesuits meant that no evidence could be found in the cities of 159 years of teaching and the successful practice of European music within the protected atmosphere of the Guaraní reductions. Moreover, contrary to what occurred in Moxos and Chiquitos, the expulsion of the Jesuits marked the beginning of the end of the musical practices imposed under their harsh regime. The political vicissitudes of the two ensuing centuries also resulted in the arrested development of art music, to the extent that, according to Szarán (2000), the first Paraguayan opera, *Juana de Lara* by Florentín Giménez, with libretto by Milcíades Jiménez y Velázquez, did not appear until 1987. It is significant that academically trained composers of the last 50 years have their roots in popular folk music: the symphonic poem based on folk tunes has become the principal genre, a further indication of the unfailing vitality of creole music. From the 19th century onwards folksongs and dances based on the European heptatonic scale from the colonial centres were re-created and given a distinctive local style. The guitar, harp and violin played, and continue to play, an important role. Indigenous music, unknown beyond native communities, exhibits features of inter-ethnic cross-culturalization, with little if any Western influence.

I. Art music. II. Traditional and popular music.

I. Art music

Documents dating from the early days of the Spanish conquest mention a choir at Asunción Cathedral, the members of which included Gregorio de Acosta, Juan de Xara, Antonio Coto, Antonio de Tomás and Antonio Romero, who were active in this and other churches until at least the 1570s. Records also refer to numerous military bands, playing a strong repertory of popular and patriotic music, a tradition which persisted in Paraguay for centuries. In 1540 Father Juan Gabriel Lezcano founded a school on the outskirts of Asunción, where the children were taught music. The Jesuits merit special attention as far as music teaching is concerned. The Jesuit province of Paraguay (1609–1768) embraced a large territory including part of present-day Argentina and Uruguay. The Belgian Jean Vaisseau-Vaseo (1584–1623), first music master in Guayrá, was succeeded by the Frenchman Louis Berger (1588–1639). The missions achieving the most success in the practice of academic music brought from Europe or composed by Jesuits were San Ignacio Guazú (Paraguay) and Yapeyú (now Argentina), the latter under the charge of Antonio Sepp. The excellence of Guaraní musicians earned repeated praise from distinguished visitors. A great variety of European musical instruments, including organs, were manufactured in the missions. The Jesuit practice of replacing religious and secular Guaraní music, initially tolerated on their arrival, has deprived succeeding generations of these traditions. The missions' objective was to instil European cultural beliefs by converting the native population to Christianity. Music played a substantial role in achieving this aim, since it embraced practically every aspect of everyday life, including fiestas and ceremonies. The Jesuits' *Cartas Anuas* and other documents describe musical practices transplanted from Europe. These have been classified in two groups: communal religious and missionary music (the only European music found during the early years), and festive music, which included ceremonial music. In the first type, the entire community participated, requiring no support in terms of either teaching or performance. Communal music included *cantarcicos*, community songs with Guaraní texts of a religious, doctrinal nature, hymns, litanies and other para-liturgical genres, dedicated to Jesus, the

Virgin Mary and various saints honoured by specific ceremonies. The second type required a complex and expensive infrastucture, which included training professional musicians, importing musical scores and instruments, organizing workshops for the manufacture of instruments, and the copying of music for distribution to towns and other missions. Festive and ceremonial music followed four European traditions: (1) martial music (with various combinations of trumpets, *chirimías* (oboes), drums, bassoons, horns, etc.), used by the army and at ceremonies welcoming distinguished visitors; (2) open-air music, recreational and processional pieces combining religious music and music derived from urban traditions including litanies and hymns, wind and fife and drum bands; (3) 'indoor' music intended for the religious liturgy of the church; and (4) dances, including those fashionable in Europe at the time (such as *españoleta*, *pavane*, *canario* etc.) and symbolic dances for ceremonial use. For a century and a half this, broadly speaking, was the musical scene in the missions. When these were disbanded, Catholic, Guaraní-speaking villages were established, laying the ground for strong popular religious activities and creating a very particular cultural situation. At the same time Indian villages in the jungle also repopulated.

In towns with European and mestizo populations, some Jesuits attempted to form choirs and bands, but with little success. In 1811, Paraguay gained independence from Spain under Rodríguez Francia. As 'Supreme Dictator' (1814–40) he closed the frontiers, resulting in cultural stagnation. However, during the subsequent peacetime regime (1840–65) Carlos Antonio López and his son Francisco Solano López, who succeeded him, showed a measure of interest in art music. Concerts with foreign conductors were held in the cathedral, the cathedral organ was restored and choirs were organized. The appointment in 1853 of a Frenchman, Francisco Sauvaget de Dupuis, to instruct military bandsmen indicates the importance attached to this form of music. Cantalicio Guerrero, trained by Dupuis, formed an orchestra in 1863, but the most intense musical activity came from a different direction, from the ballroom orchestras that played dances such as the lancers, quadrille, cotillion, waltz, mazurka, schottische and polka. It was not until ten years after the War of the Triple Alliance (1865–70) that there was any formal interest in culture. In 1881, the Sociedad Filarmónica La Lira and other similar groups were created to give concerts and organize musical soirées. Choirs were formed, while zarzuela companies arrived and instruments were imported from Europe. In 1887, the Compañía Italiana de Opera Bufa, under the direction of Guillermo Januski, introduced opera to Paraguay, but despite the creation of the Centro Lírico in 1974, no stable Paraguayan opera company has ever been formed. The Teatro Nacional opened in 1891, while in 1895 the Instituto Paraguayo, which would train future musicians, was founded. Soon afterwards Gustavo Sosa Escalada introduced the concert guitar. With the outbreak of World War I many artistic ensembles arrived and European maestros such as Lefranck, Ochoa, Segalés and Malinverni settled in Paraguay. They taught the first generation of musicians who then went abroad for further training, gaining an international reputation. Fernando Centurión (1886–1938), who founded the Cuarteto Haydn in 1911, composed the country's first symphonic works: *Marcha heroica*, *Serenata Guaraní* and *Capricho sobre un tema Paraguayo*. From 1940 onwards, successive dictatorships forced numerous composers into exile, notably José Asunción Flores (1904–72), Carlos Lara Bareiro (1914–88), Francisco Alvarenga (1910–57) and Emilio Bigi (1910–47). Among those who remained in Paraguay were Remberto Giménez (1899–1977) and Juan Carlos Moreno González (1916–82), composer of the *Zarzuela Paraguaya* as well as chamber and symphonic works. Later composers included Luis Cañete (1905–85), Florentin Giménez (*b* 1925) and Nicolás Pérez González (*b* 1935). The Asunción group of composers, concentrating on contemporary music, emerged in the 1970s. At the beginning of the 21st century there are still no professional choirs, although there is lively amateur activity.

II. Traditional and popular music

1. Indigenous music. 2. Creole and popular music.

1. INDIGENOUS MUSIC. The Chaco region is home to 11 Amerindian nations, belonging to four linguistic families: Mascoy (Angaité, Guaná, Lengua, Sanapaná, Toba Maskoy); Mataco-Mak'á (Chorote, Nivaklé and Mak'á); Guaycurú (Emok-Toba) and Zamuco (Ayoreo and Chamacoco). Apart from these there are enclaves of Chiriguano (sometimes incorrectly known as Guarayo) and Tapieté, who belong to the Tupí-Guaraní group and who arrived in the area during the 20th century. Because of their cultural affinity and inter-ethnic cross-culturalization, the musical conventions, instruments and forms of

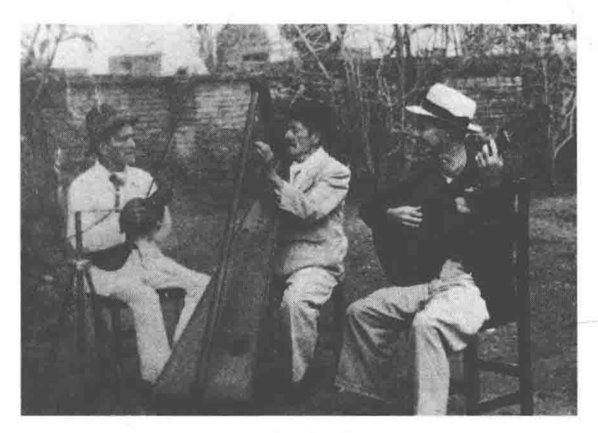
expression of the first three are similar to those of the Chaqueño Amerindians of Argentina, although the Mascoy are found only in Paraguay. Music documented for these ethnic groups includes nocturnal dances for boys, songs for men and women and an important collection of shamanic songs. The first, in the form of round dances, were very much alive in the 1970s and were still the only form of entertainment available in remote villages, while retaining their essential function as courtship dances. The lead singer, standing in the centre of the circle, marks the rhythm by beating a *tambor de agua* (a kettledrum filled with water) with a stick (ex.1). For some tribes this instrument – which the Zamuco did not have – was linked to male initiation rites. Songs for women deal with a wide range of subjects, including the souls and blood of those killed in war; various types of birdsong and lullabies; other songs accompanying the ritual dances which mark a young girl's entry into puberty (with a *palo-sonajero de uñas* – a stick rattle of animal hooves, fig.1). Outstanding among the musical customs of adult males are songs accompanied by the *maraca* (a gourd rattle), an instrument presented to boys during their rite of passage to puberty. Shamanic songs – with or without *maracas* according to the tribe – are intended to summon various benevolent forces and beings of the natural world and to exorcize the forces of evil. Shamanic medicine involving the recovery of lost souls is supported by a wide range of songs.

The Chamacoco and Ayoreo of the northern Chaco show notable musical differences from other tribes. Although they share use of the *maraca* with other groups, including the Guaraní, it is used in different ways with distinctive symbolic meanings. In contrast with the emphatic style of most songs in regular duple rhythm sung by men of the Chaco tribes, Ayoreo singing consists of continuous vibrato male voices with the uniterrupted shaking of a gourd rattle and with musical phrases continuing until the singers run out of breath. A bizarre stance is adopted for singing (fig.2). Another oddity is that the Ayoreo have no dances. Ayoreo songs for solo female voice usually tell the stories of incidents that have happened in the community.

The Tupí-Guaraní tribes of the eastern region are the Paĩtavyterã, Avá or Chiripá, Mbyá and Aché-Guayakí. The first three represent the '*monteses*' (or 'wild ones') who escaped Spanish and creole oppression for centuries. They conserve their own religious traditions and rituals, notably musical performances of various types, which reveal a certain degree of Western influence. In search of seclusion, and in the case of Mbyá, 'a land without evil', some groups migrated to the jungles of Argentina and Brazil. Their two sacred musical instruments are the *mbaraká* played only by men, which the Mbyá replaced with a five-string guitar, and the *takuapú* (rhythm tube played by women). Among the Aché-Guayakí, who became horticulturalists, the men reclaim their original role as hunters through the improvised texts of solitary nocturnal songs, while the women sing in plaintive style at religious ceremonies. Other musical instruments used by these groups include wooden whistles (by the Nivaklé and Ayoreo); vertical and transverse flutes by the Chiriguano; vertical flutes and panpipes by the Mbyá; and musical bows called *gualambáu* and *guyrapa'í* by the Paĩtavyterã and Chiripá, although some of these are no longer used. There are also examples of rustic fiddles with a single string used by the Mak'á, Lengua and Toba and various two-headed drums, both instruments adopted more recently.

2. Creole and popular music. Although originally of European origin, creole traditions are the most representative of Paraguayan music since, in creole hands and with the consolidation of the nation state, they have acquired a character of their own. Forerunners are the

2. Ayoreo Indian singing with a gourd rattle (Photo J. Novati)



aforementioned European dances, which in the 18th and 19th centuries were danced in the salons of the nobility, in public and private ballrooms and at open-air band concerts. Dances based on the cotillion include *La golondrina* (now obsolete), and *El Santa Fe*, also called *Cielito de Santa Fe* or *Chopí*, a single tune without lyrics. Boettner (*c*1957) indicates that the *Chopí* was still danced at popular festivals in the 1950s, describing how it was choreographed for three couples and consisted of four figures: a greeting, a chain, a *toreo* and a waltz. Boettner also mentions *La palomita*, popular during the war of 1865–70. Special attention is given to the polka or *polca*, the most widespread of all dances. All that remains of the dance that arrived from Europe around 1850 is the name. In lively tempo, usually sung in 3rds by two singers, it is traditionally played by guitars, harp or violin (fig.3). A double bass was added at a later stage to provide a ground bass in 3/4 time, in counterpoint to the usually syncopated 6/8 rhythm of both guitars and singers. The oldest polkas such as *Campamento Cerro León* (ex.2), which has

Ex.2 *Campamento Cerro León, polca* (Bottner, 1957)

become a kind of 'popular anthem', are by anonymous composers. *Campamento Cerro Léon* (*Cerro Corá* a Guaraní *purajheí* or song by Giménez and Fernández) and *India* (a *guarania* by Flores and Ortíz Guerrero) were officially declared Canciones Populares Nacionales in 1944 by the Paraguayan government. This gesture, indicative of the power of popular music, enshrined the *polca*, the *purajheí* and the *guarania* (a genre created in 1928 by Flores) as the three most representative genres. Both the *purajheí* and *guarania* are derivations of the *polca* although they are purely vocal and their tempo is slower than that of the dance version. The songs tell of military, political and patriotic exploits or explore romantic themes. Also popular are the *galopa* and 'onomatopoeic' pieces such as *Guyrá campana* ('Bell-Bird'), *Polka burro* ('Donkey Polka') and *Tren lechero* ('Milk Train'). These show off the virtues of the diatonic, pedalless harp with characteristic techniques of lavish glissandi and ornamentation, on occasion using techniques of the violin.

A striking feature of Paraguayan creole music is the continuity between oral and popular urban traditions and their influence on academic music. Szarán describes attempts to 'modernize' creole music, through the creation of a *nuevo cancionero*, a movement inspired by similar endeavours in Argentina and Chile.

IRMA RUIZ

Paraklitikē kai teleia. Pair of signs used in Byzantine EKPHONETIC NOTATION.

Parallagē. A term used by the 15th-century composer MANUEL CHRYSAPHES to describe a particular style of singing Byzantine chant. In his treatise *On the Theory of the Art of Chanting* (ed. D.E. Conomos, MMB, *Corpus scriptorum*, ii, 1985), Chrysaphes reproached singers who were content to read the neumes drily and ignore the vocal flourishes (*theseis*) prescribed by the great composers of the past. This practice, which he called singing 'by parallagē', is a falsification of the true manner of chanting. However, at the heart of this condemnation lies a conflict of neumatic interpretation, which had begun in the early 14th century when a conservative group rejected the kalophonic innovations of JOANNES KOUKOUZELES and his followers (*see* KALOPHONIC CHANT).

DIMITRI CONOMOS

Parallel fifths, parallel octaves. CONSECUTIVE FIFTHS, CONSECUTIVE OCTAVES.

Parallel key. A minor key having the same tonic as a given major key, or vice versa; C major and C minor are parallel keys.

Parallelklang (Ger.). *See under* KLANG (ii).

Parallel motion. In PART-WRITING, the simultaneous melodic movement of two or more parts in the same direction and at a distance of the same interval or intervals.

See also CONSECUTIVE FIFTHS, CONSECUTIVE OCTAVES.

Paralleltonart (Ger.). *See* RELATIVE KEY.

Parameter. A term associated, in musical parlance, with SERIALISM, where it refers to the aspects of a musical context: pitch or pitch class, rhythm, loudness and timbre are all different parameters. In serialism its use arises when a composer attempts to serialize the different aspects of a musical composition. Many mathematical terms have found their way into musical terminology, but it is difficult to see how the musical application of 'parameter' is an

interpretation of the mathematical meaning. In the mathematics of functions a parameter generally is a constant which may be assigned different values. While in synthesized music certain parameters of a note must be specified, the extension of the term to less quantifiable areas is unhelpful.

PAUL LANSKY, GEORGE PERLE

Paramount. American record label. Established in 1916, it was the main label of the New York Recording Laboratories of Port Washington, Wisconsin. A race series began in August 1922 and proved extremely successful; by the time it was discontinued in 1932 more than 1100 releases had been made. The work of jazz and blues singers predominated, including that of Ma Rainey, Ida Cox, Alberta Hunter, Charley Patton and Blind Lemon Jefferson. Many discs in the race catalogue are now acknowledged to be classics, including recordings by King Oliver, Lovie Austin's Blues Serenaders and Jimmy O'Bryant's Original Washboard Band. Paramount's General Series contained a smaller proportion of jazz, but included some discs by Fletcher Henderson and the Original Memphis Five and a considerable amount of hot dance music.

During the early 1920s Paramount was closely associated with the Bridgeport Die & Machine Co. and also exchanged many masters with Plaza (later part of ARC). In 1929 it moved to Grafton, Wisconsin; operations ceased in 1932. Thereafter, however, a small number of race issues appeared in a Paramount series produced by ARC. The collector John Steiner revived the label in the late 1940s, putting out both reissues and new material; LPs of the latter were released until the early 1950s.

HOWARD RYE/BARRY KERNFELD

Paraphonia (Lat., from Gk.: 'sounding beside'). A term used in the writings of a number of Greek theorists (notably Thrasyllus, Pseudo-Longinus and Bryennius) to designate the intervals of the 4th and 5th. In 1928, Peter Wagner called attention to the appearance of a similar term in the *Ordines romani I–III* (7th–8th centuries). Of the seven members of the Schola Cantorum listed in the *Ordines*, the fourth is called *archiparaphonista* and the last three *paraphonistae*. Wagner also found references to *paraphonistae* in French sources and in a sequence text. He concluded that the designation *paraphonista* described a singer who sang in paraphonic intervals, that is, in parallel 4ths and 5ths. He thus suggested that organum-like polyphony existed in the Church well before it was first described, and that, owing to the word's Greek origin, the practice came from Byzantine music.

Wagner's theories were disputed by Gastoué on philological grounds. Gastoué argued that *paraphonista* did not come from *paraphonia*, but instead was the result of adding the prefix *para* ('beside') to *phonista* ('singer'). Thus the term would mean 'singer standing beside', referring to the physical placement of the *paraphonistae* beside the boys' choir (also mentioned in the *Ordines*). In Gastoué's view, the *paraphonistae* sang in support of the boys' choir, and occasionally sang solos.

Gastoué was answered in turn by both Wagner and Moberg who argued that his combination *para-phonista* was philologically impossible. Moberg went on to interpret a passage in Pseudo-Longinus so as to demonstrate that there was indeed a Byzantine practice of singing in polyphonic 4ths and 5ths.

Subsequently Handschin, who discussed the subject at some length, agreeing with Gastoué that the *paraphonistae* did not sing in parallel 4ths and 5ths, put forward yet another interpretation: that *para* meant 'inferior' ('untergeordnet'), and that the *paraphonista* was a singer in the chorus, or one in an inferior position to the cantor, the word itself being a paraphase of the Latin succentor. Tomasello, however, has defined the *paraphonistae* as 'adult singers who were cantors or song leaders at the patriarchal churches [of Rome]' in the 12th century, who sometimes took the place of the *primicerius* of the papal Schola in ceremonies.

Reese and Ludwig also disagreed with Wagner and Moberg, but did not go into detail. Later, Eggebrecht tended to favour Wagner's theories; he did not consider, however, that the use of the word reflected a very early beginning of organized polyphony (*diaphonia*), but rather some sort of improvisatory practice.

RICHARD SHERR

Paraphrase. (1) A compositional technique, popular particularly in the 15th and 16th centuries, whereby a pre-existing melody (usually chant) is used in a polyphonic work; it may be subjected to rhythmic and melodic ornamentation but is not obscured. Examples can be found in settings of the Mass Ordinary from the 14th and 15th centuries. In early 15th-century settings of hymns, antiphons and sequences based on chant, the borrowed melody usually appears in the upper voice and was not subject to much alteration. In cyclic masses, however, borrowed melodies (mainly restricted to the tenor) could be extensively paraphrased (e.g. Du Fay's *Missa 'Ave regina celorum'*). In masses of the late 15th century and the 16th, paraphrased melodies appear within an imitative texture, moving from voice to voice (as in Josquin's *Missa 'Pange lingua'* or Palestrina's masses based on hymns). It has been suggested that 15th- and 16th-century composers consciously included in their works short citations or paraphrases of sections of well-known chants or even of works by other composers for interpretative or symbolic purposes. Paraphrases of popular tunes are also found in the music of Charles Ives, notably in his Second Symphony (1902).

(2) In the 19th century the 'Paraphrase de Concert', sometimes called 'Réminiscences' or 'Fantaisie', was a

virtuoso work based on well-known tunes, usually taken from popular operas. Liszt in particular wrote such paraphrases for piano, including 'Grande paraphrase de la marche de Donizetti' (1847) and *Totentanz: Paraphrase über das Dies irae* (1849).

Paraphrases, Scottish. Metrical versions of passages from the scriptures sung to psalm tunes in the Church of Scotland.

The Scottish Psalter of 1575 contained in an appendix five paraphrases; the edition of 1595 contained ten and that of 1635 had 14. When the present psalter was published in 1650 these all disappeared, but it seems that the Church had intended to use paraphrases, for in 1647 the General Assembly had recommended that Zachary Boyd, minister at the Barony Parish Church, Glasgow, should 'be at the paines to translate the other Scripturall Songs in meeter, and to report his travels also to the Commission of Assembly'. Nothing came of this because Boyd's verses were doggerel. Other efforts were equally unsuccessful and interest in the matter was lost for nearly 100 years. In 1741 a committee was appointed to consider the possibility of paraphrases and in 1745 it produced 45 paraphrases of scripture. These were sent by the General Assembly for consideration by the presbyteries, but the 1745 rebellion proved too great a distraction and nothing was done. In 1775 another committee was appointed, enlarged in 1777, and in 1781 it submitted to the Assembly the *Translations and Paraphrases in Verse, of Several Passages of Sacred Scripture*. They were not formally authorized, but the Assembly allowed their temporary use, pending a final decision, in congregations where the minister might find them useful for instruction. Final approval was never given, but with tacit consent the custom arose of printing them with the metrical psalms and so they passed into use. They comprise the original 45 paraphrases of the 1745 edition, though much revised, along with 22 new ones. The main authors were John Morison, John Logan, Philip Doddridge, Isaac Watts, Nahum Tate and William Cameron, but the committee took great liberties in revision and in some cases left only fragments of the original versions.

Many of the paraphrases are now obsolete, although the 1929 edition of the Scottish Psalter recommended 42 as being suitable for singing in public worship. The 1927 *Revised Church Hymnary* contains 13 paraphrases (numbered among the hymns) while *The Church Hymnary: Third Edition* (1973) contains 22. Some of the best-known paraphrases are found in the hymnbooks of other churches, including 'O God of Bethel' (*Genesis* xxviii.20–22), 'While humble shepherds watched their flocks' (*Luke* ii.8–15) and 'I'm not ashamed to own my Lord' (2 *Timothy* i.12). (D.J. Maclagan: *The Scottish Paraphrases*, Edinburgh, 1889)

Pararol [Pararols], **Berenguier de.** *See* BERENGUIER DE PALAZOL.

Paratico, Giuliano (*b* Brescia, *c*1550; *d* Brescia, ?1617). Italian composer and lutenist. He practised as a notary in the episcopal chancery at Brescia. Although Marenzio and Bertani advised him to further his musical career by travel, he is not known to have left Brescia. Gaspari considered him 'outstanding in his compositions, especially in the more affective pieces, in which he revealed himself unique and original' and commented on the sweet quality of his voice. He was still living in 1613, and, according to Fétis, died in 1617 at the age of 66. Of a first book of *Canzonette a tre voci*, dedicated to Countess Barbara Maggia Gambara, only the bass partbook survives. It contains 22 compositions, of which one is by the 'count of Villachiara' and two are by Lelio Bertani. His *Canzonette a tre voci, librò secondo* (Brescia, 1588[25]), dedicated to Francesco Morosino, contains 22 compositions, each bearing its own dedication; one work is by Andrea Picenni. The canzonetta *Di pianti e di sospir* is intabulated for lute in Terzi's *Secondo libro de intavolatura* (RISM 1599[19]).

PIER PAOLO SCATTOLIN

Paray, Paul (M.A. Charles) (*b* Le Tréport, 24 May 1886; *d* Monte Carlo, 10 Oct 1979). French conductor and composer. He studied with his father, an organist, and in Rouen, where he became an organist at 17. A year later he entered the Paris Conservatoire, won a *premier prix* in harmony and, in 1911, the Prix de Rome. Conscripted into the French army in 1914, he was taken prisoner until 1918. He made his début at a test concert with the Lamoureux Orchestra in 1920, and as a result was appointed assistant conductor of the Concerts Lamoureux, succeeding Camille Chevillard as principal in 1923. Five years later Paray became conductor of the Monte Carlo PO, and from 1933 he was principal conductor of the Concerts Colonne in Paris.

During World War II Paray conducted in Marseilles and Monte Carlo, and returned to Paris in 1944 to reorganize the Colonne Orchestra after the liberation. He remained with the Concerts Colonne until his appointment as principal conductor of the Detroit SO (1952–63). At Detroit he inaugurated the Henry and Edsel Ford Auditorium in 1956 with his *Mass of Joan of Arc*,

originally composed in 1931 for the quincentenary commemoration at Rouen and first performed there. He also recorded the mass and made several discs of French works, notably by Berlioz, Bizet, Chabrier, Ravel and Roussel. Paray acquired a reputation as a reliable conductor in a wide range of the classical repertory. As a composer he tended towards academic propriety. His works include the symphonic poem *Adonis troublé* (1921, staged at the Paris Opéra in 1922 as the ballet *Artémis troublée*), two symphonies, a *Fantaisie* for piano and orchestra, and various chamber and piano works.

Pardessus (Fr.). A 'descant' instrument, that is, one with a high range, a 4th or 5th above the treble size (called 'DESSUS' in French).

The 'pardessus de viole', a descant VIOL, was initially shaped like a small treble viol and had six strings, tuned *g–c′–e′–a′–d″–g″*. It emerged about 1690: the earliest surviving instrument, by Michel Collichon, dates from about that time and the estate inventory of Jean Rousseau (1644–99) lists a pardessus. It was first mentioned in print in Joseph Sauveur's *Principes d'acoustique et de musique* (Paris, 1701/*R*) and the first music verifiably composed for it was Thomas Marc's *Suitte de pièces de dessus et de pardessus de viole et trois sonates avec les basses continües* (Paris, 1724). By the 1720s the *dessus* was disappearing, and by the 1730s 'dessus' and 'pardessus' were often used interchangeably. Among the composers who published music for this instrument were Barrière, Boismortier and Dollé.

A five-string pardessus, tuned *g–d′–a′–d″–g″*, emerged in the 1730s. Although the early models of this instrument retained features of the treble viol body, some later ones resembled violins and were called 'quintons' (*see* QUINTON). Composers who wrote for the five-string pardessus include Blainville, Dollé, Lendormy and Vibert. The *VI sonates pour deux pardessus de violes* op.1 by Barthélemy de Caix (Paris and Lyons, 1748) are among the most difficult and interesting works for the instrument. In addition, a 'Mr de Villeneuve' made idiomatic transcriptions of a large portion of the works of Marin Marais. Louis de Caix d'Hervelois and others wrote many works of a melodic nature intended for either the five- or six-string pardessus, and the instrument was listed as an alternative on over 100 publications. The method by Michel Corrette (1748) is the only one to survive.

The pardessus was played by cultivated amateurs and is often considered a lady's instrument. However, many gentlemen played it, especially in the provinces where instruction on the violin may have been limited. The most notable virtuoso was Mlle Lévi, who played concertos at the Concert Spirituel in 1745. After about 1760 the instrument began to decline, and it had largely disappeared by 1790.

ROBERT A. GREEN

Pardon, Walter (*b* Knapton, Norfolk, 4 March 1914; *d* Knapton, 9 June 1996). English traditional singer. A village carpenter, he had a repertory of over 150 songs including traditional, popular, music hall and rare Agricultural Union songs. Most of his repertory was learnt from his uncle Billy Gee (*b* 1863), passed on from Pardon's grandfather, who had acquired them in turn from itinerant broadside sellers at a cost of one penny each. Pardon performed within the context of the family rather than the public house until he was 'discovered' by members of the Folk Revival during the early 1970s. In 1976 he represented England at the American Bicentennial Celebrations at the Smithsonian Institute of Folklife in Washington, DC, and in 1983 he was awarded the Gold Badge of the ENGLISH FOLK DANCE AND SONG SOCIETY, its highest honour for services to folk music. Pardon was admired for his introspective vocal style and quality of phrasing, sense of pitch and enunciation.

DAVE ARTHUR

Paredes, Juan. *See* BONET DE PAREDES, JUAN.

Parenti, Paolo Francesco (*b* Naples, 15 Sept 1764; *d* Paris, 1821). Italian composer and singing master. He studied at the Pietà dei Turchini conservatory in Naples, learning counterpoint from Sala, harmony and accompaniment from Taranino, probably voice from La Barbera, and, in Villarosa's description, taking Traetta's music as his guide (Traetta had left Naples by this time). In the next few years he is said to have written a good deal of sacred music; the little that has survived was praised by Prota-Giurleo and Paduano for its contrapuntal skill and invention. During this period he was probably often away from Naples. According to Gervasoni and the *Biografia* he composed four serious operas and three comic ones; oddly, except for *Nitteti*, no production records have been located for these works, although Florimo said that *La vendemmia* was his first opera, written for Naples, and

Villarosa reported that *Il matrimonio per fanatismo* was greatly applauded in Rome.

In 1790 Parenti went to Paris, where, according to Fétis, he was first employed by the Opéra-Comique to add pieces to a revival of Gluck's *La rencontre imprévue* on 1 May. This was given as *Les fous de Médine* and not, as previously thought, in translation as *I pazzi di Medina* (Brenner). Loewenberg, however, maintained that the new musical arrangement was by J.P. Solié. He subsequently wrote four comic works for the Théâtre Italien. Villarosa claimed that Parenti served as director of the Italian comic opera in Paris for the year 1802, though this fact has not been substantiated. Otherwise, he supported himself as a singing teacher of the Italian style, for which he had a high reputation.

JAMES L. JACKMAN/R

Parepa(-Rosa), Euphrosyne [De Boyescu, Parepa] (*b* Edinburgh, 7 May 1836; *d* London, 21 Jan 1874). Scottish soprano. Her father was Baron Georgiades de Boyescu, a Walachian magnate, and her mother the soprano Elizabeth Seguin, with whom she studied. She made her début in Malta under the name of Euphrosyne Parepa in 1855 as Amina in *La sonnambula*. After appearances in Italy, Spain and Portugal she was engaged by Frederick Gye for the 1857 season of the Royal Italian Opera at the Lyceum (Covent Garden having burnt down the previous year), where she made her début as Elvira in *I puritani*. Between 1859 and 1865 she appeared at both Covent Garden and Her Majesty's, in a repertory that included Leonora (*Il trovatore*), Zerlina (*Fra Diavolo*) and Elvira (*La muette de Portici*). She also sang in the Handel festivals of 1862 and 1865, and in Germany. In 1865 she went to the USA on a concert tour with Carl Rosa, whom she married there in February 1867 (her first husband, Captain H. de Wolfe Carvell, having died in 1865) and in the same year she and her husband formed an opera company, in which she sang leading roles. In 1871–2 she toured America again, and appeared in New York in Italian opera with Wachtel and Santley. In 1872 she appeared at the Lower Rhine Festival, Düsseldorf, and returned to Covent Garden as Donna Anna and Norma. On her death her husband abandoned the Drury Lane season and founded the Parepa-Rosa Scholarship at the RAM in her memory. He also decided to spend the rest of his life giving opera in English.

Her voice combined power and sweetness, and had a compass of two and a half octaves, extending to *d‴*; despite her many stage appearances she was more successful in oratorio than in opera.

HAROLD ROSENTHAL/ELIZABETH FORBES

Pareto, Graziella [Graciela] (*b* Barcelona, 15 May 1889; *d* Rome, 1 Sept 1973). Spanish soprano. She studied with Vidal in Milan, and made her début as Amina at Madrid in 1908, taking the role in Parma shortly afterwards. For two seasons from 1909 she appeared at the Teatro Colón, Buenos Aires, as Gilda, Adina, Rosina and Ophelia (Thomas' *Hamlet*), parts she sang there later on her 1926 return. In Italy she sang at Rome, Naples, as Meyerbeer's Marguerite de Valois at Turin, 1912, and reached La Scala in 1914, as Gilda. At Covent Garden in 1920 she played Norina, Violetta, and Leïla (*Les pêcheurs de perles*) under Beecham, who considered her the best *soprano leggero* of her day (in *A Mingled Chime* he described her voice as being 'of exquisite beauty, haunting pathos and flawless purity'). She appeared at Chicago (1923–5), and as Carolina (*Il matrimonio segreto*) at the 1931 Salzburg Festival. Her records, which include extracts from her leading roles, offer proof of a pure, limpid soprano, capable, as in 'Dite alla giovine' from *La traviata*, of considerable pathos.

ALAN BLYTH

Parfaict, François (*b* Paris, 10 May 1698; *d* Paris, 25 Oct 1753). French theatre historian and dramatist. Parfaict and his brother Claude (*b* Paris, 1705; *d* Paris, 26 June 1777) came from an upper middle-class family whose origins go back to Jean Parfaict (*b* 1440). François, even as a young man, was closely associated with the theatre. In 1724 he collaborated with Marivaux on comedies for both the French and Italian theatres, including *La fausse suivante ou Le fourbe puni*. He married Marie-Jacqueline Tiphaigne, and one child, Gabrielle-Philippe, was born to them on 21 February 1742.

His most important works, written in collaboration with his brother Claude, deal with the history of French theatre which, from its origins up to 1721, is the subject of the *Histoire du théâtre françois*. The *Dictionnaire des théâtres de Paris* treats alphabetically all plays (including operas) which 'from the year 1552 up to the present have been performed on the stages of the different theatres of Paris' (preface). Cast lists, revival dates, cross-references to the *Mercure de France* and the *Recueil général des opéra*, and anecdotes concerning authors, composers, actors and actresses, dancers and stage designers make this a valuable source for any study of French opera of the period. Equally important is the manuscript *Histoire de l'Académie royale de musique* which, although receiving a privilege dated 1741, was never printed. It is a chronological discussion of important events in French opera from 1645 (*La finta pazza*) to 1741. Its descriptions

are striking. The singer Du Mény, for example, 'never knew his music and often sang out of tune. Added to this he was extremely addicted to drink'. Lully is described as having a 'lively and strange countenance, without nobility, dark complexioned, with small eyes, protruding nose and large mouth'. After François's death, Claude Parfaict edited a second edition of the *Dictionnaire des théâtres* and began a *Dramaturgie générale* which was never completed.

Parhalling. *See* HALLING.

Pari, Claudio [Paris, Claude] (*b* Salines [now Salins-les-Bains], Burgundy, 1574; *fl* Palermo, 1598–1619). Italian composer of Burgundian birth. In the auto-da-fé celebrated at the monastery of S Domenico, Palermo, on 22 December 1598, he was sentenced to row in the galleys for five years for heresy. From 6 September 1611 to 18 March 1619, the dates of the dedications of his second and fourth books of five-part madrigals, he was active in Sicily, particularly in Palermo. In the dedication of the third book he refers to his ultramontane origin, and on all the title-pages he is described as Burgundian. The dedication and postscript of the second book state that, as well as the lost first book, he had already published a collection of six-part madrigals, which is also lost. In 1615, according to an uncatalogued document in the Archivio di Stato, Palermo, he received a three-year appointment as director of music at the house of the Jesuits at Salemi, in western Sicily.

Pari's predilection for madrigal cycles is noteworthy. His second book is entitled *Il pastor fido* and consists only of settings of texts from Guarini's dramatic pastoral. The bulk of the third book is made up of three cycles of madrigals to other texts from the same work. *Il lamento d'Arianna*, which gives its name to the fourth book, opens the volume and accounts for the first 12 of its 20 madrigals. Only the first is a setting of Rinuccini's text, thus corresponding to the first madrigal of Monteverdi's famous cycle (in his book 6, 1614); the other madrigals are settings of Ariadne's lament as interpolated by G.A. dell'Anguillara into his translation in ottavas of Ovid's *Metamorphoses*, imitating the lament of Olympia in Ariosto's *Orlando Furioso* and, indirectly, the lament of Ariadne in Ovid's *Heroides*. To judge from Ayello's reference to it (see below), the lost book of six-part madrigals may also have been composed to a single extended text divided into several sections.

In a postscript to the second book Don Giovanni Battista di Ayello, a gentleman of Palermo, perceptively defined Pari's style:

> He has used many new and elaborate sorts of counterpoint, including various canons and many imitative entries using double subjects – as may be seen in his first two collections of madrigals, for five and six voices – making each voice clear and distinct and without confusing the words ... [In] the sixth part of the first [book] for six voices, which begins 'Fra sí contrarie tempre', it may be seen with what artifice the six voices are worked out, with two contrary-motion entries that form an uninterrupted double canon using natural tones and semitones, that is without relying on any accidentals. It is true that in the present *Pastor fido* he has ceased using so much counterpoint, in order to vary his style, and has preferred to ensure only that the words be articulated gracefully in every voice ... Everyone can be sure that he has worked everything into his music with great industry, particularly the new and extraordinary dissonances, which he has used, not wantonly or haphazardly, but with every justification, with great art and with due regard for the words.

The title-page of the third book, which is indeed a manifesto of *musica reservata*, proclaims that its contents are 'created out of several styles and new kinds of invention never before used by anybody and with much use of imitation, strict counterpoint and close interpretation of the words'. They thus contain all the ingredients of musical mannerism – recourse to archaic stylistic procedures, novelties of style and experiments in harmony and structure, as well as strict counterpoint and great care in interpreting the words – and were clearly intended for cognoscenti.

These features are also found in *Il lamento d'Arianna*. The 12 madrigals are rigorously based on a few distinctive rhythmic and melodic elements, all derived from Monteverdi's cycle and clearly announced in the first madrigal. The vast majority of sections consist of double and triple fugues, with consequent overlapping of lines of text, against which the few short passages of syllabic declamation stand out in sharp relief. From this kind of writing and from the continual absence of cadences stems the objection of 'length, velocity and continuity of utterance' that Ayello, in the postscript cited above, had already accepted without refuting and that bring Gombert to mind as Pari's possible stylistic model. Moreover, he took advantage of such structures to insert the 'new and extraordinary dissonances' to which Ayello referred, often neither prepared nor resolved and having the effect of maintaining the harmonic tension and breaking the monotony that might otherwise have accrued from long stretches of polytextual imitation. The scoring for the five voices is resourceful and effective. In the last part, obviously to convey the resigned state of the desolate Ariadne, the harmonic tension slackens and the texture clears: instead of complex polyphony there are two passages of free declamation (*falsobordone*), dissonance is used sparingly and the soprano part stands out at times from the texture of the other parts. The remaining madrigals in the book (settings of verses by Alessandro Aligeri, Isabella Andreini, Francesco Contarini and F. Scaglia) confirm Pari's ability in handling the virtuoso concertante style, with appropriate exploitation of double

and triple fugues. He may be considered a worthy follower of Giovanni de Macque's chromatic style and is indeed worthy to stand alongside the best Sicilian madrigalists of the day, such as Antonio Il Verso (who also published a *Lamento d'Arianna* in 1619), Sigismondo d'India and Giuseppe Palazzotto e Tagliavia.

PAOLO EMILIO CARAPEZZA/GIUSEPPE COLLISANI

Pariati, Pietro (*b* Reggio nell'Emilia, 27 March 1665; *d* Vienna, 14 Oct 1733). Italian poet and librettist. Secretary to Rinaldo, Duke of Modena, he was in Madrid in 1695 and after his return to Italy spent three years in prison. He then lived in Venice from the end of 1699 until summer 1714, when he was appointed court poet in Vienna by Charles VI, for whom he had already written laudatory theatrical works staged in Barcelona.

In Venice Pariati started to work as a librettist with Apostolo Zeno, contributing to the versification and drafting of his librettos. The extent of their collaboration is not as great as has been thought, however; Pariati alone was responsible for *Artaserse*, *Anfitrione*, *La Svanvita*, *Il falso Tiberino*, *Sesostri re di Egitto* and *Costantino* (for an alternative view *see* ZENO, APOSTOLO). He began by revising 'in the modern style' 17th-century works such as *Sidonio* and turning into *dramma musicale* form recent tragedies such as Giulio Agosti's *Artaserse*. Very soon he began to turn out prose works on his own account for the Milan and Bologna stages. Established at the same time in Venetian theatrical circles, where he met composers including Albinoni and Gasparini and the *buffo* singers Giovanni Battista Cavana and Santa Marchesini, he devoted himself to writing comic scenes, *tragicommedie* (*Anfitrione*) and intermezzos, particularly for the Teatro S Cassiano. Drawing on Plautus, Molière and Cervantes, together with a wide theatrical experience, he refined the features that became characteristic of his comic style: rapid pace, brightness of dialogue and a taste for lexical extremes.

In Vienna, where he was joined by Zeno in 1718 and replaced by Metastasio in 1729, Pariati wrote oratorios (13), cantatas and chamber works (15), pastoral dramas and theatrical pieces (14) for the festive celebrations of the imperial family. The most famous such piece was the *festa teatrale Costanza e Fortezza*, set by Fux in 1723. For the court theatre he revived earlier works, wrote two new librettos and continued to collaborate with Zeno. He also found a new expressive freedom in the fantasy intermezzo and comic scene, using comedy not only as a source of laughter and entertainment, but also as an instrument with which to provoke, deride and debunk. Between 1716 and 1724 Pariati wrote alone four intermezzos and four *tragicommedie*; with *Don Chisciotte in Sierra Morena* and *Alessandro in Sidone* he even involved Zeno in his chosen field, dragging him beyond the confines of serious works into the territory of literary parody and social criticism. He exploited his favourite devices fully, varying and intertwining them: dual identity in *Il finto Policare* and *Penelope*, the philosopher's ironic situation in *Alessandro in Sidone* and in *Creso*, mental imbalance in *Don Chisciotte* and *Archelao*. Avoiding generic forms, Pariati flung his darts at diverse targets, including personal enemies and court intrigue, the very foundations of *opera seria*. He thus effected a twofold distortion: corrosive parody undermines the drama's heroic virtue and progressively erodes credibility, while an explosive stylistic mixture gives rise to the transformation into tragicomedy.

GIOVANNA GRONDA

Paridon. *See* BARYTON (i).

Parigi, Francesco da. *See* FRANCESCO DA MILANO.

Parík, Ivan (*b* Bratislava, 17 Aug 1936). Slovak composer. He took private lessons with Albrecht (1951–3), attended the Bratislava Conservatory (1953–8), where his teachers included Očenáš (composition) and Kornel Schimpl (conducting), and then studied composition with Moyzes at the Bratislava Academy of Music and Dramatic Art (until 1962). From 1959 he was a producer at Czechoslovak television, Bratislava, and between 1968 and 1997 he taught theory and composition at the Academy of Music, becoming professor in 1990 and rector in 1994. He was one of the principal organizers of the Smolenice New Music Days from 1968 to 1971.

At the beginning of his career Parík was influenced by Debussy, Hindemith and Bartók. His works from this period possess an introverted personal style combined with postwar avant-garde techniques. When developing his own musical language he was inspired primarily by the achievements of the Second Viennese School, in particular those of Webern, with whom he shared a preoccupation with detail. Distinguishing features of this earlier style include economy of expression, fragile construction, sound transparency and an interest in timbre and expressivity, all of which can be heard in *Dve piesne* ('Two Songs', 1959), the Flute Sonata (1962), *Piesne o padajúcom lístí* ('Songs about Falling Leaves', 1962) for piano and *Hudba pre troch* ('Music for Three', 1964). During the second half of the 1960s – and perhaps influenced by fine art – Parík placed greater emphasis on timbral considerations, structural detail and compositional unity, as exemplified by *Hudba k baletu* ('Music to Ballet'), or *Fragmenty*. These priorities were explored further at the Experimental Music Studio of Czechoslovak Radio, where he realized a series of works since considered a mainstay of the Slovak electro-acoustic tradition. In *Hommage to William Croft* (1969), *In memoriam Ockeghem* (1971) and *Pocta Hummelovi* ('Homage to Hummel', 1980) Parík juxtaposes music of the past with electro-acoustic means.

KATARÍNA LAKOTOVÁ

Parikian, Manoug (*b* Mersin, Turkey, 15 Sept 1920; *d* London, 24 Dec 1987). British violinist of Armenian parentage. He studied with Louis Pecskai at Trinity College of Music, London, from 1936 to 1939. He made his début as a concerto soloist in 1947 at Liverpool and in 1949 at the Royal Albert Hall, London. He led the Liverpool PO (1947–8) and the Philharmonia Orchestra (1949–57). He also led various chamber ensembles and formed duo partnerships with George Malcolm (1950–55), Lamar Crowson (1956–65) and in 1966 with Malcolm Binns. From 1957 he enjoyed considerable success as a soloist in all European countries (including the USSR), the Middle East and Canada. In 1976 he formed a piano trio for the Wigmore Hall 75th anniversary series, with Bernard Roberts (who was replaced by Hamish Milne in 1984) and Amaryllis Fleming; the trio went on to achieve international recognition. Parikian was an artist of wide musical sympathies with many first performances to his credit (Rawsthorne, Seiber and Skalkottas), and concertos by Gordon Crosse, Alexander Goehr and Hugh Wood were dedicated to him, as well as works by Elizabeth Maconchy and Thea Musgrave; he also inspired many younger English composers to write major works for his instrument. An exceptionally stylish violinist, he produced a tone of remarkable purity and displayed a polished technique. He made many important recordings. He taught at the RCM, 1954–6, and from 1959 at the RAM. He played a Stradivari of 1687.

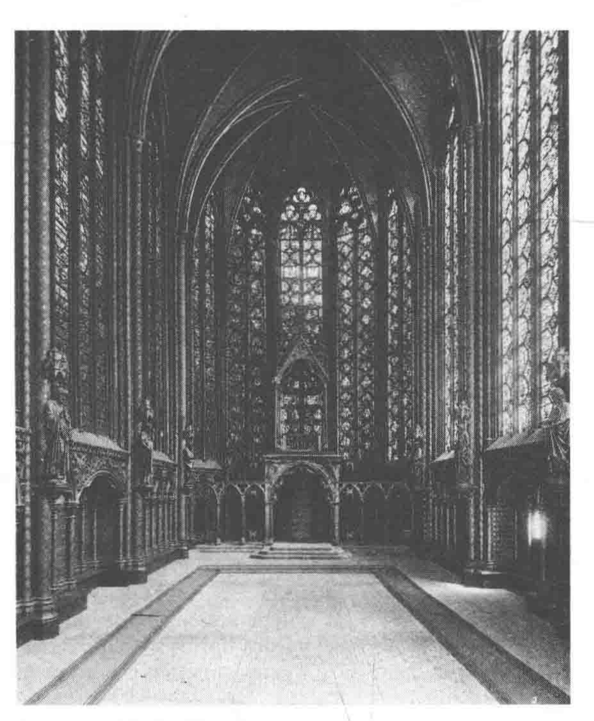
WATSON FORBES/MARGARET CAMPBELL

Paris. Capital city of France. It is situated on the River Seine, downstream from its junction with the River Marne. The city proper has a population of approximately 2.2 million, with approximately 10 million in the greater Paris area.



I. To 1450

The importance of Paris as a musical centre in medieval times lies chiefly in the period from the mid-12th century to the early 14th, when it led the European musical world in its institutions and in new methods of composition. Although there were other centres of great musical importance – the Benedictine abbeys of St Maur-des-Fossés and St Denis, the royal Ste Chapelle and the Augustinian abbey of St Victor, for example – the most celebrated activity occurred at Notre Dame. The cathedral nurtured some of the first recognized composers of stature, and they in turn realized some remarkable achievements: the earliest inclusive corpus of polyphonic liturgical music for the celebration of the Mass and Office; the first system of musical notation that clearly specified rhythmic values as well as pitches; and the development of major new musical genres. At Notre Dame not only organum but monophonic and polyphonic conductus attained their richest forms; and the creation of the motet from the discant sections of organum became a landmark in musical history. Moreover the most important musical theorists from about 1240 to 1350 all worked at, or had contact with, Parisian institutions.

1. URBAN DEVELOPMENT. The physical growth of medieval Paris was closely linked with the spread of Christianity and the city's rise in political importance under Merovingian leadership late in the 5th century. Originally a Gallic settlement on what is now the Ile de la Cité, Paris, then called Lutetia, expanded to the left bank of the Seine soon after the Roman conquest in 53 BCE. The early cathedral, evident already by the mid-5th century and first dedicated to St Stephen in the mid-7th, stood within the eastern quarter of the Ile de la Cité, just to the west of the present site of Notre Dame. Early in the 6th century Paris became the residence of the Merovingian king Clovis (ruled 482–511), a convert to Christianity, and thereafter saw many of its first major ecclesiastical foundations. Churches rose amid the vineyards on the left bank, among them basilicas dedicated to the Holy Apostles (later Ste Geneviève), to Vincent (later the abbey of St Germain-des-Prés) and to St Julien. By the middle of the 8th century there were many more, both in the south on the left bank and to the north, where St Germain-le-Rond (later St Germain-l'Auxerrois), St Martin (later the priory of St Martin-des-Champs) and the abbey of St Denis lay (founded in the 7th century by King Dagobert I).

During the Carolingian period the centre of the Holy Roman Empire moved east and Paris temporarily lost importance. Charlemagne (ruled 768–814), assisted by such scholars as Alcuin (*c*735–804) and Theodolphus of Orléans (*c*760–821), brought the liturgical and musical traditions of Rome north, displacing and absorbing the earlier Gallican liturgy and essentially condemning its music to oblivion, although occasional traces remain. Despite disruption and invasion in the 9th and 10th centuries, Paris continued to grow, as did the number and importance of its abbeys and churches. By the end of the 12th century the city had assumed the physical character it was to retain for the remainder of the Middle Ages: the Right Bank, principally the commercial quarter, became known as the Ville and acquired city walls in the 13th century; the cathedral and the royal palace dominated the Ile de la Cité; while the growing university and its ancillary institutions overwhelmed the Left Bank (hence the later name 'Latin Quarter').

With the reigns of Louis VII (ruled 1137–80) and his son Philip II Augustus (ruled 1180–1223), who expanded the kingdom to its largest extent and made Paris the seat of his government, new churches had appeared and continued to proliferate. On the Ile construction proceeded on Notre Dame (begun 1150s, high altar consecrated 1182), which together with the chevet of St Denis (1140–44) and the Ste Chapelle (1241–6; fig.1) comprised important witnesses to the new style of Gothic architecture. Along with the building of such edifices there was equal attention devoted to the Parisian liturgy and its chant. The flourishing state of liturgical music is amply demonstrated by numerous chant manuscripts that have survived from Parisian centres, whose comparison reveals a rich complex of interrelationships in liturgical practice and music for many of the city's institutions. By the 13th century an enormous increase in the demand for books, caused primarily by the university, led to a substantial growth in the profession of lay copying and manuscript illumination. Thus the central source of the polyphonic

1. Interior of the Ste Chapelle, 1241–6

Notre Dame repertory, the Florence manuscript (*I-Fl* Plut.29.1; *c*1250), has been traced to an atelier with no monastic or collegiate connections, the professional shop of Johannes Grusch. Copying continued in the religious houses as well: liturgical manuscripts survive from Notre Dame itself, the Ste Chapelle, the churches of Ste Geneviève, St Germain-des-Prés, St Germain-l'Auxerrois, St Eustache, Notre Dame de l'Annonciation, St Magloire, St Denis, the Sorbonne, the Collège de Laon, the abbey of St Victor and many other places. In his capital Philip Augustus created an atmosphere in which peace reigned and the arts flourished, and Paris became an intellectual centre in which the monarch was pre-eminent.

The Black Death, the Hundred Years War and revolutionary agitation interrupted the prosperity of Paris in the 14th century. Further disturbances and loss of prestige occurred in the 15th century during the Anglo-Burgundian alliance, which culminated in 1422 with the English occupation of the city. It was not until 1436 that Paris once again became the seat of a French king, the weak and timorous Charles VII, at the beginning of whose reign the city's economy was in ruins, its population depleted and its university overcome by intellectual stagnation. The rapid decline in the fortunes of Paris is reflected in its music, which after a spectacular ascendancy in the 'Notre Dame epoch' lost impetus during the next two centuries.

2. THE UNIVERSITY. The early development of the University of Paris remains obscure, although the tradition of ecclesiastical education suggests that the city's churches and monasteries would have encouraged learning from their earliest times. By the mid-12th century two important classes of schools were well established and together formed the *stadium* at Paris: the foremost consisted of those instructors who practised in the environs of the cathedral and were administered by the chancellor, who controlled the *licentia docendi*; the other group comprised the schools of ecclesiastical institutions, the most prominent of which were St Victor and Mont-Ste-Geneviève. At this time the university was a loose association of teaching masters (*magistri*) and students (*scolares parisienses*) who for the most part became organized into separate political and cultural 'nations' within the *studium*.

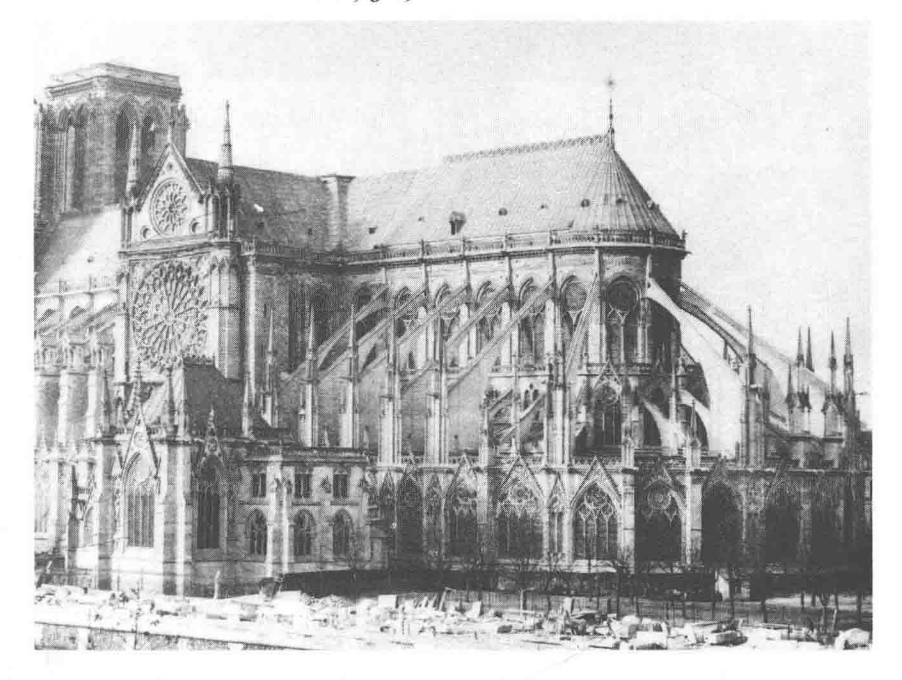
The growing independence of the schools from the chancellor's control informs much of the history of the University of Paris in the first quarter of the 13th century. The largest strides occurred early in the tenure of Philip the Chancellor (1217–36), himself a prolific author of conductus and motet texts. By 1231, after numerous legal wranglings and several teaching strikes by the masters, the university was able to ally itself effectively with the papacy and check the chancellor's power. *Bulla fulminante* and *Aurelianis civitas*, two conductus from around this time and both ascribable to Philip, paint vivid pictures of the crises that attended the University of Paris and neighbouring schools.

Continuing in the tradition established in the 12th century, the university attracted the most celebrated teachers of Europe during the 13th and 14th. The ranks of its masters opened to admit Dominicans and Franciscans beginning in 1229, and from their midst came such lights as Bonaventura (*d* 1274), Albertus Magnus (*d* 1280) and Thomas Aquinas (*d* 1274). Among all this activity the teaching of music held an important place as one of the foundational liberal arts; university statutes of 1215 made provision for 'extraordinary' lectures (on religious holidays) when '[students] shall study nothing except philosophy, rhetoric and the Quadrivium'. Although medieval records are not precise on how the teaching of music was effected at this time, numerous indirect sources suggest that it was practised both as a science and as a craft at the University of Paris, which became renowned for its teaching of the seven liberal arts. A former student at Paris, Guy da Basoches, left a description of Paris of about 1175, which is the earliest of many similar documents: 'On this island, the seven sisters, to wit, the liberal arts, have secured an eternal abiding place for themselves'. Practical music-making, too, was mentioned by Matthew Paris, who related that in 1254 Henry III of England was welcomed in Paris with 'special songs and instrumental music' performed by the *scolares parisienses* 'mostly from the English-German *nation*'. Books used by Parisian scholars often contain sections devoted to music, inventories of the various *nations* of the university include chant books, and instruction in chanting was given in some colleges and *nations*. In 1413 the English-German *nation* appointed a Parisian bachelor of medicine, Henri de Saxe, as organist of its church, St Mathurin; two years later he had gained the same post at Notre Dame. Many choirmasters of the grammar schools and singers in the royal chapel held ties to the university; and, before their matriculation, many scholars received musical training in the choir schools, including the *maîtrise* of Notre Dame.

3. MUSIC THEORY. The writings of professors and students of the university were highly esteemed during the 12th and 13th centuries; no centre in the medieval world of learning was as important as Paris. The study of music theory, if only as a philosophical branch of mathematics, is attested by several treatises written by former students that have portions devoted to music: the *De eodem et diverso* by Adelard of Bath (*fl c*1120) and chapter 13 of

Gossouin's *Image du monde* (1245), for example. Robert Grosseteste (*c*1170–1253) and Robert Kilwardby (*d* 1279), both alumni of the university, included sections on music in their philosophical writings. Alain de Lille (*d* 1202), sometime teacher at Paris and the author of a conductus preserved in the Florence codex, discussed the psychological effects of music as well as musical Intervals in the allegorical poem *Anticlaudianus*.

But by far the most important treatises are those which discuss the exciting new art of polyphony, its diverse genres and styles, and its methods of rhythmical notation. The latter topic in particular was to become the focus of the most progressive theoretical treatises throughout the later development of the Notre Dame school (after *c*1250) and during the important changes which occurred early in the 14th century with the French Ars Nova. Although these works are not directly specified by the university curriculum, they provide many oblique associations with it in their organization, terminology and methods of argument; and many, if not all, of their known authors or compilers evince some contact with the city and its schools. Examples include the *Tractatus de musica* (late 13th century) assembled 'for the use of students' by Hieronymus de Moravia, who taught at the Dominican monastery of St Jacques in Paris. He included a unique chapter on the playing of string instruments with the bow and four treatises on mensural notation. Among these, the first, the *Discantus positio vulgaris* (*c*1220s–40s?), is probably the earliest extant treatise to discuss the rhythmic practices associated with Notre Dame polyphony; the second is the seminal *De mensurabili musica* (1240s–60s?) ascribed to a Johannes de Garlandia, who included a chapter on modal combinations and a discussion of melodic figures; the third is the pivotal *Ars cantus mensurabilis* of Franco of Cologne (*c*1280), which laid the foundations of later rhythmic notations.



Situated chronologically between the Garlandian and Franconian works is the *Tractatus de musica* of Lambertus, who expanded the number of rhythmic modes beyond Garlandia's conventional six, and who was vigorously attacked for it by the St Emmeram Anonymus (1279). Garlandian principles continue to be the focus in the fruitful work of an English student of Paris, Coussemaker's Anonymus 4. His tract presents an amplified discussion of both regular and irregular modes and gives invaluable historical information about Notre Dame music and its great composers, Leoninus and Perotinus. Similarly Johannes de Grocheio, possibly a Paris teacher, supplied a unique sociological view of Parisian music at the turn of the century in his *De musica*. But the summa of all Ars Antiqua theory comes from a writer who had also been a student at Paris: in his *Speculum musice* Jacobus of Liège dealt with both *musica speculativa* and *musica practica*, and showed that he had first-hand knowledge of each.

That Paris was in the forefront of the latest trends is demonstrated by the treatises of Johannes de Muris, a musician, mathematician, astronomer and teacher at the Sorbonne, whose *Notitia artis musice* (*c*1321) shows that he had links with Philippe de Vitry (1291–1361). Muris's treatises found a wide dissemination throughout western Europe and his mathematical work, *Musica speculativa secundum Boetium*, superseded Boethius's original as the standard musical text for students of the universities well into the Renaissance. All aspects of music come under Muris's keen scrutiny – speculative theory, rhythm, notation, prolation, alteration, isorhythmic motet and ballade forms – and many later musical tracts are clearly based on his teaching. His universal fame is an indication of the great interest in music of all kinds at the University of Paris in the Middle Ages. It points to the high position that the city held when it was designated 'the mother of all learning' and sustained the study of music through its cathedral and university.

4. Practical music. Musical activity in Paris during the Middle Ages is attested by a variety of witnesses. Liturgical documents describe the melodic content of Parisian ceremony, both the chant that sounded within church walls and that of outside stational processions. In the greater establishments on major feasts – particularly at Notre Dame – highly skilled solo singers also spun out organa, conductus and possibly motets, and the organ accompanied or elaborated specific choral chants. Notre Dame first acquired such an instrument by 1332, and they also appear at St Séverin (*c*1350), St Germain-l'Auxerrois (1402) and St Jacques-de-la-Boucherie (1427) during this period.

Numerous sources of polyphony suggest a thriving interest in the most novel musical forms within the city, particularly in the diverse species of motets that came to populate the 'new' musical repertory of the 13th and early 14th centuries. Principal manuscripts such as the Florence codex, one of the Wolfenbüttel sources (*D-W* 1099), and the Bamberg (*D-Bs* Lit. 115), Montpellier (*F-MOf* H 196) and La Clayette (*F-Pn* n.a.l.13521) manuscripts all claim Parisian origin. Their widespread geographical dissemination and that of numerous other small sources indicates the allure that the new *musica mensurabilis* of Paris once exerted in musical centres as far afield as Spain, Poland and England. Some of the works in these manuscripts even point to events in the city's history, as they mourn the loss of kings and clerics, celebrate their coronations and investiture or castigate all levels of society for corrupt behaviour. This last issue is particularly well represented in the first great musical monument of the Ars Nova, Gervès du Bus's ROMAN DE FAUVEL (*F-Pn* fr.146), a vivid allegorical satire on political intrigue in the royal court, compiled in Paris about 1317 by Chaillou de Pesstain. A vibrant impression of Parisian city life appears in the texts of a 13th-century motet *On parole de batre/A Paris soir/Frese nouvele* from the Montpellier manuscript, which was taken over and expanded into a larger piece in the mid-14th century, *Je comence ma chanson/Et je servi/Soules viex* (*I-IV*).

Knowledge of specific composers and poets points to several illustrious individuals with ties to the schools, churches and courts of Paris. Many more must have lived or worked in the city, yet relatively few are named, and details of their lives are often sparser still. Of particular interest is the renowned philosopher Peter Abelard (1079–1142), who created hymns, planctus and a lost repertory of secular song, the latter almost certainly while teaching within the cathedral close. The poets Alain de Lille, Walter of Châtillon and Peter of Blois were also connected at one point to the schools of Paris and have left several of their songs in Parisian manuscripts. Notre Dame in particular owes its early musical fame to Adam of St Victor (*d* 1146), who wrote many sequences in his capacity as cantor of the cathedral before he retired to the abbey whose name he familiarly bears; while the great

2. East end of the cathedral of Notre Dame, reconstruction with flying buttresses completed mid-14th century

composers of polyphonic music Leoninus (*d c*1201) and Perotinus (Petrus Succentor?; *d* 1238), said to be the authors of the *Magnus liber organi* of Notre Dame, are now nearly legendary. Other lights of Notre Dame include cantor Albertus Parisiensis (*d* 1177), Adam's successor and the author of a conductus in the Codex Calixtinus; Philip the Chancellor (*d* 1236), mentioned above, whose poetic activities may also include the first examples of the medieval motet; and the religious and secular music of the later composers Aubert Billard, Guillaume Benoît and Etienne Grossin.

In other milieux, Parisian vernacular composition is represented by Li Moine de St Denis (*fl* 1230s), who contributed a motet to the Montpellier codex; by the chansons of the trouvère Moniot de Paris; and by Jehannot de L'Escurel. The polymath Philippe de Vitry, perhaps responsible for the musical manuscript of the *Roman de Fauvel* and the creation of the isorhythmic motet, spent long periods in Paris in the service of the court and even had a three-month stint as a canon at Notre Dame. Franco of Cologne and Petrus de Cruce likewise give evidence of at least a fleeting connection to the city; and it seems likely that some of the surviving French secular music from the later 14th century (ed. W. Apel, CMM, liii, 1970–71) comes from Parisian composers, although only Pierre des Molins and Jehan Vaillant are actually described as having lived there. In the early 15th century Nicolas Grenon was at Paris from about 1399 to 1403 and, according to Martin le Franc (*Le champion des dames*, *c*1440), Johannes Carmen, Johannes Cesaris and Johannes Tapissier 'astounded all Paris' with their new methods of composition.

References in sermons, literature, non-musical treatises and written records can often illuminate the music enjoyed in lay and public circles of Paris during the Middle Ages; the preaching of the clergy, the texts of romances, chansons and motets, and the injunctions of civic documents are altogether replete with references to urban music-making, dance and minstrelsy. From them we learn that citizens from many walks of life often took part in *caroles*, where refrain songs and, possibly, instrumental pieces such as *ductiae* and *estampies* formed the musical framework for public dancing in the open air. Paris was also a focal point for professional singers and players of secular music. In September 1321 a group of 37 'menestreus et menestrelles, jongleurs et jongleresses' petitioned the provost of Paris to enact a set of legal statutes that would regulate the behaviour of their members and set rules for those who sought to join their enterprise. The successive names given to a certain street in Paris demonstrate that an association of minstrels had formed part of the city's population for some time: 'Vicus viellarotum' (1225), 'Vicus ioculatorum' (1236) and finally 'Rue aus Jongleurs', where the 1321 statutes indicate that potential customers could hire entertainment for their feasts and celebrations. From such evidence we may infer that popular and dance music were assiduously practised in Paris at all times throughout the Middle Ages.

II. 1450–1600

1. Ile de la Cité. 2. The Ville. 3. The university. 4. Music publishing.

1. ILE DE LA CITÉ. The musical history of Renaissance Paris aptly reflects the principal institutions that dominated cultural and political life there. On the Ile de la Cité, historically the centre of ecclesiastical and secular governance, the cathedral of Notre Dame and the Ste Chapelle du Palais (parish church of the nearby royal residence in Paris) continued to be important centres of musical production. In the late 15th century the royal courts of Charles VIII and Louis XI spent considerable parts of the year travelling among various châteaux of the Loire valley, but by about 1500 Paris had become a more regular place of royal residence and a centre of artistic patronage.

A musician working in the royal *maison* of King François I (1515–47), for instance, would by ancient convention have belonged to one of three separate departments of this suitably vast (but surprisingly mobile) juggernaut of official attendants: a staff of domestic

servants (the *chambre*), clerics and singers charged with the observance of sacred liturgy (the *chapelle*), and officials for public ceremony and military protection (the *écurie*). Each of these administrative divisions carried with it an implied set of social circumstances, constraints whose operation can at times be detected in the music of those who sang and played at court.

The royal *chambre* of the 1530s and 40s included a small vocal ensemble and several instrumentalists, musicians who were above all prized as interpreters of the French chansons, dance music and instrumental solos that served as private musical entertainment for the king and his guests. Among this group were several Italian players, including the famous Mantuan lutenist Alberto da Ripa, whose contrapuntal skill and extraordinary feeling for the sonorous qualities of his instrument were held in high regard by the princes and prelates for whom he played. But if Ripa enjoyed a pre-eminent reputation among patrons and *literati* of the early 16th century, it was not until after both his death and the death of his royal patron that his music was made available to the general public, edited (with permission of the new king, Henri II, who ruled between 1547 and 1559) by Guillaume Morlaye, one of the great lutenist's pupils, in collaboration with the printing firm of Fezandat. In a dedicatory epistle to Henri, Morlaye justified the patent commercialism of the venture by offering lavish praise for French monarchs – including two of 'the most noble, virtuous and magnanimous kings in Europe', namely François I and Henri II, who had until now carefully guarded Albert's music as a private domain. Appropriating this formerly secret and socially restricted art as an object of profit and commodity for public enjoyment, Morlaye's print hints at the growing interdependence of aristocratic Patronage and bourgeois commerce. If printers came to rely on princes for protection from competition, rulers looked to the press for the ready means to promote the princely virtue of their sponsorship of private music.

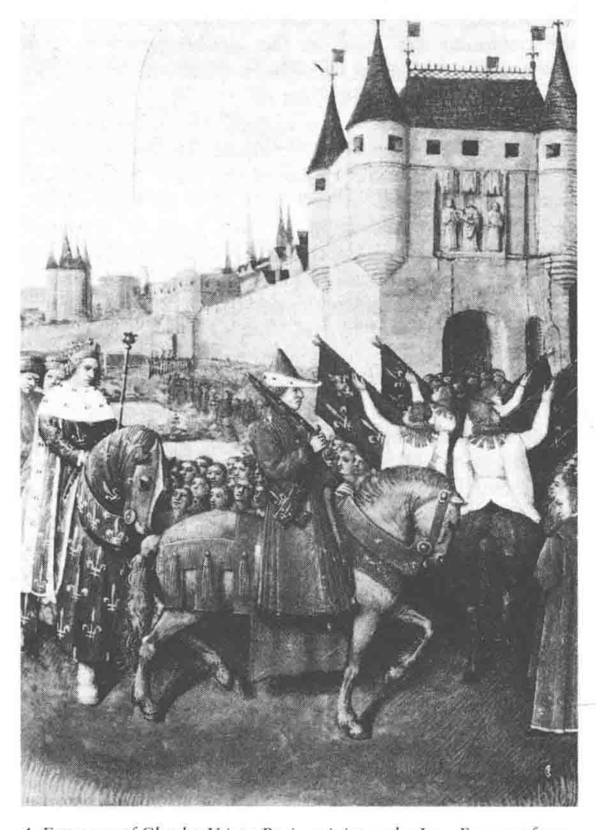
Whereas music in the royal *chambre* was directed principally at the creation of personal and private meanings for aristocratic audiences, that of the *écurie* was aimed at the ceremonial and political requirements of the monarchy as it faced a wide French public. The subtle blend of a small vocal ensemble and the quiet resonance of the lute had no place in the *écurie*, where the musical forces consisted of outdoor instrumentalists: drummers and pipers attached to the military guard plus trumpeters and shawm players (including some Italian instrumentalists) who played during large social dances and public processions. Complementing gesture and visual spectacle, their playing called attention in sound to the sort of flamboyant display that accompanied elevated status. When Henri II and Catherine de' Medici made their official entry into the city of Paris as King and Queen of France in 1549, for example, the accompanying spectacle would have been the envy of any aristocratic couple. The procession from the Porte St Denis to Notre Dame and the nearby royal palace involved thousands of participants – cavalry, merchants, civic officials, scholars, courtiers and princes.

In addition to their ensembles of public and private musicians, French monarchs seem to have had several

church choirs in their direct service. By the 1530s François' own *chapelle* was by far the largest of his musical organizations, an institution boasting nearly three dozen adult singers (plus choirboys) divided between two specialist choirs – one for liturgical plainchant and another for *musique*, or polyphonic compositions. The Ste Chapelle du Palais, not far from the royal Parisian residence, also had its own professional choir, an organization that, like the king's chapel, was very much at the centre of musical life under the French monarchs. Many of the composers active in these establishments were also the same composers who figured prominently in the early production of the royal music printer, Pierre Attaingnant. Claudin de Sermisy (*c*1490–1562) had been a minor cleric at the Ste Chapelle long before his appointment to the rank of *sous-maître* in the royal chapel (in practice he was the musical director, although the titular leadership of the group was in the hands of an aristocrat, Cardinal François de Tournon), where from the 1530s until his death he held a prestigious canonical post. Pierre Certon, a close contemporary of Sermisy, began musical service in Paris at Notre Dame, but later joined the Ste Chapelle as a *clerc* and then as *maître des enfants*, a post he held from 1536 until his death in 1572. Like Sermisy, Certon enjoyed the favour of several French monarchs, who conferred upon him the title of *chantre de la chapelle du Roy* and *compositeur de musique de la chapelle du Roy*. Either or both of these positions may have been purely honorific, but the distinction suggests the prestige and enduring protection that French rulers lavished on their favourite composers and singers, among whom are counted not only Sermisy and Certon, but a series of other important French musicians of the 16th century: Jean Conseil, Antonius Divitis, Mathieu Gascongne, Jean Richafort, Pierre Sandrin [Regnault], Antoine Mornable, Nicolas de La Grotte, Jean Maillard, Guillaume Costeley and Eustache Du Caurroy. Indeed, the pursuit of ecclesiastical offices for musicians prompted François I, like other French kings before him, to intercede with ecclesiastical authorities on behalf of his singers in order to obtain for them benefices or other canonical appointments, not only in Paris, but throughout the kingdom. Notre Dame de Paris serves as a case in point, for although it was to an unusual degree a cathedral built and maintained through the beneficence of a clerical élite, royal patronage was also important there. Royal foundations for the construction and maintenance of buildings and of services, such that, in Craig Wright's view, the sanctuary of Notre Dame was increasingly appropriated as 'a stage from which to project to his numerous subjects a positive image of the most Christian King' (Wright, 1989). The abbey of St Denis, just beyond the confines of the city of Paris itself, was yet another locus to enjoy royal musical and ecclesiastical patronage.

2. The Ville. Elsewhere in Paris, too, were important centres of aristocratic musical patronage. The Hôtel (now Musée) de Cluny on the left bank of the Seine, Parisian residence of the powerful Cardinal Jean de Lorraine, doubtless served as a locus of musical activity. A prodigious patron of music and the other arts, Jean is known to have a band of Italian instrumentalists in his service, and for a time to have been a protector of Alberto da Ripa. Indeed, throughout the 16th century members of the Lorraine-Guise family collaborated with each other and with the royal household as patrons of music and musicians. Jacques Arcadelt, the northern composer who had worked in the Italian peninsula during the 1540s, returned to Paris in the entourage of Cardinal Charles de Lorraine (nephew of Jean), and eventually became a member of the royal musical household there. Pierre Clereau and Pierre Sandrin, too, enjoyed the protection of the powerful and widely travelled Guise clan, and it seems significant that these two composers, along with Arcadelt, were among the first to pursue the implications of Ronsard's classicizing poetics. Another important venue for the nascent *air de cour* was the Parisian musical and literary salon of Catherine de Clermont, the Comtesse de Retz, which boasted an impressive range of musical visitors as well as an equally impressive collection of instruments.

In addition to the various observances endowed by the ruling élite, many other religious communities in Paris also used music for devotional purposes. In the late 16th century, for instance, a Jesuit college there legislated against overly complex sacred polyphony and the use of instruments in the liturgy. French Protestants, too, directed vocal music towards pious aims. Claude Goudimel, a composer central to the development of the Huguenot polyphonic psalter, was active in Paris through the 1550s and 1560s, at first as a member of the university community and then as an editor to the Du Chemin publishing firm. He was killed in the anti-Protestant violence that shook Paris in 1572. Claude Le Jeune, too, wrote music for Protestant audiences in late 16th-century Paris. According to Mersenne, Le Jeune's *Dodecacorde* (a collection of psalm settings organized according to Zarlino's disposition of the 12 melodic modes that was first printed in 1598) was still in manuscript form when the composer fled Paris in the anti-Huguenot riots of 1590, and was saved for later publication by Jacques Mauduit, a friend of the composer.



Elsewhere in Paris citizens might encounter music to entertain rather than edify or inspire. The parish church of St Merry on the right bank of the Seine, for instance, was the site of the Confrérie de St Julien-des-Ménétriers, the religious organization of the minstrels of Paris. Founded during the 14th century, the corporation and its confraternity periodically chose from among their ranks a leader, the *roi* or *maître des ménétriers*, whose title was summarily approved by the King of France. This chief minstrel, by authority of his guild and the throne, oversaw the rules of conduct and contract by which all members of this popular band of Parisian players were obliged to abide. Musical standards, too, were enforced by the organization, and no doubt some of the dance tunes, arrangements and variation techniques promoted in printed books and manuals by musicians such as Claude Gervaise (for the royal printer Attaingnant) and Jean d'Estrée (for the printer Du Chemin) derived from the traditions of the *ménétriers* whose administrative locus was in the parish of St Merry. With so much performing in evidence, it should not be surprising that instrument making flourished in the city; some 70 builders are known by name from the period 1540–1610. Inventories reveal that a single builder might have as many as 600 instruments of all kinds, either finished or in construction, including some that were imported, mainly from Italy.

The Ville was also the centre of theatrical enterprise. As early as the beginning of the 15th century the Confrérie de la Passion used a hall next to the Trinité, near the Porte

St Denis, to perform its mystery and morality plays interspersed with farces and *sotties*; Arnoul Greban's *Vray mistère de la Passion* (*c*1452) is the best-known example. By the 16th century this offshoot of medieval liturgical drama was no longer controlled by the clergy and had become a popular spectacle of dubious moral character, performed by lay actors. Yet the guild did not loosen its control on the revenues but enjoyed a legal monopoly. In 1548 it erected the first Parisian theatre specifically designed as such since Roman times. This playhouse was at the heart of the most populous quarter, near Les Halles and St Eustache, and was known as the Hôtel de Bourgogne. It was occasionally leased out to other companies, particularly the Enfants sans Souci, an amateur group from the milieu of the law courts.

Many of these theatrical performances, which alternatively range among the conventions of moral allegory and political farce, allude to the *timbres* and texts of monophonic chansons that apparently enjoyed wide circulation among aristocratic and popular urban audiences alike. The texts and tunes of these chansons are known through two important courtly manuscripts of the early 16th century and through later collections of printed poems. Composers such as Antoine de Févin and Jean Mouton, and others closely linked with the Paris and with the French royal court, acknowledged the currency of these tunes, arranging a considerable number of them for three and four voices.

Elsewhere in the city of Paris, music took yet other forms, quite different from either the theatrical chansons of the urban farces or the polyphonic chansons or solo *airs* of the aristocratic salons and courts. By the 14th century it was customary for sovereigns and other dignitaries to make their formal entrance into Paris via the Porte St Denis, then traverse the length of the rue St Denis to the Châtelet before crossing to the Ile. Certain fixed stations along this route came to be the traditional sites for pageants, *tableaux vivants* and architectural monuments; the stations were the Porte St Denis, the fountain of the Ponceau, the Trinité, the Porte aux Peintres, the Holy Innocents (near which the fountain decorated by Goujon as a memorial to Henri II's entry in 1549 still stands), and at the Châtelet. A final pageant station was traditional before the entrance to the Palais Royal on the Ile. These events constituted street theatre in several senses. The populace marvelled at the majesty of the sovereign, who was preceded by trumpets and followed by a magnificent retinue, an awesome sight that Jean Fouquet captured in his fine miniatures (fig.4). Before every pageant station the nobility stopped to witness a spectacle that often included theatrical machinery, speeches, inscriptions and instrumentally accompanied songs and dances, in which the minstrels' guild participated. Such entertainments were locally planned and financed, being organized at the Hôtel de Ville by the civil authorities of Paris; they were often allegorical jumbles of ancient history, myth, superstition and folklore.

4. Entrance of Charles V into Paris: miniature by Jean Fouquet from the 'Grandes Chroniques de France', c1460 (F-Pn fr.6465, f.417r)

The last two generations of Valois preferred the various Italian troupes of comedians that visited Paris, such as the famous Venetian group known as I Gelosi, invited by Henri III in 1577. They played in the Salle du Petit-Bourbon, which fell into royal hands after the treason of Charles de Bourbon in 1524. Attempts by the guild to exercise its privileges and force the Italians to play in the Hôtel de Bourgogne were foiled by royal opposition. The performances of I Gelosi were the first in which female players appeared in Paris, and they caused as much surprise and delight as the dancing and the almost continuous sounding of music, during the acts and the entr'actes. The all-night performance of the *Balet comique de la Royne* to an audience of over 9000, staged in the same hall in 1581 (fig.5) probably also employed such spectacles (see McGowan, 1963).

3. The university. During the 13th to 15th centuries several colleges were founded in the university, the most notable being the one endowed by Robert de Sorbonne in 1257. The university colleges were mostly charitable institutions, and the focus of their teaching was religious doctrine. Many dioceses throughout France established scholarships for several years' training in one of the Parisian colleges. Each college had a chapel where the students were required to attend daily services and sing chant, in which they were given instruction. But music otherwise had little place in the university, unless it was studied in connection with mathematics. Some of the most learned men of the French Renaissance echoed a largely medieval theoretical heritage when they presented geometric and proportional justifications for elemental intervals of sound. Jacques Le Febvre d'Etaples, professor in the Collège de Cardinal Lemoine (he was also teacher of the Swiss music theorist Heinrich Glarean), published just such a speculative treatise, *Musica libris quatuor demonstrata*, at Paris in 1496, while Oronce Finé, first professor of mathematics at the Collège de France, wrote a similarly abstract consideration of sound and proportions, the *Protomathesis*, that appeared in 1532. Not all

5. 'Circé, ou le Balet comique de la Royne', Salle du Petit-Bourbon, 15 October 1581: engraving by Jacques Patin; performed for the wedding celebrations of the Duke of Joyeuse and Marguerite de Vaudemont

musical activity in the university community was so abstract, however. Janequin was enrolled as a student there during the years around 1550 (when he was already in his sixth decade), as was Claude Goudimel. Maximilian Guilliaud, whose *Rudiments de musique practique* was one of several books addressed to young students that the Du Chemin enterprise issued during the 1550s, was himself a member of the Collège de Navarre.

4. MUSIC PUBLISHING. The concentration of learning on the Left Bank made the university an unparalleled centre for the diffusion and extension of knowledge. Long before the introduction of the printing press the scriptoria around the colleges supported a vast industry of paper and parchment makers, scribes, illuminators, binders and book-sellers, all organized into guilds, and all subject to the governance of the university. The rector of the Sorbonne introduced printing into France in 1470, importing three German printers; immediately printing presses were so rapidly established throughout the quarter that by 1500 Paris became one of the leading European publishing centres, both in quality and quantity.

The impetus for early printing at the Sorbonne had come from scholars who wished to produce better texts in order to restore the ancient languages and literatures, pagan as well as Judeo-Christian, a peculiarly Renaissance phenomenon. Soon the printing industry was turned to other uses, such as the publication of liturgical service books; Parisian printers were the chief suppliers to the dioceses of northern France and England. The first plainchant printed in France (1494) was inscribed 'to the masters of the Sorbonne to use in their chapel'. This branch of Parisian printing led to the development of the printing of mensural music. Michel Toulouze, a neighbour of Guerson in the Clos Bruneau, printed chant books and also made some attempts at printing mensural notes in the last years of the 15th century. His edition of Guerson's *Regulae* (*c*1500) was the first of 15 brought out by various publishers until the middle of the 16th century. Pierre Attaingnant began as a liturgical printer in the 1520s with a business and premises in the rue de la Harpe inherited from his father-in-law, Philippe Pigouchet. By 1528 he perfected a method of printing mensural notes from type with a single impression, which made mass-production possible.

Exactly who bought and used any of these books will remain something of a topic for continuing investigation. Among the books issued by Attaingnant, for instance, were volumes of sacred music conceived with audiences at court and in French regional churches clearly in mind. But in addition to these ceremonial or public uses of printed music, it is also evident that the new medium was destined in many instances for private domestic enjoyment. Indeed, not long after its advent in France, printed music books were already to be counted among the most prized personal possessions of urban bureaucrats and merchants. At the time of his death in 1544, for instance, the personal library of Jean de Badonvillier, an official in the Paris *chambre des comptes*, contained a printed collection of masses, two of Attaingnant's chanson anthologies, and printed books of motets by Claudin de Sermisy and Johannes Lupi.

François I gave Attaingnant a monopoly on music printing, but at his death (1547) this was broken. Du Chemin set up a shop in the rue St Jean de Latran, followed a few years later by the partnership of Adrian Le Roy and Robert Ballard in the nearby rue St Jean de Beauvais. Issuing dozens of volumes of sacred and secular music, from Arcadelt in the 1550s to Lassus in the 1570s and Le Jeune in the 1580s, the Ballards eventually eliminated all competition and founded a publishing dynasty that was to last for several generations.

The next generation of academically inclined poets and musicians was preoccupied less with the new chanson than with humanist notions of reviving ancient song. Jean Dorat, professor of Greek, gathered around him at the Collège de Coqueret a group of disciples that included Ronsard, Du Bellay, Tyard, Baïf and Etienne Jodelle, the 'Pléiade'. Ronsard's *Amours* (1552) were produced in collaboration with Goudimel, Janequin and Certon, master of the children at the Ste Chapelle. Humanist experiment became more and more apparent in the chansons of the third quarter of the century, leading to the radical solution of *musique mesurée*. Baïf and the composer J.T. de Courville, its creators, founded an Académie de Poésie et de Musique to propagate the new style in Baïf's house in the rue des Fossés St Victor (1571). Lassus was sufficiently impressed by the style to attempt it during his visits to Paris (1572–4), when he also wrote the music for the *Ballet des polonais*, in collaboration with Dorat. After the death of Charles IX (1574) the Académie was increasingly controlled by Henri III, holding its meetings in the Louvre.

The revival of ancient theatre attempted by Jodelle, Baïf, Garnier and Du Bellay (*c*1550) (erudite attempts to provide the French language with an equivalent to Greek tragedy) aroused no interest at the Hôtel de Bourgogne across the Seine, and its performances eventually took place on improvised stages in the various colleges, or in the provinces. There is perhaps no clearer example of the difference in atmosphere that separated the Ville from the university. Until the late 16th century only a few narrow bridges crossed the Seine; however, Henri III built a great stone bridge of unprecedented width, linking the Ile, Ville and university – the Pont Neuf – and the tripartite division of Paris subsequently became less significant. The religious wars split Paris; after Henri III's flight to Chartres in 1588 the Guises and the Sainte-Ligues controlled the capital until Henri de Navarre abjured Protestantism in 1593.

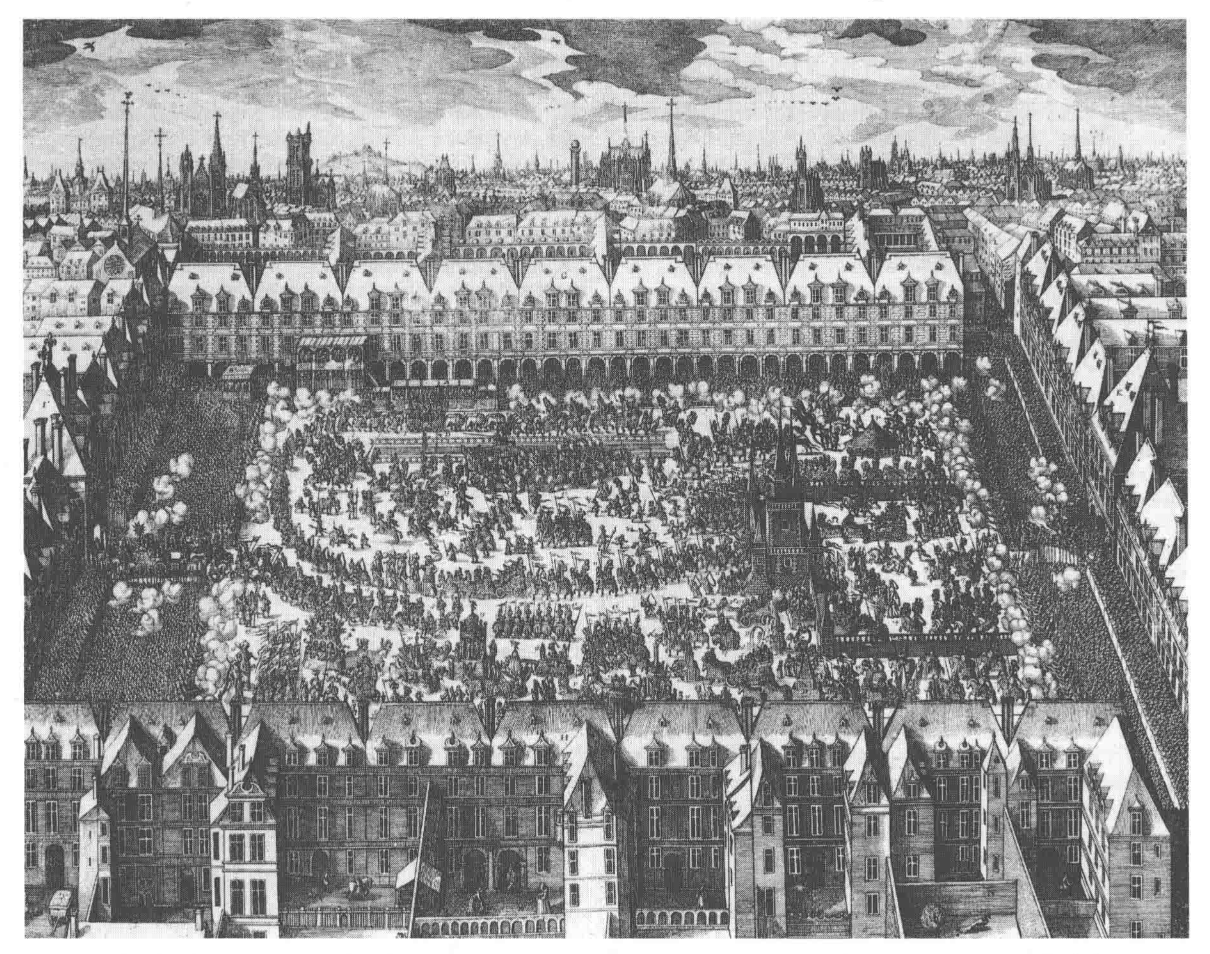
III. 1600–1723

1. General. 2. Religious institutions. 3. Theatres. 4. Orchestras. 5. Private concerts.

1. General. During the 17th century the population of Paris increased from a quarter to over half a million. By 1702 the city had been divided into 20 quarters, whose boundaries remained relatively stable until the Revolution. After Mazarin's death the medieval face of Paris was changed. 'It may very well be', wrote Martin Lister, 'that Paris is in a manner a new city within this 40 years. 'Tis certain since this King came to the Crown, 'tis so much altered for the better' (*A Journey to Paris in the Year 1698*, London, 1699). Perrault's colonnade of the Louvre (1667–74), Le Nôtre's Tuileries gardens (1667), Porte St Denis (1672) and Porte St Martin (1674), the Place des Victoires (1686) and the Place Vendôme (1699) all reflect the spirit of the *grand siècle*.

Colbert, complying with Louis XIV's passion for order, completed the plans for royal academies that would centralize the artistic and intellectual life of the regime. In 1661 only the Académie Française (established by Richelieu in 1635) and the Académie Royale de Peinture et de Sculpture (1648) existed; Colbert founded five additional academies: the Académie Royale de Danse (1661), Académie des Inscriptions, Médailles et Belles-lettres (1663), Académie des Sciences (1666), Académies d'Opéra (1669, becoming the Académie Royale de Musique in 1672) and Académie Royale d'Architecture (1671).

The quarters of Paris bordering the Right Bank (St Jacques-de-la-Boucherie, Ste Opportune, the Louvre, Les Halles, St Eustache, La Grève, St Martin-des-Champs) were little affected by the city's rebuilding. They were noisy, crowded and malodorous, with narrow, winding streets and houses built so high that Montesquieu's Persian deemed them occupied 'only by astrologers'. Shops of *luthiers* and harpsichord builders were found there, and many dancing masters and instrumentalists belonging to the Confrérie de St Julien-des-Ménétriers lived there, especially along the streets bordering the rue St Martin. In the nearby parishes of St Merry, St Nicolas-des-Champs and St Jacques-de-la-Boucherie were the homes of most of the organ makers of Paris.



The Marais was the most fashionable quarter during the first half of the 17th century. Here was the *salon précieux* of Mlle de Scudéry, and in the Hôtel Carnavelet Mme de Sévigné found 'bel air, une belle cour, un beau jardin'. In the spacious town houses of the nobility music was an adornment and a mark of distinction; divertissements were performed in the *salles* or courtyards of the *hôtels*. Such was the divertissement composed by André Campra in 1697 for the Duke of Sully to honour the Duke of Chartres. Marie de Lorraine, Duchess of Guise, employed 12 singers and several instrumentalists at the Hôtel du Marais (now the Musée des Archives Nationales) on the rue de Chaume. For the last 16 years of her life her composer-in-residence was Marc-Antoine Charpentier, who wrote eight dramatic works for her and many *petits motets* for performance in her chapel, which adjoined the Grande Salle of her *hôtel*.

The Marais' claim to fashionable society was challenged by other quarters. A pleasing stylistic unity characterized Christophe Marie's development of the Ile St Louis between 1614 and 1646. As early as 1624 Catherine de Vivonne had established her Hôtel de Rambouillet, the headquarters of *préciosité*, on the rue de l'Oratoire-du-Louvre. With the completion of Richelieu's Palais du Cardinal in 1634 (known as the Palais Royal from 1643, when Anne of Austria made it her residence) the Marais had a serious rival, and later in the century two more in the neighbouring quarters of St Honoré and Butte St Roch. Describing the Palais Royal section in 1643 Corneille wrote: 'We must presume from these superb roofs that all the inhabitants are gods or kings' (*Le menteur*) – a conceit flattering to the élite who lived there. Men of influence in government, letters and the arts preferred these quarters.

Mazarin's sumptuous palace, one section of which, the Hôtel de Nevers, was converted into the Bibliothèque Nationale in 1721, set the tone for the rue de Richelieu, which soon became 'one of the most beautiful and straight streets of Paris' (G. Brice, *A New Description of Paris*, 1687). During the reign of Louis XIV this and nearby streets were inhabited by such members of the 'vile bourgeoisie' (Saint-Simon) as Colbert and Louvois. Many of this class, prototypes of the 18th-century middle-class entrepreneur, found it distinctly advantageous socially to present concerts in their salons. Monsieur Jourdain (*Le bourgeois gentilhomme*, Act 2 scene i) was advised to have a concert at his home 'every Wednesday or Thursday' if he wanted to be considered a person of quality. From 1715 to 1725 Antoine Crozat, the wealthy treasurer of the Etats du Languedoc, held two weekly concerts at his home on the rue de Richelieu (see fig.8 below).

Because of their central location and proximity to the Opéra these quarters were favoured by both composers and performers. Four of Lully's houses were in the Palais Royal quarter, and Lalande maintained a large dwelling in the rue Ste Anne, as did the king's harpsichordist, D'Anglebert. Destouches lived next to the church of St Roch, and Mouret resided in the Place du Palais Royal next to the Café de la Régence from 1717 to 1734. From 1724 until his death François Couperin (ii) lived at the corner of the rue Neuve des Bons Enfants (now rue Radziwill) and the rue des Petits Champs; he may have been acquainted with Rameau, who at the time of his marriage (1726) also lived in the rue des Petits Champs.

2. Religious institutions. In addition to the Chapelle Royale (see §V, 1 below), the churches of Paris frequented by the royalty during the period of Louis XIII and Louis XIV were Notre Dame, St Germain-l'Auxerrois (the parish church of the Louvre), the Ste Chapelle, the chapel of the Tuileries palace, the convent of the Feuillants in the

6. Carrousel in the Place Royale (now Place des Vosges), 1612: engraving; 150 musicians accompanied a gigantic equestrian ballet before 10,000 spectators

rue de Vauguard and the convent of the Théatins, established on the Quai Malaquais by Mazarin in 1648. The *maîtrises* of these churches produced conservative music throughout much of this period. However, the two conventual chapels, together with the Augustinians' chapel in the Place des Victoires and that of the Jesuits in the Faubourg St Antoine, were generally more responsive to secular influences stemming from the *air de cour* and from opera. Italian influence was especially strong in the chapel of the Théatins, whose priests were called 'pères du chant' and whose music was under Lorenzani's direction from 1685 to at least 1687. The aristocracy flocked to hear his *petits motets* at regular Wednesday performances, and in November 1685 the *Mercure galant* complained that the Théatins, 'under the pretext of devotion to the souls in Purgatory, sang a veritable opera in their church . . . where seats could be rented for ten sols'.

Many Parisian convents were also known for their musical activities. Antoine Boësset taught the nuns of the abbey of Montmartre and the sweetness of the nuns' voices at the convent of the Assumption 'attracted many of the *beau monde* every Saturday to their litanies' (Sauval, i, p.470).

The nuns of the abbey of Longchamp were permitted to use singers from the Opéra for the annual Good Friday Tenebrae service. The origin of the 'Promenades de Longchamp' may be traced to the great number of fashionable Parisians in attendance at this service for which François Couperin composed his *Leçons de ténèbres* (*c*1714).

The *Ceremoniale parisiense* (1662) gave ecclesiastical sanction to the conservative bias of the Paris churches. The stern voice of the Council of Trent is heard in this document, which warns against using any instrument but the organ in church. Undoubtedly it made some composers reluctant to use obbligato instruments, particularly in masses. Plainchant had been accompanied by the serpent at the Ste Chapelle since 1651, but it was not until the end of the century that Campra was permitted to introduce violins at Notre Dame. The repressive measures of the *Ceremoniale* were evidently relaxed for special occasions; for the celebration of the birth of the Duke of Burgundy a 'concert of trumpets, oboes and violins' began the Vespers at Notre Dame (*Mercure galant*, October 1682). It is clear from an ordinance of the Archbishop of Paris (1674) that the secularization of religious music, attacked so vehemently by Le Cerf de la Viéville (*Comparaison de la musique italienne et de la musique française*, 1705), was already in evidence. The ordinance condemned singing profane or secular music in any chapel or church, and 'inviting others, through tickets or publicity to come and

hear the music as though it were a spectacle or theatre performance'.

According to a document (in *BrenetM*, p.243) given to François Chaperon, his duties as *maître de musique* at the Ste Chapelle (1679–98) included teaching music to the choirboys, and composing and conducting all music performed. Some of Chaperon's important predecessors at the Ste Chapelle had been the conservative and quarrelsome Artus Aux-Cousteaux (*maître de musique*, *c*1643–51) and three composers who were important to the development of the double chorus motet in France: Formé (canon, 1626–38), Veillot (canon, 1651–8) and Thomas Gobert (canon, 1651–72). From Chaperon's death in 1698 until his own death in 1704 Charpentier was in control of the considerable musical forces of the Ste Chapelle; he was succeeded by Nicolas Bernier, who remained there until 1726.

Except for Veillot (*maître de musique*, 1640–43), Campra (1694–1700) and Lallouette (1700–16; 1718–27), those in charge of music at Notre Dame were among the most conservative of French composers; they generally wrote *a cappella* masses in Renaissance style. Frémart (1625–40) preceded Veillot, who was followed by Cosset (1643–6). The surviving music of Pierre Robert dates from his tenure at the Chapelle Royale rather than his ten-year service at Notre Dame (1653–63). Mignon (*maître de chapelle* at Notre Dame, 1664–94) wrote six masses, which, with their Lullian homophony and occasional madrigalisms, are generally less conservative than those of his predecessors.

The *maîtrise* at St Germain-l'Auxerrois was led by the conservative Péchon in the 1640s. More important was Chaperon, who used his position there as a stepping-stone to the Ste Chapelle, and who numbered among his singers Lalande and Marais, both of whom left the *maîtrise* in 1672. Chaperon was followed by Minoret (who left in 1683), Jean-Baptist Fossart and, finally, Nicolas Bernier (1698–1704) who, like Chaperon, went directly from St Germain to the Ste Chapelle.

Certain Paris churches were important in the development of the French classical organ. Parisian and Norman organ builders such as Valeran Héman, Claude de Villiers, Delaunay, Pierre and Alexandre Thierry, Etienne Enoc, Pierre Desenclos and Robert Clicquot created a type of organ which became standardized by the late 1660s and remained so for a century. The typical four-manual classical French organ is exemplified by those at Notre Dame, St Louis-des-Invalides, St Paul, St Germain-des-Prés, St Merry and St Gervais. Among the more important Paris organists, who composed music ideally suited to the unique colour combinations of this instrument, are: Louis Couperin (St Gervais, 1653–61); Du Mont (St Paul, 1643–84); Etienne Richard (St Nicolas-des-Champs and, after 1652, St Jacques-de-la-Boucherie); Nivers (St Sulpice, 1654–1714); Lebègue (St Merry, 1664–1702); Gigault (St Honoré, St Martin-des-Champs, St Nicolas-des-Champs and the Hôpital du Saint Esprit); Raison (abbey of Ste Geneviève, 1666–1714, and the convent of the Jacobins, rue St Jacques, 1687–1719); François Couperin (ii) (St Gervais, 1685–1723); Louis Marchand (Jesuit College, 1689, St Benoît, St Honoré, 1703–7, and the convent of the Cordeliers, 1717–32); Louis Nicolas Clérambault (St Sulpice, 1714, and the convent of the Jacobins, rue St Jacques, 1719), Jean-François Dandrieu (St Merry, 1704); Dagincourt (Ste Madeleine-en-la-Cité, 1701–6); Dornel (Ste Madeleine-en-la-Cité, 1706–16, and the abbey of Ste Geneviève, 1716) and Daquin (Petit St Antoine, 1706, St Paul, 1727, and the convent of the Cordeliers, 1732). The *Ceremoniale parisiense*, in the hierarchical spirit of the age, lay down careful rules for Parisian organists (see Dufourcq, 1955) which partly explain the uniform style of the organ music by many of these composers.

The Jesuit institutions in Paris played a leading role in the musical life of the city from 1603, the date of their recall, until the suppression of the order in 1761. The Jesuit church of St Louis in the Marais quarter had a sumptuous gallery, and was an ideal place to hear the masses and motets of Charpentier (appointed musical director *c*1684). The Collège de Clermont (founded in 1561 and known as the Collège Louis-le-Grand after 1683) was a Jesuit school in the rue St Jacques for the sons of wealthy Parisians. One of the two annual spectacles performed there marked the completion of a year's work early in August; it included a Latin tragedy and French *intermèdes* that often related to the tragedy, and beginning in 1684, sacred *tragédies en musique* were composed for the occasion. The most important of these is Charpentier's *David et Jonathas* (1688). Among other composers serving this college were Lalande, Collasse, Campra, Lallouette, Desmarets, Clérambault, Beauchamps and Royer.

3. THEATRES. Parisian theatres were in a precarious position during the 17th century because of changes in taste, lack of royal support, jealous rivalries, repressive patents and poor financial management. However, at various times between the establishment of Molière's company in Paris (1658) and that of Lully's Académie Royale de Musique (1672) Parisians were offered a wide variety of entertainment at a number of theatres: the Hôtel de Bourgogne (now 29 rue Etienne Marcel); the Petit Bourbon, located approximately where the colonnade of the Louvre now stands; two theatres in the Palais Royal; the Théâtre du Marais (now 90 rue Vieille du Temple); the Salle des Machines in the Tuileries palace; and the Académie d'Opéra, erected on the Bouteille tennis court which extended from the rue de Seine (now no.42) to the rue des Fossés-de-Nesles (now 43 rue Mazarine), opposite the rue de Guénégaud.

At the Hôtel de Bourgogne a permanent company was formed in 1629 to play tragedies. In the same year the king awarded the company an annual grant of 12,000 livres, double the amount later given to the Marais and the Palais Royal. The king granted the Petit Bourbon to Molière and his comedians in 1658 and later (1661) also the larger of the theatres in the Palais Royal.

Molière's Palais Royal company achieved its greatest success in elaborate performances of the Molière–Lully *comédies-ballets* for the court at Versailles, St Germain-en-Laye, Fontainebleau and Chambord. Molière's final *comédie-ballet*, *Le malade imaginaire*, had music by Charpentier, being written after Molière's break with Lully; though planned for the court, it was performed at the Palais Royal. On Molière's death (1673) his Palais Royal company merged with that of the Théâtre du Marais to form the Théâtre Guénégaud, in the same theatre that had housed the Académie d'Opéra.

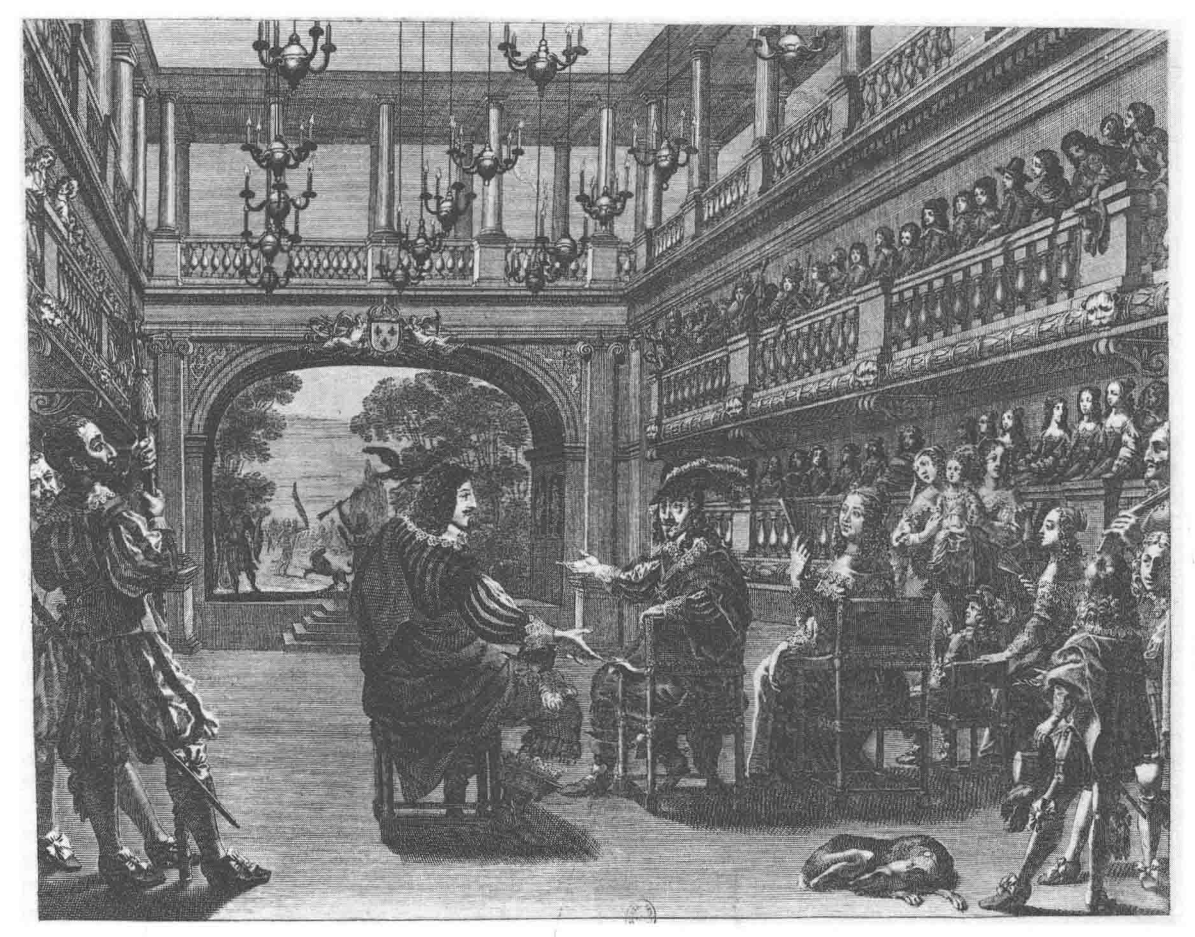
Charpentier provided music for the Théâtre Guénégaud and its successor the Comédie-Française, formed by an amalgamation with the Hôtel de Bourgogne company at the command of Louis XIV in 1680. Between his 1673

and 1685 versions of *Le malade imaginaire* Charpentier composed music for 14 productions of plays by Thomas and Pierre Corneille, Donneau de Visé, Poisson, Baron and Dancourt. Other composers who worked for the Comédie-Française were Gillier, Grandval, Raison, Lalande, Mouret and Jean-Baptiste Quinault.

Sauval found the Petit Bourbon theatre, dating from the days of the Valois kings, the 'highest and longest [hall] in the realm'. Until its demolition in 1660, to make way for Perrault's colonnade, this hall served both Molière's company and the Comédie-Italienne. The court ballets, balls and masquerades of Louis XIII and the young Louis XIV took place there, as well as in the Grande Salle of the Louvre, the Grande Salle of the Tuileries Palace, the Palais Royal (See fig.7) and the *salles* of the Hôtel de Ville and the Arsenal. The *Ballet comique de la reine* (1581) and two of the seven Italian operas introduced to Paris by Mazarin were performed at the Petit Bourbon (Sacrati's *La finta pazza*, 1645, and Caproli's *Le nozze di Peleo e di Theti*, 1654).

From 1634 to 1673 the Théâtre du Marais (capacity 1500) responded to the French taste for elaborate mises-en-scene in productions of *pièces à machines*. In Corneille's *Andromède* Dassoucy's music functions only to 'satisfy the ears of the spectators while the eyes are engaged watching the descent or ascent of a machine' (preface). Closer to opera is Claude Boyer's *Les amours de Jupiter et de Sémélé* (1666), in which spoken drama is subordinated to dance, machine and Mollier's music.

Another theatre designed to support huge machinery was known as the Théâtre des Machines. The septuagenarian architect Gaspare Vigarani and his two sons built it between 1659 and 1662 in the Tuileries palace for Mazarin, who died before its completion. Cavalli's *Ercole amante* was performed there in 1662 as a posthumous finale to Mazarin's ill-fated efforts to win the French over to Italian opera. This hall, according to Sauval, could accommodate 7000 people, and its stage machinery could elevate more than 100 performers at once. It was an immense failure; in 1665 Bernini expressed the general complaint that no-one could hear anything at all. After great expense, three years of construction and six years of use, it ceased regular performances.



Perrin's short-lived Académie d'Opéra opened on 3 March 1671 with his and Cambert's *Pomone*, usually considered the first French opera. The theatre was fashioned from the Bouteille tennis court in the rue des Fossés de Nesles (today 42 rue Mazarine). After a series of misadventures had led him to a debtors' prison Perrin sold his privilege (which he had held since 1669) to Lully, and on 1 April 1672 the Académie d'Opéra was forced to close.

The first two productions of Lully's new Académie Royale de Musique (*Les fêtes de l'Amour et de Bacchus*, 15 November 1672, and *Cadmus et Hermione*, 27 April 1673) were performed in a theatre built hastily by Carlo Vigarani at the Bel Air tennis court on the rue de Vaugirard (now between the Odéon theatre and the Luxembourg gardens). After Molière's death Lully was given the theatre of the Palais Royal free of charge (28 April 1673). With the 3000 *livres* given to him by the king, Lully instructed Vigarani to prepare the Palais Royal for the production of operas. This was completed early in 1674. The Palais Royal is the most important theatre in the history of the French lyric stage during the *grand siècle*. Cavalli's *Egisto* ('we were only 20 or 30 and we almost died of boredom and the cold', Mme de Motteville) and Luigi Rossi's *Orfeo* were performed there in 1646 and 1647 respectively. In 1651 Louis XIV made his début as a dancer there, in the *Ballet de Cassandre*, and from 1661 to 1673 the theatre served Molière's company and the Comédie-Italienne alternately. It was the home of French opera from 1673 until it burnt down in 1763; from 1673 until the death of the Regent Philippe, Duke of Orléans, in 1723, over 100 stage works were performed there, including the 13 *tragédies en musique* by Lully and works in the same genre by Collasse, Campra, Destouches, Mouret and others. From 1697 (*L'Europe galante*) popular *opéras-ballets* by Campra, Montéclair and Mouret challenged the supremacy of the *tragédie en musique* and, in spite of some opposition from aestheticians, returned the comic muse to the stage of the Palais Royal.

Built by Le Mercier and opened in 1641, the theatre was much longer than it was wide (fig.7). By Lully's time it had a parterre, an amphitheatre, a double balcony and three rows of boxes (the king's box was first on the right facing the stage, and the queen's first on the left; *see* OPERA, fig.35). The theatre was cramped. Lagrave (p.86) estimated that its capacity was between 1300 and 1400, although it contained only 1270 seats. Its stage was small. Riccoboni wrote: 'The Decorations of the Stage of the Opera are very handsome, but not to be compared with those of Italy, the Smallness of the Stage not admitting of their being either so large or so magnificent as those of the vast Theatres of Venice, Milan, etc'. (1741, p.152). The price of admission was double that of the other theatres (see Lagrave, pp.46ff). Performances began at 5.15 on Tuesdays, Thursdays (only in winter), Fridays and Sundays, and it was closed for 23 days during the Easter season and for 11 days for other religious feasts. The printed libretto (*livret*) was sold at the door of the theatre before each performance. It cost 30 sols.

In 1712 Louis XIV ordered the construction of an annexe to the Académie Royale de Musique, rue St Nicaise. Known as the Magasin de l'Opéra, it contained a school of singing, a school of dance, administrative offices, a library, rehearsal halls and a ballroom. The rules governing all the activities of the Académie Royale de Musique are fully described in two royal ordinances of 1713 and 1714 (in Durey de Noinville, i, pp.105–46); they reveal an administration generally sensitive to the needs of the singers, dancers, instrumentalists, conductors, stage designers, machinists and tailors employed by the Opéra. There were six sopranos, three *hautes-contres*, two tenors and three basses among the solo singers. It is not possible to fix the exact number of choristers at the Paris Opéra during Lully's tenure. The names of the chorus members did not appear in the librettos until 1699. The fluctuating numbers in the first decade of the 18th century (30 in 1701, 22 in 1704, 32 in 1706) reflect the economic woes of the Opéra under the direction of Jean-Nicolas de Francine, Lully's son-in-law (see La Gorce 1979, p.177). The dancers consisted of 12 men and 10 women (for details concerning the Opéra orchestra, see below).

Lully's original privilege (March 1672) gave him administrative control of the Académie Royale de Musique for his lifetime and extended this to his heirs. His son-in-law Francine shared the privilege with Hyacinthe

7. Richelieu's theatre in the Palais Royale during the performance of a play: engraving by Michel van Lochon, 1643; seated (from left to right) are Cardinal Richelieu, Louis XIII, Anne of Austria and the dauphin (Louis XIV); note the musicians playing in the upper right gallery

Gaureault du Mont in 1698. Problems of finance and discipline plagued the opera in the early 18th century, and in 1713 Destouches was appointed inspecteur-général to maintain order and discipline. When Francine retired in 1728 Destouches took over as director of the opera. In 1715, with the permission of the regent, the Académie Royale de Musique sponsored all-night public masked balls at the Palais Royal; these rapidly became a favourite pastime in Paris (see Durey de Noinville, i, p.164).

The Comédie-Italienne had been popular since its arrival in the city during the reign of Henri III. The troupe, led by Scaramouche, alternated with Molière's company at the Petit Bourbon and, after 1660, at the Palais Royal. On the creation of the Comédie-Française (1680) the Italians took over the Hôtel de Bourgogne, where they performed until they were deported in May 1697 for having satirized Mme de Maintenon in *La fausse prude* (8 January 1696). The repertory of this so-called Ancien Théâtre Italien (see Gherardi) included many parodies of Lully's operas. Of the 55 plays mentioned in Gherardi 43 use music extensively, despite the fact that Lully's patent of 22 April 1673 had reduced the number of musicians who might appear in any performance outside the Académie Royale de Musique to two vocalists and six instrumentalists. Among the identified composers who wrote for the Ancien Théâtre Italien are Lully, Cambert, Masse and Gillier.

By 1680 Paris had only three regular theatre companies: the Opéra, the Comédie-Française and the Comédie-Italienne. Each competed for public favour and jealously guarded its monopolies. Nowhere may the arrogance of power be better observed than in the attempts of the Opéra and the Comédie-Française to suppress the popular entertainments at the Théâtres de la Foire.

The Foire St Germain (3 February to Palm Sunday) and the Foire St Laurent (17 June to the end of September) had been the scene of farces and acrobatic displays since the Middle Ages; however, they became a threat to the Opéra and the Comédie-Française only in 1697, when they adopted the repertory of the expelled Comédie-Italienne (*see* THÉÂTRES DE LA FOIRE). The early years of the 18th century saw the Opéra and the Comédie-Française involved in a series of legal battles aimed at preventing the *forains* from speaking or singing on their stages. It is a tribute to the imagination of creative men and women that the Théâtres de la Foire (who took the name of Opéra-Comique in 1715) found ways of circumventing the repressive edicts of their powerful rivals.

Philippe of Orléans became regent in 1715, and lost no time in calling the Italians back to Paris. In 1716 the Nouveau Théâtre Italien was established at the Palais Royal under the direction of Luigi Riccoboni (known as Lélio). French plays by Autreau, Marivaux, Fuzelier and

others were introduced into the repertory side by side with comedies by Riccoboni and parodies by Dominique and Romagnesi. From 1717 until the year before his death in 1738 Mouret was the chief composer of the Nouveau Théâtre Italien.

4. ORCHESTRAS. The most important orchestra in Paris from the foundation of the Académie Royale de Musique to the death of the regent was the orchestra of the Opéra. Precise information concerning its membership under the direction of Lully is lacking. The earliest known source that gives information about the Opéra orchestra is an archival document of 1704 (La Gorce, 1979). The orchestra, like the chorus, was divided into a *grand* and *petit choeur*. The *grand choeur* consisted of nine violins, eight violas (divided into three parts), eight *basses de violons* (after 1700 usually violoncellos), eight winds (oboes, transverse flutes or, more usually, recorders and bassoons) and one set of kettledrums. The *petit choeur* consisted of two violins, two *basses de violons*, two bass viols and (after 1700) one double bass, one harpsichord and two theorbos. According to the Royal Ordinances of 1713 and 1714, two transverse flutes were added to the *petit choeur*. Supernumeraries must have been hired to play the trumpet, musette and cromorne parts occasionally called for in Lully's operas. A *batteur de mesure* directed the orchestra. According to the Royal Ordinance of 1713, the Opéra orchestra had 48 members (Durey de Noinville, i, 121ff), a number that hardly varied for half a century. Members of the Opéra orchestra were often used in concerts independent of the opera performances at the Palais Royal. 30 members gathered half an hour before dancing began at the public masked balls to present a concert of 'important *morceaux de Symphonie* by the best masters'. Once a year, on St Louis Eve (24 August), free public concerts for the city of Paris were given in the Tuileries gardens by vocalists and instrumentalists from the Académie and were attended by the king. The repertory was largely made up of overtures, dances and large choral sections from Lully's operas (see *BrenetC*, p.169). After Lully's death the Opéra orchestra was conducted by Marais (1695–1710), Lacoste (1710–14), Mouret (1714–18) and Jean-Féry Rebel (1718–33).

Hidden in the notarial contracts of the Minutier Central are references to two Paris chamber orchestras dating from the first years of Louis XIV's reign (see Dufourcq, 1954). The first, founded in 1656, was a string orchestra of 12 players under the direction of Léonard de Lorge, which gave a concert lasting an hour every Saturday. The second was a string orchestra of 11 players, dating from 1667, whose concerts were given on Wednesdays under the direction of Henry Mathieu.

From the Middle Ages the street musicians of Paris had been organized in various guilds. In the 17th century the minstrels' guild, the Confrérie de St Julien-des-Ménétriers, was the powerful and paternalistic protector of the 'dancing-masters and players of instruments both high and low and the oboes' of Paris. The articles governing the syndicate assured a remarkable degree of protection for its members, who were hired to perform for weddings, engagement parties, banquets, masquerades, street serenades and formal concerts. The leader of the Confrérie was known as the *roi des ménétriers*, and later as the *roi des violons*. By the middle of the 17th century many of the Confrérie's better players were absorbed into the 24 Violons, the Petits Violons, the Ecurie or the Opéra orchestra and its influence began to decline, although as late as 1660 Guillaume Dumanoir (i), then *roi des violons*, had 200 performers under his command. In that year the dancing-masters declared their independence from the Confrérie and a year later established their own Académie Royale de Danse. Guillaume Michel Dumanoir, who took control of the Confrérie in 1668, tried in vain to bring 'composers, organists and masters of the harpsichord' under the jurisdiction of his syndicate. The king's organists Lebègue, Nivers, Buterne and François Couperin, with the authority of the king behind them, removed the threat of control by the Confrérie (*Lettres patentes*, 25 June 1707); the syndicate became the butt of musical jokes, such as Couperin's 'Les fastes de la grande et ancienne Mxnxstrxndxsx' (*Ordre* no.11).

5. PRIVATE CONCERTS. The journals, gazettes, almanachs, letters and memoirs of the 17th and early 18th centuries document the active concert life of the *haut monde* of Parisian society, embracing both the nobility and the middle class. Jacques de Gouy, unfamiliar with either the earlier concerts of Mauduit at Baïf's Académie de Poésie et de Musique or the concerts of voices and instruments, of viols and harpsichord and of lutes described by Mersenne, believed the 'first concerts' to have been some *concerts spirituels* given before 1650 in the home of the king's organist, Pierre Chabanceau de La Barre (iii). At the end of the 17th century another series of *concerts spirituels*, organized weekly by Abbé Mathieu in his presbytery at St André-des-Arts, helped to popularize the music of Luigi Rossi, Cavalli, Carissimi, Corelli, Cazzati and other Italian composers.

In 1641 Chambonnières began the popular series of midday concerts given by the 'Assemblée des Honestes Curieux' on Wednesdays and Saturdays at his home. Titon du Tillet recorded that Sainte-Colombe, violist and teacher of Marais, gave family concerts in which he and his two daughters played viols. Christian Huygens wrote to his father in glowing terms about the concerts given by 'Monsieur Lambert and Mlle Hilaire, his sister-in-law, who sings like an angel'. Some concerts seem to have been particularly ambitious. In December 1678 the *Mercure galant* described the concerts 'in the manner of small operas' given by Mollier at his home every Thursday, and Dangeau stated that the music-loving Princess of Conti had a performance of *Alceste* mounted in her home.

Towards the end of the reign of Louis XIV Paris took the place of Versailles as a musical centre; the town house or country château substituted for the centralized court. By the end of the regency (1723), according to Nemeitz, one could hear a concert every day in Paris; he specifically mentioned concerts 'at the homes of the Duke of Aumont, Ambassador to England . . . Abbé Grave, Mlle de Maes, who ordinarily gave one a week; and then at the home of Mons Clérambault, who gave one about every 15 days or three weeks'.

IV. 1723–89

During the 18th century French became established as the universal language of Europe's educated classes, and Paris provided the lead in most cultural matters. The one exception was music, where the influence of Italian and German musicians proved increasingly crucial across Europe as the century progressed. In addition to its reputation for taste and elegance, 18th-century Paris was one of the most active intellectual centres of Europe,

matched only by London and Amsterdam. Home to the Encyclopedists – Diderot, D'Alembert, Rousseau, Grimm and d'Holbach – the French capital provided ample scope for the discussion and dissemination of ideas through its numerous salons frequented by a cosmopolitan society. Here the revolution in beliefs took place. The second half of the century witnessed the rapid growth of pamphlets and periodicals and of music publishing and engraving. Firms like Sieber, Boivin, La Chevardière and, later, Pleyel issued music of French, German and Italian origin and developed close links with publishing firms in other European cities. The capital's expansion, evident in the growth in population and in a vast array of new buildings, meant that Paris gradually replaced Versailles as a focus for intellectual and cultural activities. As these transferred from the court to Parisian town houses or to country mansions, so musical patronage shifted away from the king, eroding the power of royal authority established so pervasively by Louis XIV.

1. Religious institutions. 2. Concert life. 3. Theatres.

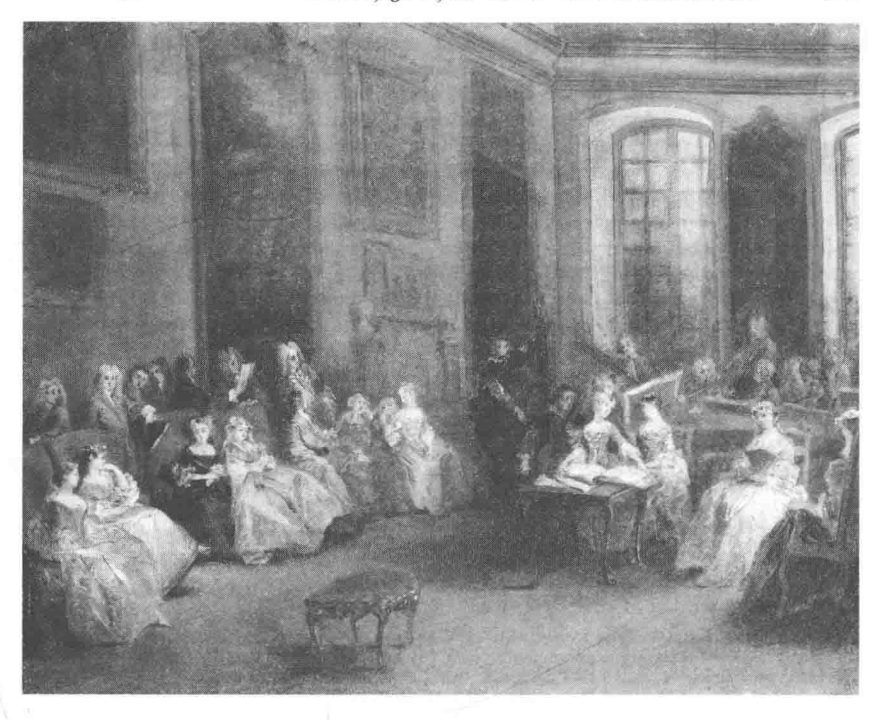
1. Religious institutions. Sacred choral music continued to be written in Paris through the 18th century, although after 1725 it developed principally at the Concert Spirituel rather than in the churches. The noble *grand motet Versaillais*, embodied in the works of Lalande, endured for another 50 years, but after 1740, stimulated by paying audiences and the influence of opera and instrumental music, Mondonville and others began to introduce tuneful melodies, crowd-pleasing virtuosity and colourful instrumental effects into the genre. With this new popular element motets flourished in churches and on stage for much of the century, although they were out of favour in Paris by the time of the Revolution.

Few churches actually had the resources for choral music, chant generally being considered sufficient. Many visitors remarked on this, including William Jones, in 1777:

> 'In the services of their church, they seldom practise more than the plain song, accompanied in the unison or octave by a leathern serpent .... I asked, how it happened that they did not affect harmony more, and sing in parts, as we do in the services of the choir? They answered, that it was purposely avoided, lest the people should bestow all their attention to the music, and forget their errand to the church.'

Churches that continued a tradition of choral music – notably Notre Dame, the Ste Chapelle and St Germain l'Auxerrois, and the Holy Innocents – continued to celebrate major feast days with motets and masses, but they could no longer boast *maîtres* like Charpentier, Campra and Bernier. Two of the *maîtres* who held posts at these churches in the second half of the century are important: François Giroust, maître at the Saints-Innocents, converted his popularity at the Concert Spirituel into a post at the Chapelle Royale; Jean-François Le Sueur achieved notoriety at Notre Dame before moving to the world of opera.

Churches invariably drew large audiences for special musical events, which were always well advertised. Mrs Cradock writes of paying about a shilling each to get good seats for Pentecost Mass at Notre Dame, and sending a servant to hold them in advance. Mercier says that Vespers, the most popular service, was dubbed *l'opéra des gueux* (beggars' opera). It was so fashionable at the Saints-Innocents under Abbé Roze that in 1778 the poor were excluded, and the archbishop had to intervene. Le Sueur created a storm of controversy in 1787 when he tried to convert major church feasts at Notre Dame into spectacular musical productions. He drew in huge crowds but subsequently lost his job. A popular annual event was St Cecilia's day at St Mathurin, which the city's musicians turned into a musical extravaganza.



By the middle of the century the severe liturgical organ tradition of Lebègue, Nivers, Couperin and Grigny had been supplanted by a more decorative style, associated with Marchand, Dandrieu, Clérambault and Du Mage. After an organ was installed at the Concert Spirituel in 1748, the trend towards concert use of the instrument increased, and a new generation of virtuosos emerged. They filled their masses and Vespers with dances, theatrical airs and elaborate variations, especially on the *Magnificat* and *Te Deum*. Although this development is lamented by modern scholars (as it was by English and German visitors at the time), organists have rarely enjoyed such popularity. Daquin was renowned for his noëls, as was G.-A. Calvière for his sonic effects. Balbastre attracted so many listeners to St Roch that his *messes de minuit* and *Te Deums* were forbidden by the archbishop; a similar ban was imposed at St Germain-des-Prés.

2. Concert life. Paris cultivated an active concert life from the earliest years of the 18th century, although many events were patronized by the upper echelons of society only. About 1730 the German traveller Nemitz referred, in his *Séjour de Paris* (in *F-Pn*), to private events organized at the homes of several illustrious patrons, including the *premier gentilhomme* and English ambassador the Duc d'Aumont, the Prince de Conti Louis-Armand de Bourbon, and Antoine Crozat, *grand trésorier* of the Ordre du Saint-Esprit, and his brother Pierre (fig.8). The Concert Italien, which developed from the Crozats' private concerts, was established in 1724 by Mme de Prie and offered twice-weekly subscription concerts, initially in the Salle du Louvre and from 1726 at the Palais des Tuileries. These, however, were eclipsed by a venture established at a similar time and destined to become the century's most famous concert institution, the Concert Spirituel.

Founded by Anne Danican Philidor, the Concert Spirituel presented its inaugural concert on 18 March 1725 and quickly established a reputation as an important forum for new music and platform for virtuosos of all nationalities. Philidor was granted the privilege by the Opéra to stage concerts of instrumental and sacred music (to Latin texts) on religious feast days when theatres were closed, using the Opéra's own orchestra and soloists; other singers were drawn from the Chapelle Royale and from Parisian churches. The use of French and the performance of operatic scenes were not allowed. Various infringements occurred, particularly from the beginning of 1728 when concerts incorporating secular French music were staged twice a week. This was also the year when Philidor transferred his privilege to Jean-Joseph Mouret, Michel de Lanny and Pierre Simard, who carried out their duties until the Opéra assumed control in 1734.

Concerts were given until 1784 in the specially prepared Salle des Suisses at the Tuileries. The return of Louis XVI to the palace necessitated a move to the Salle des Machines where the acoustics and décor were far inferior. Others occurred in 1789, one year before the Concert Spirituel was disbanded, first to the Salle Favart and then to the Opéra's new home at the Théâtre de la Porte-St-Martin.

Marie Antier and Catherine Lemaure were among the Opéra's soloists to appear during the early years of the

8. Concert at the home of Monsieur Pierre Crozat: painting by Nicolas Lancret, c1735 (Alte Pinakothek, Munich)

enterprise; they were followed by Marie Fel, Pierre Jélyotte and, later, by Joseph Legros (who took over the directorship in 1777), Sophie Arnould and Rosalie Levasseur. The vocal repertory of the Concert Spirituel included motets (*grands motets* by Lalande were particularly popular), cantatas, *airs italiens* and, from the mid-century, French oratorios. Italian singers appeared as early as 1726: first Giovanni Battista Palmerini then Domenico Annibali, Maria Monza and, most notably, Caffarelli, who sang two Italian *ariettes* on 5 November 1753. The German tenor Anton Raaff appeared in nine concerts in 1778. Native and foreign instrumentalists contracted by the Concert Spirituel included a host of talented violinists, among them Jean-Baptiste Anet and Jean-Pierre Guignon (who indulged in a contest in 1725) and Jean-Marie Leclair. Parisian audiences were introduced to a variety of Italian sonatas and concertos, and these not only encouraged the dissemination of Italian music in the French capital but also accelerated the transition to the Italian-style violin. Works were often executed by their composers; failing that, Vivaldi's concertos provided an admirable showpiece. Other instrumentalists included the cellists Jean-Pierre and Jean-Louis Duport, and the flautists Michel Blavet and Pierre-Gabriel Buffardin. The installation of a new organ in 1748 (under Joseph-Nicolas-Pancrace Royer's directorship) led to the popularization of the organ concerto, spearheaded by Claude Balbastre between 1755 and 1762; and in the 1760s the Germans Christian Hochbrucker and Philippe-Jacques Meyer created a new vogue for the harp.

From the middle of the century, instrumental works by German and Austrian composers were incorporated with greater frequency into the repertory of the Concert Spirituel. Symphonies by Johann Stamitz, which were the first to include clarinets in Paris, encouraged the orchestra to expand and led to an interest in the French symphony by composers such as François-Joseph Gossec, Simon Leduc and Joseph Boulogne de Saint-Georges. On 15 August 1762 the orchestra dispensed with their *batteur de mesure*, Gaviniès leading the first violins and Nicolas Capron the seconds; by 1775, when the directorship was in the hands of Gaviniès, Gossec and Leduc, the orchestra comprised 58 players (there was also a choir of 44 to support 11 soloists) and rehearsals were efficient and well planned. In the intervening period, Mondonville had served as director (1755–62), programming many of his own compositions, followed by the triumvirate Antoine Dauvergne, Gabriel Capperan and Nicolas-René Joliveau. Symphonies by Haydn were heard from 1777 (fig.9), and in 1778 Mozart's Symphony no.31, K297/300a, received its première. Distinguished soloists in later years included Viotti, Boccherini and Kreutzer.

In 1769 a subscription series known as the Concert des Amateurs was established in Paris. Backed financially by the *fermier général* La Haye and the *intendant général* Claude-François-Marie Rigoley, Comte d'Ogny, concerts

CONCERT SPIRITUEL,
AU CHATEAU DES TUILERIES.
Aujourd'hui MARDI 2 Février 1779, JOUR DE LA PURIFICATION.

CE Concert commencera par une nouv 'le Symphonie à grand Orchestre de la Composition del Signor HA EN.

M. MOREAU, de l'Académie-Royale d Musique, chantera un Motet de M. CANDEILLE.

M. VOUNDERLICH, exécutera un Conc de Flûte.

Mde TODI, chantera un nouvel Air Ita PICCINI.

MM. PALSA & TIERSCHEMIEDT exécutero ncerto de Cors de Chasse. On exécutera un nouvel Oratorio (ON) Paroles de VOLTAIRE, Musique de M. CAMBINI, dans lequel . DUCHASTEAU, MM. MOREAU & LE GROS chanteront.

M. CHARTRAIN, exécutera un nouv. Concerto de Violon de sa composit

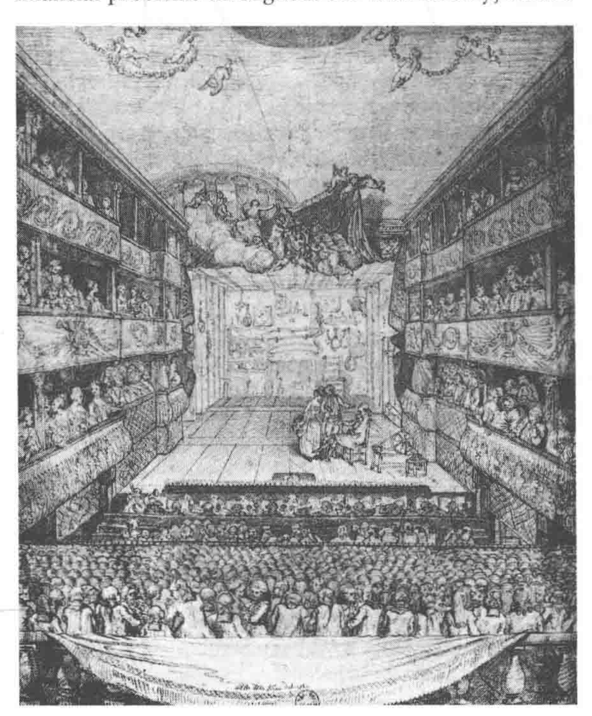
Le Concert finira par un nouvel Air Italien del Signor GUGLIELMI, chanté par Mde TODI.

On commencera à six heures. Les Voitures entreront par toutes les Cours.
On s'adressera, pour louer des Loges, à la Dlle SOUBRA, Cour des Suisses.

9. Handbill for a Concert Spirituel, Palais des Tuileries, 2 February 1779

were given weekly between December and March at the Hôtel de Soubise, conducted by Gossec, and these quickly acquired a high reputation. After Gossec moved to the Concert Spirituel, Saint-Georges became *chef d'orchestre* until the society was disbanded in 1781. It was replaced by the Concert de la Loge Olympique, whose venue until 1786 was the Palais Royal and thereafter was the Salle des Gardes at the Tuileries. Haydn's 'Paris' symphonies (nos.82–7) were commissioned by d'Ogny and performed by the society during their 1787 season; in 1788, the year before the enterprise ceased, its orchestra numbered 74 and was comparable in size to that of the Opéra.

Throughout the century concert life continued to flourish in the homes of musically inclined members of the aristocracy. Between 1731 and 1762 concerts organized by the *fermier général* La Riche de La Pouplinière (initially at his Parisian town house and from 1747 at his château in Passy) were well patronized and introduced some of the century's most important works and performers to the Parisian musical world. La Pouplinière engaged a succession of notable music directors – Rameau, Stamitz and Gossec – and provided opportunities to celebrated and lesser-known musicians of all nationalities. Rameau's *Hippolyte et Aricie* was first performed by La Pouplinière's musicians; and Gossec recounts how, on the advice of Stamitz, this orchestra was the first to introduce horns on a regular basis. Indeed, many important instrumental works performed at the Concert Spirituel were heard first at La Pouplinière's. Another notable patron was Louis-François de Bourbon, Prince de Conti, who, from about 1761 to 1771, held gatherings of writers, politicians, philosophers, artists and musicians, and earned the reputation, after La Pouplinière's death, of hosting the most famous concerts in Paris. Musicians in his employment included Johann Schobert, Jean Joseph Rodolphe, Pierre Vachon, Josef Kohaut and, as *chef d'orchestre*, Jean-Claude Trial.



Until 1789 Parisian concert life, though one of the richest in Europe, remained mainly the pleasure of a social élite. Occasional open-air celebrations enticed a wider public, but it was not until the Revolution that entertainment for the masses began to develop on any significant scale.

3. THEATRES. For much of the 18th century the main Parisian theatres were engaged in a bitter rivalry born of the monopolies established by Louis XIV and the subvention of these by enterprising entrepreneurs. Of the four public theatres, the Opéra enjoyed the highest status and wielded the greatest power. Royal subsidies were also provided for the Comédie-Française and, from 1723, for the Comédie-Italienne (recalled in 1716 after 19 years' absence): members of both troupes were allowed to style themselves *comédiens ordinaires du roi*. The unofficial Opéra-Comique, while probably the most popular theatre among Parisians, led the most precarious existence (operating seasonally at the fairs of St Germain and St Laurent) until its merger with the Comédie-Italienne in 1762. It had to contend with the jealousies of its official rivals, was entirely dependent on box-office receipts and was surpressed entirely for certain periods.

Although the impression created by the Paris Opéra was of an illustrious and luxurious theatre, the institution was in reality plagued by financial difficulties for much of the 18th century and pursued the least adventurous programming policy of any Parisian theatre. Far many more old works than new sustained the repertory. At least one opera by Lully was revived each year until 1779, an indication that while Rameau was partially successful in breaking away from the grip of the past, it was Gluck's impact on the *tragédie lyrique* in the 1770s and 80s that proved more significant. Once Gluck's works were established in the Opéra's repertory, the challenge from an influx of Italian composers – premières by Piccinni and Sacchini were given alongside performances of works by Paisiello and Anfossi – proved irresistible. The more varied programming and competition this engendered, manifest in the public controversy between Gluckists and Piccinnists, certainly provided a much-needed boost to the Opéra's revenues, as had the earlier Querelle des Bouffons (1752–4).

For the visitor the Opéra retained much of its splendour and it continued to provide a public setting for the aristocracy. Performances were staged four times a week throughout the year except during Lent. Visitors (though not *habitués*) were impressed by the machinery and decorations, although some were critical of the theatre's small capacity (under 1300). When, in 1763, the old rectangular Palais Royal was razed by fire, the company moved temporarily to the enormous Salle des Machines (cap. 8000) at the Tuileries palace. A new theatre, designed by P.-L. Moreau, was built on the original site and opened in 1770. Architectural improvements, including a rounded interior, allowed for better lines of vision to the stage and increased the capacity to 2000. However, fire again destroyed the building, on 8 June 1781; within a few months a new theatre had been constructed near Porte-St-Martin, and this was to remain the Opéra's home until 1794.

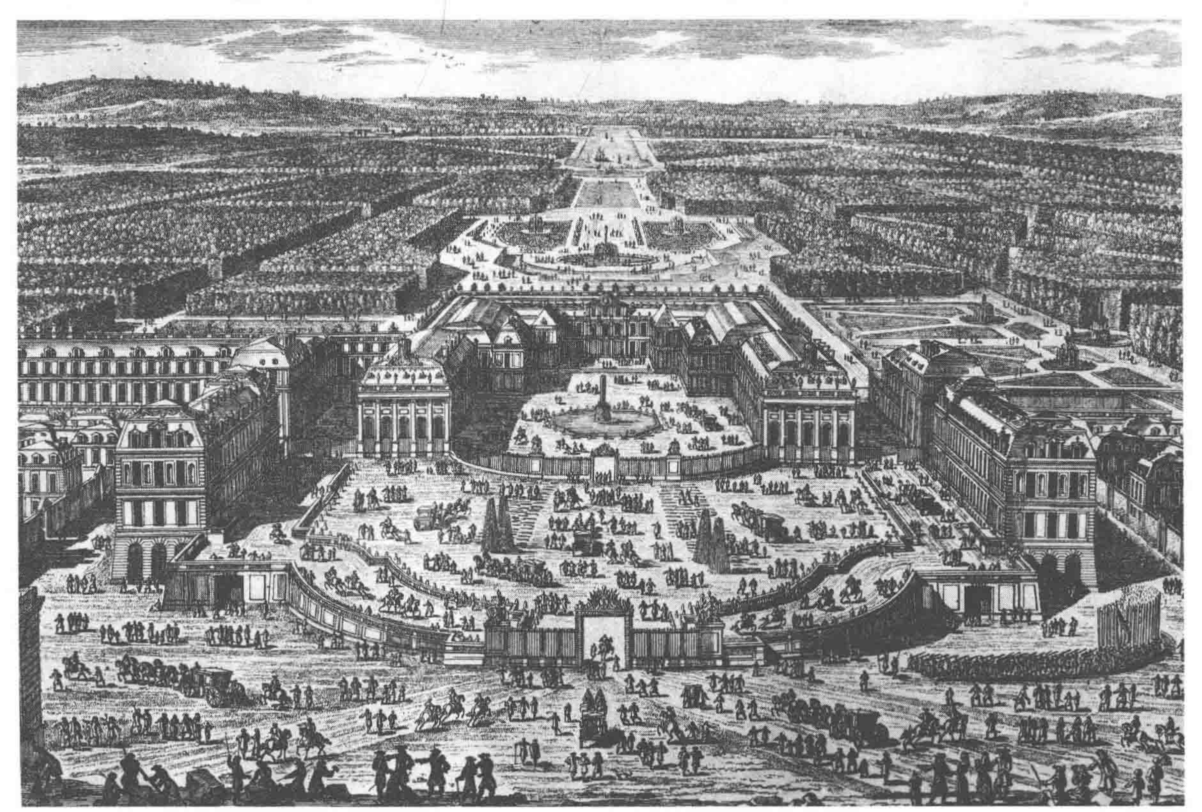
Like the Opéra, the Comédie-Italienne experienced financial problems throughout the 18th century, caused

10. Interior of the Hôtel de Bourgogne during a performance by the Opéra-Comique: drawing by Pierre-Alexandre Wille, 1767 (F-Pn)

primarily by continual expansion (without a corresponding increase in revenue) but also by the success of the Opéra-Comique. Initial ploys – recruiting playwrights such as Le Sage and Fuzelier from their rivals and relocating to the fairgrounds once their petitions had forced the regular theatres to close (1721–3) – made little difference to long-term fortunes. However, the repertory it presented at the Hôtel de Bourgogne (fig.10) was perhaps the most diverse of all the Parisian theatres, including Italian farces, French plays, ballets, vaudeville comedies and parodies. Particularly successful were Pierre Baurans' parodies, staged in the 1750s, of Italian pieces heard at the Opéra during the Querelle des Bouffons.

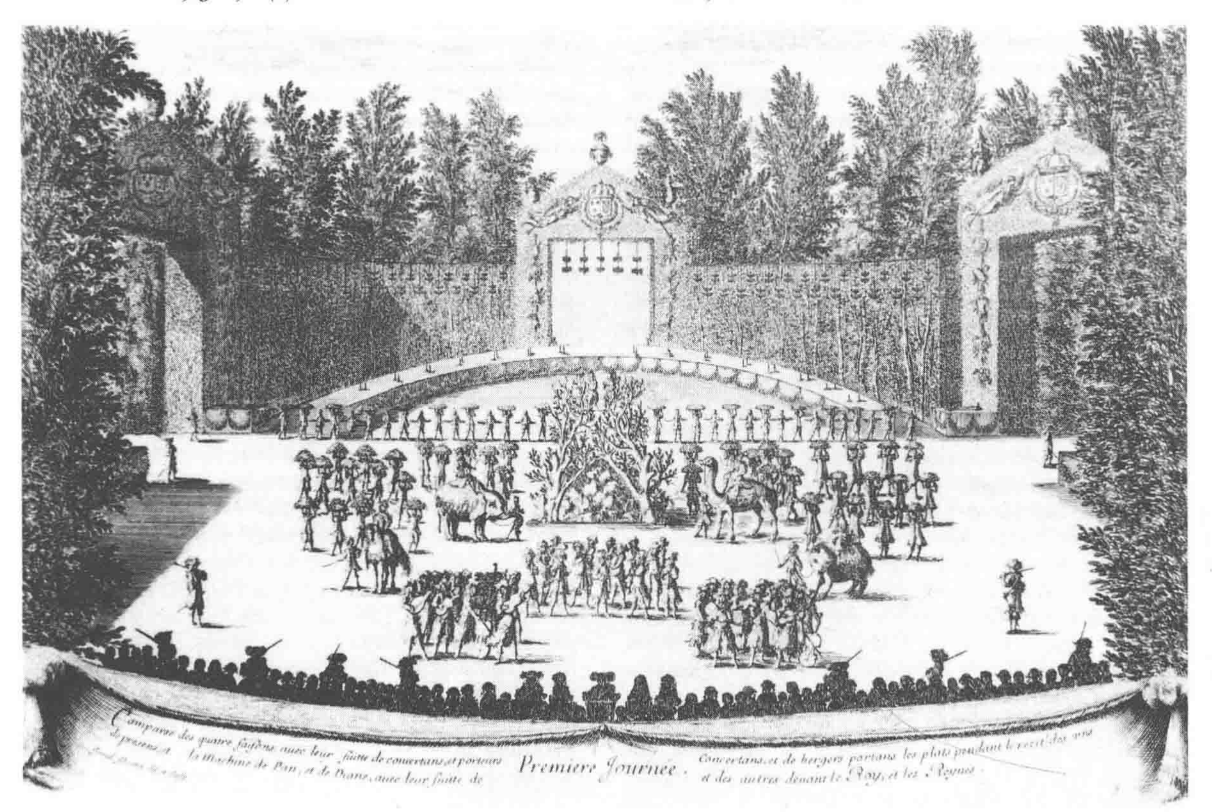
The Opéra-Comique, having survived half a century of vicissitudes, reopened after a seven-year closure in 1752, under the direction of Jean Monnet. The involvement of such figures as Favart, Noverre, Vadé, Dauvergne, Duni and Sedaine brought great success to the venture, prompting sustained machinations by the Comédie-Italienne which led to the merger of the two companies in 1762. The long-term advantage to the Opéra-Comique of playing to audiences throughout the year was offset by the fact that only five of its players were integrated into the new troupe: Laruette, Audinot, Clairval and Mlles Deschamps and Nessel. Attendance revived (most notably on nights when *opéras comiques* were presented) and the varied repertory continued with certain restrictions: opera in Italian, choruses and recitative were all forbidden. On 28 April 1783 the company moved to a new theatre, the Salle Favart (cap. 1282) designed by J.F. Heurtier. The design was less than perfect and various faults were corrected the following year by C. de Wailly.

The centre of Parisian marketplace entertainment shifted after 1762 to the fashionable Boulevard du Temple which, by 1789, boasted several theatres including the Ambigu-Comique. Many of these theatres maintained the ethos of the fair theatres, performing farces, pantomimes, marionette plays and occasional *opéras comiques* and providing rigorous competition for the official establishments.



V. Music at court outside Paris

1. Versailles: (i) 1664–1715 (ii) 1715–89. 2. Fontainebleau. 3. Saint-Cyr. 4. Sceaux. 5. Saint Germain-en-Laye.



1. Versailles.

(i) 1664–1715. During the reign of Louis XIII Versailles was no more than a village in the midst of marshy woodland. Between 1631 and 1634 Louis had a hunting-lodge built there; designed by Philibert de Roy, this small palace had a central building and two wings, which today form three sides of the marble court. Louis XIV ordered that construction begin on a new palace at Versailles soon after he reached the age of majority (23) in 1661. The architect Le Vau (Jules Hardouin-Mansart after 1678), the decorator Le Brun and the landscape architect Le Nôtre laboured for half a century enveloping the hunting-lodge within the most magnificent palace in Europe (fig.11). In 1682 Louis XIV moved permanently to Versailles from Saint Germain-en-Laye. The town that sprang up around the palace housed about 24,000 people by the time of his death.

The king's musicians were known as Officiers du Roy. To be an *officier*, one had to fulfil three conditions: to be

11. *Château de Versailles: engraving by Gabriel or Adam Pérelle, 1660s*

12. Divertissement in the gardens at Versailles, the first day (7 May 1664) of a three-day 'grand divertissement' (known collectively as Les Plaisirs de l'Ile Enchantée) given by Louis XIV to honour his mother, Anne of Austria, and his queen, Marie-Thérèse: engraving by Israël Silvestre, 1664

of good moral character; to profess and practise the Roman Catholic religion; and to possess funds sufficient to buy the post. Succession upon retirement or death was usually accomplished by what was called a *survivance*, in which the *officier* gave the right to inherit the post to a designated relative, or the right to purchase the post to a friend or possibly a student. At Versailles this was one way of building family dynasties of musicians such as the Hotteterre, Philidor, Rebel or Boesset families.

By the end of the reign of Louis XIV, there were between 150 and 200 Officiers du Roy of whom some were housed in the Grande Ecurie. Lully maintained a small apartment there in order to be near the king, and for the same reason Lalande took an apartment bordering the Grand Commun. Musicians of status sought dwellings in the 'Parc-aux-Cerfs' (Lalande, Jacques Danican Philidor), in the rue Dauphine (André Danican Philidor) and in the Avenue de Saint Cloud; others lived in the parish of Notre Dame de Versailles (completed by Mansart in 1686). A small colony of Italian singers, including the castratos Antonio Favalli and Antonio Bagniera, grew up behind the Grande Ecurie in the Avenue de Paris.

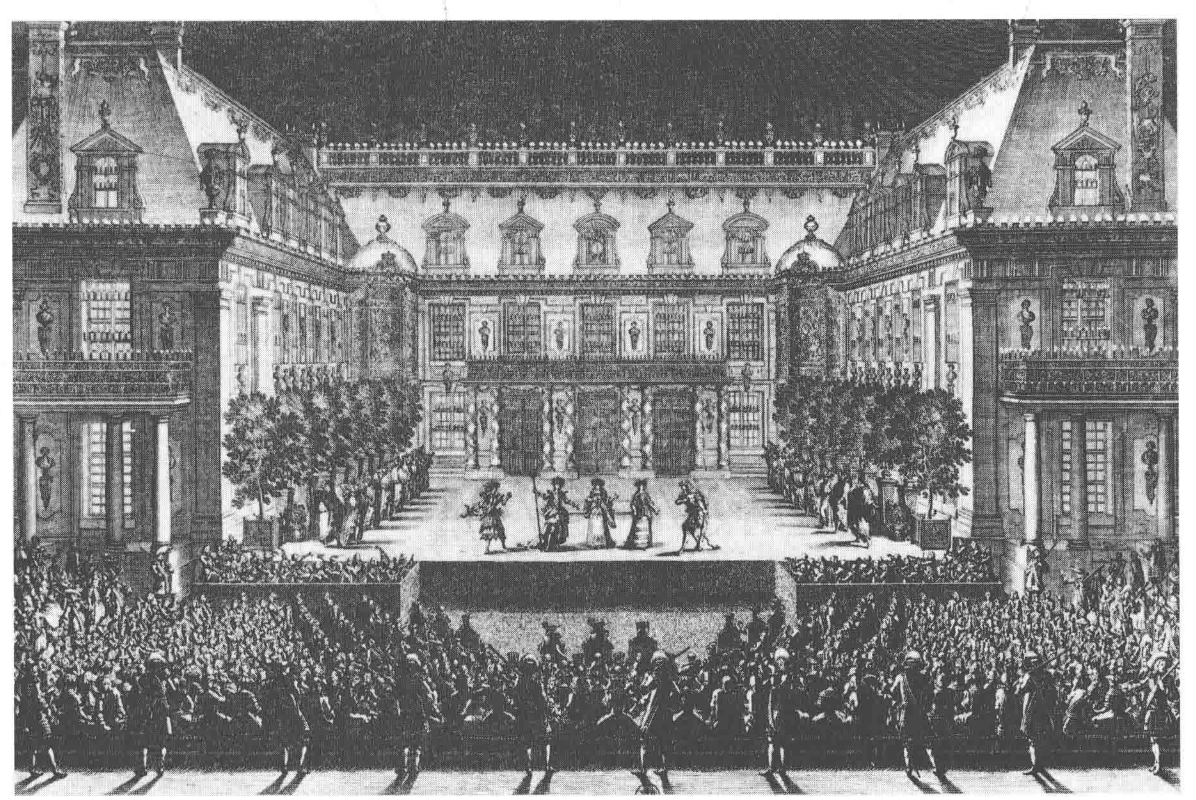
The musical history of Versailles began 18 years before Louis XIV finally settled there. In May 1664 he ordered divertissements lasting three days to honour his mother, Anne of Austria, and his queen, Marie-Thérèse. Known collectively as Les Plaisirs de l'Ile Enchantée, they included a carousel, concerts, ballets and the Molière–Lully *comédie-ballet*, *La princesse d'Elide*; this was the first of the *grands divertissements* of Versailles (fig.12). The second, known as the Fête de Versailles, celebrated the Peace of Aix-la-Chapelle for a single day (18 July 1668). Its principal divertissement was the Molière–Lully *comédie-ballet*, *George Dandin*. The third and most ambitious of the Versailles divertissements (4 July to 31 August 1674) celebrated the conquest of the Franche-Comté. Lully's *Alceste* was performed in the marble court on 4 July (fig.13); his *Eglogue de Versailles* on 11 July in a salon constructed in a grove adjacent to the Trianon palace; and his *Les fêtes de l'Amour et de Bacchus* on 28 July in a theatre built next to the 'grotto of the dragon'.

During Louis XIV's lifetime Versailles had no permanent theatre suitable for elaborate stage productions. The Salle des Comédies, a small theatre built in 1682, seated only 350. Vigarani's project of 1685 for a large Salle des Ballets in the north wing of the palace was abandoned. Performances in the palace were held in temporary theatres, such as one built in 1700 in the vestibule between the 'court of the princes' and the gardens; others were built in the Salon de Mars and in the *grands appartements*. More elaborate productions took place on hastily constructed stages in the marble court (*Alceste*, 1674), in the two pavilions flanking the fountain of the Renommée, on the Grand Canal after its completion in 1672, at the Trianon and in wooded glades. After 1681 the riding-school in the Grande Ecurie was often converted into a theatre.

Although stage productions comparable to the *grands divertissements* were rare in the 1680s and 1690s, Versailles saw the first performances of Lully's *Phaëton* (6 January 1683) and *Roland* (8 January 1685, in the Grande Ecurie). Among other large-scale stage works

performed either in their entirety or in selected acts at Versailles were Lully's *Persée* (1682, in the Grande Ecurie), *Atys* (1682), *Temple de la paix* (1685), *Thésée* (1688), *Acis et Galatée* (1695) and *Armide* (1710); Lalande's *Les fontaines de Versailles* (1683), *Epithalame* (1685, music lost), *Le ballet de la jeunesse* (1686), Desmarets' ballet or serenade (1691); Desmarets' *Endymion* (1686, music lost); Lorenzani's *Nicandre e Fileno* (1681); Collasse's *Thétis et Pélée* (1689) and *Enée et Lavinie* (1690); and André Danican Philidor's *Le canal de Versailles* (1687) and *Le mariage de la grosse Cathos* (1688).

The later years of Louis XIV's reign (1690–1715) were marked by military defeats, economic and social crises and personal tragedies. Under the pious eye of Mme de Maintenon the monarch withdrew more and more from active social life ('The king never attends public concerts or the theatre', Dangeau's *Journal*, 9 October 1704), and the town houses of Paris and country châteaux gradually replaced Versailles as centres of aristocratic entertainment. Music, however, continued to play an important role in the daily life of the king, as indicated by the *Journal* of the Marquis de Dangeau (1684–1720). In addition to the ever-present ceremonial music the king heard private performances of chamber and solo works and favourite comedies. Three evenings a week were set aside for musical entertainments under the generic title of *appartements*. Among the king's favourite musicians for his *appartements* were Germain Pinel (lute), Marie-Anne and Jeanne de Lalande, Anne de La Barre, Mlle Hilaire (singers), Robert de Visée (guitar), Decoteaux and Philibert Rebillé (flutes), Antoine Forqueray and Marais (viols), Jacquet de La Guerre and François Couperin (harpsichord) and Jean-Féry Rebel (violin).



Dangeau recorded that normally the king took his supper in bed at 10 o'clock. 'Ordinarily he would order Vize [Robert de Visée] to come and play his guitar at about 9 o'clock' (11 May 1686). On festive days the king's dinner was always accompanied by music, mostly orchestral extracts chosen from Lully's operas and from Lalande's *Sinphonies pour les soupers du Roi*.

François Couperin's *Concerts royaux* were performed for Louis XIV at Versailles on selected Sundays in 1714 and 1715. In the published edition (1722) Couperin supplied the names of his musicians for these *petits concerts de chambre*: they were François Duval (violin), André Danican Philidor (oboe and bassoon), Hilaire Verloge (viol), Dubois (oboe and bassoon) and Couperin himself (harpsichord).

On St Louis' Day (25 August) in 1715, just seven days before his death, the ailing king heard the oboes and drums of the musicians of the Grande Ecurie playing under his window for his *reveil*, and on the same day he even 'wished to hear the 24 Violons perform in his antechamber during dinner' (Dangeau, 25 August 1715).

For administrative purposes music at the court of Louis XIV was organized into three large groups: Musique de la Chambre, Musique de la Grande Ecurie and Musique de la Chapelle Royale. These divisions continued until 1761, when for economic reasons the Chapelle and the Chambre were combined.

(a) Musique de la Chambre. During the 17th and 18th centuries two men, each serving a six-month term, were

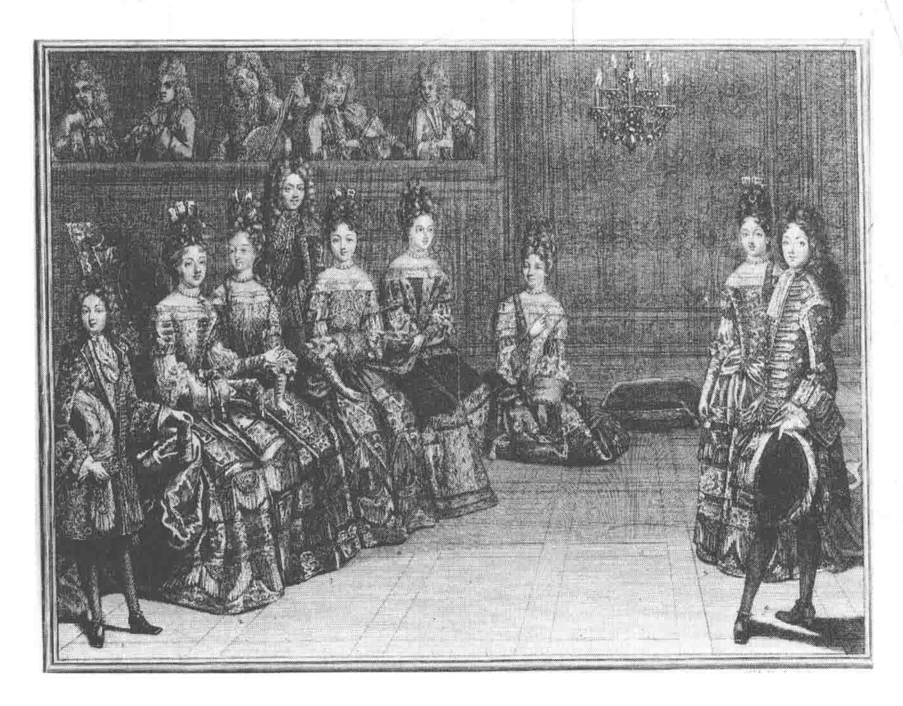
13. Performance of Lully's tragédie lyrique 'Alceste', Cour de Marbre, Versailles, 4 July 1674: engraving by Jean Le Pautre from 'Les divertissements de Versailles, 1674' (Paris, 1676)

appointed to the position of *surintendant* of the Musique de la Chambre. They were responsible for the choice of secular music at court performances, for distributing parts to performers, for overseeing the many rehearsals and for administrative details. Among the most important *surintendants* were J.B. Boësset, Lully, Collasse, Lalande, Collin de Blamont and Destouches.

Aiding the *surintendant* and attending to the musical education of the Chambre's young musicians (known as *pages*) was the *maître de musique de la chambre*. The third administrative division was that of *compositeur de la chambre*, whose specific tasks were often reflected in special titles: *compositeur de la musique instrumentale* (Lazarini, Lully) or *compositeur des entrées des ballets* (Beauchamps, Ballon).

The musicians of the Chambre numbered about eight solo singers, a harpsichordist, two lutenists, one theorbist, four flautists, three viol players and four violinists.

Financed as part of the Chambre and technically *officiers* of the Chambre, the 24 Violons du Roi (actually 25 by 1663) were an autonomous group (fig.15). The *Etat de la France* for various years give a profile of this famous string orchestra, which played for royal ballets, for coronations and marriages, and for the king's dinner on festive days such as New Year's Day, May Day and St Louis' Day. The distribution of parts within the typical five-part texture of French 17th-century instrumental music were as follows: six first violins, six bass violins and four each of the three inner voices, all tuned as the modern viola.



The Petits Violons came under the jurisdiction of the Cabinet rather than the Chambre. Reserved for those musicians whose presence the king deemed indispensable, the Cabinet functioned as an administrative annexe to the Chambre. At some time after March 1653 the king assigned the Petits Violons to Lully, who first directed them in the court ballet *La galanterie du temps*. In 1702 the *Etat de la France* detailed the tasks of the Petits Violons (by then called the Violons du Cabinet): 'They number 21, and they follow the king on all of his travels. They are usually used in all of the divertissements of His Majesty such as serenades, balls, ballets, comedies, operas, *appartements* and other private concerts'. The Petits Violons were suppressed about 1715; the 24 Violons continued in existence until 1761.

(b) Musique de la Grande Ecurie. The musicians of the Grande Ecurie provided music to accompany the pomp and ceremony for the *grand siècle*. Under Louis XIV they were divided into five categories consisting of about 40 instrumentalists: trumpets (12 players), fifes and drums (eight), violins, oboes, sackbuts and cornetts (12), six additional oboes and musettes, and six players of crumhorns and trumpets marine. The four best trumpet players were always available to precede the royal coach on horseback. The famous 12 Grands Hautbois du Roi (ten oboes and two bassoons) had only three annual official duties (the *levers* of the king on New Year's Day, May Day and on St Louis' Day); at other times they combined with the 24 Violons or the Petits Violons in court entertainments.

All the musicians of the Grande Ecurie were available for the many ceremonies attending foreign dignitaries, such as the envoys from Siam (1686) and the ambassadors from Persia (1715). They were the chief source of music for parades and outdoor *fêtes*, they accompanied the king to *parlement* and their fanfares were heard both on the battlefield and during the hunt.

For ceremonial music the king also had at his disposal the four trumpets and drums of his Gardes du Corps, the six trumpets of his Gendarmerie Françoise, the fifes and drums of his Swiss Guards and the four oboes and drums of his Musketeers.

(c) Musique de la Chapelle Royale. Louis XIV took an active interest in the music of his Chapelle Royale long before his permanent move to Versailles. In 1663 he chose four *sous-maîtres* (Du Mont, Expilly, Robert, Gobert), rather than the customary two; each took a quarter of the

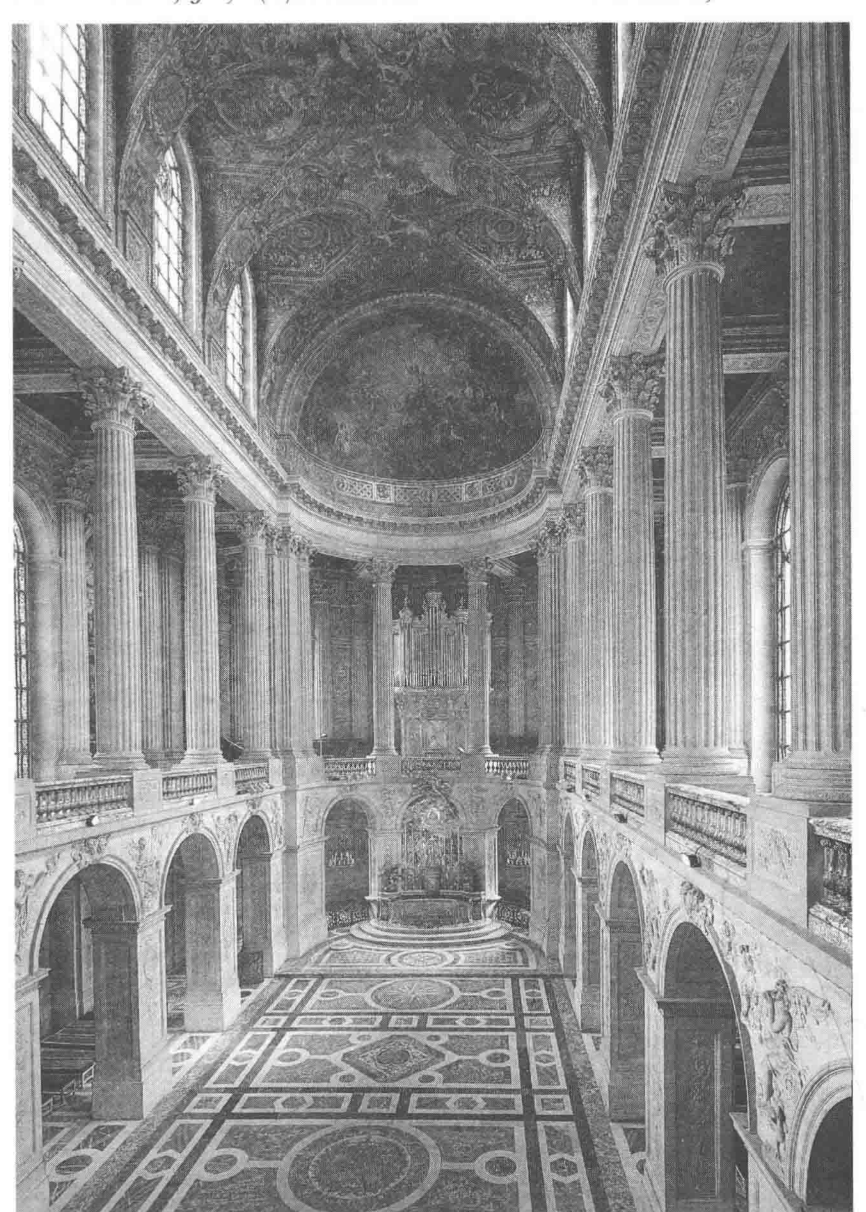
14. Music room of the fourth chamber of the queen's apartments at Versailles: engraving by Antoine Trouvain, 1696

15. One of the 24 Violons du Roi, dressed in characteristic uniform: engraving by Nicolas Arnoult, 1688

year's work. In 1678 he apointed four organists (Nivers, Lebègue, Thomelin, Buterne). After the death of two *sous-maîtres* and the retirement of Robert and Du Mont in 1683 he announced a solemn competition for four replacements; there were 35 competitors. He himself intervened to assure a position for Lalande; Minoret, Goupillet and Collasse obtained the others. By virtue of his talent and the death of his colleagues Lalande had charge of the entire year at the Chapelle Royale by 1714. Between 1684 and 1686 50 motets composed for soloists, chorus and orchestra by Du Mont, Lully and Robert were printed at the order of the king, establishing the *grand motet* as the favoured religious genre of the period.

A *sous-maître* had authority comparable to that of the *surintendant* of the Musique de la Chambre. He trained the choir and chose or composed the music for the king's Mass (a *Messe basse solennelle*) and other religious ceremonies. His superior, the *maître*, was normally a highly-placed ecclesiastic, not a musician.

The *Etat de la France* for 1708 summarizes the singers under the *sous-maître*: 11 sopranos, 18 *hautes-contres*, 23 tenors, 24 baritones and 14 basses. The sopranos were male falsettists (*dessus mues*), castratos (*dessus italiens*) and boy sopranos (*pages*); women were used on occasion towards the end of the reign of Louis XIV, and Mlle Hortense Desjardins was given a post in 1722. Cornetts lent support to the sopranos when necessary. In 1708 the orchestra of the Chapelle comprised six violins and violas, four bass violins, two flutes, two oboes, a bassoon, a crumhorn and two serpents.



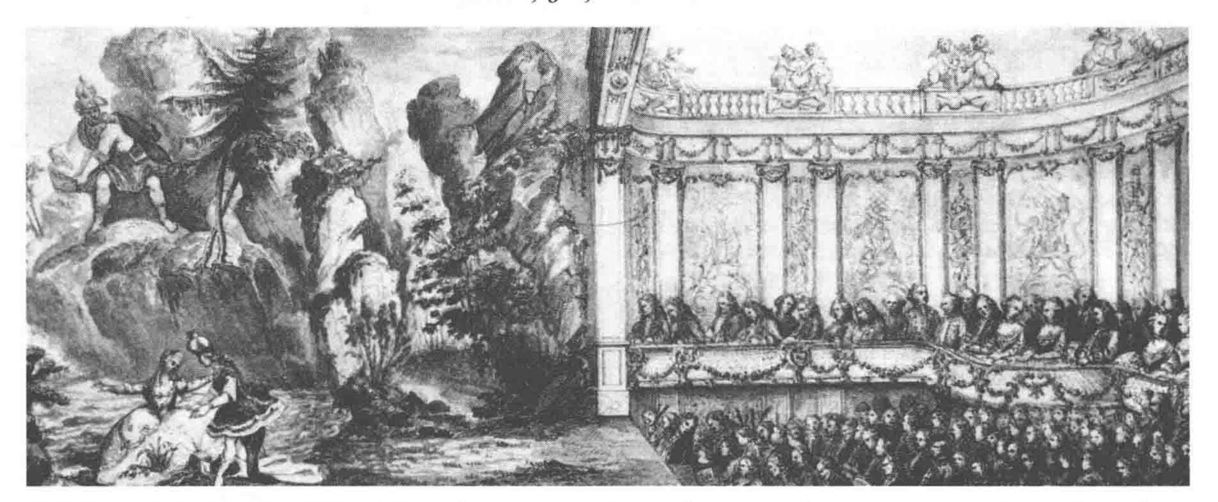
Curiously Versailles did not have a setting worthy of the *grands motets* until late in the king's life. The first chapel (1664) was only a little larger than a salon; the second (1670–73) was a large single-storey salon in the queen's wing; the third (1673–82) was built in the king's wing on the site of the Salon de Sacre; the fourth (from 1682), on two levels, was on the site of the Salon d'Hercule (see Himelfarb, 1984). The splendid final chapel that still stands was begun by Mansart and completed in 1710 by Robert de Cotte (fig.16).

Some of the music heard at Versailles during the reign of Louis XIV survives thanks to copies made from about 1680 to 1730 by the king's librarian, André Danican Philidor *l'aîné*, and his *atelier*. Separate parts as well as full scores exist for the most popular operas, divertissements, *concerts* and *grands motets*. There is also selected music from the reigns of earlier monarchs from François I to Louis XIII. The 'Collection Philidor' is dispersed; the most important holdings are now at the Bibliothèque Municipale of Versailles (*F-V*) and the Bibliothèque Nationale (*F-Pn*).

(ii) 1715–89. After a regency spent mainly in Paris, Louis XV reinstated the château of Versailles, one of several royal palaces, as his court's official residence in 1725. The young king maintained the musical structure of the Chambre, the Grand Ecurie and the Chapelle, but throughout his reign displayed a greater passion for architecture and science than for music. Louis XV's consort Marie Leczinska, his mistress Mme de Pompadour and, later, Louis XVI's consort Marie Antoinette were all to animate musical and theatrical life at Versailles.

Marie Leczinksa and her children played several instruments – Mme Henriette was painted by Nattier performing on the bass viol (*see* VIOL, fig.12) – and the queen established concerts (the Concerts de la Reine) that took place in her Grand Cabinet. Programmes included cantatas, motets and instrumental music by Lalande, Leclair, Destouches and Campra, among others, as well as individual acts of operas. Italian musicians were well received, the memoirs of the Duc de Luynes recounting visits by Bordoni, Cuzzoni and Farinelli. More spectacular were the lavish productions staged to celebrate important royal occasions: a hastily erected theatre in the Grande Ecurie served, in 1745, as the venue for Rameau's *La princesse de Navarre*, commissioned in honour of the dauphin's marriage to Maria Teresa of Spain. Other operas by Rameau received their premières under such circumstances at Versailles.

Mme de Pompadour's arrival at court highlighted the vogue for amateur theatricals among the aristocracy in the 18th century. In 1747 she launched her Théâtre des Petits Cabinets, initially intended as a social diversion for an intimate gathering of friends in her private apartments (fig.17). In less than two years the growth of her project necessitated a move to a larger venue; with the Duc de la Vallière as director, the librettist Paradis de Moncrif served as *sous-directeur*, François Rebel as *chef d'orchestre* and Dehesse as *maître de ballet*. The company's repertory began by mixing plays with operas, but musical works came to predominate, particularly those with a pastoral emphasis. In all, 33 different operas were staged, around one third newly commissioned, with Mme de Pompadour generally taking the leading role. Notable premières included Rameau's *Les surprises de l'Amour* (1748). Excessive costs led the king to intervene and



16. Interior of the royal chapel at Versailles, begun by Jules Hardouin Mansart, 1699, and completed by Robert de Cotte, 1710

abandon the enterprise in 1750 – performances continued until 1753 at Bellevue – and in 1761 he ordered that the Chambre be merged with the Chapelle.

The construction of a permanent theatre at Versailles, a project first planned by Louis XIV, was finally realized in 1770 under the direction of the architect A.-J. Gabriel (visiting troupes up until this time had performed in either the Cour des Princes or the Grand Ecurie). The inaugural performance on 16 May of Lully's *Persée* celebrated the dauphin's marriage to Marie Antoinette. After the death of Louis XV in 1774 the new queen resurrected the fashion for amateur performance at her private theatre in the Trianon. Here *opéras comiques* by important composers of the day were staged, Marie Antoinette taking such leading roles as Jenny (Monsigny's *Le roi et le fermier*) and Colette (Rousseau's *Le devin du village*).

2. FONTAINEBLEAU. The château of Fontainebleau, situated some 70 km south of Paris, originated in the 12th century but was enlarged during the reign of François I (1515–47). The building programme continued during subsequent reigns, and the interior of the château was much enriched by Louis XIII (reigned 1610–43). While the abundant hunting attracted the French court to the area (and had done so since the 12th century), there were also evening entertainments in the château. During the reign of Louis XIV concerts, operas and plays were performed by the king's royal musicians, members of the Académie Royale de Musique and the leading theatrical troupes in Paris. Indeed, when the country's finances permitted, the annual *voyage* to Fontainebleau, usually in the early autumn, resulted in a showcase for the performing arts symbolic of the wealth, power and magnificence of both the court and the country at large.

A variety of the larger rooms and galleries served as performance venues in the château; however, it was in the Salle de la Belle Cheminée that the majority of theatrical

17. Théâtre des Petits Cabinets, with Mme de Pompadour in a performance of Lully's 'Acis et Galatée', 1749: engraving after Charles-Nicolas Cochin II

and operatic performances were given. A stage equipped with machinery was installed by 1682, although no fixed seating was introduced at this time. The theatre was renovated for the wedding of Louis XV in 1725, and stage boxes and balconies were installed to increase the seating area. At the same time, a partitioned area for an orchestra was introduced. A subsequent renovation, completed for the *voyage* of 1754, increased the available seating and corrected problems with the stage itself. The theatre's maximum capacity appears to have been around 700. While the narrow width of the building created problems which were never fully resolved, this theatre was probably the court's finest until the construction of the Versailles opera house in 1770.

Many operatic works were performed at the château. Louis XIV supervised the rehearsals of Destouches' new works there, including *Issé* (1697), *Amadis de Grèce* (1698) and *Omphale* (1700). A renewed emphasis on opera during the second half of the 18th century resulted in premières of works by Rameau, Mondonville, La Borde, Francœur, Grétry and others. Rousseau left an amusing account of the first performance of his *Le devin du village* (1752) in his *Confessions*. During the reign of Louis XVI, works by foreign-born composers (notably Gluck, Piccinni, Salieri and Sacchini) were presented. The triumphant première of Piccinni's *Didon* took place at the château in 1783.

Louis XVI's court did not return to Fontainebleau after 1786. Restored by Napoleon, the château remained popular with the court during the Restoration and the Second Empire, although the association with music, and opera in particular, declined. Fire destroyed the theatre in 1856, and a new, smaller theatre was installed in the Louis XV wing in the following year.

3. SAINT-CYR. Mme de Maintenon established the Maison Royale St-Louis de Saint-Cyr in the village of Saint-Cyr, just west of Versailles, in June 1686 with the approval of her husband Louis XIV. The school was designed to house about 250 daughters of impoverished army officers and noblemen and to educate them in the pious and simple virtues. Its importance lies in the amount of music composed for the 'usage de l'église et communauté des dames et demoiselles . . . à Saint-Cyr'.

In 1688 Mme de Maintenon commissioned Racine to write a tragedy combining piety with diversion. *Esther*, with incidental music by Jean-Baptiste Moreau, was given its first complete performance on 26 January 1689 before an audience including Louis XIV and Bossuet. There were four revivals the following month, one of which was attended by the recently exiled James II and Queen Mary of England. Although Mme de Maintenon found her young charges more eager to sing the melodies of *Esther* than the psalms, she permitted a second Racine–Moreau tragedy, *Athalie*, to be performed (5 January 1691) – this time without décor and costumes. Recognizing the power of music to distract her charges, Mme de Maintenon exercised considerable control over the music performed at Saint-Cyr. She found, for example, too many ornaments and extended vocal melismas in certain motets by Nivers and went so far as to forbid the performance of one of these, *Adjuro vos*, which she deemed 'trop tendre'.

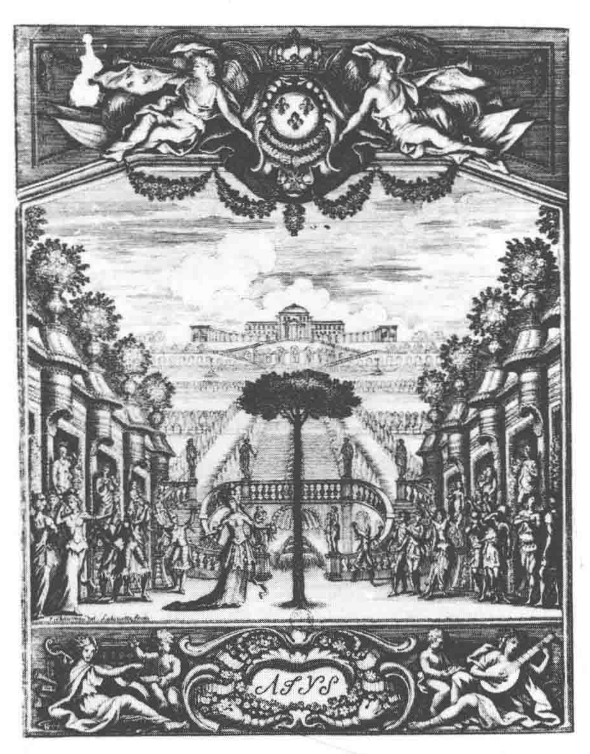
Two other composers contributed to the musical life of Saint-Cyr: Nivers, who was organist and singing teacher from 1686 to his death in 1714, and his successor Louis-Nicolas Clérambault, who held the position until 1721, when he was replaced by his son, César-François-Nicolas.

Between them Nivers and Clérambault composed almost 100 motets for one or two solo voices alternating with a two-part chorus; many are without continuo. The extensive music section of the Saint-Cyr library (now in *F-Pn* and *F-V*) also included motets by Lalande, Campra and Mondonville; Racine's *cantiques spirituelles* in musical settings by Lalande, Moreau, Collasse and Marchand; sacred cantatas by Clérambault; *airs spirituels* by L'Affilard, Nivers and Clérambault; and noëls by Pellegrin and Colletet. Besides Moreau's incidental music for *Esther* and *Athalie* the library had simplified versions of *Jephté* by Nivers and *Iphigénie* by Campra and Desmarets, in addition to arrangements of Lully's operatic prologues and three manuscript collections of dances. The Maison Royale was closed in 1793.

4. SCEAUX. The château at Sceaux, designed by Perrault and decorated by Lebrun, was a favourite site for court entertainments throughout the reign of Louis XIV. On 16 July 1685, for example, the Marquis de Seignlay provided a divertissement for the king and the court that included

a performance of the pastorale *Idylle sur la paix* by Racine with music by Lully.

Louis-Auguste de Bourbon, the Duke of Maine, purchased the château in 1699 for his talented wife Anne-Louise de Bourbon. The duchess soon surrounded herself with a *pléiade* of well-known musicians and poets. In *Les divertissemens de Sceaux* of 1712, Abbé Genest described her divertissements as 'pure amusement, unrehearsed . . . a type of impromptu entertainment'. During this early period, from 1702 to 1714, the divertissements often took place not at Sceaux but at the nearby château of Châtenay, owned by Nicolas de Malezieu. The only composer mentioned during this period is Matho. In 1714 the duchess initiated her famous Grandes Nuits de Sceaux – diversions on a grand scale. The most important of these took place on 16 evenings between 31 July 1714 and 15 May 1715. Despite the disapproval of Saint-Simon ('Sceaux was more than ever the theatre of the follies of the Duchess of Maine . . . [and] of the ruin of her husband'), the Grandes Nuits became the most fashionable aristocratic entertainment at the close of the reign of *le roi soleil*.



Many of the productions called for music; among the composers employed were Mouret, Bernier, Bourgeois, Collin de Blamont, Courbois and Marchand (probably one of the 'Versailles Marchands', perhaps Pierre-Nicolas, rather than Louis). Most of the music was composed by Mouret, who was *surintendant* of the duchess's music from 1709 to about 1730.

Lyric comedies (e.g. Mouret's *Les amours de Ragonde*), plays, dramatic divertissements, ballets *en action* (long before Cahusac and Noverre) and cantatas (e.g. Bernier's *Les nuits de Sceaux*, 1715) were performed in a garden setting designed by Le Nôtre. The Grandes Nuits de Sceaux ended abruptly with the death of Louis XIV.

5. Saint Germain-en-Laye. French kings began using Saint Germain-en-Laye as a residence in the Middle Ages. By the mid-17th century the town had a population of about 10,000 and boasted two châteaux. François I had the *château vieux* almost completely reconstructed, retaining only the 13th-century chapel and the 14th-century keep. Louis XIV had a commodious *salle des comédies* with loges constructed in the west wing. It accommodated the large, elaborate machines of C. Vigarani (see Massip, 1976, pp.118–19) and had a rehearsal hall. The *château neuf* was built for Henri II, enlarged by Henri IV and demolished by Charles X. Louis XIV was born in the *château neuf* in 1638, just five years before Louis XIII died there.

As the favoured royal residence of Louis XIV before his move to Versailles, Saint Germain-en-Laye witnessed all manner of court entertainments. The following Lully ballets were first performed there: *Les muses* (1666); *La pastorale comique* (1667); *Le Sicilien* (1667); *Les amants magnifiques* (1670, when Louis XIV appeared as dancer for the last time); *Ballet des ballets* (1671); and *Le triomphe de l'amour* (1681). Some of Lully's operas were first performed there too; *Thésée* (1675); *Atys* (1676; see fig.18); *Isis* (1677); and *Proserpine* (1680).

The court's move to Versailles in 1682–3 naturally diminished the number of *fêtes* performed at Saint Germain-en-Laye. However, a second flowering occurred when Louis XIV invited the exiled English King James II to settle there (1690–1701) with his son, who continued the Stuart court as James III (1701–12). An Italian, Innocenzo Fede (*b* 1661), was their *maître de musique*. During the later period, this court must have been a 'centre of intense musical activity' (Corp, 1995, p.222). Besides Fede's music for the royal chapel, the repertory included Italian arias, sonatas and cantatas. The Bibliothèque Nationale preserves these today in a collection of seven volumes copied under Philidor's direction.

VI. 1789–1870

The period from the Revolution to the fall of the Second Empire was one of extreme instability in French society and politics. There was an enormous growth in industry and in urban living, great advances were made in pure and applied science, and by 1830 the government was controlled by a wealthy middle class. The social changes of the period are an essential background feature of French Romanticism, and the impact of these changes created crises of conscience in many artists.

From the fall of the Bastille (14 July 1789) to the fall of Robespierre (27 July 1794) the Revolution took its most radical course; the Directory (1795–9) was a period of consolidation. On 9 November 1799 Napoleon's *coup d'état* of Brumaire established the Consulate, and in 1804 he crowned himself emperor in Paris. The period ended with Napoleon's abdication (1814) and defeat at Waterloo (18 June 1815).

The Bourbon Restoration saw first the moderate but weak Louis XVIII (king from 1814), who was followed by the right-wing, pro-clerical Charles X in 1824. Charles' repressive measures prompted the Revolution of 1830. Louis-Philippe's constitutional 'July Monarchy' (1830–48) oversaw the prosperity of the commercial class and the increasing and sometimes active discontent of the working class. Socialist theory and organization became

firmly established. In 1848 the monarchy was overthrown and the Second Republic founded with Louis Napoleon, nephew of Napoleon I, as president; in 1852 he was elected emperor, thus becoming Napoleon III. This Second Empire lasted until 3 September 1870.

1. Religious institutions. 2. Patronage. 3. Opera companies, theatres. 4. Concert life. 5. Education. 6. Criticism, publishing and instrument making.

1. RELIGIOUS INSTITUTIONS. The Chapelle Royale in the Tuileries had 35 instrumentalists when it was closed down in 1792. Napoleon reinstituted the Chapelle a decade later, bringing the orchestra up to 50 and the choir to 34 by 1810; he also had a new building constructed by early 1806. Paisiello was the initial director of music, with responsibility for composition, and was succeeded in 1804 by Le Sueur. J.P.E. Martini was co-director in 1814, and he was replaced on his death in 1816 by Cherubini. C.-H. Plantade was the *maître de musique* from about 1814 until the dissolution of the new Chapelle Royale in the July Revolution of 1830; by that time 115 persons were attached to it, including 54 singers. Napoleon III re-established the Chapelle; in 1862 Auber was *maître de chapelle* and Tilmant conductor.

Immediately before the Revolution, in 1786–7, Le Sueur had mounted his own large-scale orchestral and choral music at Notre Dame. Other churches saw large forces, often augmented by amateur musicians, on special occasions; normally, however, the organ and small ensembles or a serpent sufficed. By the end of 1792 organized Christian worship had ceased in Paris, but the situation was alleviated by Napoleon's Concordat of 1801. Meanwhile some churches were converted between 1793 and 1794 for the practice of 'natural' religion, particularly the Culte de l'Etre Suprême, and it seems probable that singing was accompanied by groups of orchestral instruments.

From 1802 recovery in Christian worship was slow; the Church was impoverished and its music at a low ebb. By 1813 cathedrals and parishes in France were reduced musically to plainchant, and competent organists were few. A handful of *maîtrises* were re-established with state help from 1813. Paris was one such privileged diocese (see §5 below), but lack of consistent funds meant that little distinctive musical activity was carried on before the mid-19th century. By then the poor level of musical taste in worship had become a cause for public concern. The government responded in 1853 by giving support to Niedermeyer's Ecole de Musique Religieuse et Classique, with the intention that this school should train personnel to revivify church music and the *maîtrises* throughout France.

Important events in the history of the organ in Paris were the appointment of François Benoist as organ professor at the Conservatoire (1819) and that of the virtuoso Boëly, one of the earlier French exponents of Bach's music, to St Germain-l'Auxerrois (1837). Noted organists of the succeeding generation appointed to important Parisian churches in the late 1850s and early 1860s were Antoine Batiste and Bazille (both at St Eustache), Louis Lefébure-Wély (St Sulpice, 1863), Charles Chauvet (St Merry, 1866; Trinité, 1869), Gigout (St Augustin, 1863), Saint-Saëns (Madeleine, 1857) and Franck (Ste Clotilde, 1859). Technique in general, and especially pedal technique, was probably not highly developed, for much of the inherited repertory consisted of arrangements of opera pieces requiring little or no pedal work. Credit for reforming that situation is due to Franck and his epoch-making *Six pièces* (1860–62), to the inspiration afforded by the model playing of the Belgian J.N. Lemmens (and his teacher Adolf Friedrich Hesse), and most profoundly to the builder Cavaillé-Coll, who systematically rebuilt many Parisian instruments (including those of Notre Dame, Ste Clotilde, St Sulpice and the Trinité), providing the means for the later achievements of the composer-performers Widor and Guilmant. His first design (1833), for the abbey church of St Denis, was realized in 1841.

2. PATRONAGE. The Revolution temporarily stopped aristocratic and bourgeois patronage, substituting little by direct means. The foundation of the Conservatoire by the state in 1795 (see §5 below), however, created many new salaried teaching posts, which were relatively secure and carried prestige. During the Napoleonic era, the Bourbon restoration and the July monarchy the state commissioned a few works from composers for ceremonies, for example Berlioz's *Grande messe des morts* (1837) and *Symphonie funèbre et triomphale* (1840, for the tenth anniversary of the 1830 Revolution).

Napoleon's amnesty for the exiles led to an early return of private patronage. A press report of May 1803 notes that 'M. and Mme Ladurner entertained a brilliant circle where, among others, amateurs and distinguished virtuosos were heard'. Thus musical salons continued from the old century to the new. The fortunes made by industrialists, bankers and others made Paris immensely wealthy. Fashionable pianists such as Liszt, Chopin and Sigismund Thalberg were patronized as expensive teachers. Chopin gave as few as seven public recitals in Paris, but gave eight or nine piano lessons a day at 20 francs a lesson. Charles Hallé was asked to educate a banker's family simply by playing the piano to them one evening a week. Wealthy publishers also became patrons: Armand Bertin of the *Journal des débats* ran a salon and was rumoured to have been the source of Paganini's gift of 20,000 francs to Berlioz in 1838; Maurice Schlesinger, the music publisher who also ran the *Gazette musicale*, sponsored concerts and supported the young Richard Wagner (1840–42) with commissions and with money; and the Erard family of music publishers and manufacturers were also powerful patrons. A successful début in the theatre was of great consequence for a composing career, and the directors of the various opera houses wielded great influence since they could commission or refuse operas for production. As 'commercial patrons', however, they could not afford to allow conflicts of taste between the composer and the public.

From time to time a number of awards for composition were instituted, often biassed towards opera: the Prix Cressent (opera, *opéra comique*); Prix Rossini (lyrical or sacred composition); Prix Mombinne (*opéra comique*); Prix de Saussay (librettos); Prix Nicolo (vocal composition); and the Prix Chartier (instituted 1861 for chamber music). The music Prix de Rome was founded in 1803 and awarded annually until 1968 by the Académie des Beaux-Arts to composition students; winners spent four years at the Villa Medici, sending their work back to Paris. This prize immediately gave a certain degree of recognition to young composers, some of whom began writing stage works in Italy.

3. OPERA COMPANIES, THEATRES. The story of opera and theatre life in Paris is particularly complex because of the way in which companies and theatres were named. The Opéra commonly means the Académie Royale (or Impériale) de Musique, but it can also refer to the building used at any one time by that company; this practice was also common among other companies and theatres. A building might also be known by the name of a previous patron or company, and theatres quite often burnt down and were rebuilt elsewhere, to be christened with the name of an old or new company, or an old or new patron. Only the most important of the Parisian companies and theatres are discussed below.

Laws passed in 1791–2 that made it possible for anybody to open a public theatre profoundly changed the status quo; the resulting abundance of new spectacles included *opéra comique*, melodrama and vaudeville. Under the Empire an evident increase in the number of debased entertainments led Napoleon in 1807 to reduce the total number of theatres to eight: the Opéra, Opéra-Comique, Théâtre Italien (Théâtre de l'imperatrice, later Odéon), Théâtre Français, Vaudeville, Variétés, Gaîté and Ambigu-Comique. The first three were the 'official' musical theatres, but the others all possessed small orchestras. Under the Restoration the Théâtre de la Porte-St-Martin and the Gymnase opened, performing lighter pieces, and the Théâtre Italien became a strong rival to the Opéra and the Opéra-Comique. The immense variety and vitality of the Parisian musical stage is seen especially in companies like the Ambigu-Comique, whose repertory is forgotten, but which achieved high standards and originality within the limits of its activity.

(i) The Opéra. The principal opera company of Paris underwent several changes of title as the result of political events. The main ones were, from 1791, Théâtre de l'Opéra; from 1794, Théâtre des Arts; from 1804, Académie Impériale de Musique; and from 1814, Académie Royale de Musique, except for the Hundred Days. The company also occupied several theatres: from 1781, Théâtre de la Porte-St-Martin; from 1794, Théâtre Montansier (cap. 1650); during 1820–21, the first Salle Favart and the Salle Louvois (Broignart, 1791); and from 16 August 1821, the new permanent premises in the rue Le Peletier (built by Debret, cap. 1954; fig.19). Gas lighting, which revolutionized stage effects, was introduced in 1822.

The Opéra was administered by the City of Paris during much of the 1790s, but Napoleon gradually arrogated it. In 1802 he retained the right to determine expenses for new works; his Minister of the Interior had the power of veto. In the reforms of 1807, when Picard became director, Napoleon sought to make the Opéra the privileged state showpiece it had traditionally been; he exercised influence over the selection of the repertory and in 1811 imposed dues payable to the Opéra by smaller theatres, fully restoring the position under the *ancien régime*, arrangements that persisted until the July Monarchy. Directorships, including those of Viotti (from 1819) and Habeneck (from 1821), tended to be of short duration; conductors during this period were Jean-Baptiste Rey (i) (until his death in 1810), Persuis (until 1817), Rodolphe Kreutzer (until 1824) and Habeneck and Valentino (until 1831). The orchestra was large, with an average of 70 players, and maintained a high standard, owing its fame not least to soloists like Baillot, Gustave Vogt and Dauprat. Conversely the French style of dramatic singing was often censured. Gradually the impact of Italian singing was felt, particularly through the influence of Rossini. Famous female singers at the Opéra included Branchu, Gavaudan, Dorus-Gras, Malibran, Viardot and Cinti-Damoreau, and male singers Lays, Adolphe and Louis Nourrit, Derivis, Lainez and later Lafont, Duprez and Faure.

Important premières at the Opéra included Le Sueur's *Ossian* (1804), Spontini's *La vestale* (1807) and *Fernand Cortez* (1809) and Kreutzer's *Abel* (1810). Earlier works were constantly revived, for example Gluck's *Orphée* (1800) and *Alceste* (1803) and Rousseau's *Le devin du village* (1810). Famous works were imported from elsewhere; Mozart's *Le nozze di Figaro* was seen in 1793, *Die Zauberflöte* (as *Les mystères d'Isis*) in 1801 and *Don Giovanni* in 1805, though all three in mutilated form. Rossini appeared with *Le siège de Corinthe* in 1826, *Moïse* (1827) and *Le comte Ory* (1828), three scores revised from earlier works. His only original work for the Parisian stage was *Guillaume Tell* (1829), which, with Auber's revolution-inciting *La muette de Portici* (1828), established the style of French grand opera which became current during the reign of Louis-Philippe. This almost always involved a historical or semi-historical plot; there were large casts, sumptuous costumes, highly realistic scenery and complex stage machinery. Under the directorship of Véron (1831–5) this formula was exploited with signal acumen in Meyerbeer's *Robert le diable* (1831); his librettist, Eugène Scribe (fig.20), became a specialist in providing texts for these sometimes bloodcurdling spectacles, such as Auber's *Gustave III* (1833) and Halévy's *La Juive* (1835). It would be hard to overestimate the role played by Ciceri, the Opéra's chief designer from 1824 to 1847, whose designs corresponded to the intentions of grand opera. Following the staggering reception accorded Meyerbeer's *Les Huguenots* (1836) this species declined in quality, if not quantity. The directorships of Duponchel (1835–41) and Pillet (1841–7) were notable mainly for the tragic failure of Berlioz's *Benvenuto Cellini* (1838), the commissioning of Donizetti's *La favorite* (1840) and an authentic version of Weber's *Der Freischütz* (1841), given in French with recitatives by Berlioz.

Conductors from the July Monarchy on were Habeneck (1831–46), Girard (1846–60), Dietsch (1860–63) and Hainl (1863–72). The early part of the Second Empire and the directorships of Roqueplan (1847–54), Crosnier (1854–6) and Royer (1856–62) were largely uneventful. Meyerbeer's position as the leading figure in grand opera was confirmed with *Le prophète* (1849), and he exerted a strong influence on Verdi's French opera, *Les vêpres siciliennes*, which had its première at the Opéra in 1855. Gounod's early *Sapho* (1851) and *La Nonne sanglante* (1854), an avowedly Meyerbeerian piece, made an inauspicious beginning. The first performance of the Opéra version of Wagner's *Tannhäuser*, with the obligatory ballet, took place on 13 March 1861. Meyerbeer's reputation was reaffirmed after his death (1864) with *L'Africaine* (1865) and by his pervasive influence on Verdi's second Opéra commission, *Don Carlos* (1867). Gounod's *Faust* (Théâtre Lyrique, 1859) quickly established itself as a classic in its Opéra version (1869). Before this time, as far back as 1852, few memorable new French works had been staged: the two by Gounod above and his artfully Meyerbeerian *La reine de Saba* (1862),

Herculanum by Félicien David (1859) and *Hamlet* by Ambroise Thomas (1868).

Ballet was at least as popular as opera, and ballets were normally worked into operatic evenings (as in *Tannhäuser*) if they did not actually round off the opera itself. Several ballets, now forgotten, remained very popular; in the period up to 1830 at least, that could be said of few new operas. Notable ballets included Catel's *Alexandre chez Apelles* (1808) on account of its large measure of original music, Sor's *Cendrillon* (1823), and *La fille mal gardée* (1828) with music arranged and composed by Hérold. There followed Adolphe Adam's second ballet *Giselle* (1841) and Burgmüller's sequel *La péri* (1843; fig.21), both with choreography by Jean Coralli. Adam remained the foremost writer of ballet music until his *Le corsair* (1856). No comparable figure appeared until Delibes, who first collaborated with Minkus on *La source* (1866), and whose *Coppélia* (1870) was the last important work to be given in the old Opéra building before it burnt down on 29 October 1873. The outstanding dancers and choreographers came from the Vestris and Gardel families; Louis Antoine Duport was a rival of Auguste Vestris. Later male dancers included Jules Perrot, the greatest before Nizhinsky, and Lucien and Marius Petipa. Notable ballerinas were Maria Taglioni (the Sylphide) and Carlotta Grisi (Giselle), with some competition from Fanny Elssler.

(ii) Théâtre Italien (Comédie-Italienne, Théâtre Favart, later Opéra-Comique). This well-established company did not present Italian works during the period under consideration but was a French company in which *opéra comique* as a form matured with the works of Grétry and Dalayrac. It moved to the Salle Favart in 1783. In the 1790s it was forced into competition with the Feydeau company (see below), and gave new works by Méhul (*Euphrosine*, 1790), Dalayrac (*Marianne*, 1796), Henri-Montan Berton (*Le délire*, *Montano et Stéphanie*, 1799),

Rodolphe Kreutzer and the young Boieldieu (*Le calife de Bagdad*, 1800). As in other theatres of the time both serious *opéras comiques* (revolutionary, classical or historical) and comedies were played. The company disbanded in 1801 and later the same year combined with the Feydeau company.

(iii) Théâtre de Monsieur (later Théâtre Feydeau). Founded just before the Revolution by L. Autié and Viotti, the company adopted the name of its patron, Monsieur, Comte de Provence, later Louis XVIII. Performances in 1789 were in the Tuileries, in 1790 in the Foire St Germain and from 1791 in the newly built Salle Feydeau, a neo-classical theatre in the rue Feydeau designed by Le Grand and Molinos (see fig.23). Italian opera (Pergolesi, Sarti, Paisiello etc.) and plays were given. The first important French opera given was Cherubini's *Lodoïska* (1791, famed for its final conflagration scene), which established it as a second Opéra-Comique company in competition with that at the Favart. *Lodoïska* was followed by Le Sueur's *Paul et Virginie* (1794), Pierre Gaveaux's *Léonore* (1798; libretto the source of Beethoven's *Fidelio*) and Cherubini's *Médée* (1797) and *Les deux journées* (1800). It merged with the Favart company in 1801 and was called the Opéra-Comique. The excellent orchestra of the theatre gave many concerts there; other ensembles also used the building for concerts until its demolition in 1829.

(iv) Théâtre (National) de l'Opéra-Comique. This new company, comprising the Favart and Feydeau companies, was formally created by act of government on 16 September 1801 and given official status in 1807. It occupied various theatres until 1805, when it moved to the Salle Feydeau. Its beginning was secure and high standards were maintained. Spontini's first French works were given there and subsequently many famous *opéras comiques* by Méhul (*Joseph*, 1807), Boieldieu, whose *La dame blanche* (1825) came to symbolize the genre as well as the institution (despite the influence of Rossini), Isouard, Auber and Hérold. The company remained at the Salle Feydeau until 1829, when it moved to the Salle Ventadour. In 1832 it moved to the first Théâtre des Nouveautés in the Place de la Bourse (opened 1827) and in 1840 to the second Salle Favart (rebuilt by Charpentier) where it remained, except for the 1853 season, until the building burnt down in 1887, having been restored by Crépinet in 1879.

As Boieldieu's career drew to a close in the 1830s younger men produced a brilliant stream of more robust entertainment pieces: Auber's *Fra Diavolo* (1830), *Le cheval de bronze* (1835), *Le domino noir* (1837) and *Les diamants de la couronne* (1841); Hérold's *Zampa* (1831) and *Le pré aux clercs* (1832); and Adam's *Le chalet* (1834) and *Le postillon de Longjumeau* (1836). The only other noteworthy event of the period was the première of Donizetti's *La fille du régiment* in 1840.

The type of *opéra comique* prevalent in the 1830s was later cultivated by Thomas in *Le Caïd* (1849) and *Raymond* (1851) but otherwise the Second Empire saw the establishment of a more frivolous and deliberately sentimental type, sometimes called operetta, typified in Adam's *Si j'étais roi* (1852) and, particularly, Massé's *Les noces de Jeannette* (1853). The term 'opéra comique' ceases to have real meaning from that time onwards, when the company suffered intense competition from Offenbach's genuine operettas at the Bouffes-Parisiens, except in the academic sense of musical numbers with spoken dialogue. In 1846 the Opéra-Comique let its hall and singers for an unfortunate performance of *La damnation de Faust*, conducted by Berlioz himself. Emile Perrin, the new impresario of the Opéra-Comique, dedicated himself to renewing the repertory, and by 1862 Meyerbeer, Auber, Halévy and Ambroise Thomas dominated it. The first Meyerbeer opera for the Opéra-Comique was *L'étoile du nord* (1854); it had had 100

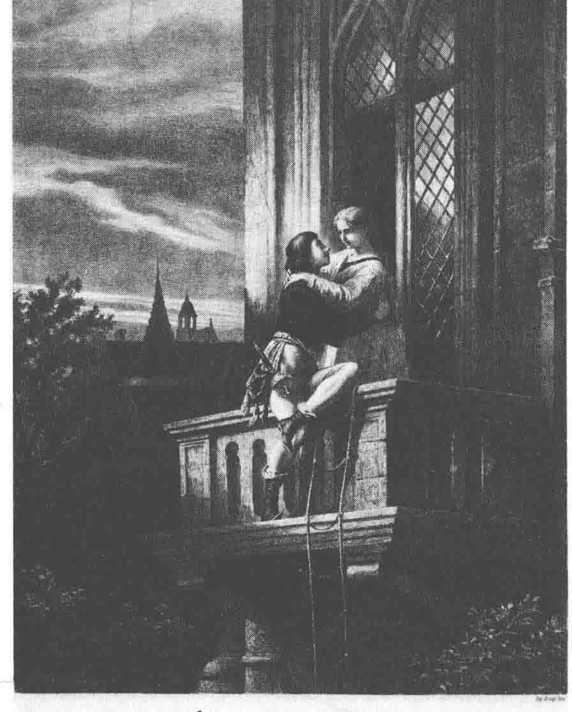
22. *The different theatres of the Opéra-Comique: (1) Salle de la Foire St Laurent; (2) Hôtel de Bourgogne; (3) Salle Favart (i); (4) Salle Feydeau; (5) Salle Ventadour; (6) Salle de la Bourse; (7) Salle Favart (ii): engraving after Guiaud marking the centenary (28 April 1883) of the first Salle Favart*

performances by February 1855. In that same month the first of the many settings of *Manon Lescaut* (this one by Auber) was mounted, without great success.

(v) Théâtre Italien (known also as Opéra-Bouffe). The beginnings of this new troupe lay in Napoleon's preference for Italian music and the imaginative speculations of the aging Mlle Montansier. It primarily gave Italian opera and had no relationship with the Comédie-Italienne. Financial difficulties beset the company from its first performance on 31 May 1801 at the Salle Olympique and at the Salle Favart (1802), but it prospered from 1804, when Picard brought it under the wing of the Théâtre Louvois; it was called the Théâtre de l'Impératrice from then until 1809. It later performed at the Odéon (1808–15) and then until 1841 in different theatres, including the Salle Favart (1825–38). Its directors included Spontini (1810–12) and Rossini (1824–6). According to Spohr, in 1820 Parisians preferred its orchestra to that of the Opéra. Mozart's *Le nozze di Figaro* was given in 1807, *Così fan tutte* in 1809 and *Don Giovanni* in 1811. Before Rossini's advent Zingarelli, Paisiello, Cimarosa and Salieri were the composers most often performed.

The first of the many Rossini operas to be given were *L'italiana in Algeri* (1817) and *Il barbiere di Siviglia* (1819). Rossini, as director, produced Meyerbeer's *Il crociato in Egitto* in 1825, the first work by this composer to be given in Paris. Bellini's *I puritani* and *Norma* were both given in 1835, the former (which was specially commissioned) with a cast including Giulia Grisi, Lablache, and Mario and Antonio Tamburini – artists whose names became inseparably linked with the Théâtre Italien in this period. Donizetti's *Anna Bolena* (1831; his first work given in Paris), *L'elisir d'amore* (1839) and *Lucia di Lammermoor* (1837) were included in the repertory.

The company's sojourn at the Salle Ventadour (1841–76; fig.23) began well with a lavish production of Rossini's *Semiramide* and continued with the success of *Don Pasquale* (1843), commissioned from Donizetti. The last major events at the theatre, and in the company's history, were productions of Verdi's *Nabucco* in 1845 and *Ernani* in 1846, after which the institution lost its distinctive character.



(vi) Théâtre Lyrique. The most important rival company to the Opéra and Opéra-Comique in the second half of the century opened in 1851 as the Opéra-National at the Théâtre Historique under the direction of Edmond Seveste. Under his brother Jules Seveste (1852–4) it was known as the Théâtre Lyrique. Emile Perrin ran it briefly before the directorship went to the 30-year-old Léon Carvalho and his wife, Marie Miolan, in 1855. From then the theatre acquired an enviable artistic reputation, due largely to Gounod's *Le médecin malgré lui* (1858), *Faust* (with spoken dialogue, 1859), *Philémon et Baucis* (1860), *Mireille* (1864) and *Roméo et Juliette* (1867; fig.24). In 1862 the company moved to the building in the Place du Châtelet (cap. 1243) that subsequently became the Théâtre des Nations, then the Théâtre Sarah Bernhardt and finally the Théâtre de la Ville. Apart from a short break in 1860–61 Carvalho remained in control until 1868; during that last period he gave the important premières of Bizet's *Les*

23. *Performance by the Théâtre Italien at the Salle Ventadour: engraving by Charles Mottram after Eugène Lami from Jules Janin's 'Un hiver à Paris' (1843)*

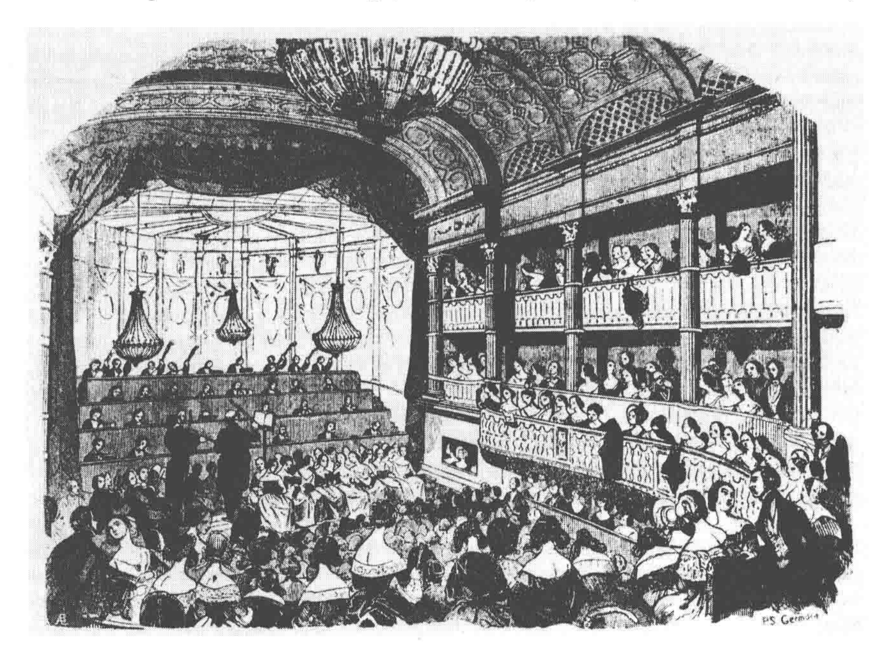
pêcheurs de perles (1863) and *La jolie fille de Perth* (1867), as well as the last three acts (abridged) of Berlioz's *Les Troyens* (1863). Carvalho tended to alter the works he presented to bring them in line with his own idea of dramaturgy; nevertheless, he was successful and energetic, and his resignation in 1868 marked the end of the Théâtre Lyrique's period of eminence. He was succeeded by Pasdeloup (1868–70), who mounted Wagner's *Rienzi* in 1869 but who, like many later impresarios, failed to revive the company, which performed in a succession of different theatres for one or two seasons at a time.

(vii) Other theatres. Two well-known companies that were suppressed in 1807 were the Théâtre des Associés and the Théâtre des Jeunes Artistes, a troupe of child actors who gave comedies, pantomimes and vaudevilles. Of those that survived, the Ambigu-Comique was perhaps the most distinguished secondary theatre. For 20 years before the Revolution a topical repertory of pantomime with music was performed; declamation and singing were legally prohibited, although these restrictions could be disregarded in the 1780s when enthusiasm and semi-official support for the lesser theatres permitted. The orchestra was small, but its music was essential, since it expressed the mimed emotions and enhanced all manner of stage effects. As far as is known music was arranged more often than composed. When this company rose to new eminence after 1800 with Pixérécourt's melodramas in dialogue, music had a less crucial, though still important, role to play. Overtures, dances, speeches and effects all required music. Quaisain and Louis Alexandre Piccinni were the principal composer-arrangers.

When the Théâtre Italien left the Odéon in 1815 the latter theatre presented a mixture of plays, vaudevilles

24. *Gounod's 'Roméo et Juliette', first performed at the Théâtre Lyrique, 1867: poster by Leray and Lamy*

and *opéras comiques*. There in 1824 and 1826 Castil-Blaze put on his notorious arrangements of Weber's *Der Freischütz* and *Euryanthe*, given as *Robin des bois* and *La forêt de Sénart* respectively.



The Théâtre de la Porte-St-Martin was another interesting company that survived the decree of 1807. It opened in September 1802, and though forced to shut in 1807, it reopened as the Théâtre des Jeux-Gymniques on 1 January 1810. It made a speciality of melodrama, pantomime and ballet, and the popularity of its ballets *Les chevaliers de la table ronde* (1811) – with Franconi's horses – and *Lise et Colin dans leur ménage* (1812) was such that the Opéra successfully applied for an injunction, on the grounds that it had infringed the older theatre's sole right to give ballets 'of a noble and gracious style, such as those whose subjects derive from mythology or history'. However, the company again reopened (under its original name) in December 1814, with an official licence to present ballet, and its reputation was sustained and admired. Chief choreographers were Jean Aumer (from 1802), Frédéric Blache (from 1814), Jean Coralli (1825–9) and then Petit. Older ballets such as *Les six ingénus*, *Annette et Lubin* and *Le déserteur* were given, but also newer creations than helped to pave the way of the Romantic style, such as *La laitière polonaise* (1817) with its skating dance and *Rosine et Almaviva*. The great acrobat-dancer Mazurier appeared here from 1823 to his death in 1828. Towards the 1840s a series of fairy plays and reviews were given, featuring a *corps de ballet* and brilliant soloists. Such were *La biche au bois* (1845) and *La belle aux cheveux d'or* (1847). With the arrival of the ballerina as romantic heroine and the necessity for a new style of group choreography, the Porte-St-Martin found regular ballet performances too costly to maintain, and the drama company predominated after 1850.

Information on the many small boulevard theatres is in Brazier (1838), Beaulieu (1905) and Cain (1906).

4. CONCERT LIFE. Theatres were most commonly used for concerts up to 1810, especially the Opéra and the Salle Feydeau. The first true concert hall of the period was that built for the Conservatoire, designed by Delannoy and opened in 1811 (fig.25). At this time the Conservatoire buildings stood on the gardens of the old Menus-Plaisirs, near the junction of today's rue Bergère and rue du Faubourg Poissonnière. The hall (which still exists) was U-shaped, with the orchestra at the straight end, and had a capacity of 1055. Little natural light entered, and oil was used instead of gas lighting to lessen the risk of fire. This hall was used by students and great virtuosos, by Conservatoire and other orchestras, and by chamber groups.

The Concert Spirituel ceased in 1790 with the abolition of royal privileges, but the great momentum of concert life generated in the final two decades of the *ancien régime* could not simply cease. The new Feydeau theatre orchestra gave highly popular concerts; and overtures, concertos and symphonies were performed during theatrical evenings at the Feydeau, the Favart and the Opéra. Military music could be heard at concerts during the years 1793–5. Under the Directory the Feydeau concerts rose to new heights, and brilliant soloists became the attraction: Punto, Baillot, Rode, J.X. Lefèvre and Ozi. Napoleon had his personal 'Band of the First Consul', with 27 musicians, and doubtless he was imitated. But the taste for larger orchestral groups led in 1798 to the founding of a subscription society, the Concerts de la rue de Cléry. Its greatest popularity was during 1800–03; in the 1802–3 season it gave 12 concerts, at which one or two Haydn symphonies were almost invariably played. J.F. Reichardt wished that Haydn could hear these performances himself. After 1803 the society declined until it ceased in 1805. The Concerts de la rue Grenelle were begun in 1803 as part of a musical 'academy' for professionals and amateurs; the venture and its orchestra lasted only three years.

The newly formed Conservatoire had given annual prizewinners' concerts since 1797, but on 6 November 1800 the first pupils' concert proper took place; thereafter between five and 12 concerts were given each year, running (like the Cléry concerts) from winter to early

25. Concert hall of the Conservatoire, designed by Delannoy and opened in 1811: engraving by P.S. Germain from 'L'illustration' (15 April 1843)

summer. The orchestra comprised about 60 players, both teachers and pupils, and the performances soon became valued for their excellence and the eclectic planning of their programmes: music for orchestra by Haydn, Méhul and Cherubini; for voices by Cimarosa, Winter, Salieri, Gluck and Rameau; compositions by senior students; symphonies and opera excerpts by Mozart; and Beethoven's first three symphonies. The young prizewinner Habeneck directed these concerts from 1806 until 1815, when financial difficulties diminished the number of concerts; they ceased in 1824.

The promulgation of the Concordat (1802) prompted the revival of *concerts spirituels* from 1805 at various theatres, but they were dull reflections of the original series. The Société Académique des Enfants d'Apollon, dormant since 1789, was revived in 1807.

New ventures during the Restoration included the appearance of a Concert des Amateurs series in 1825 at the Tivoli d'Hiver; Théophile Tilmant first performed there as a conductor. Other important developments owed their existence to Habeneck; from 1818 he directed a new series of three annual Holy Week concerts at the Opéra. Some works by Beethoven were given, including the Second Symphony and the popular Allegretto of the Seventh. On 5 February 1828, having become inspector general of the Conservatoire, Habeneck, with the Minister of Arts and others, formally initiated a new concert series, the Société des Concerts du Conservatoire; the orchestra consisted of past and present pupils (76 string players and 25 wind). The first of the six annual concerts was on 9 March 1828 and began with Beethoven's 'Eroica'; Habeneck's enthusiastic followers had already been preparing for over a year. The second concert was devoted entirely to Beethoven and included the Third Piano Concerto and the Violin Concerto; the third concert included the Fifth Symphony and *Egmont* Overture. These and subsequent concerts finally established Beethoven in France (fig.26).

Habeneck's successors were the violinist Narcisse Girard (14 January 1849), another violinist (and Habeneck's sub-conductor) Théophile Tilmant (13 January 1861) and François Hainl (10 January 1864), already conductor of the Opéra, who was elected in preference to Deldevez and Berlioz. Hainl's successful regime saw the redecoration of the Conservatoire concert hall in 1865 and the tentative inclusion of Wagner in the programmes.

The initiative of Habeneck was undoubtedly responsible for the proliferation of concert series in the late 1820s and early 1830s, such as L'Athénée Musical (1829–44) founded by Chelard. Most of these, like Fétis's Concerts Historiques (four concerts in 1832–3) and later Berlioz's Société Philharmonique (1850–51), were similarly short-lived. The Société Ste Cécile (1850–55), founded by François Seghers, presented some works by Mendelssohn and Schubert. Schumann was also performed; at the time he was considered avant-garde, and exercised considerable influence over the younger generation.

Of far greater importance was the Société des Jeunes Artistes du Conservatoire, founded by Pasdeloup in 1852 to present recognized masterpieces alongside music by young composers. It gave its first performance on 20 February 1853; the orchestra was drawn from the best of the Conservatoire students and comprised 62 players (including the 17-year-old Lamoureux) and a choir of 40 conducted by Antoine Batiste. From its inception the society was an important influence in French musical life,

Grande Salle des Concerts du Garde-Meuble de la Couronne.

CONSERVATOIRE ROYAL DE MUSIQUE.

Société des Concerts.

16e ANNÉE.

6e CONCERT

Aujourd'hui Dimanche 26 mars 1843, à 2 h. précises.

Programme.

1° Ouverture nouvelle de *M. Coradin Kreutzer*.

2° Fragmens d'une messe de *Haydn* (4e);
1° *Benedictus*, trio; 2° *Agnus Dei*, quatuor.
Les solos seront chantés par Mmes Viardot, Mondutaigny, MM. Alexis Dupont et Lutgen.

3° Fragment d'un quatuor de *Beethoven*, exécuté par tous les violons, altos, violoncelles et contre-basses de l'orchestre.

4° Sicilienne inédite de *Pergolèze*, chantée par Mme Viardot.

5° Final d'*Euriante*, de *Weber*, (le solo sera chanté par Mme Viardot.)

6° Symphonie héroïque de *Beethoven*.

L'Orchestre sera dirigé par M. HABENECK.

Le 7me Concert aura lieu le dimanche 9 Avril.

Les Programmes doivent être délivrés gratis.

Avis. La Société donnera comme les années précédentes, trois Concerts supplémentaires savoir: le *Vendredi-Saint*, *Dimanche de Pâques*, à huit heures et demie du soir; et un 8e et dernier, le *Dimanche* 23 avril, à deux heures.

MM. les abonnés qui désireraient conserver leurs places pour ces Concerts, sont priés d'en faire retirer les coupons au bureau de location, Faubourg-Poissonnière, n° 11, jusques et y compris le samedi 8 avril, autrement on en disposerait. Le bureau continuera d'être ouvert les jeudi, vendredi et samedi, de onze heures à quatre heures.

26. Programme of a concert of the Société des Concerts du Conservatoire, 26 March 1843, conducted by Habeneck (who had initiated the series in 1828) and featuring Pauline Viardot

and continued Habeneck's work by firmly establishing the French reputation of the Viennese Classics and of Mendelssohn and Schumann. Indeed, some of the earliest French works presented, such as the curious symphonies of Gounod and the Second Symphony of Saint-Saëns, were among the earliest works in 'classical' forms by Frenchmen. In 1856 when Auber, the director of the Conservatoire, became patron, its name was changed to Société des Jeunes Artistes du Conservatoire Impérial de Musique; but by 1861 it had a large deficit, and Pasdeloup initiated the series Concerts Populaires de Musique Classique at the Cirque Napoléon (Cirque d'Hiver after 1870). In spite of the inexpensive seats (5 francs maximum, compared with 12 at the Conservatoire) the enterprise repaid itself after only three of the six Sunday afternoon concerts in the first season, and Pasdeloup booked the theatre for a year. The orchestra consisted of 56 strings and 25 wind, and included 44 Conservatoire *premier prix* winners. Until the war of 1870 the series was an unquestionable artistic and financial success.

Under Louis-Philippe a distinct public demand brought about many light classical concerts, typically with a promenade audience and dancing during the quadrilles. Promenade concerts were extremely popular; when Henri Valentino started his Concerts Valentino in October 1837

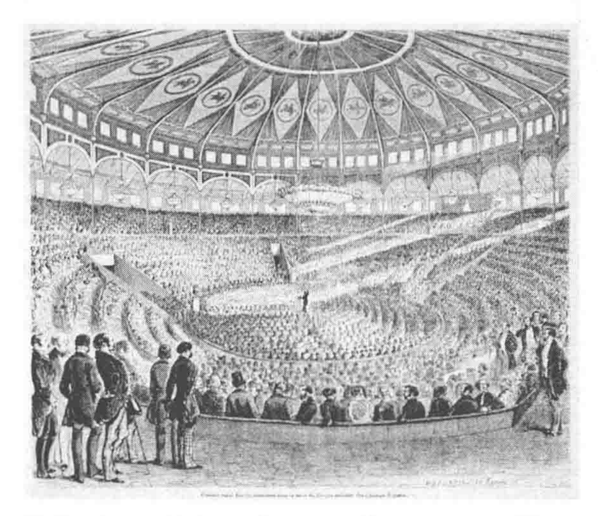
27. *Programme of a 'Grand Concert' of music by Berlioz, conducted by the composer, given as one of the Concerts Vivienne, 6 August 1840: lithograph*

he found that the public preferred dance evenings to whole symphonies, but the enterprise ended in April 1841. In 1833 Philippe Musard inaugurated the promenade and dance concert in a hall in the rue St Honoré; his orchestra was large (about 90 players) and disciplined and Mozart and Beethoven rubbed shoulders with Musard's own quadrilles. By 1837 he was giving summer promenade concerts in an immense marquee in the Champs-Elysées. The formula was adopted by Jullien in Paris from 1836 to 1839 and by Jules Rivière at the Casino Paganini and the Jardin d'Hiver; summer concerts were also given at the Jardin Turc, the Champs-Elysées and the Tuileries gardens. Berlioz, for example, gave a concert in a temporary exhibition hall erected for the Festival of Industrial Products in the Champs-Elysées in 1844 (*see* BERLIOZ, HECTOR, fig.5) and early in 1845 gave four concerts in the huge arena of the Théâtre Franconi.

The public performance of chamber music in Paris was, before mid-century, maintained by small groups of enthusiasts. Baillot, the moving spirit of instrumental music of the time, led various quartets from 1814, and played Beethoven's op.135 in 1828 and op.131 in March 1829 (when Berlioz heard it) and Mendelssohn's Quartet op.13 in February 1832, during the composer's visit to Paris. From 1836 the double bass player Achille Gouffé sponsored weekly private performances and an annual public concert in the Salle Pleyel, devoted mainly to Haydn, Mozart and Boccherini. Two quartets were founded to perform the quartets of Beethoven. The Bohrer Quartet (1830–31) specialized in the late string quartets, and the Société Maurin-Chevillard (also called the Société des Derniers Quatuors de Beethoven), performed the 'Grosse Fuge' in the Salle Herz in 1852 and toured Germany in 1855–6.

Other ensembles included the Société Alard-Chevillard (1837–48), the Société Alard-Franchomme (1847–70) and the Dancla Quartet (1838–70). The Armingaud-Jacquard Quartet (1856–68) performed mainly Schubert, Mendelssohn and Schumann, and regularly played with such famous pianists as Anton Rubinstein, Saint-Saëns (1860) and Clara Schumann (1862–3). The Lamoureux Quartet, founded in 1860, gave the first popular public concerts of chamber music in Paris, in the Salle Herz and the Salle Pleyel (fig.28).

The impetus for the starting of Choron's school in 1817 (see §5 below) was choral training and performance. Choron edited and taught earlier music, either ignored or unsuccessfully attempted by the Conservatoire; particularly memorable concerts were given in 1826–8, featuring Palestrina, Jommelli, Handel and others. Choron's work was continued in Desiré Beaulieu's Société des Concerts de Chant Classique. In 1843 the Prince de la Moskowa founded the Société pour la Musique Vocale Religieuse et Classique; he himself directed the performances of 16th- and 17th-century music. The popular choral movement in Paris, the Orphéon, was started in 1833 by G.L.B. Wilhem. This male-voice society gave its first concert in 1836, 300 strong; a decade later there were 1600 members (fig.29). After 1860 the Orphéon was divided into Left and Right Bank sections; its conductors included Gounod (1852), Pasdeloup and Bazin (both in 1860). In 1868 Pasdeloup founded the Société des Oratorios, which gave the first Paris performance of Bach's *St Matthew Passion* at the Panthéon.



The numerous open-air festivals of the Revolution generally incorporated music; in Paris it was typically provided by wind players of the National Guard, later the Institut National de Musique, and by the end of 1793 between 55 and 65 players could be called upon. Important festivals were the Fête de la Fédération (14 July 1790) and Voltaire's reburial (11 July 1791). The latter, planned in neo-classical style by the painter J.-L. David, established a visual pattern that was matched in music by the soberly triumphant hymns of Gossec, Catel, Cherubini and Méhul. The famous Fête de l'Etre Suprème ordained by Robespierre (8 June 1794; fig.30) involved thousands of spectators, some of whom may have been hurriedly tutored two days before by members of the Institut. David's plans specified 100 drums, and both these plans and engravings of the event show three or four trumpeters on top of a tall column to lead the public in the Marseillaise. Napoleonic festivals incorporated large-scale choral and orchestral works by Le Sueur, Méhul and Paisiello. They celebrated the battle of Marengo (on 14 July 1800), the Concordat (on Easter Day 1802) and Napoleon's coronation (2 December 1804).

5. EDUCATION. The *maîtrises* (church choir schools), traditional institutions for the musical education of males, were closed in the wake of anti-clerical activity. In Paris, however, an Ecole Royale de Chant (the predecessor of the Conservatoire National Supérieur de Musique) had been founded in 1784, largely through the efforts of Gossec, initially with 15 male and female pupils. Sarrette,

28. Concert hall of the Salle Pleyel in rue Rochechouart: engraving from 'L'illustration' (9 June 1855)

who had organized the musicians of the National Guard, obtained permission in June 1792 for a music school attached to it and in 1793 had this made into the Institut National de Musique; by the end of 1794 there were 80 pupils. On 3 August 1795 the Conservatoire was legally founded by the National Convention, and included the personnel of the older Ecole Royale de Chant. The first group of 351 pupils entered in October 1796, and were taught by 115 professors.

The early achievements of the Conservatoire were the successful training of a generation of instrumentalists, publication of many tutors and establishment of a free library. Its early failings were the inability to produce well-equipped singers, too little training in fundamental musicianship and lack of provision for boarders. Attacks on the new institution were made by Le Sueur (dismissed in 1802 when Napoleon reduced the staff for economy reasons) and others favouring the *maîtrises*. The Conservatoire was closed by the Bourbon restoration, and reopened in 1816 as the Ecole Royale de Musique. Perne was director, succeeded by Cherubini in 1822. The latter quickly laid down the hierarchy through counterpoint, harmony and fugue towards composition; but it is noteworthy that even in 1808 prospective harmony students were required to 'know the piano'.

29. Vocal concert by the Orphéonistes at the Cirque National des Champs-Elysées: engraving from 'L'illustration' (27 March 1847)

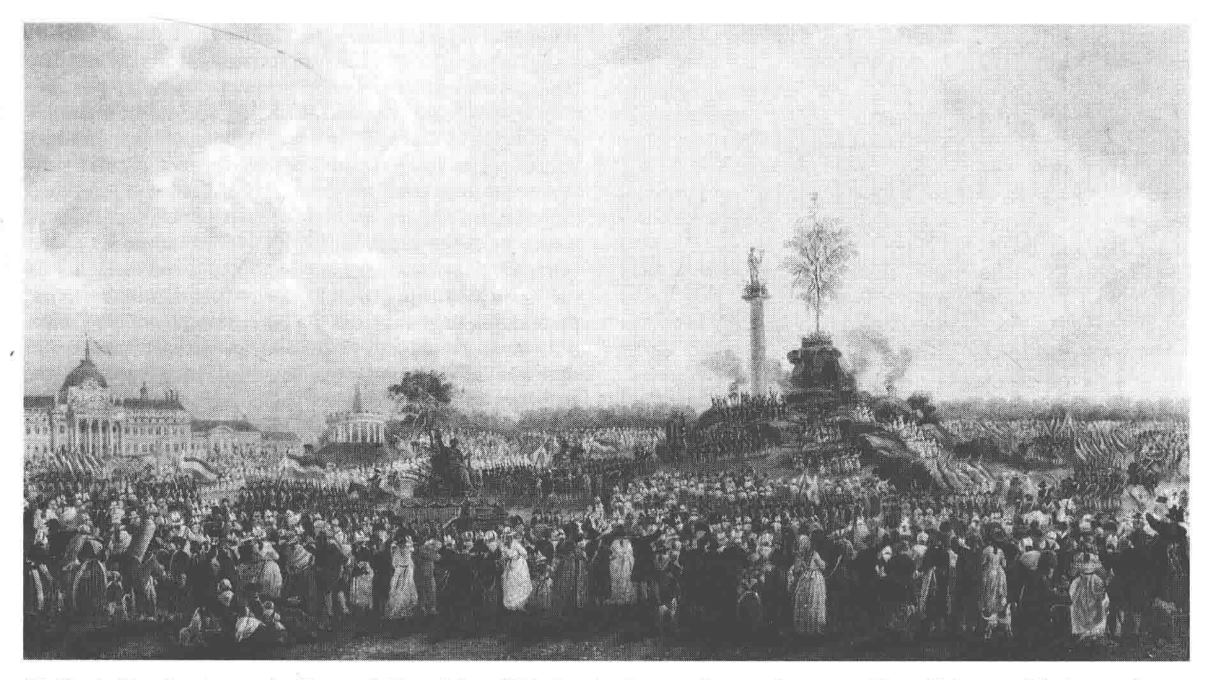
Antoine Reicha's teaching was important as a complement to the Conservatoire. After settling in Paris in 1808 he took many private composition pupils. His emphasis on German models, especially Bach, was new at the time, and his methods were thorough and successful, and appeared in several publications. Habeneck's development, for instance, has been credited to Reicha's teaching.

Choron, whose *Principes de composition* appeared in 1808–10, also published early music. Choron's reputation involved him in the reorganization of the *maîtrises* (from 1813) and in 1817 he founded his own school of music. His teaching was based on the editing, study and performance of early vocal music; choral instruction involved teaching individual parts by heart and then combining them. Choron composed pieces suited to this technique, and later applied the method to large ensembles of untutored workers and children, believing singing to be for the good of civilization. Government support followed public recognition around 1824, but the revolution of 1830 put an end to this aid, and the school closed.

In 1813 some money was voted for the setting up of *maîtrises* in major dioceses, including Paris, but funds were often insufficient and variable. Central treasury support from 1826 was severely cut in 1830, and the depressed condition of the *maîtrises* persisted. In about 1853 official support was given to Niedermeyer's new Ecole de Musique Religieuse et Classique, conceived as a continuation of Choron's work. (The government hoped it would provide competent musicians for churches and *maîtrises*.) The curriculum included the study of the organ, 16th-century counterpoint and the ecclesiastical modes. Saint-Saëns was appointed professor of piano on Niedermeyer's death in 1861 and among his first pupils were Fauré, Gigout and Messager.

6. Criticism, publishing and instrument making. The first specifically musical journal of the period was the *Correspondance des amateurs musiciens* (1802–5). Before this, notices of musical events appeared in the *Journal des spectacles* and *Courrier des spectacles*; retrospective information formed the substance of the annual *Almanach des spectacles*. The *Tablettes de polymnie* (1810–11) stands as forerunner of the many periodicals that proliferated with French Romanticism, beginning with Fétis's *La revue musicale* (1827–35). This was combined in 1835 with the short-lived *Gazette musicale de Paris* to become *La revue et gazette musicale de Paris*, which ran until 1880.

The *Journal des débats*, founded in 1791, had a long tradition of musical criticism before Berlioz joined the staff in 1835. The other principal music critics were Comettant (*Le siècle*), Escudier and the vituperative Scudo (*Revue des deux mondes*). These and other writers produced an enormous quantity of occasional writing about music.



Music publishing was not adversely affected during the troubled decade of 1789–99, and the intense activity of the *ancien régime* continued. Royal privileges vanished, and musical education and commercial and domestic music-making were catered for in a vast output of engraved music. All genres were published, and the trend towards keyboard arrangements was well under way before 1800, but full scores of operas rather than vocal scores continued to be issued at the beginning of the 19th century. As music periodicals became more common the custom of including piano music or songs to attract subscribers was established. Lithography was introduced to Paris in 1802 but took time to make its impact. Few composers published their own music (Dalayrac and Pleyel are exceptions), although Cherubini, Méhul, Kreutzer, Rode, Isouard and Boieldieu set up a joint venture from 1802 to 1811. Principal houses in the earlier period were Erard, Gaveau, Imbault, Leduc (which survives), Sieber and Pleyel; and later Choudens, Costallat, Durand, Hamelle and Schlesinger.

Paris was an important European centre of instrument making. Among the most important makers were Cousineau (harps), Erard (harps, pianos), Pleyel (pianos), Triébert (woodwind), Buffet (woodwind), Savary (woodwind), Courtois (brass) and Sax (brass). Moreover, many string instruments from 19th-century Paris are increasingly valued, especially those by Lupot, F.L. Pique and Vuillaume.

VII. After 1870

1. Introduction. 2. 1870–1918. 3. 1918–44. 4. After 1945.

1. Introduction. Since the Third Republic, whose leaders believed that music should serve the public good, Paris's function as the centre of musical life in France has changed and expanded. Just as the country's social, financial, and political élite all live in Paris, so too is much of the French musical world based in the city. A majority of the country's patrons, producers, composers, musical instrument manufacturers, performers, publishers, critics and teachers, together with a large potential public, form

30. Fête de l'Etre Suprème on the Champs de Mars, 8 June 1794, showing the specially erected mountain, Tree of Liberty and the Statue of Hercules (on the pillar); painting attributed to Pierre-Antoine Demachy (Musée Carnavalet, Paris)

an interactive network of overlapping forces. A large range of performance venues – not only prestigious theatres, concert halls, museums, cultural centres and private homes, but also brasseries, jazz clubs, parks and even the metro – makes an intense concentration of creative activity possible. The symbolism of place embedded in Paris's geography gives meaning to every musical event. Some spaces – such as the Palais Garnier (Théâtre National de l'Opéra) and the great Champs de Mars – remind listeners of the socio-political contexts in which music earlier thrived. Others – such as the adjustable hall (*espace de projection*) of IRCAM – imply new relationships between composer, performer and public. Great musical instruments abound, not only in the Conservatoire's museum, but also in the 19th-century halls of the major piano manufacturers (the Salle Pleyel, Salle Erard and Salle Gaveau), the multitude of Parisian churches and the studios of musical research. The Conservatoire has drawn to the capital the country's finest and assured a continual succession of highly trained musicians. Always receptive to a wide range of musicians from around the world, including Stravinsky, Falla, Enescu, Sidney Bechet, Elliott Carter and Xenakis, partly, in recent years, because of its recording studios, it has also attracted some of the best musicians of world beat from Africa, the Arab world and the Antilles. Unremitting vitality and ferocious competition have fed Parisians' ceaseless search for distinction, thereby assuring constant change in their musical tastes and activity.

What makes Paris distinct as a musical centre is what links the musical world with the world of politics. Because republican (and later socialist) leaders have believed that music can have a healthy moral influence, shape people's identity and behaviour and, as a collaborative medium, promote respect for social institutions, they have subsidized it with significant state funding. They have also looked to it as a means of enhancing national pride and exhibiting France's prestige abroad. This support has ranged from hundreds of thousands of francs – 80% of both the Opéra's annual budget in the 19th century and the Ensemble InterContemporain's budget from 1977 – to a few thousand for smaller organizations serving some national priority. It has also made possible music's extensive role in the city's Universal Exhibitions of 1878, 1889, 1900, 1931 and 1937 and in numerous international congresses, such as those devoted to music history in 1900 and radio art in 1937.

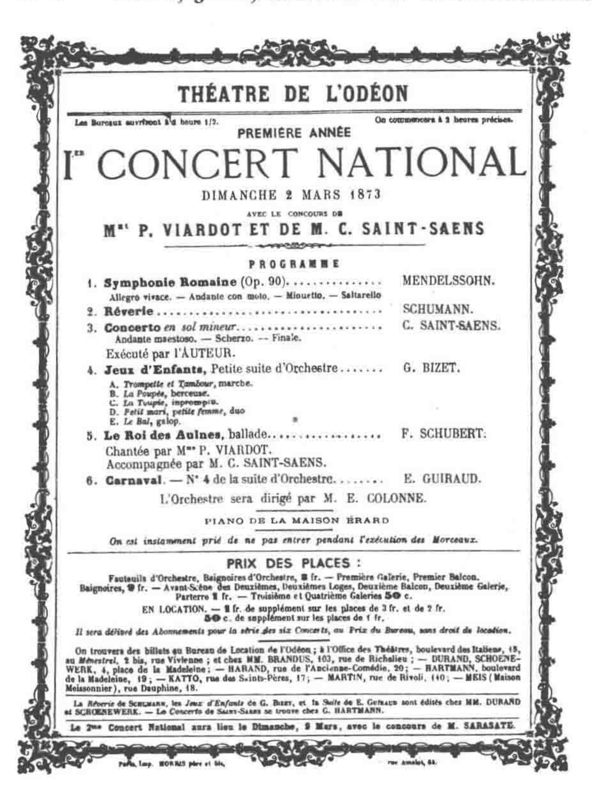
For the most important musical institutions in the country – the Opéra, Opéra-Comique and the Paris Conservatoire – the rhythm of existence has depended on the goodwill of the Chambre des Députés. So, too, after 1879 and, especially, 1920 certain smaller concert societies and amateur music groups looked to the state for help. Even though the arts budget has never been more than 0·3% of the state's total, each year during the annual budget discussions the nation's deputies review the subsidies of these organizations and their *cahiers de charge*, and what is expected in return for this support. During times of political turmoil the largest budget item, the Opéra, has provoked heated debate. Some have thought it should turn a profit, and its receipts are regularly published in the press and followed avidly by the general public; others, more concerned about the Opéra's utility as a reflection of larger political issues, have forced changes in its repertory. In 1879, for example, those who argued for musical museums as guardians of national traditions prevailed; those who insisted that the leading institutions serve as outlets for new work by living French composers forced changes in 1891 at the Opéra and in 1898 at the Opéra-Comique; those wanting more popular works performed there have influenced decisions made shortly after World War II and also more recently. From the internal conflicts between those in the Chambre des Députés who have demanded that music be more accessible to *les classes populaires* and those who have preferred to protect élitist traditions and the international reputation of French music have also come various attempts to 'return art to the people'. This has included four versions of an Opéra Populaire in Paris (1874; 1879–80; summer seasons in 1879–82 and 1883–4; 1900–01; and again in the late 1930s). It has also resulted in recurring efforts at decentralization, especially after 1901; the expansion of radio in the late 1930s; and the Jeunesses Musicales around the country in the 1940s and 50s.

Because of the state's perspective on music's role in society, control of much of the musical world emanates from Paris. The continuity of French traditions can be linked to this centralization of power, a relic of France's monarchical past. In 1870 music was placed under the Ministry of Public Instruction and Fine Arts, which in 1932 changed its name to the Ministry of National Education. Except for two short periods when there was a separate arts minister, from November 1881 to January 1882 and later in the 1930s under the Popular Front, the arts were confined to a division, department or undersecretary of state. This changed in the Fifth Republic. In 1959 the government created a Ministry of Cultural Affairs to take control of the arts. A separate music section was created in 1970. Despite these changes, however, the administration of the arts has remained at the Palais Royal. Close geographical proximity to their most expensive responsibilities – the Opéra, Comédie Française, Opéra-Comique and, more recently, IRCAM – has assured not only institutional accountability but also the government's continued support. A similar relationship with the orchestras of Colonne and Lamoureux led to instigating *cahiers de charge* for such associations, beginning in 1897. Until 1940 this meant regular state review of their performances of new French music, their ticket prices and the number of their concerts at reduced prices or seats available to the blind or poor. Other branches of government have also had direct influence on the musical world. For many years, the requirement that performing organizations get permission from the Préfecture de la Police before holding public concerts meant that the government was involved in overseeing the activities of private concert societies and amateur music groups. Riots outside the Opéra's first production of *Lohengrin* in 1891 (*see* FRANCE, fig.17) and continued threats by anti-German patriots at other concerts made maintenance of social order one of the main criteria for censuring repertory.

One of the results of this relationship to the state has been a concentration of educational institutions and important competitions in Paris. Arguably the most important step toward a career for any musician has been entrance into the Paris Conservatoire, never an easy task. According to Pistone (1979), in 1900 210 singers competed for 21 places, 195 pianists for 27 places and

131 violinists for 14. Although there have always been other music schools in Paris – the most important being the Ecole Niedermeyer (founded 1853), the Schola Cantorum (founded 1894) and the Ecole Normale de Musique (founded 1919) – a *premier prix* from the Paris Conservatoire virtually assures a musician of a career. Not only has study with teachers from Massenet and Fauré to Messiaen had a major impact on composers from Ravel and Schmitt to Boulez and Grisey, the pre-eminent composition competition at the Conservatoire, the PRIX DE ROME (ended in 1968), exposed a composer's work to the review of the six most powerful musicians in the country, those at the Académie des Beaux-Arts, all of whom had to live in Paris. This group not only chose the winner, it also sponsored Parisian performances of the winner's work composed during three subsequent years in Rome. Since the 1870s the Académie has also awarded other composition prizes, including the Cressent, Rossini, Monbinne and Nicolo prizes. In 1876 the City of Paris began to offer its own composition prize, the music equivalent of the annual salon for painters. This prize included 10,000 francs for a Parisian première.

Another effect of state support has been technological innovation in Paris, as symbolized by the Eiffel Tower of 1889. In the 19th century the great Parisian exhibitions encouraged a race for new patents, resulting in the double-keyboard piano, the chromatic harp and hundreds of other new instruments. The installation of Cavaillé-Coll organs in St Sulpice, Ste Madeleine-en-la-Cité, La Trinité, Notre Dame, the Princesse de Polignac's salon and elsewhere helped stimulate a new way of writing for the instrument. In 1881 the Opéra's use of electric lighting and the *théâtrephone* to transmit music to listeners outside the hall transformed the public's experience of theatre. In the 20th century the film and radio industries based in Paris have provided new opportunities for musicians. Since 1948 music research has been an integral part of work at the radio. The GROUPES DE RECHERCHES MUSICALES (founded 1958), directed by Pierre Schaeffer and later François Bayle, invented electro-acoustic music there. Music research and creation became departments of the Maison de la Radio in 1975. They have also been priorities at the computer research facilities of IRCAM in the 1980s and 90s.



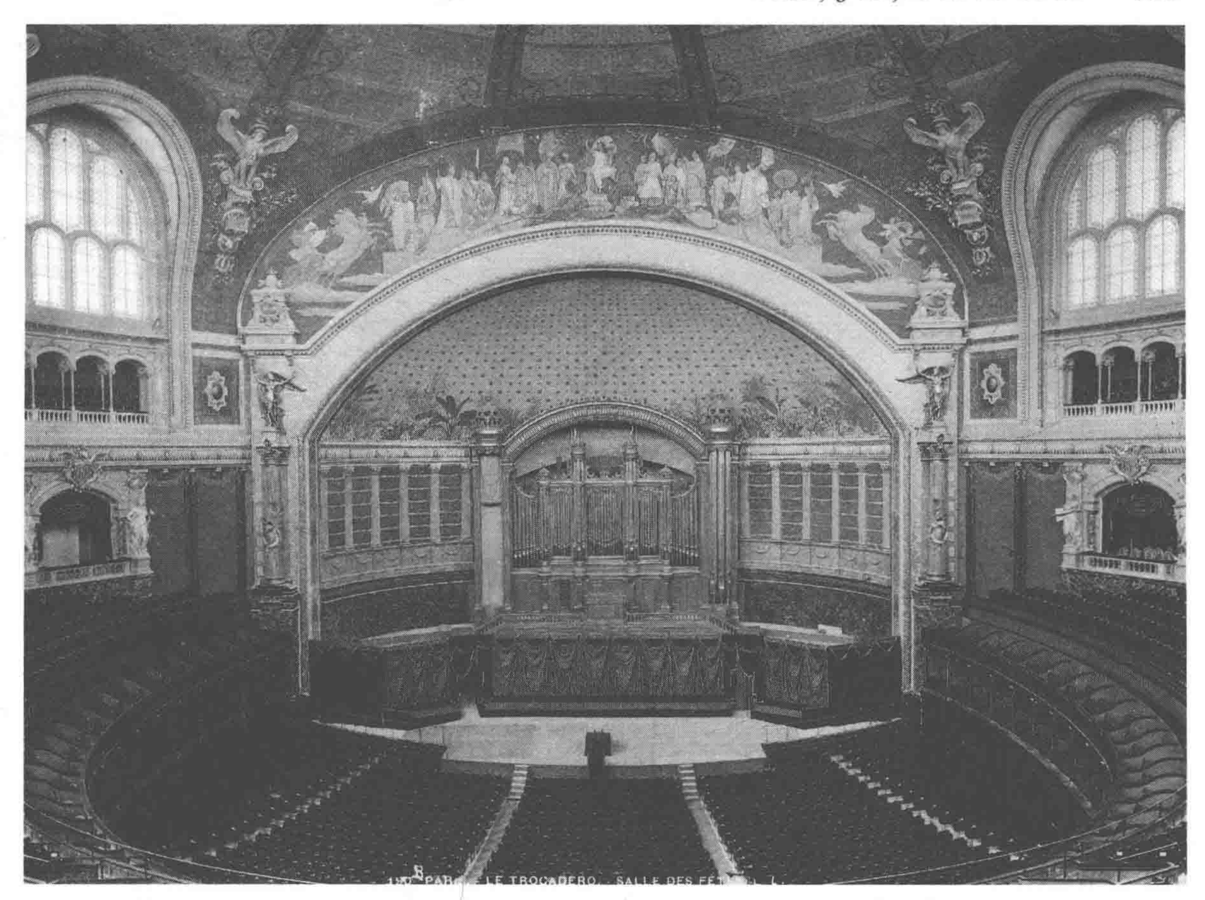
More indirectly, Paris has also proved immensely stimulating for musicians seeking inspiration, fame and fortune. Cafés, journal headquarters, bookstores and private homes have provided important contexts for discussing ideas, performing music and building bonds. In the early 1880s Debussy, who came from the working class, visited daily the bourgeois home of Mme Vasnier for whom he wrote some of his best songs and whose encouragement was an important part of his early career. He met Satie at the Auberge du Clou and Proust at the Café Wéber. In the early 1890s he discussed occultist and symbolist ideas with poets and other writers at the Revue Blanche and at the bookstore, the Librairie de l'Art Indépendent. He also attended Mallarmé's Tuesday salon. In the 1920s Adrienne Monnier's bookstore and Jean Wiener's Gaya bar similarly attracted composers such as Ravel, Auric and Poulenc and singers such as Maurice Chevalier, together with Cocteau, Picasso, Tzara, Paul Poiret and others for jazz performances.

As a centre of innovation and intellectual life, Paris has long been an arbiter of taste and fashion. As part of *la vie mondaine*, musical performances have provided élite audiences with numerous opportunities to see and be seen. Before World War I especially, the huge ornate staircase and numerous boxes of the Palais Garnier, completed in 1875, served as a backdrop to the theatre's elegant public (fig.31). Some have asserted that the Opéra was a 'neutral terrain for the privileged', a momentary escape from listeners' fierce political differences. Others point to the allure of *snobisme*, or the élite public's desire to stay abreast of the most recent trends, whether represented by Wagner, the Ballets Russes or, more recently, computer music. Such an appeal grew increasingly important after 1900 as producers used 'scandals' to draw crowds and generate interest. Linking fashion, luxury and music between 1905 and 1913, Gabriel Astruc attracted aristocrats, wealthy industrialists and financiers to over 1000 performances he presented. This strategy contributed to the success of his annual spring series of Italian operas, his succession of foreign visitors (Caruso in 1905, the New York Metropolitan Opera in 1910 and Toscanini in 1911) and his Théâtre des Champs-Elysées, which opened in 1913 with Debussy's *Jeux* and Stravinsky's *The Rite of Spring*.

From the late 19th century, however, increasing numbers of bourgeois listeners were drawn to concerts, replacing the wealthy élite as the largest component of the Parsian musical public. Concert series conducted by Pasdeloup (founded 1861 as the Concerts Populaires), Colonne (founded 1873 as the Concert National; fig.32) and Lamoureux (founded 1881), all still functioning, eventually built huge audiences of two to three thousand

31. Staircase of the Opéra (Palais Garnier) during the opening ceremony on 5 January 1875: painting by Edouard Detaille, 1878 (Musée de Versailles et de Trianon)

32. Handbill of the first Concert National at the Théâtre de l'Odéon, 2 March 1873, conducted by Edouard Colonne (after whom the series was later named), with Saint-Saëns and Pauline Viardot



people who came Sunday after Sunday for 24 weeks per season. Some paid only one franc or less. By the 1890s arts director Gustave Larroumet credited these associations with spreading the taste for music more than the opera houses or the most prestigious Parisian orchestra, the Société des Concerts du Conservatoire (founded 1828), whose subscription seats rarely changed hands. Some critics, such as Camille Mauclair, thought these concerts helped people 'forget their misery, flee from who they were and find who they wanted to be'. They helped to make music an integral part of city life.

The tactics used by the orchestral associations set important precedents for their successors. As with other forms of bourgeois diversion, like reading and drawing, organizers understood that concerts needed to nourish and educate as well as entertain. In 1885–6 Colonne decided that his concerts that season would 'form a complete summary of the history of music' and be accompanied by programmes with extensive notes written by Charles Malherbe, archivist at the Opéra. By 1900 such notes were a major part of a Parisian listener's experience. Concert repertory also reflected a desire to teach. Not only the major orchestras but also soloists such as Marie Jaëll and Edouard Risler occasionally performed works in series, such as the symphonies or sonatas of Beethoven in chronological order. At the end of the 19th century they also dug up neglected works from the past and combined old and new on concert programmes. The juxtaposition of old works and classics of modern music with premières of new works has characterized a number of concert programmes since then, including Boulez's Domaine Musical (1954–73).

Paris has also been the site of many specialized music societies. Some, including the Association des Chanteurs de St Gervais (1892) and Les Arts Florissants (1979), have focussed on early music, others on individual composers or single genres. Some have arisen out of political divisions, such as those created by the Boulanger and Dreyfus affairs, or attempts to bridge such divisions. In an effort to solidify the *ralliement* ideology of the 1890s, for example, Comtesse Greffuhle's Société des Grandes Auditions Musicales (1890–1913) used music to bring republicans together with *ancien régime* sympathizers. Antagonisms between composers have generated numerous new initiatives advocating various approaches to musical progress: the Société Nationale de Musique (1871–1939), the Société Musicale Indépendante (1909–35), Triton (1932–9), Ars Nova (founded 1963), Itinéraire (founded 1973) and the Ensemble InterContemporain (founded 1976). The proliferation of *petites chapelles* in Paris, each with its own aesthetic beliefs, has made the city an ideological battlefield among those seeking to shape the future.

Certain private musical venues have served to define and promote the interests of such groups. In the late 19th century, for example, the Friday evening concerts of Mme de Saint-Marceaux, attended by painters, sculptors and writers as well as musicians, served as testing grounds for members of the Société Nationale, including Fauré, Saint-Saëns and d'Indy. The salons of Chausson and Chabrier performed a similar function. From the turn of the century until the 1930s the Princesse de Polignac sponsored in her home premières of new works by such composers as Poulenc and Stravinsky. In 1945 it was at René Leibowitz's home that Boulez first heard Schoenberg's Wind Quintet, initiating his lifelong interest in serialism, and in private classes at Messiaen's home that he, Barraqué, Berio, Maderna, Stockhausen and others found support for a new way of writing. Similarly, in the late 1940s and early 1950s Boulez was supported by Suzanne Tézenas and her friends, who funded the concerts at Théâtre Marigny which evolved into the Domaine Musical concerts and publications. In addition to aristocrats and members of the *haute bourgeoisie*, Tézenas's circle included painters, art gallery directors and writers, who, it has been suggested, supported serial music because they saw a link between it and the abstract painting they were collecting.

Amateur musical groups, many of them choruses, have also thrived in Paris, though perhaps less so than in the provinces. Guillot de Sainbris' Société chorale d'Amateurs performed regularly in the late 19th century and was reviewed frequently in the press because it often gave the premières of works by contemporary composers. Other amateur groups were formed by workers at factories and department stores. The Bon Marché, for example, which had a choral society and wind band from 1872 to the turn of the century, offered its musicians regular solfège classes and hired retired directors of the National Guard band to conduct. Their ensembles performed each summer in the park outside the store. The attempt to bring music education to the lower classes, sponsored by groups such as the Association Galiniste, eventually led to the creation of a number of schools. The most famous, Gustave Charpentier's Conservatoire Populaire Mimi Pinson, was founded for working-class girls in 1902. Subsidies from both the Minister of Public Instruction and the City of Paris allowed them to perform concerts at the Palais du

33. Interior of the Palais du Trocadéro, built for the 1878 Exposition Universelle, with the organ by Cavaillé-Coll

Trocadéro. The Jeunesses Musicales created in Paris in 1941 for girls left behind during the war continued this spirit. As they expanded to 40,000 members, they were given the major halls of Paris for their conference concerts, including the Opéra (beginning in 1942) and the Salle Pleyel. By 1944 they had played for 300,000 listeners and their activities spread throughout the country.

At less formal venues such as skating rinks, the Jardin Zoologique d'Acclimatation and the kiosks of the Tuileries, Palais Royal and Luxembourg Gardens, part-time orchestras, amateur wind groups (*orphéons*) and the military bands of the various French regiments have animated public spaces with cheap or free concerts. By performing transcriptions of popular operas, such groups helped to spread the taste for classical music among the masses in the late 19th and early 20th centuries. When the socialists came to power in 1981, the minister of culture Jack Lang revived this activity. His annual Fête de la Musique on the summer solstice has come to involve the entire city in a wide range of popular as well as classical music-making, all free to the public.

As music became an increasingly important part of culture, music criticism and musicology blossomed in Paris. In 1902, for example, it was not uncommon for new works at the Opéra to receive four dozen reviews in as many different print media in the first two weeks of performances. Critics based in Paris but writing as foreign correspondents also have helped promote French musicians abroad. They have educated audiences by writing programme notes for concerts, lecturing at concerts and developing radio programmes. The Sorbonne offered its first musicology course in 1895 and created the Institut de Musicologie in 1951. The Ecole Pratique des Hautes Etudes, the CNRS and the ethnomusicology division of the Museum of Man have also been important centres of research, but none more so than the music department of the Bibliothèque Nationale, the Opéra library and the Archives Nationales.

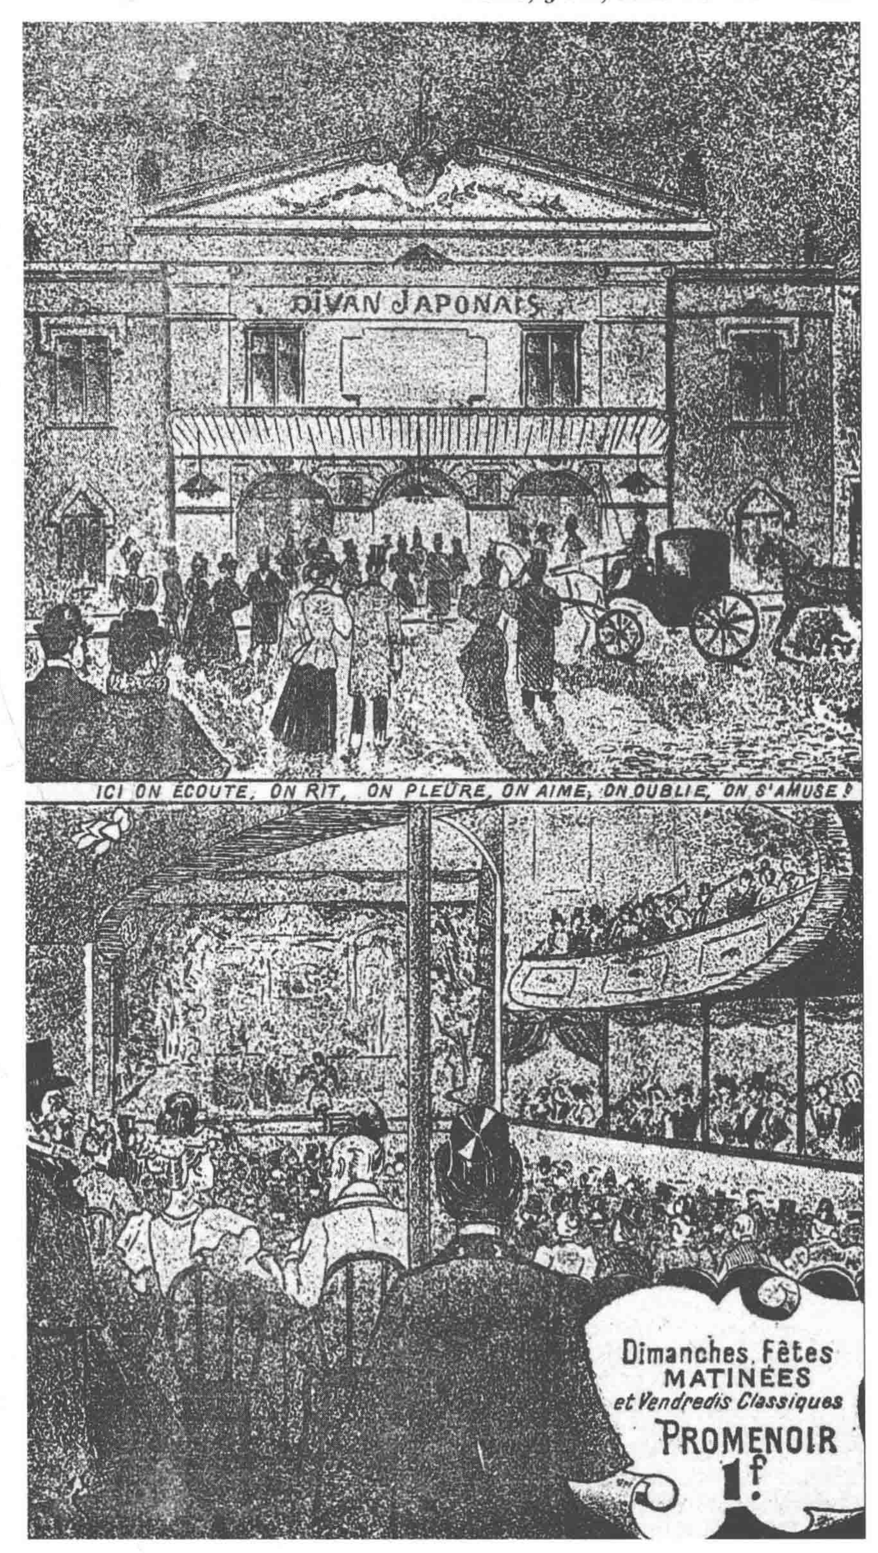
2. 1870–1918. Between 1861 and 1896, the population of Paris rose by nearly 50%, with most of this growth coming after 1870. Between 1876 and 1881 more than a quarter of a million of these newcomers were poor people seeking jobs in Paris's growing industries. Wanting the state to be seen as representing popular sovereignty, the republicans who came to power in the late 1870s aimed to make music accessible to the largest number of listeners. Paris was their proving ground. They forced the Opéra and other state-funded institutions to provide free or reduced-price concerts to a broader public. The Opéra, for example, began performances for a wider public on Sundays, and in 1892 started a Saturday subscription series for families. The government also sponsored huge festivals at the Hippodrome, many of them devoted to contemporary French music; and it built the colossal Palais du Trocadéro for the 1878 Exhibition and installed in it one of Cavaillé-Coll's great organs (fig.33).

Because republicans also understood musical progress as a way of demonstrating the country's regeneration after the Franco-Prussian war, they maintained support

for the country's élite institutions. In spite of constant debates over the Opéra's utility, from 1876 to 1914 they subsidized the Opéra with over 800,000 francs a year, while after 1880 the Opéra-Comique received a subsidy of 300,000 francs a year. More than 800,000 listeners attended the Palais Garnier in an average year. Expenses and receipts stayed almost constant during this period and the repertory changed only gradually. Preference at the Opéra for Meyerbeer and Gounod (1000 performances of *Les Huguenots* by 1903 and of *Faust* by 1905) only gradually ceded to Wagner (nine works produced between *Lohengrin* in 1891 and *Parsifal* in 1914) and Saint-Saëns (100 performances of *Samson et Dalila* between 1892 and 1898). The Opéra also performed 77 new works between 1875 and 1914, two or three per year in the 1890s. At the Opéra-Comique, Bizet's *Carmen*, Thomas's *Mignon*, Massenet's *Manon* and Gounod's *Mireille* remained popular despite more performances of new works. After a fire in 1887, the Opéra-Comique moved to the Théâtre Lyrique and the Château-d'Eau before finally, in 1898, at huge public expense, occupying the Salle Favart. The Eden-Théâtre also performed opera and operetta (1883–94), as did other theatres like the Théâtre Italien, Théâtre Lyrique, Théâtre des Bouffes-Parisiens, Théâtre de la Gaîté, Théâtre de la Renaissance, Théâtre de la République and Théâtre des Variétés.

Musical life exploded at the end of the century in part because in the 1880s the government, which had previously focussed on individual arts initiatives, turned to economic liberalism and the encouragement of large business interests. Not only did the theatres on the right bank boulevards thrive, so did three circuses. Montmartre became a centre of night life with the opening of Rudolphe Salis' 'Le Chat Noir' (1881; *see* CABARET), Aristide Bruant's 'Le Mirliton' (1885), 'Le Divan Japonais' (1886; fig.34), frequented by the famous singer Yvette Guilbert (fig.35), and 'La Cigale' (1887). Their appeal spread to all social classes. The cabaret 'Chat Noir', for example, attracted well-off snobs and foreign aristocrats on the 'chic day', Friday evening, as well as bourgeois and working class on other days. It offered theatrical sketches, songs, and, after 1886, nightly shadow puppet shows. Satie played the piano there from 1888 to 1891, after which he moved to the Auberge du Clou and the Café de la Nouvelle Athènes. According to guides of the time, there were around 200 such café-concerts in Paris in 1890, earning over 100,000 francs a month. While some attacked such venues for their politically satirical songs and 'vulgar' entertainment, others praised them for liberating both composers and the public from narrow views about music.

Other cabarets and music halls, such as the Folies-Bergère (*see* CAFÉ-CONCERT), the Casino de Paris and Olympia, made their reputations in the 1890s with *revues à grand spectacle*. The Folies-Bergère and Olympia were the first to incorporate film (Lumière Cinématographe in 1898) and others soon followed. Unlike the café-concerts, music halls were international in nature. Along with operettas, musical plays, ballets and circus acts, they included foreign groups – exotic dancers like Loie Fuller or soloists from Java, women's orchestras from Austria and eastern Europe, ragtime and American popular dance. Although café-concerts tended to disappear by 1918, music halls thrived until the mid-1930s when cinema claimed much of their public.



Classical music groups were also formed in increasing numbers. In 1900 there were 162 music societies in Paris, although the increasing popularity of sports clubs and other activities led to a decline thereafter. Orchestras tended to present the same formula of about five works, each in a different genre, and many during this period gave premières of new works as well as featuring distinguished singers from the Opéra. In addition to the major orchestras, orchestral music was presented by, among others, the Société des Grands Concerts de Broustet (founded 1881), the Concerts Modernes de Godard (founded 1884), the Concerts Chaigneau (founded 1887), Eugène d'Harcourt's Concerts Eclectiques Populaires (founded 1893), Le Rey's Société Philharmonique (founded 1900) and the Concerts Séchiari (founded 1906). With an orchestra of 14, many of them Prix de Rome winners, the Concerts Rouge (founded 1889) gave nightly concerts of symphonies and operas in a brasserie on the rue de Tournon. Their competitor, the Concerts Touche, did the same in another brasserie after 1906.

Chamber music also thrived. Besides groups dedicated to new music, audiences heard the Nouvelle Société de Musique de Chambre (1873), the Quatuor Ste-Cécile, a women's ensemble directed by Marie Tayau (1875), the Société des Quatuors Populaires (1877), the Société des Instruments à Vent (1879), the Société de Musique Française d'Edouard Nadaud (1880), the Société des Quatuors Modernes (1881), the Quatuor Parent (1890), the Quatuor Capet (1893), the Société de Musique d'Ensemble de Réné Lenormand (1894), the Société Moderne des Instruments à Vent (1895), the Double Quintette de Paris (1897) and many others.

The success of these concerts linked music to family life, led many to taking piano or singing lessons, contributed to the growth of the musical instrument industry and created demand for easily available and inexpensive musical scores. This resulted in the production of a great number of regular music publications, all based in Paris. Especially before World War I this included weekly musical scores in newspapers such as *Le Figaro* and *L'Echo de Paris*, innumerable monthly journals of music transcribed for piano, monthly music supplements to family magazines such as *Illustration* and cheap sheet music.

The war interrupted musical life. The Opéra closed after *Les Huguenots* on 29 July 1914, moved for a brief period to the Trocadéro and returned to the Palais Garnier in December 1915. Performances continued under the new leadership of Jacques Rouché. In spring 1915 the Opéra-Comique gave the premières of works by Bruneau, Leroux, Messager and Casadesus and gave 32 performances of Paul Vidal's *Soldats de France*. Just as the Union-Sacrée, the coalition controlling the Chambre des Députés, embraced a politics of national unity, so the previously competitive Concerts Lamoureux and Concerts Colonne merged during the war. Some hoped, in vain, that the two most important groups promoting new music, the Société Nationale and the Société Musicale Indépendante, would bury their differences and do the same.

3. 1918–44. After the war Paris was lively again, but also full of fascist leagues. Like the conservative coalition that came to power in the Chambre des Députés, musical producers sought works that represented a French identity on which many could agree. On 17 January 1919 the Opéra reopened with Rameau's *Castor et Pollux*. Three

34. Programme for a Sunday matinée, Le Divan Japonais, 3 December 1897

days later the Société Musicale Indépendante gave the première of Lili Boulanger's *Clairières dans le ciel*. Performing French music became a priority for many organizations. Between 1919 and 1939 the Opéra, under Jacques Rouché, gave the premières of 71 operas and 73 ballets, many of them by French composers such as Schmitt, d'Indy, Ravel, Bruneau, Hahn and Roussel. The Opéra-Comique, criticized for becoming a place to try out new works, mounted even more premières of French works as well as making 60 recordings. From 1937 the state itself began to commission French composers as part of the politics of the Popular Front.

35. Yvette Guilbert taking a bow: wash drawing by Henri de Toulouse-Lautrec, 1894

New institutions and musical organizations were also created. In 1919 Alfred Cortot and Alfred Mangeot founded the Ecole Normale de Musique with the explicit purpose of preparing students for careers, including teaching music. The American Conservatory in Fontainebleau, south-east of Paris, opened in 1921, attracting numerous Americans to the classes of Nadia Boulanger. Many orchestras and new music groups also began, the most important being the revived Concerts Pasdeloup (1918), the Concerts Koussevitzky (1921–9), the Concerts Wiéner (1921–4), the Concerts Siohan (1924–32), the Concerts Straram (1926), the Orchestre Symphonique de Paris (1928) and, in the 1930s, the Société Philharmonique de Paris, the Concerts Poulet and the Orchestre Féminin Jane Evrard. A new Salle Pleyel opened in October 1927 with Stravinsky conducting his *Firebird* and Ravel his *Valse*; and the Montparnasse boulevard on the left bank became a favourite night spot.

Despite this productivity and attempts to expose audiences to new music, tastes were becoming more conservative. In 1929 an Opéra subscriber interviewed by Rouché said he would rather hear *Faust* 100 times than the same modern work twice. A few years later, Jacques Ibert told an interviewer that students, who previously filled the top floor at premières, were no longer going to the Opéra-Comique. Renewed spirituality and interest in Catholicism played a role. In 1923 another school for sacred music opened, the Institut Grégorien of the Institut Catholique. In the 1930s composers began to write works based on religious figures, especially Joan of Arc (Paray, Rosenthal, Rivier and Honegger). Some also turned to ancient Greece or wrote new works for the harpsichord. Wanda Landowska presented Sunday Concerts champêtres of early music, while Nadia Boulanger put on concerts of Monteverdi, Purcell and Bach (1933–8). Forced by their *cahiers de charge* to give so many minutes of new French works, orchestras drew audiences with endless festivals of Beethoven or Wagner. The two societies devoted to new music, Sérénade and Triton, were formed in the early 1930s but came to an end in 1939, as did the Société Nationale and, in 1935, the Société Musicale Indépendante.

Audiences, too, began to shrink, as did the number of music publishers, piano makers, amateur singing societies and music teachers. According to the *Guide musical* the number of concerts in Paris declined from 1810 in 1924–5 to 1025 in 1938–9, although the popularity of orchestral concerts increased to 1930. Some blame the advent of radio, sound films and the rising popularity of the phonograph and pianola. The first radio transmission in France came from the Radio Tour-Eiffel, a state-owned station, in 1921; Radio Paris, the first private station, was created in 1922. Daily broadcasts began in 1925 and by 1935 music on the radio ran from early morning until after midnight. Radio became an important part of the musical world of Paris, stimulating the government in 1935 to create a Conseil Supérieur de la Radiodiffusion to involve the participation of authorities from the arts, sciences and literature. Radio broadcast both recordings and live performances, the first one coming from the Opéra after the victory of the Left in the legislative elections of 1932. Its popularity also generated a new orchestra, the Orchestre National de la Radiodiffusion, formed in 1934, the first orchestra with musicians paid monthly as state employees. It began to pay musicians broadcast rights; and its programmes, some of them explicit in their pedagogical role, reached five million by 1939. That year, from Radio Paris and Paris-PTT alone, audiences each week could have heard 52 variety programmes, including two operettas, as well as 75 classical concerts, including three by the radio orchestra. New publications like *Mon programme* published by the newspaper *Le petit parisien*, became integral parts of the listening experience.

Meanwhile the popularity of jazz transformed the city, going beyond what Oriental exoticism had represented for composers and audiences before the war. At cinemas and music halls, blues, ragtime and dixieland were played by black orchestras such as the Charleston Jazzband. At first this attracted intellectuals and aficionados. Sartre dreamed of becoming a jazz musician after the Hot Club opened in 1932. Django Reinhardt, among others, performed there. Later, big bands such as those of Count Basie, Duke Ellington and Benny Goodman attracted the mass public. Indeed, some black Americans gained more

recognition in Paris than in the USA. The sound of American ballroom and swing on records, as well as popular singers like Edith Piaf, helped drive the craze for recordings in the 1930s. New journals sprang up to feed this interest, among them *Bulletin du Hot Club*, *Jazz Hot* and, later, *Jazz Magazine*.

The new forces contributed to crisis at the Opéra. It adapted to the public's increasing taste for spectacle by presenting mixed genres often involving dance (Roussel's *Padmâvatî*, Schmitt's music for the film *Salammbô* and the productions featuring Ida Rubenstein). However, Rouché was forced to spend his private fortune to keep it afloat in part because the state subsidy never rose and in 1928 taxes were over one million francs. Between 1931 and 1937 the Opéra's receipts fell by 38%. On 14 January 1939 the state made it a public institution, assuming total responsibility and creating the Réunion des Théâtres Lyriques Nationaux. Subscribers were then divested of their quasi-permanent seats and only a few evenings were reserved for them. The Opéra closed with the war on 1 September 1939, reopened and then closed again when German troops entered Paris on 14 June 1940.

During the occupation military bands performed German music before the Opéra and Notre Dame, in the Tuileries Gardens, and at the Place de la République. Meanwhile, musical life returned to a kind of normal. The Conservatoire reopened on 24 June, as did cinemas, theatres, cabarets, music halls, circuses, followed in August by the Opéra, Opéra-Comique and Comédie Française. Without necessarily collaborating with the Vichy regime, many composers and playwrights were content to have their works performed during this period, including Poulenc (*Les animaux modèles*), Honegger (*Antigone*) and Schmitt (*La tragédie de Salomé*), Claudel (*L'annonce faite à Marie*), Giono (*Le bout de la route*) and Sartre (*Huis clos*). In addition to some Wagner, the opera houses continued presenting their repertory of late 19th-century French masterpieces. Major orchestras also continued to perform. Radio stations were perhaps the only aspect of the musical world directly reflecting Paris's political condition. A 'war of the waves' took place between the communist Radio Liberté, the German-influenced Radio Paris, and Radio Vichy. This propagandistic use of the medium contributed to a dramatic increase in the number of radios in the city.

4. After 1945. After the liberation of Paris, musical leaders changed their orientation. Responding to the increased popularity of radio, Manuel Rosenthal reorganized the Orchestre National de la Radiodiffusion, increased its size, and added a lyric orchestra, a chamber orchestra and six provincial orchestras. Henry Barraud programmed more non-French composers, including Stravinsky, Bartók, Hindemith and Prokofiev. In 1947, the Conservatoire initiated new classes in analysis (Messiaen), aesthetics (Beaufils) and musicology (Dufourcq). In 1951 the Prix de Rome competition changed to accommodate post-tonality and allowed composers to include earlier works and a wider variety of genres; and in 1952 Bernard Gavoty introduced analysis lectures to accompany the contemporary music concerts of the Jeunesses Musicales.

Under the Fourth Republic mass culture became a major phenomenon, with the number of radios growing to over ten million in the 1950s. After 1945 radio also became a state monopoly, with Radiodiffusion Française (RDF) the most important national station; this later became Office de Radiodiffusion-Télévision Française (ORTF) with the creation of the second television channel in 1964. Along with cinema and television, the popularity of radio contributed to a standardization of taste and repertory. This, however, was accompanied by a widespread crisis. The Jeunesses Musicales became one of the most important cultural movements in the world, spreading to almost 200 provincial towns. But from 1949 to 1963 there was a further decline in the musical public. While the Société des Concerts du Conservatoire maintained high attendance at its concerts, the Concerts Pasdeloup often played to a hall two-thirds full, Colonne to somewhat less, and Lamoureux to even fewer listeners. At the same time, although 60% of the country's musicians resided in Paris, the number of orchestral musicians in the city declined from 7000 in 1930 to 2000 in 1964. By 1963 only 23 associations were receiving state subsidies, and subsidies of the most important orchestras had decreased substantially. Instrumental production also declined, especially in pianos. Whereas in 1929 20,000 instruments were built in Paris, by 1962 only 2000 were made there. The French lute industry almost disappeared. Only the production of wind instruments maintained previous levels; and while the record industry grew substantially, the music publishing business stalled.

Some saw the problems of the 1950s and 60s as a product of French protectionism and sought to address this by looking beyond French frontiers. In 1952 Nicolas Nabokov founded the Oeuvre du XXe Siècle to present the works of Schoenberg and Webern; the society gave the Parisian première of Berg's *Wozzeck*. Boulez's Domaine Musical also revealed new works coming from abroad, as did the Opéra-Comique, whose 1954 Festival de Paris became known as the Théâtre des Nations from 1957 to 1963.

In 1959, with the erosion of private patronage of music, the government decided to take charge of the situation and attributed to culture a ministry of its own under the leadership of André Malraux. He believed that culture is not inherited but 'conquered'. It is an existential struggle to 'protect the imaginary' and 'resurrect nobility' in a world of imagery provided by machines. Acknowledging the need for new visions of musical life, in 1966 he appointed Marcel Landowski as director of music. Their politics consisted of rethinking the role and nature of orchestras and music pedagogy, funding festivals (96 of them by 1974) and commissioning composers. In 1967 this resulted in the creation of a new orchestra of 110 salaried musicians, the Orchestre de Paris, replacing the Société des Concerts du Conservatoire. Funding was provided by the state (50%) the City of Paris (33%) and the Conseil Général de la Seine (17%). At its inaugural concert on 14 November 1967, Charles Münch conducted the première of Stravinsky's *Requiem Canticles* together with Debussy's *La mer* and Berlioz's *Symphonie fantastique*. In 1973 the orchestra moved to the Palais des Congrès and later the Salle Pleyel. The state and City of Paris also shared funding for various new music initiatives, including the Journées de Musique Contemporaine (1968), which formed part of the Semaines Musicales Internationales de Paris (founded 1968), the Festival d'Automne (1972) and the research centre IRCAM (1975); see Institut de recherche et coordination acoustique/musique, created to encourage collective

work and reputedly as a condition of Boulez's return to France from New York. All this was part of a conscious effort to recognize and support the city as a European, not merely a French, centre of musical and artistic life.

Malraux's concept of culture took hold, and whereas in 1960 people's spending on cultural events constituted one sixth of their spending on food, this increased to one third by 1979. Moreover culture became a focal point in the debates about national identity and national heritage. When the socialists came to power in 1981, it became even more important. Because they doubled the Ministry of Culture's budget, spending was increased on musical production, musical centres and new music associations. The musical landscape changed radically. In 1980 the Théâtre Musical de Paris at the Théâtre du Châtelet, supported by the city as a public service to 'inform, instruct, and elevate' its citizens, added an important venue for operas and new music as well as foreign orchestras, singers and dance groups. This strengthened the importance of Paris as an international creative centre. So did the Maison de la Culture in Bobigny, which began to offer major premières such as that of Boulez's *Répons* and later operas directed by foreigners like Robert Wilson and Peter Sellars. Meanwhile IRCAM, which expanded its research programmes in the 1980s and its pedagogical programmes in the 1990s, continued to function as a place of international exchange funded entirely by the state, although for some its excessive cost and Boulez's tight control limited other kinds of growth in the musical world. By the mid-1980s, however, there were six orchestras performing in Paris and the state supported 11 centres of music research in the suburban area. The radio orchestra gave 350 concerts per season and performed 150 new works each year, over 40 of them commissions. The public stations France-Musique, France-Culture and France-Inter broadcast over 10,000 hours of music per year, while the extremely successful Festival d'Automne brought music from all over the world.

Besides favouring innovation, research and new projects over established institutions, the socialists also sought to make music available to a diverse public including the young and working class and to support popular along with élite genres. In the spirit of integrating the traditional sections of Paris in the midst of sociological transformation, plans began for a Cité de la Musique in the working-class neighbourhood of La Villette – eventually to contain a new building for the Conservatoire, a concert hall, a musical instrument museum, a pedagogical institute and a research centre. Expansion into the Bercy area led to the construction of the Palais des Sports, completed in 1983. Its 13,000 seats made operas such as *Aïda*, *Turandot*, *Carmen* and *Faust* available to the masses. In 1982 President Mitterrand announced his plan to build a new opera house, the Opéra Bastille, in the Marais district. Opera performances at the old house, the Palais Garnier, ceased in 1987 and it is now used mainly for ballet. The Opéra Bastille (fig.36) was virtually completed for its inaugural operatic concert on 13 July 1990; a short operatic season had already opened on 17 March 1990 with P.L. Pizzi's production of *Les Troyens*. From the beginning the house has been treated as a political football. Daniel Barenboim, appointed artistic director in 1987, was dismissed in 1989 by the newly appointed president of the board, Pierre Bergé, who took overall artistic control and appointed Myung-Whun Chung as his musical director. But controversy, both financial and practical, has continued to dog the Opéra Bastille, as exemplified by the resignation of Chung in 1994 after disagreements with Bergé and his successor, Hugues Gall.

The state has taken explicit steps to help popular musicians in Paris, and for huge rock concerts it helped build 'Zénith'. Paris also developed as a centre for African musicians including Manu Dibango, Salif Keïta, Ray Lema, Mory Kanté, Alpha Blondy and the group Xalam, especially after the annual African festival at the Porte de la Villette (founded 1978). Jack Lang subsidized some of

36. Opéra Bastille, designed by Carlos Ott, opened 1990

these concerts, and at La Villette each July he also supported a festival of jazz. In the mid-1980s the state lowered the tax on recordings, funded the creation of an Orchestre National de Jazz, and founded centres for the study of jazz (1984), rock (1986) and traditional music (1992), and a studio to record popular music. State support for jazz and popular music grew 350% from 1980 to 1990.

In 1987 and 1990 laws passed to attract private foundations to the support of music further transformed the musical world. It became possible for any corporate foundation 'recognized of public utility' to deduct its contributions to non-profit organizations from its taxes, and so private enterprise became a major factor. This represented a substantial change from the long tradition of state control. Corporate foundations who close to support music in Paris include: France Télécom (vocal music); the Société Générale (young performers, musical practice, musicological conferences and contemporary music); the Caisse des Dépôts (the Théâtre des Champs-Elysées, jazz, and Baroque music); the BNP (comic opera); Le Crédit Local de France (opera); Hewlett Packard France (the Festival d'Art Sacré de la Ville de Paris); and Moët Hennessy and Louis Vuitton (IRCAM). Of all foundation money supporting the arts, a majority has gone to music, and a third of this to music in Paris.

In the early twenty-first century Paris remains musically vibrant. On any day, on average 20 classical concerts are presented in over 80 venues, together with performances in over 70 venues for jazz, folk and popular music, as well as ballet, and traditional music and dance from around the world. France-Musique broadcasts around 400 concerts per year, the majority by its four ensembles, although at low frequency for a limited public. France-Culture and France-Classique also programme classical music. Popular music, however, is the norm on the radio as well as in restaurants and stores. Although the city shares in the worldwide crisis concerning both the role of serious music and the notion of a distinct national music, the centralization of government in Paris and its commitment to arts organizations as public services assure a continuation of support for musical developments that reflect evolving concepts of progress.

Paris, Aimé (*b* 1798; *d* 1866). French educationist. A former pupil of Pierre Galin, he abandoned a legal career to perfect and propagate Galin's method of teaching sight-singing. Cooperating with his sister Nanine and her husband Emile Chevé he produced the GALIN-PARIS-CHEVÉ METHOD. He devised the 'langue des durées', which forms an essential part of that teaching method.

BERNARR RAINBOW

Paris, Anton Ferdinand (*b* Salzburg, 19 Feb 1744; *d* Salzburg, 2 June 1809). Austrian composer and organist. The son of the former cathedral organist Georg Joseph Paris (1700–60), he was active in a similar capacity at the Salzburg court from 1762. He was a friend of the Mozart family and apparently figured in Leopold Mozart's negotiations with Archbishop Colloredo concerning the terms of Mozart's last appointment in Salzburg. According to Leopold's letters of 31 August and 3 September 1778, Paris was given additional pay to take over some of Wolfgang's duties as court and cathedral organist, and Wolfgang was required to play the cathedral organ only for major feasts, with Paris doing duty at other times.

Paris was an active composer, mostly of church music. For the most part his compositions are written in a modern if conservative, shortwinded and uninventive style, including his two surviving orchestral works, a symphony and a keyboard concerto. His pedagogical keyboard works, composed as part of his duties at the Kapellhaus, are lost. Paris was also active as a copyist, not only of his own works but also of works by Mozart, Hafeneder and Romanus Hofstetter, among others. He is said to have been a passionate hunter.

WORKS

Sacred: masses, *D-LFN*, *TEI*; lits, *A-Wn*, *D-LFN*, *FW*; offs, *CH-E* (incl. autographs), *D-LFN*; Regina caeli, Vespers, Ave Regina, Tantum ergo, ants, hymns, sacred arias, *A-MB*, *Sn*, *Ssp*, *D-LFN*, *TZ* (incl. autographs), *WS*
Inst: Sym., F, *A-MB*, ed. in RRMCE, xl (1994); Conc., C, kbd, *Ssp*; numerous cadenzas, preludes and versettes for organ, *Sn*; pedagogical kbd works, lost (see Pillwein)

CLIFF EISEN

Paris, Claude. *See* PARI, CLAUDIO.

Paris, Guillaume-Alexis [Alexandre] (*b* Liège, ?1756; *d* St Petersburg, 18/30 Jan 1840). Flemish conductor and composer. In 1776 he was on the staff of the theatre at Maastricht. He directed the orchestra of the Théâtre de la Monnaie in Brussels from 1780, was musical director and conductor of a theatre at Ghent in 1782–3, was in Lyons in 1784 and by January 1786 was conducting in a Liège theatre, where his opera *Le nouveau sorcier* was given. In 1787–8 he conducted French operas in Amsterdam, and from 1790 to at least 1792 he did the same at La Monnaie. When the French invaded Brussels in 1794 he and his company fled to Hamburg, encountering C.-F.-H. Duquesnoy, with whom he probably collaborated in mounting French operas for émigrés. In 1799 he was engaged to direct the French theatre at the St Petersburg court. This was the beginning of a remarkable career as a conductor and a composer of operas and ballets. Apart from his theatrical post, he conducted the St Petersburg Philharmonic Society (founded in 1802); during his 20 years in that position, he conducted several performances of the *Messiah*, Haydn's *Creation* and *The Seasons*, and Mozart's Requiem. His talent was such that Boieldieu, who succeeded him at the theatre in 1804, preferred to leave the conducting of his own new works to Paris; his authority and impartiality were particularly lauded. In 1824 he retired with a generous pension, remaining in Russia until his death. His compositions, mostly works for the stage, remain little known.

WORKS

Le nouveau sorcier (op, P. Dubuisson), Liège, 9 Jan 1786
Les lois et les rois (scène lyrique), Brussels, Monnaie, 15 April 1793
Les amants protées (vaudeville), Moscow, Jan 1806, perf. St Petersburg, 1808, in Russ., as Le revirement, ou Les disputes jusqu'aux larmes
Ballets: Le retour de Thétis (P. Chevalier), Gatchina, Palace Theatre, 15 Sept 1799, *RUS-SPan*; L'arrivée de Thétis (Chevalier), Gatchina, Palace Theatre, 1 Nov 1799; La famille des simples d'esprit, Gatchina, Palace Theatre, 1823; La forêt noire (3), 1824
Inst: Chaconne concertante, orch, 1795

PHILIPPE MERCIER

París, Juan (*b* 1759; *d* Santiago de Cuba, 10 June 1845). Spanish composer and choirmaster. He was a priest. Nothing is known about his life or musical training prior

to 1805, by which date he was choirmaster in Santiago de Cuba Cathedral, replacing Francisco José Hierrezuelo, who worked there for two years as Esteban Salas y Castro's successor. París occupied his post for forty years, during which time he trained a generation of musicians and contributed to the cultural development of the cathedral within the city. He reformed the choir in 1807, changing the members and including flute, oboe and violin in the orchestra.

París composed a great deal of music, carols in particular. Indeed his first compositions, written while he was working as choirmaster, were four carols: *Cautivos de Israel*, *Albricias pastores*, *Vamos* and *A qué fin van los pastores con tanta prisa a Belén*. The scores and the individual parts of the first-mentioned have survived. Almost all his works of this type are for four voices and follow the ternary form Allegro–Lento–Allegro, with some variations, such as the inclusion of a recitative or a sung and accompanied pastourelle. From 1806 he broadened the carols out into four movements or sections: Adagio–Recitado–Andante–Allegretto, or other combinations; on occasions he substituted the brief introductory piece with a true prelude. *Hasta cuándo ... santo cielo?*, *Qué raro portento* and other works date from this period. Between 1808 and 1829 he composed nearly 30 carols. In 1806 and in 1824 pamphlets with the lyrics to some of the carols appeared, but the music itself remained unpublished. Virtually all París's work can be found in the archives of the Museo Eclesiástico de Cuba, situated in Santiago de Cuba Cathedral.

VICTORIA ELI RODRÍGUEZ

Parish Alvars, Elias [Parish, Eli] (*b* Teignmouth, 28 Feb 1808; *d* Vienna, 25 Jan 1849). English harpist and composer. He studied with François Dizi and also worked with Théodore Labarre in London. For some time in the 1820s he was employed by the harp manufacturers Schwieso and Grosjean at their Soho Square premises, where he may have met the shadowy figure known as A. Alvars, who dedicated a harp piece to Frederick Grosjean, and who may well be the person whose surname Eli Parish appears to have adopted; at the same time he changed his name from Eli to Elias. It is as Elias Parish Alvars that his name appears on his earliest published compositions (Artaria, 1836).

From the early 1830s he was based mainly in Vienna, though he is known to have given concerts in Germany in 1830 and in Italy in 1833, when he shared a concert in Milan with John Field. In 1836 he was appointed first harp at the Imperial and Royal Opera of Vienna, but two years later he was back in London, dedicating his Concertino op.34 to Queen Victoria, and his Fantasia op.35 to Sigismond Thalberg, who is said to have developed his famous 'three-handed' piano technique in imitation of Parish Alvars's writing for the harp. A *Grande fantaisie brillante* for harp and piano based on *Anna Bolena*, *La sonnambula* and *Lucia di Lammermoor* and composed jointly with Carl Czerny can be dated to 1838. From 1839 until 1842 he made a leisurely tour of the Eastern Mediterranean, commemorated in his *Voyage d'un harpiste en Orient* op.62.

In May 1842 Parish Alvars bought his first new 'Gothic' model double-action harp from Pierre Erard. The acquisition of this more robustly constructed, mechanically superior instrument appears to have been significant; already unsurpassed as a virtuoso, he developed many innovative techniques, integrating pedal and manual skills in a completely unprecedented way, seizing brilliantly on the advantages and possibilities presented by the new harp, and engendering the enthusiasm of his contemporaries, among them Berlioz, Liszt and Mendelssohn. His innovations include chordal glissandi, double, triple and quadruple harmonics, the combination of harmonics with glissandi, the use of enharmonic effects (as in *La danse des fées* op.76), glissandi both with the pedals and with the tuning-key (*Sérénade* op.83), the pre-setting of pedals in such a way as to give an impression of brilliant virtuosity (*Grand Study in Imitation of the Mandoline* op.84) and the use of scordatura (*Last Grand Fantasia*).

Parish Alvars was in London again in 1846, this time with the intention of settling there permanently, but finding the musical establishment unsympathetic to the harp as a solo instrument, he returned to Vienna, where in 1847 he was appointed chamber musician to the emperor. His last important public appearance was at a concert of his own compositions in Vienna on 2 January 1848.

Parish Alvars's published compositions for the harp include over 80 works for solo harp, many of which are of phenomenal difficulty; three concertos, two concertinos (one for solo harp and one for two harps) and duos for harp and piano. His unpublished works include the fantasia *Sounds of Ossian*, among the most demanding solos ever written for the harp, a symphony, an overture inspired by Byron's *Manfred*, an opera *The Legend of Teignmouth* and two piano concertos. (H.-J. Zingel: *Harfenmusik im 19. Jahrhundert: Versuch einer historischen Darstellung* (Wilhelmshaven, 1976; Eng. trans., 1992)

ANN GRIFFITHS

Parish clerk. A subordinate official who for many centuries played an important role in the music of an English parish church, in addition to other duties. A similar role was played in German churches by the Küster (Lat. *custos*). In the Middle Ages parish clerks usually belonged to minor priestly orders, and assisted the parish priest in various functions. Their musical importance was greatest in the century before the Reformation, when in the richer churches they were often at the head of a staff of full-time musicians ('clerks' or 'conducts') and sometimes were also expected to train the choristers. Something of this organization survived in some churches until about 1570, but from then on the parish clerk was left to lead the congregation alone. He was no longer in orders, he was ill-paid and his standing rapidly sank to that of a menial. The Canons of 1603 still required incumbents to appoint as parish clerk a man who had 'competent skill in singing (if it may be)', but this was seldom observed, and John Playford in 1671 lamented that few London parish clerks could even lead a common psalm tune properly (*see* PLAYFORD family, (1)). With the introduction of lining out the parish clerk had to read out each line of the metrical psalm before it was sung, and in some places this developed into a curious kind of chant. As time went on

he was often left to choose the psalms and the tunes as well. He would announce the psalm in the traditional form, 'Let us sing to the glory of God the –th psalm', and in many cases the choir would have had no previous warning of his choice. Increasingly the parish clerk became a figure of fun, as Caleb Quotem in many an 18th-century farce, or as Davy Diggs in Hewlett's *The Parish Clerk* (1841). Nevertheless, some parish clerks became notable church musicians – Abraham Barber at Wakefield, WILLIAM KNAPP at Poole, JOHN ARNOLD at Great Warley, Essex, Michael Broome and James Kempson at Birmingham, all of whom published collections of church music. The parish clerk had disappeared in all but the most remote country places long before the end of the 19th century.

The Company of Parish Clerks of London, also known before the Reformation as the Fraternity of St Nicholas, dates back at least to 1233. It was incorporated by charter in 1442; the fraternity was suppressed in 1547, but the company remained, obtaining its last charter in 1640. Its powers included the right to examine every London parish clerk in the ability to sing psalms. Before the Reformation clerks had played an important part in pageants and other entertainments, and they continued to sing at the Lord Mayor's election. Soon after 1660 the Company acquired an organ, and began fortnightly practices of psalmody which continued to 1822, when the last organist resigned. For most of this period they used Playford's *Psalms and Hymns in Solemn Musick* on these occasions. The Company's hall in Silver Street was destroyed in World War II with most of the surviving records, which are, however, described by Ebblewhite.

NICHOLAS TEMPERLEY

Pariton. *See* BARYTON (i).

Parizot [Parisot]. French family of organ builders. Originally from the Lorraine region, they were active in the 18th century. Claude Parizot (*b* Etain, before 1700; *d* ?Etain, *c*1752) was the son of a carpenter, he was recruited by Christophe Moucherel while building the organ at Etain (1720–21). He followed his master to Paris and then worked for François Thierry. He became a master organ builder, probably in Paris around 1730. Asked to work for the Premonstratensian order with the Alsatian builder Georges Daniel Faul, his work can be found at Abbeville (St Georges, 1736, and St Sépulchre, 1738). However, it seems that he lost his position to Charles Dallery, and went to work in Rouen for Charles Lefèvre. He worked on the organ at St Rémy, Dieppe, in 1737. After he finished building the organ at Séry-aux-Prés Abbey, Amiens (1739), he moved to Caen to build instruments at Mondaye Abbey (1740; surviving), Sées Cathedral, Ardenne Abbey, and particularly Notre Dame de Guibray at Falaise (1746–52; surviving). The organ at Gouffern Abbey (1754) has been mis-attributed to him: it is actually by one of his nephews. He returned to Etain and died there.

Henri Parizot (*b* Etain, 1736; *d* Le Mans, 1795), a nephew and pupil of Claude, moved to Alençon in 1755, where he married Julienne Pavillon in 1759. He later moved to Le Mans. Examples of his prolific output include organs at La Ferté-Bernard (1758), St Jean, Caen (1769–72), St Sulpice, Fougères (1772), Mortain (1774), St Lô (1780 and 1792), St Gervais Falaise, St Pierre, Coutances (1782), Fontaine-Daniel Abbey (1784), La Trinité, Cherbourg (1785) and probably Gouffern Abbey (1788).

Nicolas Parizot (*b* Etain, *c*1735; *d* Le Mans, 1792), brother of Henri, and nephew and pupil of Claude, settled in Le Mans in 1754. He married there in 1759 and worked locally: at Mamers (1760), Abbaye de Perseigne (1762), Notre Dame, Vire (1762), Torcé (1763) and St Suzanne, Courcité (1777). His son became a carpenter and Nicolas himself seems to have given up organ-building in favour of his brother.

PIERRE HARDOUIN

Park, John (*b* Greenock, 14 Jan 1804; *d* St Andrews, 8 April 1865). Scottish composer. He came from a musical family and was a parish minister of the Church of Scotland. He was educated in the local schools of Greenock and Paisley, then at the universities of Glasgow and Aberdeen, and gained the DD. His first Scottish charge was that of Glencairn, Dumfriesshire, where he was appointed in 1843; after 11 years there he accepted a call to the First Charge of the Collegiate Parish Church (Holy Trinity) in the university town of St Andrews, Fife, where he remained until his death. Highly gifted in painting, verse and music, he played several instruments and excelled as a composer. 'Music was his native element', wrote J.C. Shairp, principal of St Andrews University, in his foreword to Park's *Songs*.

Park's compositions include a small number of works for solo piano and piano duet (1831, *GB-Er*), of which Sonata no.4 for solo piano is perhaps the most interesting; although he followed the normal conventions of a four-movement sonata, the simplicity of his style can reveal delicate subtleties, and the clarity of his textures is refreshingly undemonstrative. His songs (*c*100 in total) are only occasionally overtly Scottish, but his setting of Lady Grizel Baillie's 'There was ance a May' is a beautiful contribution to the genre. Some, such as his treatment of Shelley's 'Hymn of Pan', are extended and varied, while others are tiny vignettes. Many are settings of his own verses, often pious, and disarmingly unpretentious,

while some hint at disappointed love (Park never married). He also wrote the words for the ever-popular *I wish I were where Gadie rins*, setting them to a traditional tune he collected himself.

Park refused to publish any of his works during his lifetime, but told his relatives 'When I am gone, you may do what you will with them'. In 1876 a selection of 64 of his finest songs was successfully published and they are still sung today. Three volumes of songs in manuscript completed by 1849, and three music sketchbooks are held in the Reid Music Library at the University of Edinburgh. Of a gentle, slightly melancholy disposition, he appears to have been held in deep affection, despite the fact that he avoided much in the way of pastoral duties. He suffered a stroke just after hearing the 'Alleluia' chorus from Handel's *Messiah* and never regained consciousness.

JEAN MARY ALLAN/JOHN PURSER

Park [née Reynolds], **Maria Hester** (*b* 29 Sept 1760; *d* Hampstead, 7 June 1813). English composer and teacher. She played the harpischord and piano in public concerts and taught music to members of the nobility, including the Duchess of Devonshire and her daughters. In April 1787 she married the engraver and man of letters Thomas Park (1759–1834). On 22 October 1794 Haydn wrote to thank Park for sending him two charming prints, enclosing 'for the Mistris Park a little Sonat' with the promise of visiting her within a few days. Although she suffered from ill-health for many years, her family life was a happy one; her husband wrote several touching poems to her. Her surviving music, spanning a quarter of a century, is that of a very competent, professional composer. Her sonatas are varied and spirited, while the concerto for keyboard and strings reveals an individual voice, particularly in the final rondo.

Earlier reference works confuse her with the singer and composer Maria F. Parke, to the extent of calling the singer Maria Hester Parke; the British Library *Catalogue of Printed Music* clearly distinguishes the two. Her keyboard sonatas opp.1 and 2 were published under her maiden name.

OLIVE BALDWIN, THELMA WILSON

Park Choon-suk [Pak Ch'unsŭk] (*b* Seoul, 1933). Korean composer of popular music. He was the son of a rich businessman and had the opportunity to learn the piano during childhood. He showed musical talent from an early age and entered the College of Music at Seoul National University, but he was inclined to the world of popular music and soon gave up his career as a classical musician. He subsequently composed many songs which were performed by some of the most well-known singers in the Korean mainstream popular music market, and he also discovered several new singers and helped them to establish their careers. Park composed around 2500 songs and more than 200 film soundtracks. His music covers a wide range of genres including pop, jazz and ballad, but he is principally noted for his contribution to *t'ŭrot'ŭ* ('trot') music, which developed during the 1930s under the influence of Japanese popular music while Korea was under the Japanese colonial regime (1910–45). Although *t'ŭrot'ŭ* was at one time subject to criticism as being part of the legacy of Japanese colonialism, it gained widespread popularity among Koreans, and Park has had more hits than any other composer of *t'ŭrot'ŭ* songs.

KIM CHANG-NAM

Parke [Park]. English family of musicians.

(1) John Parke (*b* London, 1745; *d* London, 2 Aug 1829). Oboist. He studied with Simpson, but preferred to develop the soft sweet tone that J.C. Fischer introduced into England. In the late 1760s he was principal oboist at the oratorios and a performer at Ranelagh and Marylebone Gardens. After one season at the King's Theatre, he was replaced by Fischer in 1769, but by 1771 he was playing at Vauxhall Gardens. In that year he became first oboe at Drury Lane where he remained for most of his career. He was especially praised for his obbligatos – 'his accompanying a voice is particularly delicate' (*ABC Dario Musico*, 1780) – and Thomas Linley the younger wrote several fine arias with oboe obbligato for him. He often played concertos of his own in oratorio intervals, as also in the pleasure gardens, but none seems to have survived. Parke also played in the Queen's band, for the Prince of Wales at Carlton House, in the Concert of Ancient Music, and (with his brother) in the Professional Concert and probably in most or all of the famous Haydn concerts in Hanover Square Rooms. Parke retired about 1815. His son Henry (1793–1835) was a pupil of Sir John Soane and became an architect; some of his drawings and watercolours can be seen in the Soane Museum, London.

(2) William Thomas Parke (*b* London, 15 Feb 1761; *d* London, 26 Aug 1847). Oboist and composer, brother of (1) John Parke. At ten he was learning the flute and at 11 the oboe from his brother; also, at 13, the piano from Charles Rousseau Burney, the historian's nephew. In 1775 he sang in the Drury Lane chorus as a treble in Dibdin's *A Christmas Tale*, and in 1776 he was, significantly, judged good enough after 'rather more than

three months' practice' to play the viola at Vauxhall Gardens and Drury Lane. On his own he worked hard at the oboe, and in 1783, on the recommendation of William Shield, he succeeded Sharp as first oboe at Covent Garden. In 1787 he joined the Professional Concert.

According to Sainsbury, 'his tone [was] remarkably sweet, his execution rapid and articulate, his shakes brilliant, his cantabiles and cadenzas varied and fanciful, and ... his judicious style of playing adagio movements evince[d] the greatest feeling and expression'. Shield so admired his playing that he wrote long soprano arias with a difficult concertante oboe part in his *Robin Hood*, *Fontainbleau*, *The Choleric Fathers* and *Marian*. Mrs Billington, who sang the one in *Marian*, inspired a similar aria that Shield added to Grétry's *Richard Coeur-de-lion* in which Parke played the concertante part on a flute. There are also concertante parts for Parke in the overtures to Hook's *The Fair Peruvian*, Shield's *The Woodman* and Mazzinghi's *The Magician No Conjurer* and *The Exile*.

After studying composition with Baumgarten, the leader of the Covent Garden orchestra, Parke was able to play an oboe concerto of his own in an oratorio interval at Drury Lane in 1786, and in 1791–2 he published two sets of duets for two flutes or two oboes. He was already extending the upper range of the oboe, and at a Hanover Square Rooms concert in 1796 he first demonstrated his high G, presumably in another concerto of his own. Only one was ever published, *A Grand Concerto for the Oboe, German Flute, or Clarinet* (*c*1805). In his memoirs he mentions concertos by himself that included variations on *Rule, Britannia*, *God Save the King* and *The Bridge of Lodi*.

Shield, who disliked writing overtures to his own operas, got Parke to compose those in *Netley Abbey* and *Lock and Key*, as also the Act 2 finale in *The Lad of the Hills*. Parke also composed a pantomime-ballet, *The Tithe Pig* (11 April 1795), but the music is lost. After Shield's retirement from Covent Garden in 1797 Parke was not asked for any more theatre music.

In 1786 he had adapted Dalayrac's *Nina* for the benefit performance of Covent Garden's singing actress Elizabeth Martyr who, two years earlier, had been the first English Chérubin in Beaumarchais' comedy. Petite and 'a good breeches figure', she was Parke's mistress until her death in 1807, when she bequeathed her farm at Yalding in Kent to the two sons she had had by him. Mrs Martyr specialized in the cheerful sailor-boy songs Parke wrote for her. Later in life he composed little else but songs – about 150 for Vauxhall Gardens between 1808 and 1821. He also wrote elegies on the deaths of Sir John Moore (1809) and the Princess Amelia (1810), and an *Ode to Peace* (1814).

Parke's garrulous *Musical Memoirs* were published in 1830; they are a useful source of information about Shield and on contemporary performing practice. His *New Preceptor for the German Flute* had appeared in 1806.

(3) Maria Frances Parke (*b* London, 26 Aug 1772; *d* London, 31 July 1822). English soprano, composer and pianist, eldest daughter of (1) John Parke. She was taught by her father and played the harpischord at his 1781 benefit concert when she was eight years old. The following year at his benefit she made her début as a singer and played a piano concerto by J.S. Schroeter. In 1784 the *Public Advertiser* praised the taste and spirit of her playing and a year later wrote that she 'certainly will be one of the best Piano Forte performers in England'. However, as an adult performer she was primarily a singer. She had sung among the trebles in the Handel Commemoration concerts in 1784 and by the age of 20 was a leading soprano soloist in concerts and oratorios in London and the provinces. Her uncle W.T. Parke remembered her singing in *Messiah* 'with great taste and judgement'. She sang at Haydn's benefit concert at the Hanover Square Room on 2 May 1794 and both sang and played at her own benefit on the 19th, when Haydn 'presided at the piano-forte'. She retired on her marriage to John Beardmore in 1815.

She has been confused with the composer Maria Hester Park (née Reynolds), but her published compositions are all attributed to 'Miss Parke' and often signed 'MFP' on the title-page. Miss F. Parke, her younger sister Francesca Margaretta, sang at her benefit concerts in 1798 and 1799.

ROGER FISKE/JANET K. PAGE (1, 2), OLIVE BALDWIN, THELMA WILSON (3)

Parke, Thomas. *See* PACK, THOMAS.

Parkening, Christopher (William) (*b* Los Angeles, 14 Dec 1947). American guitarist. Inspired by the guitar transcriptions of his cousin Jack Marshall, he took up the instrument at the age of 11. After several years' study with Celedonio Romero and Pepe Romero, he participated in the masterclasses of Segovia at the University of California, Berkeley, and subsequently studied privately with him. In 1964–5 he spent a year at UCLA but then transferred to the University of Southern California as a cello student of Gabor Rejto (the guitar was not yet taught at the university); asked to found a guitar department there, he eventually became its head (1971–5). Meanwhile, he made his recording début in 1967 and his concert début a year later. For the next decade he enjoyed a highly successful career as a performer, and his recordings from this period are notable for their energy and bravura. By 1977, however, he had become disenchanted with his increasingly stressful career and happily realized his long-standing dream of retiring at 30. Abandoning the concert stage, he moved to a ranch in Montana, where he taught the guitar, and appeared only rarely as a recitalist (for example, in Washington DC, 1979). About 1981, after becoming a committed Christian, he resumed his performing career, with the intention of playing 'only for God's glory' (quoting J.S. Bach); since that time his recordings (various reissues apart) have usually included a number of overtly religious works. In performance, he gradually recaptured the successful formula of his earlier recitals, which were centred on colourful shorter pieces, and critics have drawn particular

attention to his greater subtlety of expression. Since the mid-1980s he has often been joined in concerts by guitarists such as David Brandon. Parkening has published *The Christopher Parkening Guitar Method* (Chicago, 1972–), several volumes of transcriptions, including one of works by Bach (Chicago, 1973–), and *Music for Guitar*, an edition of 19 pieces by Rodrigo (Mainz, 1995).

THOMAS F. HECK

Parker, monk of Stratford. Composer, possibly identifiable with WILLIAM STRATFORD.

Parker, Alice (*b* Boston, 16 Dec 1925). American composer, organist and conductor. She studied at Smith College (BA 1947) and the Juilliard School of Music (MS 1949), where her teachers included Robert Shaw, Julius Herford and Vincent Persichetti. She worked as an arranger for the Robert Shaw Chorale (1949–67), taught at Westminster Choir College, and founded and directed Melodious Accord, Inc. Her more than 400 compositions include operas, cantatas, choral pieces, and song cycles on Amerindian texts and poems by Ogden Nash, Robert Frost and Emily Dickinson. Her association with Shaw produced numerous choral settings of American folk-songs, hymns and spirituals. Her many honours include a MacDowell Colony Fellowship, ASCAP awards, honorary doctorates, grants from the NEA and AMC, and commissions from Chanticleer, the Vancouver Chamber Singers and the Atlanta SO. She is the author of *Musical Reference Grammar* (New York, 1964), *Creative Hymn Singing* (Chapel Hill, NC, 1976), *Folk Song Transformations* (New York, 1985) and *Melodious Accord* (Chicago, 1991).

SHARON PRADO HOWARD (text, bibliography), CHRISTINE AMMER (work-list)

Parker, Charlie [Charles, jr; Bird; Chan, Charlie; Yardbird] (*b* Kansas City, KS, 29 Aug 1920; *d* New York, 12 March 1955). American jazz alto saxophonist. He was one of the most important and influential improvising soloists in jazz, and a central figure in the development of bop in the 1940s. A legendary figure in his own lifetime, he was idolized by those who worked with him, and he inspired a generation of jazz performers and composers.

1. Life. 2. Style. 3. Influence.

1. LIFE. Parker was the only child of Charles and Addie Parker. In 1927 the family moved to Kansas City, Missouri, an important centre of African American music in the 1920s and 1930s. Parker had his first music lessons in the local public schools; he began playing the alto saxophone in 1933 and worked occasionally in semi-professional groups before leaving school in 1935 to become a full-time musician. From 1935 to 1939 he worked mainly in Kansas City with a wide variety of local blues and jazz groups. Like most jazz musicians of his time, he developed his craft largely through practical experience: listening to older local jazz masters, acquiring a traditional repertory and learning through the process of trial and error in the competitive Kansas City bands and jam sessions.

In 1939 Parker first visited New York (then the principal centre of jazz musical and business activity), and stayed for nearly a year. Although he worked only sporadically as a professional musician, he often participated in jam sessions. By his own later account (Levin and Wilson, 1949), he was bored with the stereotyped changes that were being used then: 'I kept thinking there's bound to be something else … I could hear it sometimes, but I couldn't play it'. While working over *Cherokee* in a jam session with the guitarist Biddy Fleet, Parker suddenly found that, by using the higher intervals of a chord as a melody line and backing them with appropriately related changes, he could play what he had been 'hearing'. Yet it was not until 1944–5 that his conceptions of rhythm and phrasing had evolved sufficiently to form his mature style.

Parker's name first appeared in the music press in 1940; from this date his career is more fully documented. From 1940 to 1942 he played in Jay McShann's band, with which he toured the Southwest, Chicago and New York, and took part in his first recording sessions in Dallas (1941). These recordings, as well as several made for

broadcasting from the same period, document his early, swing-based style, and at the same time reveal his extraordinary gift for improvisation. In December 1942 he joined Earl Hines's big band, which then included several other young modernists such as Dizzy Gillespie. By May 1944 they, with Parker, formed the nucleus of Billy Eckstine's band.

During these years Parker regularly participated in after-hours jam sessions at Minton's Playhouse and Monroe's Uptown House in New York, where the informal atmosphere and small groups favoured the development of his personal style, and of the new bop music generally. Unfortunately a strike by the American Federation of Musicians silenced most of the recording industry from August 1942, causing this crucial stage in Parker's musical evolution to remain poorly documented (there are 9 privately-recorded acetates from February 1943 with Parker playing tenor saxophone and 4 more from late 1943–early 1944 with Parker on alto). When the recording ban ended, Parker recorded as a sideman (from 15 September 1944) and as a leader (from 26 November 1945), which introduced his music to a wider public and to other musicians.

The year 1945 marked a turning-point in Parker's career: in New York he led his own group for the first time and worked extensively with Gillespie in small ensembles. In December 1945 he and Gillespie took the new jazz style to Hollywood, where they fulfilled a six-week night-club engagement. Parker continued to work in Los Angeles, recording and performing in concerts and night clubs, until 29 June 1946, when a nervous breakdown and addiction to heroin and alcohol caused his confinement at the Camarillo State Hospital. He was released in January 1947 and resumed work in Los Angeles.

Parker returned to New York in April 1947. He formed a quintet (with Miles Davis, Duke Jordan, Tommy Potter and Max Roach), which recorded many of his most famous pieces. The years from 1947 to 1951 were Parker's most fertile period. He worked in a wide variety of settings (night clubs, concerts, radio and recording studios) with his own small ensembles, a string group and Afro-Cuban bands, and as a guest soloist with local musicians when travelling without his own group. He recorded slightly over half his surviving work and visited Europe (1949 and 1950). Though still beset by problems associated with drugs and alcohol, he attracted a very large following in the jazz world and enjoyed a measure of financial success.

In July 1951 Parker's New York cabaret licence was revoked at the request of the narcotics squad: this banned him from night-club employment in the city and forced him to adopt a more peripatetic life until the licence was reinstated (probably in autumn 1953). Sporadically employed, badly in debt and in failing physical and mental health, he twice attempted suicide in 1954 and voluntarily committed himself to Bellevue Hospital, New York. His last public engagement was on 5 March 1955 at Birdland, a New York night club named in his honour. He died seven days later in the Manhattan apartment of his friend the Baroness Pannonica de Koenigswarter, sister of Lord Rothschild.

2. STYLE. Parker was among the supremely creative improvisers in jazz, one whose performances, like Armstrong's before him, changed the nature of the music. The force and originality of his style was such that many listeners rejected his music as no longer part of the jazz tradition, and as other jazz musicians took up and elaborated his innovations the music sank to what was then its lowest ebb in popular acceptance. Only decades after his death did Parker shed the élite aura attached to him by fellow musicians and admiring jazz fans and begin to assume a classical status in the popular imagination.

Although Parker was an innovator, his music is rooted firmly in tradition. Like the Kansas City music he heard when young, Parker's repertory was built on a very limited number of models: the 12-bar blues, a number of popular songs, several jazz standards and newly invented jazz melodies using the underlying harmonies of popular songs. This last-named category and blues account for about half the pieces he recorded. Although the device of composing new melodic themes to borrowed chord progressions was not new to jazz, bop musicians of the 1940s employed this technique much more extensively, partly for financial reasons (to avoid paying copyright royalties) and partly to frighten the uninitiated (who could not always recognize the underlying chord patterns), but also to invent themes that were more consistent with the new jazz style than the original melodies. Thus, by restricting himself to a few harmonic sources, Parker was able to improvise over a few familiar patterns, against which he constantly tested his ingenuity and powers of imagination. A number of Parker's newly composed melodic themes (based on existing harmonic and metric structures) themselves became jazz standards, among them *Anthropology* (1950, Sonet; based on the chord progressions of George Gershwin's *I got rhythm*, and written in collaboration with Gillespie), *Now's the Time* (1945, Savoy; blues), *Ornithology* (1946, Dial; based on Morgan Lewis's *How High the Moon*, probably written in collaboration with Little Benny Harris) and *Scrapple from the Apple* (1947, Dial; the *A* section from *I got rhythm* and the bridge from Fats Waller's *Honeysuckle Rose*).

Parker's outstanding achievement was not his composition but his brilliant improvisation. His improvised line combined drive and a complex organization of pitch and rhythm with a clarity rarely achieved by earlier soloists. In contrast to the rich timbres of Johnny Hodges and Benny Carter, the two most important predecessors on his instrument, Parker developed a penetrating tone with a slow, narrow vibrato. This suited the aggressive nature of the new music, and allowed him to concentrate on line and rhythm. Parker's improvisations are usually based on the harmonic structure of the original. Melodic ornamentation or paraphrase occasionally occur, but characteristically these are reserved for thematic statements of popular melodies in the opening or closing chorus (ex.1).

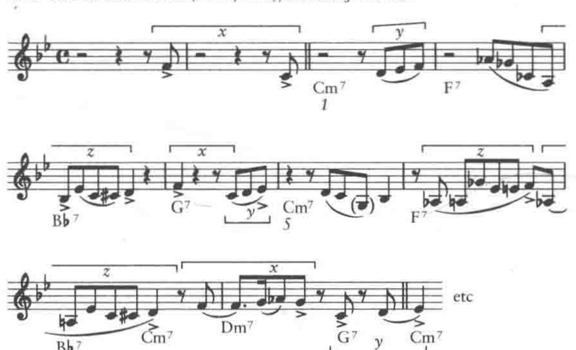
His organization of rhythm and pitch often has an oblique relationship to the principal elements of jazz variation – the pulse (beat) and chord progressions. His solo on Dizzy Gillespie's *Groovin' High* (1945, Guild; ex.2) disturbs the crotchet pulse, steadfastly maintained by the accompanying double bass, resulting in an ever-changing succession of varied subdivisions. This rhythmic complexity is often used in conjunction with highly syncopated lines and persistently contrasting phrase lengths and accents, all helping to obscure the beat, metre and harmonic rhythm. His occasional derivation of pitches from the theme is often hidden by this kind of

Ex.1 Parker's opening thematic statement on *Out of Nowhere* (1948, Le Jazz Cool); transcr. J. Patrick

treatment. This can be seen in his solo on *Groovin' High*, notably in bars 5 and 15.

Parker's line typically includes pitches outside the given harmony: in addition to those produced by passing notes, suspensions and other familiar devices, these result from free use of chord extensions beyond the 7th (particularly the flattened 9th and raised 11th), chromatic interpolations suggesting passing chords, the interchange of major, minor, augmented and diminished triads with others on the same root and the anticipation or prolongation of chords within the given progression. Despite this harmonic complexity, Parker's best work has a clear and coherent line. Sometimes this is achieved by motivic development, as in ex.3, the first ten bars of his solo on *Klactoveedsedstene* (1947, Dial; based on the chord progressions of Juan Tizol's *Perdido*). This passage is constructed from three short ideas, developed and combined, with silences of subtly varied length throughout.

In his improvisations, Parker most often drew from a corpus of formulae and arranged them into ever-new patterns, a technique sometimes known as *cento*. This aspect of Parker's art has been exhaustively investigated by Owens (*Charlie Parker*, 1974), who codified Parker's improvisational work according to about 100 formulae. Many of these are specific to certain keys (where they may be easier to finger) or to particular pieces. Some occur in earlier swing music, particularly in the work of Lester Young, but others originated with Parker himself, and later became common property among musicians working in the bop style. Although it is based on a limited number of such formulae, Parker's work is neither haphazard nor 'formulaic' in a restricted sense: the arrangement of the formulae was subject to constant variation and redisposition, and his performances of a piece were never identical. The overriding criterion was always the coherence and expressiveness of the musical line.



Closely related to this approach is Parker's use of musical quotations. Probably no jazz musician before him was as fond of this device, or as wide-ranging in his choice of material, as Parker, particularly in private performances in a relaxed atmosphere. His improvisations contain snatches of melody from popular songs and light classics; from earlier jazz performances such as Armstrong's *West End Blues*; from his own jazz compositions; and even quotations from Wagner, Bizet and Stravinsky. He retained this device throughout his career, and it is another measure of his authority in jazz that witty quotations became characteristic of the bop style as a whole.

3. Influence. Although Parker was not solely responsible for the development of the bop style, he was its most

Ex.2 Parker's improvisation on D. Gillespie, *Groovin' High* (1945, Guild): transcr. J. Patrick

Ex.3 *Klactoveedsedstene* (1947, Dial); transcr. J. Patrick

important representative and a source of inspiration to all musicians who took part in its early growth. His influence was not limited to performers on his own instrument: his lines, rhythmic devices and favourite motifs were transferred to instruments other than reeds, such as the trombone, vibraphone, piano and guitar, and many innovations of bop drummers were made in response to the increased rhythmic complexity of his music.

Parker's influence was immediate and intense. His most famous early solos were learnt note-for-note by thousands of aspiring young bop musicians on all instruments; as early as 1948 published transcriptions of them were available for study purposes. Some were even given texts by bop singers and performed as independent pieces. Parker's impact was naturally strongest on alto saxophonists such as Sonny Stitt, Cannonball Adderley, Phil Woods and many others; only Lee Konitz and West Coast musicians such as Paul Desmond managed to create viable independent styles on alto saxophone. Despite the differences in timbre and mobility of the lower-pitched, bulkier instrument, many tenor saxophonists also came under Parker's sway, most notably Sonny Rollins and John Coltrane. Only in the early 1960s did Parker's influence gradually wane as the modal style led to the abandonment of bop's formulaic approach and the smoothing out of its erratic rhythms, and the free-jazz style dispensed with preset harmonic patterns; nor did Parker's music play a role in the emergence of jazz-rock in the early 1970s. Nevertheless, his work remained available on disc in more or less complete reissue series, and recordings of his performances were discovered on private tapes, matrices or radio recordings, and issued posthumously.

With the revival of bop in the mid-1970s Parker's music once again became a vital force in the evolution and teaching of jazz. The Fine Arts Library at the University of Texas, Austin, holds the world's largest collection of recordings by Parker, and hundreds of his solos are now available to the student in published transcriptions. The group Supersax, based in Los Angeles, achieved some popular success playing Parker's solos in harmonized arrangements for saxophone chorus. His work has been the subject of several university dissertations. Although the evanescent, hieratic and emotionally disturbing nature of Parker's music precludes popularity on a par with that of Armstrong or Ellington, his place beside them as a creative force in jazz history is assured.

JAMES PATRICK

Parker, Daniel (*fl* London, *c*1700–30). English violin maker. His most probable early instructor in the craft was the maker Barak Norman, whose reputation was already established at the end of the 17th century. However, his life has so far eluded research, and he remains a shadowy figure in the London trade of that time. His connections with other violin makers are intriguing. Work labelled by Edward Lewis sometimes seems to show Parker's hand, but violins attributed to him have also been found to bear the signature or label of Joseph Hare, a violin maker and music publisher with whom Parker was certainly closely associated. As is true of so many violin makers since Parker's time, his success had its basis in an appreciation of the work of Antonio Stradivari. In 1687 a set of Stradivari instruments are said to have been ordered for James II. More significant is the presence in London between 1702 and 1705 of the Cremonese violinist Gaspare Visconti, who was personally acquainted with Stradivari, and whose compositions were published by Hare. Parker might well have had a number of opportunities to study the great master's early work: his working life was to coincide with the best years of Stradivari's. Parker copied the Stradivari instruments with respect to form: outlines, archings, layout of scroll and pegbox, placing of soundholes, etc. In details of workmanship he followed the practices of English contemporaries such as Norman and Nathaniel Cross. His varnish, which varies in colour from a light orange-brown to a bright, clear red, was of the same fine quality that has allowed so many early English instruments to pass as Italian.

Parker was equally successful with his violas, which he made in various sizes, including in his output some remarkably elegant instruments based on Stradivari's 'long pattern'. Only a limited number of his instruments survive, but almost all of them are first rate tonally and have established his reputation as the finest early English maker of violins. One of his champions was Fritz Kreisler, who owned and often performed on an outstanding example of Parker's work.

CHARLES BEARE/JOHN DILWORTH

Parker, Horatio (William) (*b* Auburndale, MA, 15 Sept 1863; *d* Cedarhurst, NY, 18 Dec 1919). American composer and church musician. At 14 he took piano and organ lessons with his mother; he later studied composition with George Chadwick, the piano with John Orth and theory with Stephen Emery in Boston. He was church organist in Dedham, Massachusetts, 1880–82. His first compositions were 50 songs on poems by Kate Greenaway, written shortly after his first year of musical study; within the next few years he composed keyboard, chamber and some short orchestral pieces. From 1882 to 1885 he studied at the Hochschule für Musik in Munich, including composition under Josef Rheinberger. During this time he wrote his first extensive compositions, including the *Ballad of a Knight and his Daughter*, the cantata *King Trojan* and the Symphony in C.

On returning to America, Parker spent several years in New York, where he taught at the cathedral schools of St Paul and St Mary (1886–90), at the General Theological Seminary (1892) and at the National Conservatory of Music (1892–3). He was organist and choirmaster at St

Luke's in Brooklyn from 1885 to 1887, St Andrew's in Harlem from 1887 to 1888, and at Holy Trinity in Manhattan from 1888 to 1893.

Parker's reputation as a composer was established during the early 1890s with performances of his student works, the publication of a considerable amount of church music, and major works including the overture *Count Robert of Paris*, heard at the first public concert of the New York Manuscript Society in 1890; the cantata *Dream-King and his Love*, which won the National Conservatory prize in 1893; and the oratorio *Hora novissima*, written for the Church Choral Society of New York in 1893. There followed a series of major vocal and choral compositions, including *Cáhal Mór of the Wine-Red Hand*, a rhapsody for baritone and orchestra first performed by the Boston SO (1895); the dramatic oratorio *The Legend of St Christopher*, a commission from the Oratorio Society of New York (1897); and the motet *Adstant angelorum chori*, which received a prize and performance by the Musical Art Society of New York (1899).

Frequent performances of *Hora novissima* during the 1890s brought Parker to national prominence. In autumn 1893 he left New York to become organist and choirmaster at the fashionable Trinity Church in Boston. The following year he received an honorary MMus from Yale University and accepted the Battell Professorship of the Theory of Music there, a position he retained until his death. In 1904 he was made dean of the School of Music, and under his guidance Yale gained a national reputation for training composers. Parker also became an important musical figure in the New Haven community by organizing and conducting the New Haven SO (from 1895 to 1918) and the Choral Society (from 1903 to 1914). He conducted various choral societies and glee clubs both in the vicinity of New Haven and as far away as Philadelphia. He continued in his post at Trinity Church in Boston until 1902, when he left to take up a similar post at the collegiate church of St Nicholas in New York; he served this Dutch Reformed church until 1910.

A performance of *Hora novissima* at the Three Choirs Festival in Worcester in 1899 was the first of a series of activities in England which included the commission of *A Wanderer's Psalm* for the Hereford Festival and the performance of *Hora novissima* in Chester (both in 1900) and of part iii of *St Christopher* at Worcester and *A Star Song* at Norwich (both in 1902). He received an honorary MusD from Cambridge University in 1902.

Significant vocal and choral compositions from his later years include *Crépuscule*, a prizewinning concert aria performed by the Philadelphia Orchestra in 1912; the cantata *King Gorm the Grim* (1908) and the morality *The Dream of Mary* (1918), both for the Norfolk (Connecticut) Festival; and the oratorio *Morven and the Grail* (1915), commissioned for the centennial celebration of the founding of the Handel and Haydn Society of Boston.

Parker's second area of composition was theatre music. After writing incidental music for two plays, *The Eternal Feminine* (1904) and *The Prince of India* (1906), he composed music for two grand operas: *Mona*, which won a prize offered by the Metropolitan Opera Company and received four performances in that house (1912); and *Fairyland*, which won a prize offered by the National Federation of Music Clubs and six performances in Los Angeles (1915).

Parker composed numerous songs, anthems and hymns. Apart from some character-pieces for organ and piano, his instrumental composition was infrequent after the early years; however, the symphonic poem *A Northern Ballad* (1899) and the Concerto for Organ and Orchestra were performed by major American orchestras. Parker performed his Concerto with the Boston SO (1902) and the Chicago SO (1903).

Parker's health, which had been uncertain since his youth, deteriorated rapidly during World War I, and he died of pneumonia contracted while on a recuperative trip to the West Indies in 1919. His last compositions, *The Red Cross Spirit Speaks* (1918) and *A.D. 1919*, are marked more by emotional fervour than by his creativity.

Parker composed steadily throughout his life, although his church, educational and conducting duties were extensive. He was capable of intense concentration and frequently used the time while commuting from New Haven to Boston or New York for composing. After 1907, many of his largest works were written during summers at his family's vacation home in Blue Hill, Maine.

His career as a composer can be divided into three periods. The first was strongly eclectic and included the student and New York cantatas as well as the oratorio *Hora novissima*. The latter contains flowing, balanced melodic lines, moderately chromatic harmony, colourful orchestration and stirring polyphonic effects.

The second period was marked by an increasing concern for dramatic expression in several of the larger choral works, and the fulfilment, with *Mona*, of a desire to write an opera. The contrasting, sectional structures of the first period gave way to an increasingly unified, highly expressive style. The key works are *Cáhal Mór of the Wine-Red Hand*, with its integration of solo voice and orchestra; *The Legend of St Christopher*, with its well-developed leading motif technique; *A Star Song*, with its long-phrased melodies, tonally evasive harmony and unified structure; and finally *Crépuscule* and *Mona*, with their pervading chromaticism, vacillating tonalities and sometimes angular, disjunctive melodies.

During this same period Parker wrote a number of cantatas and ceremonial pieces which had a more conservative cast and sustained his reputation as a traditionalist. They include *Adstant angelorum chori*, with its allusions to Renaissance polyphony; A *Wanderer's Psalm*, with its contrasting sections and unifying *tonus peregrinus*; *Hymnos Andron*, with its application of the rhythm and structure of Greek poetry; and the occasional pieces, *Union and Liberty* and *Spirit of Beauty*, with their balanced sections.

The third period, following *Mona*, was stylistically regressive: for example, *An Allegory of War and Peace*, *The Dream of Mary*, *The Red Cross Spirit Speaks* and *A.D. 1919* are marked by a return to diatonic harmony, more traditional key relationships, balanced structures and clearly defined melody. Parts of *Morven and the Grail* and *Fairyland* also show these tendencies. These works reflect Parker's concern, during his last few years, to communicate more directly with the American public.

During his lifetime Parker was considered a craftsman without equal and was one of America's most highly respected composers, but since his death, the number of

performances of his major works has declined steadily. Even his more imaginative works, in which he attempted to follow such composers as Wagner, d'Indy, Strauss, Debussy and Elgar, are received no better than the more conservative pieces, which show the influence of Brahms, Dvořák and Gounod. Parker's inability to achieve a strongly individualistic style, and his reliance on chromatic formulae which are now considered too sentimental, have undoubtedly contributed to the neglect of his music. *Hora novissima*, *A Northern Ballad* and a few anthems are still occasionally heard, and several of his songs have a beauty which should rescue them from obscurity.

WORKS

printed works published in New York unless otherwise stated

CHORAL

op.	
2	5 Part Songs, 1882; listed in Strunk
—	2 Gesänge für Gemischten Chor, 1882; listed in 9. *Jahresbericht der Königlichen Musikhochschule in München* (1882–3), 37

WILLIAM KEARNS

Parker, J(ames) C(utler) D(unn) (*b* Boston, 2 June 1828; *d* Brookline, MA, 27 Nov 1916). American composer, organist and teacher. A graduate of both the Boston Latin School and Harvard College (1848), he abandoned law in favour of music. From 1851 to 1854 he studied with Hauptmann, Moscheles, Plaidy, Richter and Rietz in Leipzig. When he returned to Boston he began teaching the piano, organ and harmony at the New England Conservatory (1871–97) and was organist at the fashionable Trinity Church (1864–91). His compositions, always thoroughly conservative, included a cantata, *St John*, written for the 75th anniversary of the Handel and Haydn Society (of which he was organist), and an Easter oratorio, *The Life of Man*, sung by the society in 1895. He published a *Manual of Harmony* (Boston, 1855), edited a large anthology of sacred choruses (Boston, 1861), and translated several works including practical manuals and the texts of some of Mendelssohn's partsongs (1856) and Gade's *Comala* (1875).

WORKS
(*selective list*)

all published in Boston

7 Part Songs (1875); Redemption Hymn, A, 4vv, vs (1877); The Blind King (after L. Uhland), ballad, Bar, male vv, orch, vs (1883); St John (cant.), solo vv, 4vv, orch, vs (1890); The Life of Man (orat), solo vv, 4vv, orch, vs (1894)

ROBERT STEVENSON

Parker, Maceo. See JBS.

Parker, Roger (Leslie) (*b* London, 2 Aug 1951). English musicologist. He studied at London University (1974–81) under Margaret Bent and Pierluigi Petrobelli, completing his doctoral studies with a dissertation on early Verdi. He became a professor at Cornell University in 1982; in 1988 he was appointed co-director of the critical edition of Donizetti and the next year became founding co-editor of the *Cambridge Opera Journal*. His edition of *Nabucco* (1987) inaugurated the new critical edition of Verdi's operas. In 1993 he returned to England to take up the position of lecturer at Oxford University; in 1996 he became a reader in music and fellow of St Hugh's College and in 1999 was appointed Professor of Music at Cambridge University. He was awarded the Premio 'Giuseppe Verdi' (Parma, 1986), a John Simon Guggenheim Fellowship (1989) and the Dent Medal (1991). Parker's central interests lie in Italian opera of the 19th century, in which area his work has led to the re-examination of traditional assumptions and entrenched attitudes; but his knowledge and perceptions extend to many other areas, as his writing on analytical topics and his enterprising editing have demonstrated. His book *Leonora's Last Act* (1997) includes discussion of the possibilities of an 'authentic' staging of Verdi's operas,

and the advantages and disadvantages of analysing them according to terms that his contemporaries might have understood.

ROSEMARY WILLIAMSON

Parkhurst, Susan McFarland [Parkhurst, Mrs E.A.] (*b* Leicester, MA, 5 June 1836; *d* Brooklyn, NY, 4 May 1918). American composer. She composed popular songs and parlour piano solos during the 1860s. A skilful writer, she gained most recognition for songs on such topical themes as temperance and abolition. *Father's a drunkard and mother is dead* (1866), which she and her daughter ('Little Effie') performed at concerts and temperance meetings in New York, became a standard of the period. Other successful songs include *New Emancipation Song*, *There are voices*, *Spirit Voices* and *Weep no more for Lilly* (all 1864).

Horace Waters, the New York publisher associated mainly with Stephen Foster, promoted Parkhurst's work, printing a *Select Catalogue of Mrs. E.A. Parkhurst's Compositions* in 1864. She contributed tunes to Waters's collections of 'Sunday school' hymns: *The Athenaeum* (1863), *The Golden Harp* (1863) and *Zion's Refreshing Showers* (1867). In the early 1860s Parkhurst worked at Waters's music store, where she encountered Foster. She published 'Personal Recollections of the Last Days of Stephen Foster' in the September 1916 issue of the magazine *The Etude*, describing herself as a 'lady who in her youth was known as a successful composer, and who, when a young girl, took a friendly interest in Stephen Foster'.

Writing in the standard song-and-chorus format of the period, Parkhurst infused popular song formulae with a more ambitious musical language. Her harmonic vocabulary was more expansive and richer than that found in most average songs of the period, and the piano postludes she often used to round off her songs were more imaginative. Original prints of about 60 songs are held in the Music Division of the New York Public Library; instrumental works are at the American Antiquarian Society, Worcester, Massachusetts.

JUDITH TICK

Park Lane Group. London concert organization founded in 1956. *See* LONDON (i), §VI, 4(iii).

Parlamagni, Antonio (*b* 1759; *d* Florence, 9 Oct 1838). Italian bass. Having made his début about 1788, he sang very successfully as a *basso buffo* in Rome, Florence and Venice. At La Scala he sang Figaro in Paisiello's *Il barbiere di Siviglia* and appeared in operas by Palma and Paer (1797), Sarti and Mayr (1800), and in 1812 created Macrobio in Rossini's *La pietra del paragone*. In 1821 he sang Isidoro in the first performance of Rossini's *Matilde di Shabran* at the Teatro Apollo, Rome; his daughter Annetta Parlamagni sang the contralto role of Edoardo and was also a fine Rosina (*Barbiere*), a role she sang in Siena in 1835.

ELIZABETH FORBES

Parlando (It.: 'speaking'; gerund of *parlare*). A performance direction. 'Parlante' (present participle of *parlare*) is also used. In vocal music, as in Verdi's Requiem at the words 'fac eas, Domine', 'parlando' directs that the voice should approximate to speech. In instrumental music its use is more vague. Beethoven headed the sixth bagatelle of his op.33 *allegretto quasi andante: con una certa espressione parlante* – a context which suggests that *parlante* could be translated 'eloquent'. The second of Schumann's Abegg Variations op.1 has at the beginning *basso parlando*. The notion of musical eloquence was one that sprang naturally from 18th-century philosophical thought on music (*see* RHETORIC AND MUSIC, §I). *Quasi parlando* ('as though speaking') is also common.

DAVID FALLOWS

Parlante. *See* PARLANDO.

Parlasca [Perlasca], **Bernardino.** *See* BORLASCA, BERNARDINO.

Parley of Instruments. British Renaissance and Baroque string consort, founded by PETER HOLMAN in 1979. It takes its name from the public concerts given in London by John Banister in 1676. The core group consists of Judy Tarling and Theresa Caudle (violins), Mark Caudle (bass viol, bass violin and cello) and Peter Holman (harpsichord and chamber organ). The ensemble has pioneered the revival of Renaissance violins modelled on instruments by Gasparo da Salò and Andrea Amati from the late 16th century, which produce a more blended, viol-like sound than their 18th-century counterparts. With their short 'French' bows, the group has done much to revive the 17th-century orchestral repertory in recordings such as 'A High-Priz'd Noise', featuring dance music by Ferrabosco II, Stephen Nau and William Lawes. The Parley also fields a Classical orchestra and has moved into the 19th century with recordings of West-Gallery Music.

LUCY ROBINSON

Parliament. American funk-rock group led by GEORGE CLINTON.

Parlour organ. *See* REED ORGAN.

Parlow, Kathleen (*b* Calgary, 20 Sept 1890; *d* Oakville, ON, 19 Aug 1963). Canadian violinist. At the age of four she was taken to San Francisco where for ten years she studied the violin, first with a cousin and then with Henry

Holmes. In 1905 she travelled to London where she gave a recital in the Bechstein Hall and played Beethoven's Violin Concerto with the LSO. In 1906 she commenced studies in St Petersburg with Auer, who became not only her teacher but her financial and musical adviser for many years. Until 1926 she lived in England, touring Europe (she was Glazunov's choice to play his Concerto at the International Musical Festival at Ostend, 1907) and making regular visits to North America. In 1922 she made a successful tour of the Orient. Returning to the USA in 1926, Parlow made several tours (notably one of Mexico), taught at Mills College, Oakland (1929–36), and led the South Mountain Quartet in the Berkshires during the summers of 1935–41. Finally she settled in Toronto (1941) where she taught at the Conservatory, led her own highly influential quartet (1943–58), performed and made frequent radio broadcasts almost to the end of her life. She also played in a duo with Ernest MacMillan, and with MacMillan and Zara Nelsova formed the Canadian Trio.

Parlow's playing was in the Auer tradition: a big, pure tone, suave legato and effortless technique. She made many recordings before she became somewhat disenchanted with that medium in 1926. Her quartet recorded several works by Canadian composers. She owned the 1735 'Viotti' Guarneri, which she bequeathed to the University of Toronto.

GODFREY RIDOUT/TULLY POTTER

Parma. City in northern Italy. The earliest references to music in the city occur in the medieval statutes of Parma Cathedral, which indicate that it was traditional for the *primicerio* to instruct clerics in the art of choral singing. Valuable information may be found in the work of 15th-century theorists, notably Giorgio Anselmi, a teacher, doctor and mathematician; his treatise *De musica* (1434) was praised by Gaffurius. The presence in Parma of Johannes Legrense, who died there in 1473, was also of some importance; one of his pupils, Nicolaus Burtius of Parma, wrote *Musices opusculum* (1487), disputing the theories of Ramos de Pareia and affirming those of Guido of Arezzo. Burtius was still *guardacore* at the cathedral in 1518.

In the mid-16th century, when the Farnese family created a political stability that Parma had previously lacked, cultural development became more significant and continuous. Music, which played an increasingly conspicuous and clearly defined role in this period, was fostered by three important *cappelle*: at the cathedral, the Chiesa

1. Teatro Farnese, Parma, designed by Giovanni Battista Aleotti, 1618, showing the theatre arranged for the inaugural production, 1628; conjectural reconstruction from R. and H. Leacroft, 'Theatre and Playhouse' (London, 1984)

2. *Design by Domenico Mauro for Sabadini's 'Il favore degli dei', Act 1 scene xxvii, Teatro Farnese, Parma, 1690; engraving by Francesco Maria Francia*

della Madonna della Steccata and the ducal palace. Musicians often served at more than one of these. The cathedral *cappella*, formally founded in 1564, continued a tradition that had been established by such Italian musicians as Archangelo da Correggio (*primicerio* in 1479) and by such foreigners as the Flemish Guglielmo Dillen. Musicians who worked there in the 17th century include Giacinto Merulo (nephew of Claudio Merulo), G.B. Chinelli, M. Dionigi, Marco Marazzoli ('dell'Arpa') and Giorgio Martinelli.

The Steccata *cappella* was established in 1528, the same year as the church. Its greatest period was under Giovanni Maria Lanfranco, *maestro* from 1540 until his death in 1545. Other 16th-century *maestri* included Stefano Alessandrini, Pietro Pontio, who was equally famous as composer and theorist, Raynaldo Caussin, his son Ernold, highly esteemed in his day as a composer, and Gottfried Palmartz, a Flemish organist and composer. The frequent movement of musicians in Parma is exemplified in the career of Claudio Merulo, who was appointed to the court in 1586, to the cathedral as organist in 1587 and to the Steccata as organist from 1591 to 1604; at the Steccata he built for his own use a 4′ positive organ, now in Parma Conservatory. 17th-century developments included the cultivation of instrumental music; but even after 1694, when Duke Francesco granted the musicians the freedom to perform at entertainments outside the church, the *cappella* continued to embellish the major feasts with customary splendour.

The ducal chapel was the central expression of the Farnese family's love of music in the 16th century. It was founded in 1545, before Pier Luigi Farnese had moved to Parma, and with the engagement of famous singers and players, especially from the Netherlands (Alessandro Farnese was governor of Flanders), it played an increasingly important part in the city's life. The most distinguished figures were Claudio Merulo and Cipriano de Rore. Rore was at Parma from 1561 to 1563 and from November 1564 until his death in December 1565; both he and Merulo were buried in the cathedral. Three other Flemish musicians who worked at the court were Baldoino Blondeau, Josquino Persoens and Jean d'Arras. Their colleagues included G.A. Veggio, Giulio Buonagiunta, Orazio Bassani and Santino Garsi; they acted both as composers and as instrumentalists. 17th-century court *maestri di cappella* included Francesco Manelli, who held the same post at the Steccata, F.A.M. Pistocchi, B. Sabadini and Francesco Corselli. Performances of music by the most important composers of the day enriched the court's musical life; among those who dedicated works to the duke of Parma were D'India (*Il quarto libro dei madrigali a cinque voci*), Paolo Quagliati (*Il primo libro*

dei madrigali), Domenico Mazzocchi (*La catena d'Adone*) and Marco da Gagliano (*La Flora*).

Although instrumental music was followed attentively by the Farnese family, theatrical works became increasingly important in the 17th century. In 1618–19 Duke Ranuccio I commissioned Gian Battista Aleotti to construct the Teatro Farnese on the first floor of the Palazzo della Pilotta; it opened on 21 December 1628 (see fig.1) with the tourney *Mercurio e Marte* (libretto by Claudio Achillini, *intermedi* by Monteverdi), which concluded the festivities to mark the marriage of Odoardo Farnese and Margherita de' Medici (see Reiner). Operas by Manelli, Sabadini (fig.2) and Leonardo Vinci were performed there. The theatre was closed in 1732 and was almost completely destroyed in 1944; it was later reconstructed, but is not in use. There were also smaller theatres. The theatre at the Collegio dei Nobili was founded by Ranuccio I in 1600; the Teatro della Racchetta in Borgo del Leon d'Oro was administered by the Sanoitale family from 1688 to 1832, when it was closed. The Teatrino della Corte was built in 1689 by Ranuccio II and opened with G.F. Tosi's *L'idea di tutte le perfezioni*, performed for the duke's marriage to Dorothea of Neuburg (1690). The Teatro Ducale (1688, also built by Ranuccio II) assumed greater significance because it was more suitable for opera; it opened with A. Giannettini's *Teseo in Atene* (libretto by A. Aureli, settings by F. Galli-Bibiena).

The treaty of Aix-la-Chapelle in 1748 assigned the duchy of Parma to the Infante Philip of Bourbon, second son of Elizabeth Farnese, and during the Bourbon domination arts and letters flourished to such an extent that Parma became known as the 'Athens of Italy'. This was largely because of the general intendant of the royal household, Guillaume du Tillot, who was responsible for theatrical performances. The royal orchestra was employed on these occasions, and a Regia Scuola di Canto was established in 1769 to serve the Teatro Ducale; the school was directed by F.Z. Poncini, organist at the Steccata *cappella*. It was during this period that Carlo Innocenzo Frugoni, the refined Arcadian poet, and Tommaso Traetta, the southern composer whom Philip had appointed *maestro di cappella* in 1758, attempted their reform of opera. Their aim was to reconcile French taste and Neapolitan spectacle, and they produced several important works, including *Ippolito ed Aricia* (1759), *I tindaridi* and *Le feste d'Imeneo*. There were also performances of *opere buffe* by Paisiello to librettos by Goldoni (*Le virtuose ridicole*, *Il negligente* and *I bagni d'Abano*), which marked the beginning of the composer's fame. Others working at the ducal court during the 18th century were Alessandro Besozzi (ii), Gaspare Ghiretti, Giuseppe Colla, G.F. Fortunati and G.S. Mangot (Rameau's brother-in-law). In 1792, towards the end of the Bourbon period, Duke Ferdinand named Ferdinando Paer honorary *maestro di cappella*. Although he stayed only a few years in his native city before embarking on his illustrious career in Vienna, Dresden and Paris, Paer occasionally returned to Parma; a visit in 1809 was notable for the first performance of *Agnese* at the Teatrino in the Villa Douglas-Scotti.

In 1815 political events took Napoleon's second wife, Marie-Louise of Austria to Parma, and a new period of musical growth began. She instigated the Scuola Canto Corale at the Ospizio delle Arti, which later also provided instrumental tuition and formed the basis of the present conservatory (the Conservatorio di Musica A. Boito). The court orchestra, directed from 1835 to 1840 by Paganini, was also founded at her behest (1816). In 1821, feeling that the Teatro Ducale was no longer adequate, she commissioned the architect Nicola Bettoli to construct a new theatre; it opened in 1829 with Bellini's *Zaira*, a success which created bitter controversy. In a century when opera provided the most direct and widespread expression of popular involvement in the aesthetic and political ideals of the day, the new Teatro Ducale, after 1849 called the Teatro Regio, became the centre of Parma musical life. It staged opera performances of the highest calibre from 1829 to 1873 and remains an important centre of operatic activity. Besides Verdi, who was brought up near Parma, many notable composers worked there in the 19th century, among them Ferdinando Orlandi, Ferdinando Melchiorri, G.C. Ferrarini, Giovanni Rossi (ii), Gualtiero Sanelli, Ferdinando Provesi and Emilio Usiglio. Parma also produced such important conductors as Manlio and Gaetano Bavagnoli, Giovanni Bolzoni, Cleofonte Campanini, Giuseppe del Campo and Toscanini. Directors of the conservatory included Ferrarini, Giusto Dacci, Arrigo Boito, Giovanni Tebaldini, Guglielmo Zuelli and Luigi Trecate. The most important 20th-century composer from Parma was Ildebrando Pizzetti.

3. *Poster for the Verdi centenary season at the Teatro Regio, Parma, 1913*

The music section of the Palatine library comprises some 100,000 printed books and 500 manuscripts, of which the most precious are the treatises of Aaron, Vicentino and Zarlino, and over 400 sonatas by D. Scarlatti. The collection of about 700 volumes and 150 handbills from the house of Bourbon and the music library of Marie-Louise is an invaluable source of information, especially about early 19th-century works for the theatre.

In 1963, under the auspices of UNESCO and the Italian ministry of education, the Istituto di Studi Verdiani was established at Parma; by its publications and research it has given the study of Verdi's works a new historical and musicological basis. Since 1989 a Verdi Festival has been held annually in September and October.

GIAN PAOLO MINARDI

Parma, Ildebrando da. *See* PIZZETTI, ILDEBRANDO.

Parma, Nicolo [Nicola] (*b* Mantua; *fl* 1575–1613). Italian composer. He probably spent his early career at Mantua in the service of the Gonzaga family, since he was one of seven composers who wrote cantus-firmus masses using chants from the *Kyriale ad usum Ecclesiae S. Barbara*, a revised liturgy devised for the ducal chapel of S Barbara at Mantua by Duke Guglielmo Gonzaga. Parma's mass is in a manuscript source believed to date from about 1575. He also contributed madrigals to *L'amorosa caccia* (RISM 1588[14]), an anthology by native Mantuans many of whom were then employed either at S Barbara or at Mantua Cathedral (S Pietro), and also to the third volume of the *Floridi virtuosi d'Italia* (1586[9]), a collection with a strong Mantuan flavour dedicated to Duke Guglielmo. His own *Secondo libro* of 1592 is dated from Pavia, and the inclusion of his *Gite felici* in Lodovico Torti's *Secondo libro delle canzoni a tre voci* (1584[10]) suggests that he may have been there for some time. In his *Madrigali a sei voci* of 1606 (now lost) he was apparently described as 'maestro di Cappella dell'Incoronata', which Pitoni believed to be S Maria Incoronata at Lodi, near Pavia. From 1610 to 1613 he was *maestro* at Novara Cathedral, but was evidently dissatisfied there, because on 7 April 1613 he applied for a vacant canonry at S Barbara, Mantua. Although it is traditionally accepted that he was successful, since he appears in a list of Mantuan musicians in Cagnani's 'Lettera cronologica', his name does not appear in the surviving chapel records.

In his sacred works Parma handled a variety of styles with competence and fluency. The pieces for small forces are usually in the standard post-Tridentine polyphonic manner, and those for larger ensembles show his ability in a polychoral style. The *Missa Beatae Mariae Virginis* is designed for *alternatim* performance as specified in the S Barbara liturgy.

IAIN FENLON

Parma, Santino Garsi da. *See* GARSI, SANTINO.

Parma, Viktor (*b* Trieste, 20 Feb 1858; *d* Maribor, Slovenia, 25 Dec 1924). Slovenian composer of Italian descent. He studied composition while a law student in Vienna, and attended Anton Bruckner's lectures. After World War I he became honorary Kapellmeister of the National Theatre in Maribor. At the end of the 19th century and the beginning of the 20th, Parma was the most prolific and popular operatic composer of Slovenia. Although cosmopolitan by inclination – his principal model was Verdi in his early and middle creative periods, and he also followed the *verismo* trend to some extent – he was devoted to the national Slovenian cause. As well as several operettas, he composed four operas, of which *Urh, grof celjski* ('Ulrich, Count of Cilli') was the first all-sung Slovenian opera. *Zlatorog* ('The Goat with the Golden

Horns') is his best opera in terms of musical technique and artistic achievement.

WORKS

Stage: Urh, grof celjski [Ulrich, Count of Cilli] (op, 3, A. Funtek), 1894; Ksenija (op, 1, F. Göstl and Funtek), 1896; Stara pesem [The Old Song] (dramatic romance, 1, G. Menasci, after H. Heine), 1897; Caričine Amazonke [The Empress's Amazons] (operetta, A.D. Borum), 1902; Nečak [The Nephew] (operetta, F.A. Hirsch), 1906; Venerin hram [The Temple of Venus] (operetta, R. Felden and B. Swowsky), 1908; Zaručnik v škripcih [The Fiancé in a Fix] (operetta, A. Grund), 1917; Zlatorog [The Goat with the Golden Horns] (prol., 3, R. Brauer, after R. Baumbach), 1919

Other vocal: Povodni mož [The Waterman] (ballad, F. Prešeren), 1v, chorus, orch, 1910; Sveti Senan [Holy Senan] (ballad, F. Prešeren), 1v, chorus, orch, 1922; choruses, songs

MANICA ŠPENDAL

Parmegiani, Bernard (*b* Paris, 27 Oct 1927). French composer. After studying mime with Jacques Lecoq (1957–61), a discipline he has regarded as influential to his composing, he worked as a sound engineer for French television. In late 1959 he joined the Groupe de Recherches Musicales (GRM), founded the previous year by Pierre Schaeffer under the auspices of RTF; *Alternances* (1963) was composed for the famous and tempestuous Concert Collectif devised by Schaeffer. Subsequently he provided studio assistance to several composers, most notably Xenakis, and produced music for radio, television and the stage. As head of the Musique-Image section of the GRM, he also wrote many film scores. Among his wide range of functional compositions is a jingle written for Charles de Gaulle airport in 1971. After leaving GRM in 1992, he set up a studio at Saint Rémy in Provence.

Parmegiani began to write electro-acoustic works for the concert hall in the 1960s. *Violostries* (1965), a dense polyphonic work in four movements for violin and tape, is constructed out of nine basic violin tones (sound cells) suggested to the composer by violinist Devy Erlih. *L'instant mobile* (1966) shows the emergence of Parmegiani's preoccupation with the passing of time, an interest that led 25 years later to a series of works inspired by ideas of temporal perception. *Capture éphémère* (1967), one of his most successful pieces, alludes to the passing of time, as well as to the brevity and transience of sound; it is a dynamic composition in which the subject is perfectly illustrated through micro-montage. In 1971 with *Pour en finir avec le pouvoir d'Orphée*, a work that amounts to a confession of faith, he claims to have broken with the seductive power of repetition and the spellbinding musical fabric in which he had excelled. During this period he composed *Enfer* (1972), the first part of a *Divine Comedy* (after Dante) written in collaboration with Bayle.

It was only with the pivotal work *De natura sonorum* (1975) and subsequently with *Dedans-Dehors* (1977), however, that Parmegiani, out of a desire for rigour and abstraction, broke free of his tendency towards aural enchantment. What his music lost in charm and spontaneity it gained in meaning and compositional skill; nonetheless, the economy of his methods and the linearity of his subjects could not mask the lingering sensuality in his music. From this point on, his sound palette was modified and clarified. To some extent he abandoned massive orchestral textures in favour of a more agile kind of counterpoint. At times, however, he reverted to full-bodied and warm material, often situated in the middle or lower register. In *La création du monde* (1984), for example, he turned back to progressive mutations of sound material. Later works include the four *Exercismes* (1985–9), compositions of almost pointillist refinement; *Litaniques* (1987), which takes up his fascination with incantatory music; *Rouge-Mort* (1987), after Mérimée's *Carmen*, as powerful and dramatic as its model; *Le présent composé* (1991), *Entre-Temps* (1992) and *Plain-Temps* (1993), highly wrought works that refer back to reflections on time; the resonant *Sonare* (1996); and *Sons/jeux* (1998). Other notable features of his music include: a sense of humour, often emphasized by punning titles; a generosity of inspiration in an almost popular vein, particularly evident in his early works; a frequent, but never banal, use of synthesized sound; and a love of the 'material' element.

WORKS

(*selective list*)

Tape: L'instant mobile, 1966; Bidule en ré, 1969; L'oeil écoute, 1970; Pour en finir avec le pouvoir d'Orphée I, 1971; La roue Ferris, 1971; Enfer, 1972 (after Dante: *Divine Comedy*); Ponomatopées, 1972; Paradis, 1974, collab. F. Bayle (after Dante: *Divine Comedy*); De natura sonorum, 1975; Dedans-Dehors, 1977; Des mots et des sons, 1978; Mess media sons/La table des matières, 1979; L'écho du miroir (Parmegiani), 1980; La création du monde, 1984; Exercisme 2, 1985; Exercisme 3, 1986; Litaniques, 1987; Rouge-Mort: Thanatos, 1987 (after Mérimée: *Carmen*); Exercisme 4, 1989; Le présent composé, 1991; Entre-Temps, 1992; Plain-Temps, 1993; Eclectic bolero, 1995; Sonare, 1996; Sons/jeux, 1998

Tape and insts: Violostries, vn, tape, 1965, collab. D. Erlih; Jazzex, jazz qt, tape, 1966; Et après, bandoneon, tape, 1973, collab. M. Portal; Tuba-Raga et tuba-ci tuba-là, tuba, tape, collab. C. Buquet; Exercisme 1, synth trio, tape, 1985, collab. Trio TM+

FRANCIS DHOMONT

Parmerud, Åke (*b* Lidköping, 24 July 1953). Swedish composer. He studied at the Göteborg Conservatory from 1978 after having worked as a photographer. He also studied with Bodin and Rune Lindblad. Since 1987 he has been teaching computer music and composition at the Göteborg Conservatory; he also teaches at the Lindblad-studio of the University of Göteborg.

Parmerud has written instrumental and multimedia music, but it is above all his electro-acoustic music that has attracted attention and won prizes. He often combines tapes with instruments and also with voices. Examples include *Remain*, for orchestra and tape, *Alias* based on vocal sounds and quotations from Dowland and Gesualdo, and *Retur*, for saxaphone quartet and tape. He occasionally collaborates with other composers, such as Anders Blomqvist, with whom he wrote the music for a two-hour documentary on Greta Garbo. This work gave rise to *Strings & Shadows*, in which the sounds of the harp are transformed.

Interactions and transformation processes between different sound sources, and also within the same material (a voice, instrument, chord or specific sound), are characteristic of Parmerud's work. His explorations in

the world of sound culminated in *Grains of Voices*, based on different singing styles throughout the world. The various sections of the work are based on the Creation story in the Bible, nursery rhymes, prayers and poems.

WORKS

Stage: Floden av glas, multimedia, 1978–82; The Heart of Silence, multimedia, 1997–8

HANS-GUNNAR PETERSON

Parodi, Teresa (*b* Genoa, 27 Aug 1827; *d* after 1878). Italian soprano. She entered the musical institute in Genoa at the age of 12, and after studying with Felice Ronconi in Milan was heard by Pasta, who was so impressed that she accepted Parodi as a student and adopted her. Parodi's début was in Bergamo (1845, in *Gemma di Vergy*) and from there she went to Verona, La Spezia, Florence and Rome; her success throughout Italy was immediate. Her London début, as Norma, was at Her Majesty's Theatre (1849). She was engaged by Max Maretzek as the prima donna for his Astor Place Opera Company in 1850–51, with which she appeared to great acclaim in New York, Philadelphia and Boston. She and Maurice Strakosch then organized a concert troupe and embarked on an extended tour of the eastern USA. Parodi subsequently performed again with the Astor Place company and with Strakosch, and sang with the Paris Opéra. In the late 1850s she returned to the USA and (again with Strakosch) organized the Parodi Opera Company, with which she appeared all over the American South and Midwest (1859–60). The extent of Parodi's activities after 1860 is unknown, but as late as 1878 she appeared with James Henry Mapleson's company at the Academy of Music in New York, where her voice was described as 'rich, sweet, clear and sympathetic'.

KATHERINE K. PRESTON

Parody (i). A term used to denote a technique of composition, primarily associated with the 16th century, involving the use of pre-existing material. Although the technique of parody was important, particularly in mass composition, throughout the 16th century, the term itself was not used until 1587 when it appeared in the form 'parodia' on the title-page of a mass by Jakob Paix. 'Missa ... ', 'Missa super ... ' or 'Missa ad imitationem ... ', followed by the title of the work on which the mass was based, had been the usual way in which borrowed material was acknowledged. The preference for Greek terms, seen earlier in Kotter's use of 'anabolē' for prelude, for example, was a product of humanistic influence which was strong in Germany by the time of Paix, and may account for his adoption of 'parodia' from the Greeks as the equivalent of 'ad imitationem'. In 1603 Calvisius published a motet based on a piece of Josquin's labelled 'Parode ad Josquini', and in 1611 there appeared a treatise by Georg Quitschreiber entitled 'De parodia'. The term thus occurred in a mere handful of works of little significance and was unknown before Paix's use of it. Ambros's innocent reference in *Geschichte der Musik* (iii, 1868) to Paix's *Missa parodia* in his description of what has come to be termed 'parody technique' is the source of the general currency it has acquired, particularly since Peter Wagner's *Geschichte der Messe* (1913).

The technique of borrowing more than one voice from a model has a history that stretches back to the 14th century, but in early examples, such as Antonio Zachara da Teramo's Gloria '*Rosetta*' (based on his ballata *Rosetta che non canci*), entire blocks of material are quoted in a manner that resembles more the technique of contrafactum than the parody of the 16th century. In the later 15th century, occasional use of the other voices of a polyphonic model can be found in mass settings, mostly in combination with a cantus firmus structure, as in Obrecht's *Missa 'Fortuna desperata'* and *Missa 'Rosa playsante'*, where substantial passages from the chanson models are introduced when the cantus firmus ceases in the tenor parts.

In Renaissance music the borrowing of material from one composition as the basis of another was commonplace. The essential feature of parody technique is that not merely a single part is appropriated to form a cantus firmus in the derived work, but the whole substance of the source – its themes, rhythms, chords and chord progressions – is absorbed into the new piece and subjected to free variation in such a way that a fusion of old and new elements is achieved.

By the early 16th century the principle was well established as Josquin's *Missa 'Mater Patris'* (printed 1514) and the *Missa 'Ave Maria'* by Antoine de Févin (*d* 1512) show, although there was now an increasing tendency to use motets as source material in addition to secular forms such as chansons and madrigals. Parody masses form a large proportion of the masses of such composers as Gombert, Crecquillon, Morales, Victoria, Lassus and Palestrina. Two of the best-known examples of composers using material from their own motets are Palestrina's *Missa 'Assumpta est Maria'* and Victoria's *Missa 'O quam gloriosum'*; the Sanctus of Monte's *Missa super 'Cara la vita'* and the madrigal of Wert on which it is based are printed in HAM (no.146). Occasionally a double parody appears, as in G.M. Nanino's mass based on Palestrina's madrigal and mass *Vestiva i colli*. The last significant example of the parody mass was Monteverdi's of 1610 based on Gombert's motet *In illo tempore*.

Brief allusions to the technique of parody (though not to the term itself) occur in theoretical writings by Vicentino (1555), Zarlino (1558) and Pietro Pontio (1588 and 1595) long after the method was well established. But the fullest account (an elaboration of Pontio) is found in Cerone's *Melopeo y maestro* (1613). Cerone suggested that the beginning of the model should be used, with varied contrapuntal treatment, at the beginnings of the five main movements of the mass and that their endings should similarly correspond to its close; subsidiary motifs from the model should be employed elsewhere in the mass, although the beginning of the second Kyrie and parts of the Agnus Dei might be freely invented. In

practice there was a tendency to allow the beginning, middle (often the opening of the second part if the model was a motet in two parts) and end of the model to reappear at corresponding points in each main movement. Sub-sections such as the 'Qui tollis' and 'Osanna' were derived from the middle portion, and the whole was drawn together by newly composed sections, which might still be motivically related to the model. Later composers often broke the model down into more sections, but these usually reappeared in the derived mass in their original order.

It has been suggested (Lockwood, 1964) that parody technique of the 16th century and later can be distinguished from earlier examples of borrowing more than one voice from a model because 16th-century parody is based on the structural technique of points of imitation. In Lockwood's view, the change of polyphonic model from the 15th-century chanson with its easily extractable single lines to the motivically structured 16th-century motet, chanson and madrigal created parody technique. Others, however, have argued that there is no causal relationship between the rise of the imitative style in polyphonic models and this type of parody. Debates concerning parody technique have centred on its relationship to the concept of 'imitatio' in the Renaissance. Brown (1982) argued that the idea in the 15th and 16th centuries of creating, by a variety of means, entirely new musical works based on pre-existing models grew from the venerable rhetorical tradition of 'imitatio' as elaborated particularly by the humanists. Meconi (1994), however, argued that there is no real connection between the practice of polyphonic borrowing and rhetorical theories of 'imitatio'. The question of the relationship of parody technique to this important aspect of Renaissance thought therefore remains open.

Parody technique, though primarily associated with the mass, was not uncommon in other areas of 16th-century music. It is found in settings of the *Magnificat*, and chansons were written parodying other chansons. Keyboard and consort pieces, though often mere intabulations of vocal works, sometimes break the model into fragments and expand it by inserted material, as in Giulio Severino's *Fantasia ... sopra 'Susane un jour'* in Molinaro's *Intavolatura* (Venice, 1599[18]), which is based on Lassus's well-known chanson, or Cabezós *Tiento sobre 'Malheur me bat'*, based on a chanson by Ockeghem in the *Odhecaton*. Other examples depart from the model to a greater extent, perhaps making significant use only of its opening section. Parody, whether vocal or instrumental, had its dangers, since it could become compilation rather than composition, and some parodies represent no more than a competent manipulation of scissors and paste. But handled with skill and imagination it could be a genuinely re-creative exercise in free variation.

Although the use of borrowed material persisted through the Baroque period, to employ the term 'parody' in connection with it is in many ways unfortunate since the particular techniques of 16th-century parody are often not in evidence. Purcell's Trumpet Tune 'Cibell' is a parody of a piece by Lully, but Francesco Durante's duet versions of some of Scarlatti's solo cantatas and most of Bach's or Handel's transformations of their own or others' music are perhaps better described as reworkings or arrangements when they are not simply contrafacta.

The type of borrowing implied in parody was discredited during the 19th century when originality was sought of a kind that would admit little more than symbolic quotation in major works. Mendelssohn's, Schumann's and later Busoni's arrangements of Bach, or Grieg's toying with Mozart, cannot usefully be compared with the parody mass, which had constituted a main stream in Renaissance music with a contemporaneity quite distinct from that of the Romantic era's intermittent manipulation of music from its remoter past. A creative engagement with earlier music, as opposed to mere pastiche, has been one of the concerns of 20th-century music. But again, works like Stravinsky's *The Fairy's Kiss* and *Pulcinella*, though exhibiting the kind of interaction of composer and model that was characteristic of 16th-century parody, at the same time indulge a stylistic dichotomy far removed from it. The remoteness in style of the model from that of the idiom in which it is placed in works like Peter Maxwell Davies's Taverner fantasias, which represent a preoccupation with music based on borrowed material, similarly engenders a conflict foreign to the total synthesis that was the aim of 16th-century parody.

MICHAEL TILMOUTH/RICHARD SHERR

Parody (ii). A composition generally of humorous or satirical intent in which turns of phrase or other features characteristic of another composer or type of composition are employed and made to appear ridiculous, especially through their application to ludicrously inappropriate subjects. Parody, in the non-technical sense of the word, has been a frequent source of humour in music, often aimed at the correction of stylistic idiosyncrasies or exaggeration. Some composers have even been prepared to parody their own work: Cesti, himself the author of many cantatas, parodied the genre in *Aspettate, adesso canto*, and the humour of *Così fan tutte* and *Der Schauspieldirektor* owes a good deal to Mozart's treatment of the coloratura style in arias like 'Come scoglio'.

Opera, as the most extravagant kind of musical entertainment, has invited parody throughout its history, but such parodies, meaningless without a knowledge of the original, are often an indication of the success the original achieved. Lully's operas were parodied in performances at the Ancien Théâtre Italien, initially merely spoken, later with pointedly humorous texts allied to Lully's music or with his texts set to popular vaudeville melodies. A rash of parodies was provoked by the Querelle des Bouffons and the Gluck–Piccinni controversy, and many works now regarded as significant in the operatic repertory were at one time given a similar distinction; Mozart's *Die Zauberflöte*, for example, was parodied by Wenzel Müller in 1818, and J.N. Nestroy dealt suitably with the heroics and posturings of Wagner's *Tannhäuser* and *Lohengrin*. Popular theatre and puppet theatre in Vienna provided natural outlets for this kind of satire; from the time of *The Beggar's Opera* the popular theatre in London produced a spate of healthy antidotes to what were considered to be the unnatural features and excesses of serious opera, culminating perhaps in the commonplace words of Captain Corcoran set to high-flown recitative in Sullivan's *HMS Pinafore*. Parody of Italian opera lends dramatic point to the scene in Britten's *Midsummer Night's Dream* where the play within the play becomes a mock-Italian opera within the opera. The more sophisticated and 'artificial' kinds of composition have naturally provided a target for humorous

imitation in popular or lighter forms. Einstein pointed out how the affectation and 'super-sensitivity' of the madrigal were mocked in frottolas, villanellas and canzoni, and how Andrea Gabrieli parodied a famous piece, Rore's *Ancor che col partire*, by having it sung as a three-voice *giustiniana* by three trembling and stuttering old men.

Bach's 'Peasant' Cantata *Mer hahn en neue Oberkeet* (BWV212) is subtitled 'Cantate burlesque' and satirizes among other things the italianate da capo aria so readily adopted by German composers (including Bach himself) at the time. Mozart, too, parodied the incompetent lesser composers of his day, their mechanical constructions and short-breathed paragraphs, in the sextet *Ein musikalischer Spass* K522 (1787), and Wagner presented Beckmesser in a similar light in *Die Meistersinger*.

There is an element of parody in the appropriation of features of popular music in serious works, though pastoral effects like that of simulated bagpipe drones in 18th-century music generally serve to remind the listener that the rustic idiom was merely assumed for the moment: a pleasant conceit like the rustic life depicted in so many paintings of the *fêtes champêtres*, when picnic baskets concealed an excellent bottle of champagne and other necessary appurtenances of civilization. This veneer and artificiality has gone in Beethoven's humorous view of the village band in the scherzo of the Pastoral Symphony; Mahler's street bands are not so much parodies as realities in his all-embracing symphonic world.

Towards the close of the 19th century, parody, especially in French music, became a tool, often sharp-edged, to overthrow the inflated idioms of late Romanticism. The pleasantries of Chabrier's quadrilles on themes from Wagner's *Tristan und Isolde* and similar pieces by Fauré and Messager based on the *Ring* were followed by works of more acid intent such as Debussy's 'Golliwogg's Cake-Walk' with its quotation from *Tristan und Isolde* and the satires and caricatures of Satie. Ravel's piano pieces in the manner of Borodin and Chabrier (the latter once described as a parody of Chabrier parodying Gounod) are comparatively innocent, but Bartók's parody of Shostakovich in the interruption to the intermezzo of the Concerto for Orchestra is more vitriolic in intent. The neo-classical movement saw the production of many works by Stravinsky, Hindemith, Prokofiev and others which imitate certain features of earlier styles, but they were not often primarily intended to display the models in a maliciously humorous light: the urbanity and wit of Haydn and his contemporaries are what Prokofiev sought to mirror in his Classical Symphony.

MICHAEL TILMOUTH

Parody mass. A musical setting of the five movements of the Ordinary of the Roman Catholic Mass that is unified by the presence of the entire texture of a pre-existing polyphonic work, represented by borrowed motifs and points of imitation. The relationship is usually clearest at the beginning, middle and end of each movement. The designation 'imitation mass', more in keeping with the terminology used in the 16th century to describe this type of composition, has been adopted by some scholars.

See also BORROWING IN MUSIC; MASS, §II, 6–9; PARODY (i).

Paroisse-Pougin, Arthur. *See* POUGIN, ARTHUR.

Parra, Violeta (*b* San Carlos, Nuble, 4 October 1917; *d* Santiago, 5 February 1967). Chilean traditional singer, collector, *cantautor* (singer-songwriter), poet and artist. Parra inherited a folkloric repertory from her parents, singing with members of her family in circuses, theatres and bars in Santiago. From 1953 she dedicated her life to the subject of Chilean folklore: collecting, broadcasting on radio, recording and teaching. During the periods 1954–6 and 1961–4 she lived in France, based in Paris, performing in festivals, theatres, clubs, radio and television and recording Chilean music. In 1964 her art was exhibited at the Louvre's Musée des Arts Decoratifs. On her return to Chile she installed a tent in a suburb of Santiago called La Reina, and here she lived and worked with Chilean popular culture, performing until her premature death by suicide.

With intuitive and powerful talent, Parra consciously introduced an original aesthetic to popular urban song, bringing together distinctive aspects of different Latin American traditions in a manner which could be described as a kind of 'primitivism', while at the same time developing literary, musical and performing aspects of the tradition, establishing her own influential models of popular Chilean musics during the 1960s. She had seminal influence on the emerging, groundbreaking generation who were to forge Chile's *nueva canción* (new song) tradition, including her own children Angel and Isabel Parra, VÍCTOR JARA, Patricio Manns and the groups Inti Illimani and Quilapayún, whose music was to play an integral part in the political and social life of 20th-century

Chile from the late 1960s onwards; as well as on the repertory of other innovative popular musicians.

Of her 277 works registered with the Chilean Performing Rights Society the following, recorded for Odeon, France, can be singled out: *Casamiento de negros* (1953), *La jardinera* (1960), *Arriba quemando el sol* (1965), *La carta* (*c*1965), *La pericona se ha muerto* (1966); as can *Cantores que reflexionan*, *El rin del angelito*, *Gracias de la vida*, *Run Run se fue pa'l norte* and *Volver a los diecisiete*, recorded in 1966 for RCA Victor, Chile, issued as part of her final recording *Las últimas composiciones*. Self-taught and self-motivated, she is considered one of the key Latin American folklorists and popular musicians of the 20th century.

JUAN PABLO GONZALEZ

Parran, Antoine (*b* Nemours, 1587; *d* Bourges, 24 Oct 1650). French theorist and composer. He was a Jesuit who became a novice at Nancy in 1608 and later taught grammar and humanistic studies for many years at the college there. His *Traité de la musique théorique et pratique* (Paris, 1639, 2/1646/*R*) is a didactic manual devoted to a systematic presentation of the contrapuntal rules governing an older compositional style, exemplified especially by the music of Du Caurroy and Le Jeune, whose works he praised. He exhibited a historical awareness unusual for the time, as well as concern with the aesthetics and social function of music. He corresponded with Mersenne. He is known to have been a composer too, but except for the examples in his treatise, none of his music appears to have survived.

ALBERT COHEN

Parratt, Sir **Walter** (*b* Huddersfield, 10 Feb 1841; *d* Windsor, 27 March 1924). English organist, teacher and composer. He was a child prodigy, educated by his parents (his father, Thomas, 1793–1862, was organist of St Peter's, Huddersfield, from 1812 to 1862) and at the age of ten could play *Das wohltemperirte Clavier* from memory. From the age of 11, when he had lessons from George Cooper at St Sepulchre's, Holborn, London, he was organist of various churches in Huddersfield and London. In 1861 he became organist of St Michael's, Great Witley, Worcestershire, and private organist to the Earl of Dudley, associating with Adolf von Holst and F.A.G. Ouseley at St Michael's College, Tenbury Wells. In 1864 he married Emma Gledhill, with whom he had five children. In 1868 he went to Wigan as parish church organist and, in 1872, succeeded Stainer at Magdalen College, Oxford. There he conducted the musical societies of Exeter, Trinity, Jesus and Pembroke Colleges, and the Oxford Choral Society, graduating BMus in 1873. His first significant composition, incidental music to *Agamemnon*, was produced at Balliol College in 1880.

In 1882 he received a royal command to succeed George Elvey as organist of St George's Chapel, Windsor, and from there his influence spread over the whole country. When the RCM opened in 1883, George Grove invited him to become chief professor of the organ. Many honours followed; he was knighted and made private organist to the queen in 1892 and became Master of the Queen's Music in 1893 (confirmed by Edward VII and George V) and honorary DMus at Oxford (1894), Cambridge (1910) and Durham (1912). He became dean of the Faculty of Music at London University in 1905 and was president of the Royal College of Organists from 1905 to 1909. In 1908 he succeeded Parry to the chair of music at Oxford, resigning in 1918. Edward VII awarded him the MVO (1901), and George V the CVO (1917) and KCVO (1921).

Parratt is best remembered for the part he played with Parry and Stanford in the renaissance of English music. His impeccable taste and style were founded on his early association with S.S. Wesley and the latter's promotion of J.S. Bach's works, which Parratt continued. He was the foremost exponent and teacher of the organ of his time, most of the leading organ appointments in the country

Walter Parratt: drawing by John Singer Sargent, charcoal, 1914 (Royal College of Music, London)

being filled by his pupils, and he succeeded in raising both the standard of organ playing and the status of the organist. He rejected his contemporaries' attempts to make the organ imitate the orchestra, advocating instead a style founded on technical accuracy, clarity of phrasing and simple registration. From his youth onwards Parratt was conscious of the general decline of taste in church music and, from his appointment to St George's Chapel, set a standard in his choice of works ranging from Tallis to Wesley: here also many works by the rising school of church composers led by Stanford received their first performances. He also promoted contemporary British music through his position as Master of the Music. Parratt had a strong, magnetic, highly strung personality and an engaging sense of humour, and possessed an exceptional memory, which he put to good use in his principal hobby, chess. His compositions include the *Obiit Service*, written for St George's Chapel, the anthem *Confortare* for the coronation of Edward VII (1902) and other sacred music, incidental music for plays and some 20 songs and partsongs. He also published the article 'Music' in T.H. Ward's *The Reign of Queen Victoria* (London, 1887) and contributed ten articles to the second edition of *Grove's Dictionary*.

FREDERICK HUDSON/ROSEMARY WILLIAMSON

Parr-Davies, Harry. *See* DAVIES, HARRY PARR.

Parreiras Neves, Ignacio. *See* NEVES, IGNACIO PARREIRAS.

Parrenin Quartet. French string quartet. Its members since 1980 have been Jacques Parrenin, John Cohen, Jean-Claude Dewaele and René Benedetti. When formed in 1944, the quartet included, besides Serge Collot as viola player, Marcel Charpentier as second violinist and Pierre Penassou as cellist. Collot was succeeded in 1958 by Michel Walès who in turn was replaced by Dénes Marton in 1964. After his death in a car accident in 1970, Marton was succeeded by Gérard Caussé and the same year Jacques Ghestem replaced Charpentier. Parrenin studied in Lorient and at the Paris Conservatoire (with Calvet) and formed the original quartet on completing his studies. After five years as resident ensemble at Radio Luxembourg, the quartet began extensive international touring in 1949 and by 1970 had built up a far-reaching reputation, winning particular acclaim in the USA, eastern Europe and the USSR. Its repertory emphasizes music of the Second Viennese School and a representative cross-section of pieces by the most prominent composers since 1945, and includes the standard Classical and Romantic works. The quartet's familiarity with such an extensive range of styles enriched its interpretations of the key works of the early 20th century, so that for many years and for many listeners its performances of Webern, for instance, were not only authoritative but definitive. Its recordings of the core French repertoire were also acclaimed. At no time did the quartet sacrifice a full ensemble tone even in the most refined, sparsely textured contemporary pieces. However, the later personnel changes seemed to disturb its corporate identity, and the ensemble has found it difficult to sustain the reputation it had enjoyed in the 1950s and 1960s. Among the Parrenin Quartet's many (more than 150) premières are the Quartet no.1 by Roberto Gerhard (1955), the Quartet no.2 by Henze (1952), the Quartet no.6 by Bacewicz (1960), the Quartet no.2 by Penderecki (1968) and works by Berio, Boulez, Ohana, Petrassi and Xenakis.

LESLIE EAST/R

Parris, Robert (*b* Philadelphia, 21 May 1924). American composer and music critic. After graduating from the University of Pennsylvania (BS 1945, MS 1946), he studied composition at the Juilliard School of Music (BS 1948) with Mennin and Bergsma, and at Tanglewood (1950–51) with Ibert and Copland. A Fulbright Fellowship (1952–3) enabled him to continue his studies with Arthur Honegger at the Ecole Normale, Paris. From 1961 to 1975 he served as music critic for the *Washington Post* and *Washington Star*. He joined the music department at George Washington University in 1963. He has received commissions from the Detroit SO (*The Phoenix*, 1969), the Albany SO, New York (*The Messengers*, 1974), the Contemporary Music Forum (*The Book of Imaginary Beings II*, 1983) and the National SO (*Symphonic Variations*, 1987).

Parris's music balances a keen sense of order with an imaginative exploration of extreme registers, wide-ranging textures, intricate rhythmic/metric schemes and virtuosic performance techniques. Together with a penchant for counterpoint, his music demonstrates a striking economy of means, an emboldened sense of contrast and a passionate lyricism. His works are often darkly introspective, even macabre, a feature enhanced by intense chromaticism and expressionistic orchestration. The mystical visions evoked in his preferred texts are often transmuted into musical imagery. (*EwenD*; *Baker 8*)

CECELIA H. PORTER

Parrish, Carl (*b* Plymouth, PA, 9 Oct 1904; *d* Valhalla, NY, 27 Nov 1965). American musicologist and composer. He studied at the American Conservatory in Fontainebleau (1932), the MacPhail School of Music (BM 1933), Cornell University (MA 1936) and Harvard University, where he took the doctorate in 1939 with a dissertation on the influence of the early piano on 18th-century keyboard technique and composition. Harvard awarded him the Knight prize in chamber music composition in 1938, and in 1945 he received the ABC composition prize. Later he won other honours: a Fulbright appointment for research in France in 1953 and a Guggenheim Fellowship in musicology for 1958–9. He taught at Wells College (1929–43), Fisk University (1943–6), Westminster Choir College (1946–9), Pomona College (1949–53) and Vassar College (1953–65), at the summer school sessions at Stanford University and at the universities of Minnesota, North Carolina and Southern California. Parrish's compositions include partsongs for chorus, choral arrangements of folksongs, pieces for piano and for orchestra, a set of organ preludes, a song cycle, a string quartet, and a *Magnificat* for soprano solo, women's voices and organ. He is best known for his writings, of which the most important are two anthologies of early music showing the styles of composition at different periods, and a standard work on the transcription of medieval music.

RAMONA H. MATTHEWS

Parrott, Andrew (Haden) (*b* Walsall, 10 March 1947). English conductor. Following undergraduate and research studies at Merton College, Oxford, he founded the Taverner Choir and then the Taverner Consort and Players, with whom he has made over 50 recordings, ranging from Machaut through much 16th-, 17th- and 18th-century music to Pärt and Tavener. In his refreshing and revealing Bach recordings he has adopted Joshua Rifkin's view that the choruses and orchestral music were usually intended to be performed one-to-a-part. In addition to his work with period-instrument ensembles, Parrott has conducted many orchestras in Britain, Europe and the USA, and in 2000 was appointed music director of the London Mozart Players. In the field of contemporary music he has conducted the London Sinfonietta and the Nash Ensemble, sung with Electric Phoenix, and acted as assistant to Tippett. He worked with Kent Opera from 1989 and has conducted at La Scala, Opera North, Covent Garden and Drottningholm. He has taught through symposia and in workshops at Cambridge, Cornell, the GSM, the RAM and Dartington International Summer School. His scholarly writings reflect his particular concern with performing practice and include many influential articles, notably in *Early Music*, and the book *The Essential Bach Choir* (London, 2000).

GEORGE PRATT

Parrott, (Horace) Ian (*b* London, 5 March 1916). British composer and writer. He studied at Harrow (1929–31), the RCM (1932–4), privately with Benjamin Dale, and at New College, Oxford (1934–7); he took the Oxford DMus in 1940. After teaching at Malvern College (1937–9) and completing military service, he was appointed to a lectureship at Birmingham University in 1946. From 1950 until 1983 he occupied the Gregynog Chair of Music at the University College of Wales, Aberystwyth. His honours include first prize from the Royal Philharmonic Society (1949) for the symphonic poem *Luxor* (1947), the Harriet Cohen Musicology Award (1966) and the Glyndwr Award (1994).

Following his move to Wales in 1950 Parrott identified himself closely with Welsh musical life; at Aberystwyth he fostered generations of young Welsh composers, including William Mathias and David Harries. His compositions also reflect his interest in the Welsh language and culture. His opera *The Black Ram* (1951–3), for example, incorporates Welsh folksongs. Among his most successful works are five symphonies and five string quartets. In addition to composing, he has written on a wide range of topics; his books include *Elgar* (London, 1971), *Cyril Scott and his Piano Music* (London, 1992) and *The Crying Curlew: Peter Warlock* (Llandysul, 1994).

WORKS

Stage: The Sergeant-Major's Daughter (op, K. Womersley), 1942–3, Cairo, 1943; Maid in Birmingham (ballet), 1949; The Black Ram (op, I. Bell), 1951–3, concert perf., BBC, 1957, staged, Aberystwyth, 1966; Once upon a Time (op, C.J. Price), 1958–9, Christchurch, 1960; The Lady of Flowers (op, A. Cooper), 1981, Colchester, 1982

Orch: El Alamein, sym. prelude, 1944; Sym no.1, 1946; Luxor, sym. poem, 1947; Pf Conc., 1948; Pensieri, str orch, 1950; Romeo and Juliet, ov., 1953; Variations on a Theme of Dufay, 1955; Eng Hn Conc., 1956; 4 Shakespeare Dances, 1956; Y Dair [The Three Ladies], 1958; Seithenin, ov., 1959; Sym no.2 'Round the World', 1960; Vc Conc., 1961; The Three Moorish Princesses, nar, orch, 1964; Suite, vn, orch, 1965; Sym. no.3, 1966; Trbn Conc., 1967; Homage to Two Masters, 1970; Reaching for the Light, 2 ob, bn, 2 hn, glock, str, hpd, pf, 1971; Concertino, 2 gui, orch, 1973; Sinfonietta (Sym. no.4), 1978; Sym. no.5, 1979; Arfordir Ceredigion [Ceredigion's Coastline], 1992; Fanfare Ov., 1993

Vocal: I heard a Linnet Courting (R. Bridges), high v, pf, 1940; Absence (J. Donne), low v, pf, 1943; In Phaeacia (J.E. Flecker), A Ship, an Isle (Flecker), high v, orch, 1945–6; Ps xci, SATB, orch, 1946; Three Kings Have Come (cant.), S, Bar, SATB, pf, str, 1951; Jubilate Deo, SATB, org, 1963; The Song of the Stones of St Davids, SATB, 1968; Flamingoes (J. Wilson), low v, pf, 1972; Welsh Folk Song Mass, SATB, 1972; Song for Dyfed, 2 nar, SATB, pf, 1973; Surely the Lord is in This Place, chorus, 1974; Master Hugues of Saxe-Gotha, male vv, 1975; Cymru Fach [Wales], male vv, 1976; 2 Thoughtful Songs (W. Blake, G.M. Hopkins), medium

v, pf, 1977; My Cousin Alice, SATB, tape, 1982; No Complaints, Bar, pf, 1984; Anthem of Dedication, SATB, org, 1985; Mag and Nunc, S, org; Mae 'Ngahriad i'n Fenws [My Love is a Venus] (trad); Adam Lay ybounden (trad); Eastern Wisdom, medium v, orch, 1987; Arglwydd Ein Ior Ni [O Lord, our God], SATB, org, 1991; Aphorisms and Arias of Death and Life (various), S, Bar, pf, 1995; Songs of Renewal (various), S, rec, pf, 1995

Chbr and solo inst: Ob Qt, 1946; Str Qt no.1, 1946; Wind Qnt no.1, 1948; Fantasy-Trio, pf trio, 1950; Family Prelude and Fugue, str, pf, 1956; Str Qt no.2, 1956; Ceredigion, hp, 1957; Str Qt no.3, 1957; Sonatina, trbn, pf, 1958; Fantasy for James Blades, perc, 1959; Septet, fl, cl, str qt, pf, 1962; Str Qt no.4, 1963; Big Hat Guy, vn, pf, 1965; Partita, hp, 1967; Wind Qnt no.2 'Fresh about Cook Strait', 1970; Arabesque and Dance, rec, hpd, 1972; Fanfare and March, brass qt, 1973; Soliloquy and Dance, hp, 1973; Devils Bridge Jaunt, vc, pf, 1974; Duo Fantastico no.1, vn, pf, 1976; Gleaming Brass, brass qnt, 1977; Arfon, hp, 1978; Fantasy-Sonata, cl, pf, 1979; Reflections, vn, pf, 1982; Suite, vc, pf, 1982; Autumn Landscapes, ob, pf, 1983; Duo, cl, tpt, 1983; Duo, 2 gui, 1988; Duo Fantastico no.2, vn, pf, 1990; Fun Fugato and Awkward Waltz, bn, pf, 1990; Fantasising on a Welsh Tune, fl, ob, pf, 1993; Str Qt no.5, 1994; Awel Dyfi, rec, 1995; The Wrexham Pipers Meet the Machynlleth Marchers, rec, gui, 1996; Portraits, rec, pf, 1999

Kbd: Theme and Six Variants, pf, 1945; Fantasy and Allegro, 2 pf, 1946; Fantasia, org, 1974; Aspects, pf, 1975; Fantasy, pf, 1976; Suite no.1, org, 1977; Hands Across the Years, org, 1980

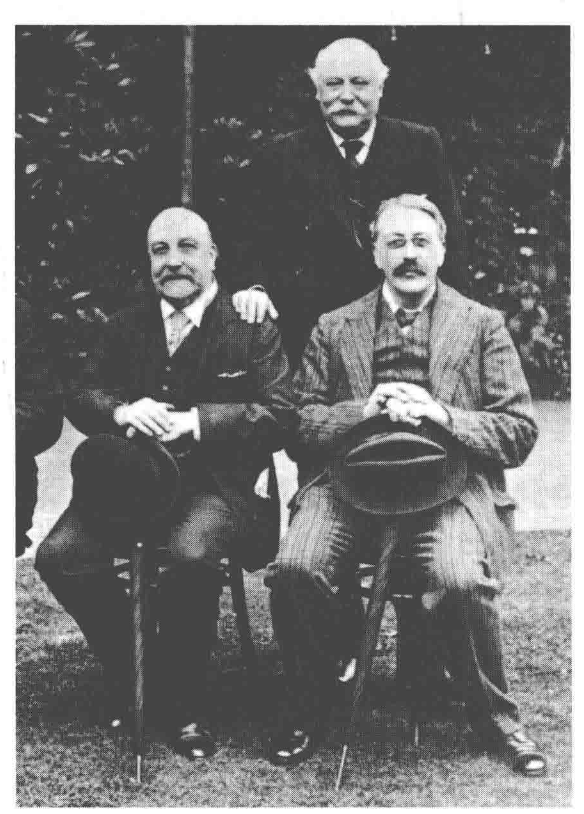
MALCOLM BOYD/GERAINT LEWIS

Parry, Henry John. English music publisher, partner in the firm of EDWIN ASHDOWN.

Parry, Sir **(Charles) Hubert (Hastings)** (*b* Bournemouth, 27 Feb 1848; *d* Rustington, Sussex, 7 Oct 1918). English composer, scholar and teacher. Combining these three activities with a forceful personality and social position, he exercised a revitalizing influence on English musical life at a time in the 19th century when standards of composition, performance, criticism and education were low.

1. Life and works. 2. Style and influence.

1. LIFE AND WORKS. The sixth child from the first marriage of Thomas Gambier Parry, painter and art collector, Parry grew up at Highnam Court near Gloucester. While attending Twyford School, near Winchester, he became acquainted with S.S. Wesley at Winchester Cathedral. At Eton he received instruction from Sir George Elvey at St George's Chapel, Windsor, and obtained the BMus in 1866, before entering Exeter College, Oxford, to read law and modern history. During the summer of 1867 he studied in Stuttgart with Henry Hugo Pierson; this was the only formal musical training he received while at Oxford. After taking the BA in 1870 he worked at Lloyd's of London as an underwriter, a move in accordance with both his father's wishes and those of his future wife's family. In 1872 he married his childhood sweetheart, Maude Herbert, sister of George, 13th Earl of Pembroke; they had two children, Dorothea and Gwendolen, named after characters in George Eliot's novels.



In his first few years at Lloyd's Parry took some lessons with William Sterndale Bennett. Desiring more criticism than Bennett was prepared to give, he applied (through Joachim) to study with Brahms in Vienna. When this project failed to materialize, he began a course of study with Edward Dannreuther, a renowned pioneer, champion of Wagner and piano virtuoso. Under Dannreuther's tuition Parry improved his piano technique, but gradually emphasis shifted from the keyboard repertory to the discussion and study of contemporary music, particularly of instrumental works by Liszt, Tchaikovsky and Brahms. This had a profound effect on the development of Parry's musical language, a fact demonstrated in the scale and profusion of chamber works such as the *Grosses Duo* for two pianos (1875–7), the Piano Trio in E minor (no.1, 1877), the Nonet for wind instruments (1877), the Fantasie Sonata in B minor for violin and piano (1878) and the Piano Quartet (1879), all written for Dannreuther's series of semi-private concerts at his home, 12 Orme Square, Bayswater. Parry also became a fervent Wagnerite, attending *Der Ring des Nibelungen* at Bayreuth in 1876, assisting when Wagner was Dannreuther's guest in London in 1877 and again visiting Bayreuth, to hear *Parsifal* three times in 1882. His admiration for Wagner is evident in his concert overture *Guillem de Cabestanh* (1878), conducted by Manns at the Crystal Palace in 1879, and perhaps more controversially in his setting of Shelley's *Prometheus Unbound* for the Gloucester Three Choirs Festival in 1880, a year which also witnessed two performances of his Piano Concerto in F♯ major.

Parry gave up his work at Lloyd's in 1877, confident that he could make a living as a musician. Besides Dannreuther's encouragement, further support came from George Grove, who engaged Parry as sub-editor for his new *Dictionary of Music and Musicians*, an enterprise to which Parry contributed more than 100 articles. Within the province of musical scholarship and theory Parry showed himself to be versatile and original, attributes which, combined with his compositional abilities, persuaded Grove to enlist him in 1883 as Professor of Musical History at the newly founded RCM. That same year the University of Cambridge conferred on him an honorary doctorate, Oxford following suite in 1884 as well as appointing him choragus to the university.

Parry's first period of creative maturity was largely dominated by instrumental composition, and during the 1880s the production of no fewer than four symphonies and a symphonic suite (*Suite moderne*) suggests that orchestral music held a major attraction for him. In addition to the challenge of large-scale symphonic forms, he also turned his attention to opera, inspired by his vivid impressions of Wagner's music dramas and by the interest shown in indigenous opera by Carl Rosa. Unfortunately, however, Parry lacked experience of the stage and he failed to assimilate the necessary elements of Wagner's musico-dramatic technique, shortcomings which were not enhanced by Una Taylor's deficient libretto. *Guenever*, his one foray into operatic music, was abandoned after Rosa's refusal to perform it in 1886. To counter his disappointment, Parry enjoyed his first taste of national acclaim with the ode *Blest Pair of Sirens*, written for and dedicated to Stanford and the Bach Choir. Its success brought mixed blessings: his reputation as a composer rapidly became established, but the demands brought by commissions from provincial festivals signalled a shift from symphonic to choral music, a change of direction much lamented by Bernard Shaw.

In 1888 Parry's national renown was consolidated with *Judith*, the first of three oratorios. Other choral works followed in rapid succession, notably the *Ode on St Cecilia's Day* (1889) for Leeds, *L'Allegro ed Il Pensieroso* (1890) for Norwich, *The Lotos-Eaters* for Cambridge (1892), *Job* (1892) for Gloucester and *King Saul* (1894) for Birmingham. For the Purcell bicentenary in 1895 he worked with Robert Bridges on the ode *Invocation to Music*, and, two years later, composed a setting of the *Magnificat* in celebration of Queen Victoria's Diamond Jubilee. Such was Parry's esteem and popularity during the 1890s that he was regarded as the nation's unofficial composer laureate, a position he bore with some reservation. In 1895 he succeeded Grove as director of the RCM and in 1898 he was knighted in recognition of his services to British music. In 1900, after Stainer's resignation, he was appointed Heather Professor of Music at Oxford and in 1902 he was made a baronet. Suffering from worsening heart trouble he was forced to give up the chair at Oxford in 1908, but retained his directorship at the RCM until his death.

A Song of Darkness and Light (1898), his second collaboration with Bridges, marked a period of his output in which he was preoccupied with the expression of his own personal heterodoxy. Between 1898 and 1908 he produced a number of choral works (so-called ethical oratorios) such as *Voces clamantium* (1903), *The Love that Casteth out Fear* (1904) and *The Soul's Ransom* (1906), drawing on texts from the Bible and his own words in which he attempted to elucidate his humanitarian convictions. In 1907 this culminated in *The Vision of Life*, written for the Cardiff Festival and for which Parry provided the entire text. The sentiments and symbols of *The Vision of Life*, with its main protagonist, The Dreamer, and the chorus of Dream Voices, deeply appealed to Elgar who, significantly perhaps, went on to explore a similar theme in *The Music Makers* of 1912. The unfocussed and at times obscure philosophical message of these ethical deliberations left audiences unmoved and, after the performance of *Beyond these voices there is peace* at Worcester in 1908, caused Parry to reconsider the best means of enunciating his artistic ideals. In his later choral works he wisely returned to the poetry of established authors, setting Dunbar's *Ode on the Nativity* (1912) and Bridges' naval ode *The Chivalry of the Sea* (1916), an achievement crowned by the supremely eloquent and poignantly valedictory *Songs of Farewell* (1914–15), a group of six motets which represent the summit of British *a cappella* music.

Hubert Parry (standing), with Alexander Mackenzie (left) and Charles Villiers Stanford, Bournemouth, 1910

Thanks largely to the initiatives of the Philharmonic Society, Parry also turned his attention to orchestral composition. Between 1909 and 1910 he extensively revised his Fourth Symphony, composing a new scherzo as well as appending an ethical programme ('Finding the Way') to the entire work. Similar programmes, of an essentially autobiographical significance, informed his last two orchestral works, the Fifth Symphony (later renamed Symphonic Fantasia '1912'), written for the (by then 'Royal') Philharmonic Society's centenary celebrations, and his only symphonic poem, *From Death to Life* (1914).

2. Style and influence. Parry's musical style is a complex aggregate reflecting his assimilation of indigenous as well as continental traditions. Trained in the organ loft during his schooldays and educated through the degree system of the ancient universities, he had imbibed fully the aesthetics of Anglican church music and the oratorio-centred repertory of the provincial music festivals by the age of 18. His early works, sacred and secular, betray the influences of Sterndale Bennett, Stainer and, most of all, Mendelssohn, whose stylistic paradigms are clearly emulated in his Oxford exercise 'O Lord, Thou hast cast us out' (1866). His study with Pierson, however, disabused him of Mendelssohn and the years spent working with Dannreuther during the 1870s were crucial in awakening him to the music of Brahms and Wagner. Both these composers exerted a powerful influence on the development of his technique. The chamber works written between 1876 and 1890 exhibit a thorough understanding of Brahmsian generative procedures, the Piano Quartet in A♭ and the Piano Trio in B minor (no.2) being particularly fine examples. Other influences, notably those of Schumann and Liszt, are also evident in the more experimental Wind Nonet (1877) and Fantasie Sonata in one movement for violin and piano (1878), which show an interest in melodic transformation and cyclic design. An especially intriguing instance of the Liszt–Brahms fusion can be seen in the Piano Concerto in F♯ (1878–80), in its arresting tonal events, inventive structures and, perhaps most remarkably, in the lengthy virtuoso cadenza at the end of the finale.

Cyclic treatment remained an important component of Parry's orchestral music, but in these larger works his more mature lyrical style, infused with a diatonicism gleaned from his English heritage and allied with the Romantic sonority of larger orchestral forces, begins to take centre stage. The rhapsodic First Symphony (1880–82) and the melodically fertile Second (1882–3)

have a confidence and energy which are consolidated in the shorter, more overtly Classical Third Symphony, the first version of the Fourth Symphony (both performed in 1889) and in the motivically discursive *Overture to an Unwritten Tragedy* (1893). Parry once again shows a predilection for original structural thinking, be it in the illusion of four symphonic movements in his Symphonic Variations (1897) or the deft manipulation of sonata principles in the *Elegy for Brahms* (1897), a work unperformed during his lifetime but which Stanford exhumed and conducted at the RCM memorial concert for Parry in November 1918. This inclination for formal intricacy continued in the considerably revised and expanded Fourth Symphony (1909–10), and, above all, in the cyclic involution and structural compression of the Symphonic Fantasia '1912', arguably his masterpiece.

The influence of Wagner is conspicuous in both the *Concertstück* for orchestra (1877) and the overture *Guillem de Cabestanh* (1878), but it was altogether more prominent in his first major choral commission, *Scenes from Prometheus Unbound* (1880), a work hailed by some as the beginning of the so-called English Musical Renaissance. The opening prelude and scenes in Part 2 for Jupiter and The Spirit of the Hour, in revealing a clear debt to *Tristan und Isolde* and the *Ring*, had a powerful sense of contemporaneity which struck a note of modernism in the ears of English audiences. In fact, while *Prometheus* displays a certain *étincelle électrique* (as described by Prosper Sainton: 'Charles Harford Lloyd', *MT*, xl, 1899, p.373), it bears all the symptoms of immaturity and inchoateness, and its most 'modern' traits are precisely those which Parry later chose to jettison. In *Blest Pair of Sirens* his earlier Wagnerian enthusiasms are more completely digested (as in the paraphrase of *Die Meistersinger von Nürnberg* in the introduction) within a muscular language of greater diatonic dissonance, a stylistic attribute linking him with his English predecessors such as Stainer, S.S. Wesley, Ouseley and Walmisley. This diatonic tendency remained a pronounced feature of Parry's music and was used to great effect, be it lyrically in *L'Allegro*, the *Invocation to Music* and *The Pied Piper of Hamelin*, grandiosely in the *Te Deum* (1873), the coronation anthem *I was glad* and the *Ode to Music*, or polyphonically in *De profundis* (a tour de force for 12-part chorus), the *Ode on the Nativity* and the *Songs of Farewell*.

Parry also showed a flair for miniature forms. His 12 volumes of *English Lyrics* were undoubtedly an important vernacular precedent to the outpouring of songs by the next generation, particularly those setting Shakespeare. In contrast to the Elizabethan lyrics of the earlier volumes, he evidently felt an increasing empathy with contemporary poetry, which he used more frequently in later songs (the ninth set is devoted entirely to the poems of Mary Coleridge). The quality of these settings is variable but a number, among them *Through the Ivory Gate* (set iii), *A Welsh Lullaby* (set v) and *From a City Window* (set x), are especially fine. Other small-scale compositions – the *12 Short Pieces* (1894) for violin and piano, the *Shulbrede Tunes* for piano, the late chorale preludes and fantasias for organ and some of the partsongs – show a high level of imagination and craftsmanship, but none perhaps more so than the elastic phraseology of the choral song *Jerusalem*, an immutable favourite with the English public.

Another important facet of Parry's creative energies was his contribution to musical scholarship. At Oxford he was deeply impressed by Ruskin's morality of art, to which he held a lifelong allegiance. In maintaining an interest in philosophy, the arts, social sciences and politics after leaving university, he was also drawn into the tide of evolutionist thought, particularly through the 'social Darwinism' of Herbert Spencer. This profoundly influenced his approach to the study of musical history, in which he believed that the principles of man's evolutionary past, as seen biologically, intellectually and socially, were, according to the natural laws of the universe, reflected in the growth and change in music. This stance in itself transformed the role of the music critic and historian into one analogous with the scientist. Parry remained a fervent exponent of musical evolutionism, espousing tenets of ethnocentrism (in which German music was venerated above that of other European nations), the importance of tradition and training, and the balance between expression and design. Such standpoints recur with conviction in his many articles, lectures and books, notably *The Art of Music* (1893, significantly renamed *The Evolution of the Art of Music* in later editions) and *Style in Musical Art* (1911), a compilation of his Oxford lectures. Moreover, at the end of his life Parry continued to pursue an essentially Darwinist philosophy outside music in his unpublished *Instinct and Character*, a somewhat over-amplified but nevertheless valuable summation of his moral aesthetic.

Parry's personality, as with many Victorians, embraced many apparent contradictions. One side of it reveals the idealist, the radical and even, perhaps, the political rebel (as a supporter of Gladstonian liberalism). And yet, as an establishment figure, he was also an ardent advocate of tradition, nervous of artistic extremes and therefore seemingly conservative and restrained. He was drawn towards hedonism (as is clear from *The Lotos-Eaters*) but this is consciously balanced by a puritanical zeal. As if to compound these apparent paradoxes, he was deeply religious but nevertheless developed a pathological loathing for organized religion. His musical style and sensibility, capable of passionate yearning and affecting melancholy, is also imbued with a natural reserve, a tempered respect for technique and a propensity for moderation. These attributes, combined with a profound sense of the composer's obligation to society, was his legacy to a younger generation of composers and admirers, among them Vaughan Williams, Holst, Howells, Bliss and, most notably, Finzi.

WORKS

fuller list in Dibble (Life and Music, 1992)

printed works first published in London unless otherwise stated

MSS in GB-Ctc, Lbl, Lcm, Lco, Ob, R; Old Rectory, Highnam; Shulbrede Priory, Sussex

STAGE

incidental music unless otherwise stated

The Birds (Aristophanes), Cambridge, 27 Nov 1883 (1885)
Guenever (op, U. Taylor, Ger. trans. by F. Althaus) 1884–6, unperf.
The Frogs (Aristophanes), Oxford, 24 Feb 1892 (Leipzig, 1892); rev., Oxford, 19 Feb 1909
Hypatia (S. Ogilvie), London, Haymarket, 2 Jan 1893; suite, orch, 5 movts, London, 9 March 1893
A Repentance (P.M.T. Craigie), London, St James's, 28 Feb 1899
Agamemnon (Aeschylus), Cambridge, 16 Nov 1900 (1900)
The Clouds (Aristophanes), Oxford, 1 March 1905 (Leipzig, 1905)
Proserpine (ballet, P.B. Shelley), London, Haymarket, 25 June 1912
The Acharnians (Aristophanes), Oxford, 21 Feb 1914 (1914)

ORATORIOS, SERVICES

Magnificat and Nunc dimittis, A, 1864
Te Deum, B♭, ?1864
Morning, Communion and Evening Service, D, chorus, org, 1866–9 (1868–9)
Kyrie eleison, fugue, 8vv, 1867
Te Deum, E♭, 1873
Evening Service ('The Great'), D, 1881, ed. Dibble (1984)
Judith (orat, Apocrypha and H. Parry), S, A, T, B, chorus, orch, Birmingham, 29 Aug 1888 (1888)
Job (orat, Bible and Parry), S, T, 2B, chorus, orch, Gloucester, 8 Sept 1892, vs (1892), fs (1898)
King Saul (orat, Bible and Parry), S, A, T, B, chorus, orch, Birmingham, 3 Oct 1894 (1894)
Magnificat, F, S, chorus, orch, Hereford, 15 Sept 1897 (1897)
Thanksgiving Te Deum, F, S, B, chorus, orch, Hereford, 11 Sept 1900 (1900); rev., with Eng. text, Gloucester, 11 Sept 1913 (1913)
Te Deum, D, for coronation of George V, chorus, orch, London, Westminster Abbey, 23 June 1911 (1911)

OTHER SACRED

Praise God from whom all blessings flow, chorale, 1864–5
Lobet den Herren, 5vv, 1867
O Lord, Thou hast cast us out (cant., Bible), Eton College, 8 Dec 1867 (1867)
Ode on St Cecilia's Day (A. Pope), S, B, chorus, orch, Leeds, 11 Oct 1889 (1889)
De profundis (Ps cxxx), S, 12vv, orch, Hereford, 10 Sept 1891 (1891)
Grace for a City Dinner (Benedictus), 4vv, 1897
Voces clamantium (Bible and Parry), S, B, chorus, orch, Hereford, 10 Sept 1903 (1903)
The Love that Casteth out Fear (sinfonia sacra, Bible and Parry), chorus, orch, Gloucester, 7 Sept 1904 (1904)
Praise God in His Holiness, ps, B, org, 1906
The Soul's Ransom (sinfonia sacra, Bible and Parry), S, B, chorus, orch, Hereford, 12 Sept 1906 (1906)
Beyond these voices there is peace (Bible and Parry), S, B, chorus, orch, Worcester, 9 Sept 1908 (1908)
Eton Memorial Ode (R. Bridges), Eton College, 18 Nov 1908 (1908)
Ode on the Nativity (W. Dunbar), S, chorus, orch, Hereford, 12 Sept 1912 (1912)
I believe it (R. Browning), soliloquy, B, org, 1912
God is our hope (Ps xlvi), B, double chorus, orch, London, St Paul's Cathedral, 24 April 1913 (1913)

motets

[6] Songs of Farewell: My soul, there is a country (H. Vaughan), 4vv (1916); I know my soul hath power to know all things (J. Davies), 4vv (1916); Never weather-beaten sail (T. Campion), 5vv (1916); There is an old belief (J.G. Lockhart), 6vv (1916); At the round earth's imagined corners (J. Donne), 7vv (1917); Lord, let me know mine end (Ps xxxix), 8vv (1918)

anthems

In my distress, 1863
Fear thou not, 1864
O sing unto the Lord a new song, 1864
Blessed is He, 1865 (1865)
Prevent us O Lord, 1865 (1865)
Why boastest though thyself, 1865
Blessed are they that dwell in Thy house, 1870
Lord, I have loved the habitation of Thy house, 1870
Hear my words, ye people (Bible), chorus, orch, Salisbury, 10 May 1894 (1894)
I was glad (Ps cxxii), coronation anthem for Edward VII, London, Westminster Abbey, 9 Aug 1902 (1902), rev. version, 23 June 1911 [for George V]

Hymn tunes and chants

SECULAR CHORAL

with orchestra

Scenes from Prometheus Unbound (dramatic cant., Shelley), S, A, T, B, chorus, orch, Gloucester, 7 Sept 1880 (1880)
The Glories of Our Blood and State (ode, J. Shirley: *The Contention of Ajax and Ulysses*), chorus, orch, Gloucester, 4 Sept 1883 (1885)
Blest Pair of Sirens (At a Solemn Music) (ode, J. Milton), chorus, orch, London, 17 May 1887 (1887)
L'Allegro ed Il Pensieroso (cant., Milton), S, B, chorus, orch, Norwich, 15 Oct 1890 (1890)
Eton (ode, A.C. Swinburne), chorus, orch, Eton College, 28 June 1891 (1891)
The Lotos-Eaters (A. Tennyson), choric song, S, chorus, orch, Cambridge, 13 June 1892 (1892)
Invocation to Music (ode, Bridges), S, T, B, chorus, orch, Leeds, 2 Oct 1895 (1895)
A Song of Darkness and Light (Bridges), S, chorus, orch, Gloucester, 15 Sept 1898 (1898)
Ode to Music (A.C. Benson), S, S, A, T, B, chorus, orch, London, RCM, 13 June 1901 (1901)
War and Peace (sym. ode, Benson and Parry), S, A, T, B, chorus, orch, London, Royal Albert Hall, 30 April 1903 (1903)
The Pied Piper of Hamelin (cant., Browning), T, B, chorus, orch, Norwich, 26 Oct 1905, vs (1905), fs (1906)
The Vision of Life (sym. poem, Parry), S, B, chorus, orch, Cardiff, 26 Sept 1907 (1907); rev. 1914 (1914) [rev. for Norwich Festival but not perf.]
The Chivalry of the Sea (naval ode, Bridges), chorus, orch, London, 12 Dec 1916 (1916)

partsongs

Tell me where is fancy bred (W. Shakespeare), 4vv, 1864; Fair daffodils (R. Herrick), madrigal, 5vv, 1865 (1866); Persicos odi (Horace), 4vv, 1865; Take, O take those lips away (Shakespeare), TTBB, 1865; Oft in the stilly night (T. Moore), 1866; Dost thou idly ask (W.C. Bryant), 1867; Pure spirit, O where art thou? (?Parry), 1867; There lived a sage (?Parry), 4 male vv, 1869; He is coming (Mrs H. Gladstone), carol (1874); 3 Trios, female vv (1875); 6 Lyrics from an Elizabethan Song Book, 4–6vv (1897); 6 Modern Lyrics, 4vv (1897); 8 Four-Part Songs (1898); Who can dwell with greatness (A. Dobson), 5vv, 1899, in *Choral Songs . . . in Honour of Queen Victoria* (1899); In Praise of Song (?Parry), 8vv (1904); 6 Partsongs (1909); 7 Partsongs, ATB (1910); La belle dame sans merci (Keats), 5vv, 1914–15, ed. P.M. Young (1979); When Christ was born of Mary free (Harleian MS) (1915); I know an Irish lass, 4vv, ?1916; 2 carols (1917)

unison and school songs

Rock-a-bye (1893); Land to the leeward ho! (M. Preston) (1895); The best school of all (H. Newbolt), 1908 (1916); 5 Unison Songs (1909); School Songs (1911); 3 Unison Songs (1913); School Songs (1914); Come join the merry chorus (H. Smith) (1915); A Hymn for Aviators (M.C.D. JEREMY DIBBLE

Parry, John (i) ['Parry Ddall'] (*b* Bryn Cynan, *c*1710; *d* Ruabon, 7 Oct 1782). Welsh harper. He was blind, and was taught to play the Welsh triple harp by a relative, Robert Parry of Llanllyfni, and by Stephan Shon Jones of Penrhyndeudraeth. With perseverance and (according to the report of another blind harper, Richard Roberts of Caernarvon, 1796–1855) 'earnest prayer for the gift of playing the harp', Parry became the most distinguished harper of his generation in Great Britain. From 1734 he was harper to the first Sir Watkin Williams Wynn of Wynnstay, Ruabon, and continued from 1749 to his death in the service of Sir Watkin Williams Wynn II. This Welsh baronet was an active patron of the arts and he numbered Sir Joshua Reynolds, David Garrick and Handel among his friends. It was probably in playing for Sir Watkin's circle in London that Parry so impressed Handel and also recommended himself to the attention of the Prince of Wales, who became his patron. A performance of Parry's at Cambridge in 1757 proved to be a source of inspiration for Thomas Gray's Pindaric Ode *The Bard*; Gray wrote to his friend William Mason:

> Mr Parry has been here and scratched out such ravishing blind harmony, such tunes of a thousand years old, with names enough to choke you, as have set all this learned body a dancing, and inspired them with due respect to my old bard, his countryman, whenever he shall appear. Mr Parry, you must know, has set my Ode in motion again, and has brought it at last to a conclusion.

Parry's most important contribution lay in the fact that, in collaboration with Evan Williams, a Welsh organist and fellow harper in London, he published the first collection (supposedly entirely) of Welsh melodies. Of the 24 untitled tunes in *Antient British Music* at least half are indisputably Welsh: a few of Parry's florid arrangements, however, can be identified as tunes known in 16th-century England, such as *The Frog Galliard* (Aria II), *Monsieur's Almain* (Aria X) and *Mall Sims* (Aria XXIII). *Mock Nightingale* (Aria VI) is a variant of an early 18th-century country dance tune and Aria XV is derived from the 17th-century ballad *Methinks the Poor Town*. This kind of variety was typical of a professional Welsh harper's repertory passed on orally before the middle of the 18th century.

Parry's final volume, *British Harmony*, contains, among its traditional Welsh tunes, a May carol and a New Year *quête* song, while the piece *Erddigan tro'r Tant* has some of the characteristics of the harp music of the Robert ap

Huw period. As in his other collections no words are printed with the music. However, in 1745, shortly after the appearance of *Antient British Music*, Parry and Williams intended to bring out a volume of Welsh tunes with words. A specimen manuscript exists containing six tunes with Welsh words to be sung in *canu penillion* style, the earliest examples of this form of traditional Welsh singing.

WORKS

Antient British Music, or A Collection of Tunes, never before published, which are retained by the Cambro-Britons (more particularly in North Wales), hp/hpd/vn/fl, bc (London, 1742), collab. E. Williams
A Collection of Welsh, English & Scotch Airs with New Variations also 4 New Lessons, hp/hpd (London, 1761), also incl. 12 Airs, gui
Twelve Airs, gui/2 gui (London, *c*1765)
British Harmony, being a Collection of Antient Welsh Airs, the Traditional Remains of those originally sung by the Bards of Wales (Ruabon and London, 1781, 2/*c*1809 as Cambrian Harmony)

OWAIN EDWARDS/PHYLLIS KINNEY

Parry, John (ii) (*b* Denbigh, 18 Feb 1776; *d* London, 8 April 1851). Welsh instrumentalist and composer. After studying the harp and the clarinet he joined the band of the Denbighshire militia in 1793 and became master of it in 1795. In this position he became proficient on a large number of instruments, and he exhibited his talents at Covent Garden in 1805. He settled in London in 1807, as a teacher of the flageolet. In 1809 he was engaged to provide some music for Vauxhall Gardens; in 1814 he began composing and arranging music for various operatic farces and other stage productions. In several cases he was responsible for the libretto as well as the music. At least five dramatizations of Scott's *Ivanhoe* were presented in London in 1820: the one at Covent Garden was the most successful, partly because of Parry's song 'The Lullaby'. He was particularly skilled at composing ballads with a Celtic flavour, which he often sang himself. At his farewell concert in June 1837 he sang his own popular ballad *Jenny Jones* accompanied on the harp by his son, JOHN ORLANDO PARRY. The duet *Flow gently Deva* was also for many years a favourite.

Parry maintained his Welsh links, conducting the cymrodorion and eisteddfods held in various places in Wales. He was one of the promoters of the Cambrian Society, and at the Powys Eisteddfod of 1820 he received the title of 'Bardd Alaw' (Master of Song). He was treasurer of the Royal Society of Musicians from 1831 to 1849, and secretary of the Royal Musical Festival held at Westminster Abbey in 1834. He wrote several books on musical subjects and was an assiduous collector and arranger of Welsh melodies. From 1834 to 1849 he was music critic of *The Morning Post*.

WORKS

all performed in London; music lost by the composer unless otherwise stated

LCG – *Covent Garden*
LDL – *Drury Lane Theatre*

Fair Cheating, or The Wise Ones Outwitted (operatic farce), LDL, 15 June 1814, vs pubd
Harlequin Hoax, or A Pantomine Proposed (extravaganza, T. Dibdin), Lyceum, 16 Aug 1814, vs pubd
Oberon's Oath, or The Paladin and the Princess (musical drama, B. Thompson), LDL, 21 May 1816

PETER CROSSLEY-HOLLAND/NICHOLAS TEMPERLEY

Parry, John Orlando (*b* London, 3 Jan 1810; *d* East Molesey, Surrey, 20 Feb 1879). Welsh pianist and singer, son of JOHN PARRY (ii). He studied the harp under Bochsa and in May 1825 appeared as a performer on that instrument. His principal gifts, however, were as a pianist and, above all, as a baritone and entertainer. His voice was rich, though not powerful, and was at its best in a comic vein or in simple ballads. In 1833 he went to Italy, living for some time at Naples where he learnt from Lablache. At his benefit concert in June 1836 he gave the first public indication in England of the extraordinary nature of his comic talent, by joining Maria Malibran in Mazzinghi's duet *When a little farm we keep*, and mimicking Harley. In the same year he appeared in his father's *Sham Prince*, in Hullah's *Village Coquettes* and other pieces. In 1837 he gave his *Buffo Trio Italiano* (accompanying himself on the piano), in which he successfully imitated Grisi, Ivanov and Lablache. In 1840 he introduced *Wanted, a Governess* (with words by George Dubourg), the success of which induced him to abandon serious and devote himself to comic singing. In 1849 he gave up concert singing and produced an entertainment, *Notes, Vocal and Instrumental*, written by Albert Smith, in which he exhibited a large number of his own watercolour paintings, and which was very successful. He gave similar entertainments in 1850 and 1852. He had long been a victim of fits of nervous hysteria; in 1853 these became so bad that he was compelled to retire from public performance. He became organist of St Jude's, Southsea, and practised as a teacher. He made several brief returns to the stage, the last at the Gaiety Theatre

on 7 February 1877. Parry composed or compiled a large number of songs, of which 34 are listed by Boase (*DNB*). He also wrote a few glees and a good deal of dance music for the piano.

W.H. HUSK/NICHOLAS TEMPERLEY

Parry, Joseph (*b* Merthyr Tydfil, 21 May 1841; *d* Penarth, 17 Feb 1903). Welsh composer. He came from a musical family and showed talent at an early age, but owing to the poor circumstances of his parents he gave up school to work in a coal mine at the age of nine. In 1854 his family emigrated to Danville, Pennsylvania, where they lived in a Welsh community. He was employed in an iron works, but he also learnt music, including theory, from two emigré Welsh musicians, John Abel Jones and W.J. Price. During the next 20 years he travelled frequently between Wales and the USA, performing, studying and composing songs and glees with Welsh texts. He won several eisteddfod prizes in both countries. In 1865 he was inducted into the Gorsedd of Bards of the National Eisteddfod, taking the bardic title 'Pencerdd America'. In 1868 he had raised enough money to enter the RAM, where he studied under Sterndale Bennett, Manuel García and Steggall. He won a bronze medal (1870) and a silver medal (1871). In 1871 he received the MusB at Cambridge and then returned to Danville to run a music school. In 1873 he became the first professor of music at the University College of Wales (Aberystwyth), but he left acrimoniously in 1880. It seems that part of his dispute with college authorities stemmed from the success of his music class, which at one time accounted for more than a quarter of the college's students. In 1878 he took the MusD at Cambridge. He established a private school of music in Swansea (1881–8), and from 1888 until his death he was lecturer in music at the University College of South Wales and Monmouthshire in Cardiff.

Parry's compositions enjoyed much favour during his lifetime both in Britain and the USA. He wrote some orchestral and chamber music, but most of his work is choral or dramatic: his *Blodwen* is believed to be the first Welsh opera, and his oratorio *Saul of Tarsus* created a considerable stir at the Cardiff Festival of 1892. His standing among Welsh musicians became almost legendary. Young considered that his academic success undermined his vitality as a composer: 'in his major works he felt obliged to use a nondescript style thought to be proper to a Doctor of Music'. However, his hymn tune 'Aberystwyth' stands as a monument to his talents, and his partsong *Myfanwy* is the most popular and performed setting of a Welsh text for male choir. He was less at ease with instrumental idioms than with vocal, but his *Tydfil Overture* (unpublished) for the virtuoso Cyfarthfa Band (the private band of R.T. Crawshay of Merthyr Tydfil) is almost certainly the earliest original art music composition for brass band.

His son Joseph Haydn Parry (*b* Danville, PA, 27 May 1864; *d* London, 27 March 1894) composed three operas, *Cigarette* (Cardiff, 1892), *Miami* (London, 1893) and *Marigold Farm* (unperformed), as well as other works. In the early 1890s he taught composition at the GSM, London.

WORKS

STAGE

operas unless otherwise stated

Blodwen (3, R. Davies), concert perf., Aberystwyth, 1878; stage, Swansea, 20 June 1878 (Aberystwyth, 1878)

Parsch, Arnošt (*b* Bučovice, Moravia, 12 Feb 1936). Czech composer. After private composition study with Jaromír Podešva, he graduated from the Brno Academy (JAMU) as a pupil of Miloslav Ištvan in composition and of Jan Kapr, Ctirad Kohoutek and Alois Piňos in theory. Like other Czech composers of his generation, he has often shown an ironic attitude to the serial methods he employs, the tendency to humour becoming a predominant trait in his work at the end of the 1960s, when the importance of aleatory writing increased. In about 1970 he began to incorporate more diverse ideas and techniques in collage structures containing frequent sharp confrontations of style. Parsch has always been stimulated by ideas from pictorial art and by sound situations in life. Together with Piňos, R. Růžička and Miloš Štědroň, he was a founder-member of the Brno composers' group formed in 1967. He served as secretary to the Brno branch office of the Czech Composers' Union (1969–77) in addition to holding a number of teaching positions at the Janáček Academy of Performing Arts (assistant professor 1971–3 and 1990–91, lecturer in theory and composition, and vice rector for foreign relations and school development 1991–7, professor of composition from 1997). He has also had a long association with the Brno International Music Festival, firstly as secretary (1977–93) and from 1993 as president.

WORKS

(selective list)

Vocal: Znamení touhy [A Sign of Longing] (cant.), 1972; Viver lieto voglio, op.57, chorus, 1980 [from madrigal by G.G. Gastoldi]; Džbánky [Jugs] (P. Aujezdský), op.59, chorus, 1981; Jízda králů [The Kings' Ride] (cant.), op.66, T, B, chorus, chbr ens, 1984; Ústa [Mouths] (Aujezdský), op.64, chorus, 1984; Vyzvání lásky [Invitations to Love] (Aujezdský), 5 songs, T, pf, 1987; Vítání jara [The Welcoming of Spring], 15 scenes, op.76, Mez, T, B-Bar, chorus, children's chorus, orch, 1990; Uspávanky [Lullabies], op.78, female v, 2 dulcimer, db, bell, 1991; Etudes amoureuses, op.87, Mez, vn, mar, hpd, 1995; Popravy a vzkříšení [Executions and Resurrections] (L. MILOŠ ŠTĚDROŇ

Parsley, Osbert (*b* 1511; *d* Norwich, 1585). English composer and singer. He spent most of his life in Norwich where he was a 'singing-man' in the cathedral choir. A memorial tablet to Parsley in the north aisle of the nave of Norwich Cathedral provides most of the biographical information so far available:

OSBERTO PARSLEY
Musicae Scientissimo
Ei quondam Consociati
Musici posuerunt Anno 1585

Here lies the Man whose Name in Spight of Death.
Renowned lives by Blast of Golden Fame:
Whose Harmony survives his vital Breath.
Whose Skill no Pride did spot whose Life no Blame.
Whose low Estate was blest with quiet Mind:
As our sweet Cords with Discords mixed be:
Whose Life in *Seventy* and *Four* Years entwin'd.
As falleth mellowed Apples from the Tree.
Whose Deeds were Rules whose Words were Verity:
Who here a Singing-man did spend his Days.
Full *Fifty* Years in our Church Melody
His Memory shines bright whom thus we praise.

Parsley was thus one of several composers whose lives spanned the Reformation and who wrote church music for both Latin and English rites. On the evidence of his surviving output, Parsley's art found its most congenial expression in his Latin church music. The psalm *Conserva me, Domine*, in which flowing lines weave expressive webs of polyphony, is a particularly noteworthy contribution to the genre. His setting of the Lamentations follows contemporary practice in providing settings of the Hebrew letters which precede each section; however, the appearance of the liturgical chant in the upper voice throughout is unusual.

Parsley's surviving church music to English texts includes two four-part Morning Services (each of which consists of *Te Deum* and *Benedictus*) and a single anthem *This is the day*. It is markedly inferior in quality to his Latin church music, being marred by stiff points of imitation and an unimaginative approach to problems of texture. A setting of both *Magnificat* and *Nunc dimittis*, which in some 17th-century sources is associated with the First Service's *Te Deum* and *Benedictus*, is variously attributed to Parsley and Tye. On stylistic grounds it might equally well have been written by either composer, although the duplication of material between the morning and evening canticles would appear to favour Parsley as composer.

Parsley's instrumental ensemble music illustrates various aspects of his ingenuity. In all, five In Nomine settings have survived, though the two most interesting of these (both for five viols) exist only in a fragmentary state. One of the In Nomines gives five beats to each note of the plainsong cantus firmus. This feature can also be seen in the *Spes nostra* for five viols. Another five-part instrumental composition entitled *Perslis clocke*, which is described in one source as *The Songe upon the Dyaall*, is based on the hexachord. A three-part instrumental canon by Parsley on the plainsong *Salvator mundi* was printed as a musical example in Morley's *Plaine and Easie Introduction to Practicall Musicke* (London, 1597).

PHILIPPE OBOUSSIER

Parsons, Geoffrey (Penwill) (*b* Sydney, 15 June 1929; *d* London, 26 Jan 1995). Australian pianist and accompanist. He studied with Winifred Burston at the Sydney Conservatory (1941–8), and with Friedrich Wührer in Munich (1956). His first significant concert performance was of a Mozart concerto in Sydney (1946); a 1948 tour of Australia with Essie Ackland decided him on a career as an accompanist. In Britain important early appearances included those with Peter Dawson (Southampton, 1950); Hüsch in *Winterreise* (London, 1955); and a first Royal Festival Hall recital (1961) with Schwarzkopf, whose principal accompanist he later became. Los Angeles, Streich, Gedda, Hotter, Popp, Baker, Bär, Hampson, Tortelier and Milstein are other musicians for whom he regularly played. After the retirement of Gerald Moore, Parsons became the leading accompanist in Britain, admired internationally for the subtle authority and quiet strength of his playing, less dramatic or flamboyant than Moore's but no less responsive. His repertory was extensive, and he was adept at matching his style to that of his partner. He made many recordings, of which his long series with Olaf Bär is perhaps his most significant achievement, with singer and pianist achieving a close interpretative rapport.

MAX LOPPERT/R

Parsons, Gram [Connor, Cecil Ingram, III] (*b* Winterhaven, FL, 5 Nov 1946; *d* Joshua Tree, CA, 19 Sept 1973). American country rock singer, songwriter and guitarist. Generally regarded as the principal architect of country rock, the earliest of his classic compositions in this style was the elegiac *Hickory Wind* (1968), which first appeared on the Byrds' album *Sweetheart of the Rodeo*. Often co-writing with Chris Hillman of the Byrds, Parsons contributed such songs as *Ooh Las Vegas*, *Sin City* and *My Uncle* to the repertory of the prototype country rock group, the Flying Burrito Brothers, between 1969 and 1971. He then worked briefly with the Rolling Stones on their album *Exile on Main St* before recording two solo albums of his own, *GP* (Rep., 1973) and the posthumously released *Grievous Angel* (Rep., 1974); these included further well-crafted ballads such as *Grievous Angel*, *In My Hour of Darkness*, *She* and *The New Soft Shoe*. His style combined the intense melancholy of the strand of country music associated with Hank Williams and George Jones and the kinetic energy of heavily amplified rock. Subsequent to his death, his compositions have been recorded by Emmylou Harris, Elvis Costello and Poco, one of the many country rock groups inspired by his pioneering efforts. For further information see B. Fong-Torres: *Hickory Wind: the Life and Times of Gram Parsons* (London, 1991).

DAVE LAING

Parsons, John (*b* c1575; *d* London, bur. 3 Aug 1623). English organist and composer. He was appointed parish clerk and one of the organists of St Margaret's, Westminster, in 1616, and Organist and Master of the Choristers of Westminster Abbey on 7 December 1621. His annual salary was £16, to which was added £36 13s. 4d. for looking after the choristers. Married in 1600, he had three children. He is buried in the cloisters of Westminster Abbey.

Very little of John Parsons's music survives in complete form. A late 17th-century score of his Burial Service (*GB-Ob* Tenbury 787), bound in black covers, and including Purcell's *Remember not O Lord, our offences* was probably used at the funeral of Charles II in 1685, when Parsons's service is known to have been performed. The verse anthem *Holy Lord God almighty* is dated 16 January 1622 in a note appended to the work by Adrian Batten in his organbook (*Ob* Tenbury 791). Camden's *Remains ... concerning Britaine* (London, 7/1674) contains an interesting epitaph on the composer:

> Death passing by and hearing Parsons play,
> Stood much amazed at his depth of skill,
> And said, 'This artist must with me away'
> (For death bereaves us of the better still),
> But let the quire, while he keeps time, sing on,
> For Parsons rests, his service being done.

PHILIPPE OBOUSSIER

Parsons, Michael (Edward) (*b* Bolton, 12 Dec 1938). English composer and performer. After reading classics at St John's College, Oxford (1957–61), he studied

composition with Fricker at the RCM (1961–2). He was active as a writer on music in the 1960s, during which period he got to know Cardew, attending his workshops at Morley College and co-founding the SCRATCH ORCHESTRA with him in 1969, along with Skempton. Between 1970 and 1990 he was a visiting lecturer in the department of Fine Art, Portsmouth Polytechnic and at the Slade School of Art, University College London. During 1996–7 he was composer-in-residence at Kettle's Yard, Cambridge. He has been involved in long-term collaborations with Skempton and John White.

Parsons's music has a number of diverse, overlapping influences that continue to develop, creating a varied yet personal sound world. His early music was strongly influenced by Webern and the idea of structural ordering remains important. In contrast, along with Cardew, he explored some of the ideas of Cage, Wolff and Feldman. His 'Scratch' music closely followed the group's manifesto aims, aspects of which continue in his work with mixed media forms. At Portsmouth and Slade his association with the English 'Systems' artists (including Malcolm Hughes and Geoffrey Steele) began. Subsequent works have a strong constructional element, usually employing some form of permutational scheme applied to pitch and rhythm (such as the pendulum sequence applied to a pentatonic scale in *Pentatonic Music*, 1975). This period also illustrates his interest in folk musics and change-ringing patterns, as well as rhythms derived from numerical patterns and abstracts of dance rhythms. Later works, such as the *Four Oblique Pieces* (1996), are less rigidly systematized, engaging more directly with sound as colour and the chromatic worlds of Webern and Feldman. His affinity with Mondrian and interest in computer-generated sounds is seen in the series of *Levels*. Several works from the 1990s show renewed interest in large-scale choral writing. The meticulous calligraphy of his scores and his preference for transparent structures and audible processes emphasize the aesthetic of expression through clarity rather than grandiose statement.

WORKS
(selective list)

Songs: Luna (G. Reynolds), S, 1981; Sirian Air (Parsons), female v, 1982; Luna (Reynolds), S, 4 gamelan players, 1982; 3 Arctic Songs (F. Nansen), Bar, pf, 1984; 2 Arctic Songs (Nansen), S, pf, 1985; 3 Songs from Skopelos (trad. Gk.), S, hurdy-gurdy, 1992; 2 Greek Choral Odes (Sophocles), SATB, 1997–8

Other vocal: Mindfulness of Breathing (Buddhaghosa), low male vv, 1969; Mindfulness Occupied with the Body (Buddaghosa), 40 or more vv, perc, 1970; Expedition to the North Pole (Nansen), S, B, SATB, pf, 1988; Lamentations (Vulgate), SSAATTBB, ob, cl, bn, vn, va, vc, db, 1997; 2 Greek Choral Odes (Sophocles), SATB, 1997–8

Pf (solo unless otherwise stated): Piano Piece, 1962; Piano Piece, 1967; Piano Piece March, 1968; Variations, 1971; Rhythm Studies I and II, 2 pf, 1971; Rhythm Studies 3 and 4, 1973; Canon, pf 4 hands, 1973; Arctic Rag, 1974; Fourths and Fifths, 1977; 3 Pieces, pf 4 hands, 1980; Bagatelle, 1983; Arctic Instrumental Music, pf 4 hands, 1988; Skopelos 1–4, 1992; Triptych, 1993; 4 Oblique Pieces, 1996; Fourth Bagatelle, 1996; Jive and Jive 2, 1996; Fourth Bagatelle, 1996; 2 Canons, 1997; krapp music, pf, tape, 1999

MICHAEL NEWMAN

Parsons, Robert (i) (*b c*1535; *d* Newark-upon-Trent, 25 Jan 1571/2). English composer. He is first documented in the Teller's Roll for 1560–1 (PRO E405/126, 1v, 10v), where payments by Parsons to Richard Bower, Master of the Children of the Chapel Royal, are recorded. This confirms that Parsons was involved at the Chapel and the court before his appointment as a Gentleman of the Chapel Royal on 17 October 1563. A connection with the choirboy plays is suggested by a number of his songs, and it is possible that he acted as 'usher' to the children.

On 30 May 1567 he was granted a Crown lease for 21 years on three rectories near Lincoln. We know that he was still alive in November 1571, when the annual tax certificate issued to court servants refers to his residence in Greenwich (PRO E111/293/10). His death is recorded in the Cheque Book of the Chapel Royal: 'Robt. Parsons was drowned at Newark uppon Trent the 25th of Januarie, and Wm. Bird sworne gentleman in his place at the first the 22d of Februarie followinge, A° 14° [1571/2, from] Lincolne'. The date of his death would seem to be confirmed by an entry in *Index to Intestates, Prerogative Court of Canterbury*, vol.2, 1572–80, 3: '1571/2 Feb 7 Robert Parsons, East Greenwich, Kent, to relict Helen Parson'.

The fine anthem *Deliver me from mine enemies* and the 'great' First Service, based on the 1549 Prayer Book text and surely written for the Chapel Royal, both feature in Barnard's *The First Book of Selected Church Musick* (RISM 1641[5]). Elizabeth I's Act of Uniformity prescribing the 1552 text applied only from 24 June 1559. As the musical style of the service is clearly Elizabethan, it can be dated from 1558–9. But as in the case of Byrd, Parsons's Latin settings are more impressive. Doe dates the alternating *Magnificat* to Mary's reign. Using canon, and contrasting full sections with more elaborate writing for reduced forces, this setting testifies to Parsons's technical virtuosity. It is known that Latin texts continued to be set during Elizabeth's reign, and the motets *O bone Jesu* and the fine *Ave Maria* date from the late 1560s. These are unusual pieces, the first incorporating various psalm texts punctuated by invocations. Doe poses the possibility that these 'paraliturgical' motets may relate to the oppressed Catholics, and that the sub-text in *Ave Maria* points to Mary Queen of Scots, who fled to England in 1568 and who was regarded as the true monarch of English

recusants. Perhaps Parsons, like his successor, Byrd, was a Catholic.

Parsons made a major contribution to early Elizabethan instrumental repertory. The five-part In Nomine survives in many sources and must have been among the most widely performed. The technical problems set by *De la court* and *The Songe called Trumpetts* suggest that they were written for professional court musicians, with violinists very likely to be playing the upper parts.

Parsons was a composer of considerable standing and his music is characterized by a rich harmonic texture with extensive passing and suspended dissonance. The lack of clear modulation to related keys places him between the Edwardian and later Elizabethan composers. Robert Dow's eulogy, written in the 1580s (*Och* 987), suggests that he died at the height of his powers and at a relatively early age:

> Qui tantus primo Parsone in flore fuisti,
> Quantus in autumno in morere fores.

(Parsons, you who were so great in the springtime of life, How great you would have been in the autumn, had not death intervened.)

PHILIPPE OBOUSSIER

Parsons, Robert (ii) (*b* ?Colyton, Devon, 1596; *d* Exeter, July 1676). English composer, priest and singer. His family is well documented in Exeter and Devon records, but there is no evidence to connect him with any other composers bearing his surname. His will, drawn up on 2 December 1675, shows him to have been a man of some substance, for his goods and property were valued at over £2000 when he died in the following year. He was admitted to Exeter Cathedral as a lay vicar in 1621 and married Grace Irish, daughter of the custos, in 1624. He was appointed a priest-vicar in 1640, and was custos of the College of Vicars Choral during the Visitation of Bishop Ward in 1665. He was also rector of St Martin's, Exeter, from 1634, and deputy librarian of St John's Hospital, whose books were placed in the Lady Chapel of the cathedral in 1657.

Little of his music survives. Most extensive is the short Morning and Evening Service, a competent work, if rather archaic in style. The dates of the manuscripts in which most of Parsons's works are found suggest that he stopped composing about 1640. Attributions are generally made to 'Mr. Parsons de Exon' or 'Mr. Robert Parsons of Exeter', to distinguish him from the earlier composer of the same name.

PHILIPPE OBOUSSIER

Parsons, William (*fl* 1545–63). English composer. His name appears in the register of vicars-choral at Wells in 1555. On four occasions between 1552 and 1560 payments to Parsons are noted in the *Communar's Paper Book*, suggesting that he was also employed as composer and copyist to the cathedral: 'Paid William Parsons, Feb 11 (1552), by order of the president and chapter, for divers songs and books by him made and to be made. 16s. 4d.' In 1553 he was paid 5s. for '15 books containing 3 masses and a primer' and in 1560, 20s. for 'making and pricking off certayne songes in Englisshe'. There are no later references to Parsons in the surviving records at Wells.

Little of his music remains and most is incomplete. He probably wrote the *Flatt Service* by 'Mr. Parsons of Wells', the location distinguishing him from Robert Parsons (ii) of Exeter, whose music features in the same source. The setting is in a note-for-note style, similar to that found in Tallis's Short Service of *c*1550. Two Latin motets survive. The Easter antiphon *Christus resurgens*, in two sections and based on the Sarum plainchant, is a typical example of the ritual Marian motet. *Anima*

Christi, for three voices, is only one section of a much longer motet for six voices.

William Parsons is generally credited with being the composer of 81 out of 141 settings in John Day's *The Whole Psalmes in Foure Parts* (RISM 1563[8]). As the major contributor he may have been involved in an editorial capacity.

PHILIPPE OBOUSSIER

Part (i) (Fr. *voix*; Ger. *Stimme*; It. *voce*). The line or lines of music read by an individual performer or performing section in the realization of a musical work; the written music itself, hence 'the piano part', 'the first violin part', 'the english horn part', 'the soprano part' etc. For performing purposes, the parts of a composition are usually copied separately, and these copies are also called 'parts'. Thus, for example, in a symphonic work the players in the first violin section read the first violin part, which contains the music of no other parts of the composition (except cues that may facilitate the players' correct placing of their part in the ensemble); one therefore contrasts the parts of a musical work with its score, the form of the work in which all the parts are shown simultaneously.

WILLIAM DRABKIN/R

Part (ii). In polyphonic music, one of the individual musical lines that contribute to one or more elements of the music, for example two-part counterpoint, four-part harmony, six-part texture; to avoid confusion with the third meaning of 'part' given below, the word 'voice' is sometimes used instead, e.g. four-voice fugue. Certain forms or genres are often described by the number of parts or voices their polyphonic structure consistently maintains, for instance, two-part invention, three-voice chanson (chanson à 3). One frequently distinguishes the outer (highest and lowest) parts (Ger. *Aussensatz*) from the inner (middle) part or parts.

In early polyphony parts were named not according to vocal range or timbre, but on the basis of their function in the contrapuntal design, and part names therefore reflected the hierarchies of parts characteristic of various COUNTERPOINT theories. Such theories initially disussed techniques of taking a pre-existing melody and supplying an additional part: the earliest designations for these two elements are 'vox principalis' and 'vox organalis' (*see* ORGANUM, §1), or simply 'cantus' and 'organum'. In the 12th century the upper parts in mensural organum were given numerical names: after the cantus, the second, third and fourth parts above were referred to as 'duplum', 'triplum' and 'quadruplum'.

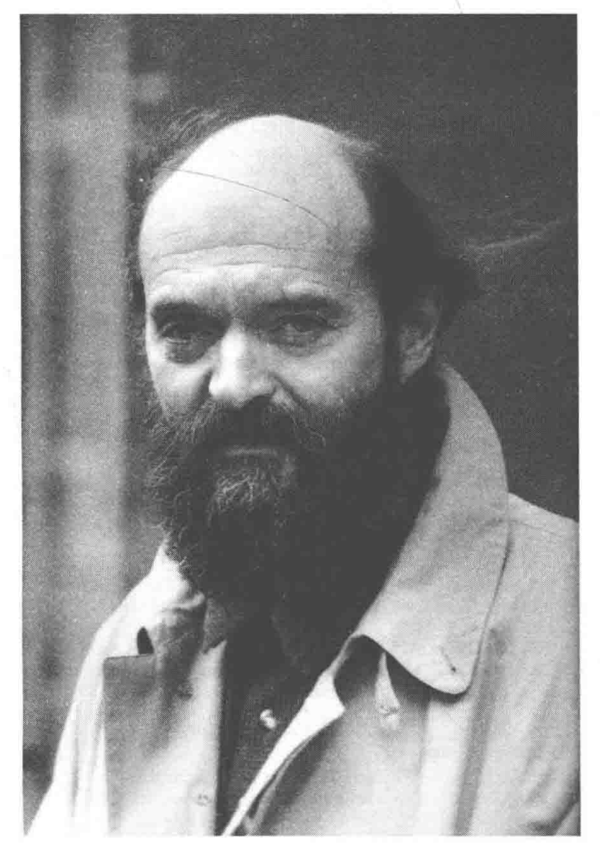
In the early motet the name tenor (*see* TENOR, §2) was given to the part bearing the pre-existent plainsong melody, and the texted duplum was called the 'motetus' (in three- and four-part motets the names 'triplum' and 'quadruplum' were maintained). In the 14th and 15th centuries 'tenor' referred to the main lower part which 'held up' the harmony, and the tenor was often paired with a CONTRATENOR; the principal upper part (usually undesignated in musical sources) was referred to as the 'cantus' or 'discantus'. A fourth part would be added to this discantus–tenor–contratenor framework; when this was functionally an additional contratenor, as was often the case in the 15th century, the terms 'contratenor altus' and 'contratenor bassus' ('high' and 'low' contratenors) were used to distinguish the two.

With the introduction of such names as 'contratenor bassus', part names began to take on registral connotations. By about 1500 the word 'bassus' was in use as a noun meaning the lowest polyphonic part. In the 16th century the names used in the commonest type of setting, in four parts, were 'superius', 'altus', 'tenor' and 'bassus' (these are the ancestors of the modern names soprano, alto, tenor and bass). Sometimes the lowest part was designated by the Greek *basis*, which referred to its 'fundamental' importance rather than to its lowness. For compositions in five or six parts, the names 'quinta vox' (quintus) and 'sexta vox' (sextus) were used; occasionally a fifth part was called *vagans* (Lat.: 'wandering'), which implies a variable range.

WILLIAM DRABKIN/R

Part (iii) (Fr. *partie*; Ger. *Teil*; It. *parte*; Lat. *pars*). The primary division of certain large-scale works (especially oratorios), equivalent to the act in theatrical works; in smaller forms, one of the sections of a work by which its form is defined, e.g. three-part song form; *prima pars*, *secunda pars* of a motet.

WILLIAM DRABKIN/R

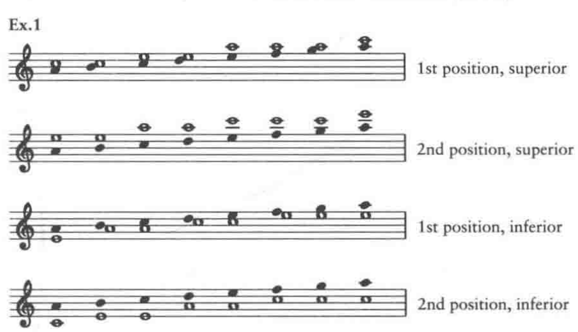


Pärt, Arvo (*b* Paide, 11 Sept 1935). Estonian composer. He studied at the music middle school in Tallinn under Harri Otsa and Tormis and then at the Tallinn Conservatory under Eller, from whose class he graduated in 1963. While still a student he found work as a recording engineer with Estonian radio, and as a composer of film and theatre music. He continued to support himself with such work during much of his early career.

His earliest works, mostly for piano, are neo-classical in style. In 1962 his children's cantata *Meie aed* ('Our Garden') received joint first prize at the All-Union Young Composers' Competition in Moscow. At this time he was studying serial composition from the few scores and textbooks that had found their way into the Soviet Union; the first of his works to use serial technique was the orchestral *Nekrolog*. This path earned him official rebuke, though he nevertheless continued to apply serial procedures throughout the 1960s. *Perpetuum mobile* (1963) applies serial technique to pitch, duration and rhythm throughout, while the First Symphony (1963–4) explores canonic procedures and is deservedly subtitled 'Polyphonic'. Both works are related through the use of

different versions of the same all-interval row. In 1964 Pärt revealed his growing interest in J.S. Bach, employing rows that incorporate the B–A–C–H motif and writing often in imitation of the Baroque style. The works *Pro et contra* and the Second Symphony (both 1966) also make significant use of collage and frequently set in opposition the perceived turmoil of Modernist dissonance against the calm order of tonal (neo-Baroque) consonance. These processes receive their most climactic treatment in *Credo* (1968), a pivotal work of Pärt's career; here the tonal world of Bach's C major prelude from book 1 of *Das wohltemperirte Clavier* is slowly distorted through application of a chain of 5ths used as a 12-note row. Ultimately, the tonal impression dominates, but this work provoked an official scandal – not for its musical language but for its avowal of Christianity.

After *Credo* Pärt reached an impasse both musically and professionally. For several years (from 1968) he concentrated on exploring tonal monody and simple two-part counterpoint in exercises inspired by his studies of early music and Gregorian chant. During this period he produced two works (*Laul armastatule* – subsequently withdrawn – and the Third Symphony) which reveal the strength of these preoccupations. It was only in 1976, however, that he began to compose fluidly again, this time using a tonal technique of his own creation which he calls 'tintinnabuli' (after the bell-like resemblance of notes in a triad). The first piece to be written in this new style was the short piano solo *Für Alina*.



A two-part homophonic texture forms the basis of tintinnabuli technique: a melodic voice moves mostly by step around a central pitch (often but not always the tonic), and the tintinnabuli voice sounds the notes of the tonic triad. The relationship between these two voices follows a predetermined scheme (which varies in detail from work to work) and is never haphazard. Furthermore, the entire structure of a tintinnabuli work is predetermined either by some numerical pattern or by the syntax and prosody of a chosen text. Very often these two ideals are combined.

Arvo Pärt, 1993

Typically, the melodic voice part can be reduced to ascending or descending modes, to or from a central pitch. To this the tintinnabuli voice is fitted note by note (ex.1), either by providing the pitch in the triad that is nearest to the melodic voice pitch (1st position), or the pitch that is nearest but one (2nd position). The tintinnabuli pitches may be applied above or below the pitches of the melodic voice, or alternate between these (ex.2).

Ex.1

In 1976–7 Pärt laid the foundations of this new style and composed several of the works that would help to establish his international reputation – *Cantus in memoriam Benjamin Britten*, *Fratres*, *Summa* and *Tabula Rasa*. However, his position as a composer of overtly religious music in an austere and seemingly simple tonal style endeared him neither to the Soviet authorities nor to the academic establishment, and the development of his career as a composer inside the Soviet Union was continuously being frustrated. In 1980 he and his family emigrated, first to Vienna and then to Berlin. He took with him sketches of the *St John Passion*, which was completed in 1982 and has become the quintessential work of the tintinnabuli style. A strict, through-composed setting of the text, the Passion employs the tintinnabuli techniques described above but using a number of interconnected triads and pitch centres so that the whole work draws upon three sets of overlapping 5ths: D–A–E–B. The work lasts approximately 70 minutes, and comprises a short introduction (*exordium*) and conclusion flanking the main narrative section of the text. The Evangelist is represented by an SATB quartet and four instruments; the part of Christ is sung by a bass solo and that of Pilate by a tenor. Both solo voices are accompanied by the organ, as is the choir, who sing the remaining roles and also represent the turba. The words are set in a rhythmic scheme which employs three relative note values – short, medium and long – operating at three different speeds. Ex.3 shows the general scheme of the work and the relative range of the different voices. (Turba is here used for the choir's collective role. The tintinnabuli triad

Ex.2

for each group is always fixed and is given in semibreves; a square white note denotes a pedal or drone pitch and the black note heads indicate the melodic scales employed. The underlying note value is shown in brackets.)

The majority of Pärt's works composed after 1980 are for chorus or small vocal ensemble; his choice of texts has ranged from Latin (which predominated at first) to German, Church Slavonic, Spanish, Italian and English. Among the larger works mention should be made of *Te Deum* which invokes – but does not in fact use – Gregorian chant; *Stabat mater*, in essence an extended piece of chamber music for double trio (three strings and three voices); *Miserere* which incorporates an earlier setting (here revised) of the *Dies irae* sequence; two *a cappella* choral works, the (Latin) *Magnificat* and the (German) Seven Magnificat Antiphons; and *Litany* (1994), the first work since the Third Symphony to employ something approaching a full orchestra; and *Kanon Pokajanen*, a large-scale *a cappella* setting of Russian Orthodox texts.

In later works, the underlying tintinnabuli concept has remained largely unchanged, though it has been subject to various technical refinements. The use of speech patterns to determine melodic contours and the combination of enharmonically related triads and chromatically inflected scales have enriched Pärt's musical vocabulary; later choral works have also shown a tendency to divide text and music more equally among vocal parts, creating a more fluid texture.

Partart, Antonio. *See* PATART, ANTONIO.

Partbooks (Fr. *parties séparées*; Ger. *Stimmbücher*). Manuscripts or printed books that contain music for only a single voice (whether human or instrumental) of a composition, as opposed to those sources (scores, choirbooks, table-books etc.) that supply the complete music. The Shrewsbury fragment (Shrewsbury School, MS VI, *c*1430) is probably the lone survivor of a set of three partbooks (S. Rankin, *PRMA*, cii, 1975–6, pp.129–44), but otherwise the format seems to date from the late 15th century, becoming standard for the dissemination of ensemble music in the 16th and 17th centuries. Among the earliest surviving partbooks are the three known as the 'Glogauer Liederbuch' (*D-Bsb* Mus.ms.40098), which date from about 1480; the earliest printed partbooks extant are the four books comprising the *Motetti C* collection issued by the Venetian printer Ottaviano Petrucci in 1504 (see illustration). With the increasing use and availability of scores from the late 17th century onwards the role of partbooks was to some extent pre-empted, although the practice of performing from separate parts has survived for certain types of music (e.g. chamber and orchestral music) to the present day. This is partly because of the considerable expense involved in providing every performer with a score containing much material not strictly necessary for his individual need.

A basic set of early partbooks usually consisted of four books, although there might be as few as two or as many as ten. Although various designations are found, the most usual ones, in descending order of pitch, are: Cantus or Discantus or Superius or Medius, Altus or Contratenor, Tenor and Bassus. The fifth and sixth partbooks, if required, were called Quintus and Sextus respectively, whatever their pitch. Although these designations evolved in a period when the music in the partbooks was primarily (or even exclusively) vocal, the terms were retained in the 16th and 17th centuries for both vocal and instrumental sets of books. Additional partbooks to the four listed above, if for a voice in approximately the same range as one of them, may carry the qualification 'primus' or 'secundus' (e.g. 'Cantus primus', 'Bassus secundus'). English liturgical partbooks normally carried an additional qualification, 'Decani' or 'Cantoris', depending on the side of the choir for which they were intended. Slight variants of the above designations are sometimes found, as also are other names of limited application (e.g. 'Triplex', the highest of the original three voices of a motet, from which the word 'Treble' is indirectly derived).

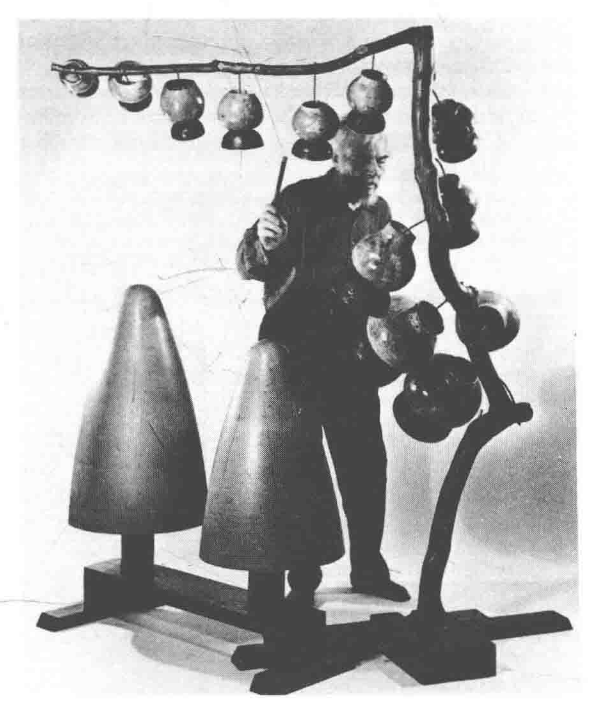
The extent to which partbooks were used for performance in the Renaissance and early Baroque periods is still a matter of debate. Printed partbooks have never been cheap, and even manuscript books would have entailed considerable expense when a professional copyist was involved. Many sets of partbooks survive in such excellent condition that it seems unlikely that they were ever used in performance; in other examples the high incidence of undetected (or uncorrected) errors, some of which are in themselves relatively insignificant, strongly suggests that the books could not possibly have served as performing material. Furthermore, sets of English liturgical partbooks of the period 1550–1650 included only one boy's partbook for each side of the choir, although the full complement of boys would often have been between eight and twelve. In all these cases, at least, it is possible that sets of partbooks were master copies preserving a repertory of which only a fraction was performed, and that from memory. The loss of a partbook would have rendered the remaining members of the set useless for performance. Many surviving sets from the 16th century onwards lack at least one partbook, and in exceptional

Opening of Josquin's motet 'Liber generationis Jesu Christi' from the superius partbook of Petrucci's 'Motetti C' (Venice, 1504)

cases only a single one survives from a set of as many as ten.

JOHN MOREHEN/RICHARD RASTALL

Partch, Harry (*b* Oakland, CA, 24 June 1901; *d* San Diego, 3 Sept 1974). American composer, theorist, instrument maker and performer. He dedicated most of his life to implementing an alternative to equal temperament, which he found incapable of the true consonance his ear and essentially tonal aesthetic demanded. He invented an approach to just intonation he called 'monophony'; realizing that traditional instruments and performers would be inimical to his system, he designed and constructed new and adapted instruments, developed notational systems, and trained performing groups wherever he was living and working. By the 1940s he had transformed a profound antipathy to the European concert tradition into the idea of 'corporeality', emphasizing a physical and communal quality in his music.



Growing up in the American Southwest, Partch had piano lessons and played well enough to accompany silent films in Albuquerque. By 1920 he had returned to California, where he spent the next 13 years as a proofreader, piano teacher and violist. During this period he began to research intonation, sparked by his discovery of Helmholtz's *On the Sensations of Tone* in 1923: he was particularly influenced by Helmholtz's preference for just intonation, and by the translator A.J. Ellis's discussions of 19th-century experimental keyboard instruments, most of them English. He experimented with just intonation on string instruments, and eventually developed the 'adapted viola' by attaching a cello fingerboard to a viola and indicating appropriate finger positions, an instrument he finished in 1930 in New Orleans during a one-year sojourn there. By 1928 he had completed the first draft of a theoretical treatise, *Exposition of Monophony*, which extended triadic consonance to include the 7th, 9th and 11th partials. He also posited a symmetrical 29-note-per-octave scale (more properly gamut) for the adapted viola. Acknowledging the text-setting principles of early opera, Gluck, Musorgsky, Debussy and the Schoenberg of *Pierrot lunaire*, his first 'monophonic' works featured an 'intoning' voice that used Sprechgesang in a non-expressionist manner and was accompanied (in 1930–33) by the adapted viola. From the outset he used pitches outside the chosen gamut, never restricting himself dogmatically.

Partch presented his first recitals in 1932–3. By 1933 his gamut had evolved to 37 tones (after flirtations with 39, 41 and even 55 tones), and the last draft of *Exposition of Monophony* was finished (though subsequently lost until the early 1980s). He went to New York, where he won a grant to do research in England (1934–5), where he studied the work and instruments he had read about in *On the Sensations of Tone*; he also met Yeats, Arnold Dolmetsch, Dulac, A.E. and (in Rapallo) Pound. In addition to the new adapted guitar, he had a first keyboard instrument (the Ptolemy) built in London; it was abandoned after being shipped to California. He returned to the USA in the spring of 1935; by June he had begun a nine-month transient existence in the western states, the subject of his socio-musical diary, *Bitter Music*. This narrative of life on the road and in Depression-era federal work camps mixes irony, nostalgia and homoeroticism with drawings and interpolations of voice-and-piano renderings of transcribed speech-music, along with more complex settings. Partch nearly published it in 1940, but later tried to destroy all copies; it resurfaced in the 1980s.

By 1941 Partch was in the Midwest, where he expanded his instrumentarium (adding notably two chordophones – the kithara and harmonic canon (see illustration) – and an adapted harmonium, the chromelodeon), set a final 43-tone gamut and began to compose for larger ensembles. During the early 1940s he concentrated on works with 'Americana' texts, including hitchhikers' inscriptions (*Barstow*), newsboys' cries (*San Francisco*) and a hobo's train journey (*US Highball*). He had his first semi-official university association at the University of Wisconsin in Madison from 1944 to 1947; his anti-academic views were reinforced by the music faculty's generally hostile attitude towards his music (see Wiecki).

He returned to California and composed smaller pieces suffused with the melancholy of his first 'monophonic' music. His treatise, *Genesis of a Music*, was finally published in 1949; in it the 'expanded tonality diamond', based on the consonant hexad and revealing an interlocking series of common tones, reached fruition. He worked with Ben Johnston (1950–51) and presented the original version of *King Oedipus* at Mills College, Oakland (1952). His Gate 5 Ensemble (1953–5) performed and recorded *Plectra and Percussion Dances* and the revised *Oedipus* for his private record label (later also called Gate 5). These large-ensemble works have a mixture of tragic solemnity and vigorous rhythm, the latter due to the new percussion instruments: the diamond marimba, bass marimba, marimba eroica, cloud-chamber bowls and spoils of war.

In 1956 he moved to Urbana, where Johnston taught at the University of Illinois, to produce *The Bewitched*, a mime drama featuring a coloratura witch leading a group of 'lost musicians' through a dramatic haze; the première (1957) barely survived the friction between composer and

Harry Partch with his Castor and Pollux (harmonic canon II, above) and gourd tree and cone gongs (below)

choreographer Alwin Nikolais (see Gilmore, 1995). In 1958 he collaborated with Madeline Tourtelot on three films (*Windsong*, *Music Studio* and the performing sections of *US Highball*), then returned to Urbana to compose and produce *Revelation in the Courthouse Park* and *Water! Water!*. Another major event at Urbana was his meeting Danlee Mitchell, a percussionist who became his foremost performer, conductor, assistant, amanuensis and friend for the rest of his life.

Partch returned to California for good in 1962. With the exception of a few smaller pieces, his music since the early 1950s had been truly 'corporeal': dramaturgically intense, musically eclectic, and with the instruments (now over 20) and their performers in full view of the audience. The culmination of his theatrical and musical theories was *Delusion of the Fury*, a two-act work in which he used two non-European myths: a Japanese noh tale of a pilgrim doing penance for a killing, and an African story of a quarrel judged by a deaf and near-sighted judge. The work has some of Partch's most beautiful as well as most invigorating music; the variety of textures allows the subtleties of his harmonies and instrumental timbres to come forward. (Tourtelot filmed the 1969 production.)

He was never in good health, and his physical and mental stability began to give way in the last decade of his life. He managed to compose the score for *The Dreamer that Remains*, an episodic but touching mesh of reminiscences and music in an earlier style. He died of a heart attack a year after the film's completion. By that time, his instrumentarium (excluding small hand instruments) comprised the following:

chordophones (plucked or struck with mallets unless otherwise stated): adapted guitars I and II, adapted viola (bowed), kithara I and II, surrogate kithara, harmonic canons I, II (Castor and Pollux) and III (blue rainbow), crychord, koto (a gift from Lou Harrison and not altered)

idiophones (all tuned unless otherwise stated): diamond marimba, quadrangularis reversum, bass marimba, marimba eroica and mbira bass dyad (all wood); boos I and II, eucal blossom (bamboo); gourd tree, cone gongs (metal); cloud-chamber bowls, mazda marimba (glass); zymo-xyl (glass and wood), spoils of war (metal and wood, includes whang gun)

aerophones: chromelodeons I and II (modified reed organs), bloboy (pipes and bellows)

As Johnston noted soon after Partch's death, the problems in preserving a music so intimately tied to its creator and a fragile and unique instrumentarium are immense. Dean Drummond, a Partch performer in the 1960s and the founder of the New York group Newband, has taken possession of the instruments that had belonged to him; they have been used in Partch performances and new works by Drummond and others, while copies have been made of some. They now reside at Montclair State University (New Jersey). But reproductions of the composer's tablature scores, transcriptions into expanded conventional notation, recordings and films remain the primary means by which to study and hear the music – a somewhat ironic situation given Partch's lifelong ambivalence about recording.

Nevertheless interest in Partch has increased greatly since his death, and overtaken the view held of him in life as quixotic or worse. His eclecticism, especially his unfettered use of traditional music from around the world, anticipated many post-serialist trends, and he has served as a model for developments in intonation, acoustic instruments and timbre, even as computer programs produce the fine tunings of his 'monophony'. He influenced the percussive motor-rhythm music of the minimalists of the 1960s and 70s, and his theatre works are precursors of numerous experiments since the mid-1950s. His life provides an example of curmudgeonly but humane courage.

WORKS

all in just intonation unless otherwise stated

Works in equal temperament, incl. pf conc., sym. poem, *c*50 songs, 1910s–20s, destroyed 1930

String Quartet, vn, 2 va, vc, *c*1925–7, lost

My Heart Keeps Beating Time, equal temperament (L. Yoell), 1v, pf, 1929, rev. 1935 (in *Bitter Music*)

17 Lyrics of Li Po (trans. S. Obata), 1v, adapted va, 1930–33; San Francisco, 9 Feb 1932

By the Rivers of Babylon (Ps cxxxvii), 1v, adapted va, 1931; San Francisco, 9 Feb 1932; final rev., 1v, vc, kithara II, chromelodeon, 1955

Potion Scene from Romeo and Juliet (W. Shakespeare), 1v, adapted va, 1931; San Francisco, 9 Feb 1932; rev. 1955, 1v, 2 S, vc, orig. insts

The Lord is My Shepherd (Ps xxiii), 1v, adapted va, 1932; San Francisco, 9 Feb 1932; rev., 1v, chromelodeon, kithara, 1943

Barstow: Eight Hitchhiker Inscriptions from a Highway Railing at Barstow, California, 1v, adapted gui, 1941; New York, 22 April 1944; final rev., 2 vv, orig. insts, 1968, facs. and transcr. ed. R. Kassel (Madison, forthcoming) [1st of 4 works in The Wayward cycle]

December, 1942: 3 Settings, 1v, adapted gui: Come Away, Death (Shakespeare: *Twelfth Night*), The Heron (Tsuryuki, trans. A. Waley), The Rose (E. Young); nos.2–3 rev., 1v, orig. insts, in Intrusions

Dark Brother (T. Wolfe: *God's Lonely Man*), Bar, adapted va, chromelodeon, kithara, Indian drum, 1942–3; Madison, WI, 3 May 1945; rev., addl bass mar, after 1951

Mad Scene from King Lear (Shakespeare), 1v, chromelodeon, kithara, *c*1942–3, lost

US Highball: a Musical Account of a Transcontinental Hobo Trip (Partch), vv, gui I, kithara, chromelodeon, 1943; New York, 22 April 1944; rev., 2 vv, large ens of orig. insts, 1955 [2nd of 4 works in The Wayward cycle]

San Francisco: a Setting of the Cries of Two Newsboys on a Foggy Night in the Twenties, 1v, adapted va, chromelodeon, kithara, 1943; 22 April 1944; rev., 1v, vc, kithara II, chromelodeon, 1955 [3rd of 4 works in The Wayward cycle]

The Letter: a Depression Message from a Hobo Friend, 1v, adapted gui, kithara, 1943; final rev., 1v, large ens of orig. insts, 1972 [4th of 4 works in The Wayward cycle]

2 Settings from Finnegans Wake (J. Joyce): Isobel, Annah the Allmaziful, S, double flageolet/2 fl, kithara, 1944; Madison, 7 March 1945

Y[ankee] D[oodle] Fantasy (Partch), S, tin fls, tin ob, flexatone, chromelodeon, 1944; New York, 22 April 1944

'I'm very happy to be able to tell you about this … ' (W. Ward, BBC transcr.), S, Bar, kithara, Indian drum, 1945; Madison, 3 May 1945; lost

Polyphonic Recidivism on a Japanese Theme (The Crane), equal temperament, SATB, 1945

Intrusions, incl. Study on Olympos' Pentatonic, Study on Archytas' Enharmonic, The Waterfall (Young), The Street (W. Motley: *Knock On Any Door*), Lover (G. Leite), Soldiers–War–Another War (G. Ungaretti, trans. W.F. Weaver), Vanity (Ungaretti, trans. Weaver), Cloud Chamber Music, 1v, orig. insts, last work with chorus, Indian deer-hoof rattle, 1946–50

Sonata Dementia (Partch), 1v, insts, 1949–50; rev. as Ring Around the Moon

The Wooden Bird (incid. music, W. Leach), 1v, insts, 1950, collab. B. Johnston; Charlottesville, VA, 10 Jan 1951

Plectra and Percussion Dances: Castor and Pollux, a Dance for the Twin Rhythms of Gemini, 1952, rev. 1968; Ring Around the Moon, a Dance Fantasm for Here and Now (Partch), 1952–3; Even Wild Horses, Dance Music for an Absent Drama (A. Rimbaud: *A Season in Hell*), vv, large ens of orig. insts, 1949–52; Berkeley, CA, 19 Nov 1953

King Oedipus (1, after W.B. Yeats, after Sophocles), 10 solo vv, chorus, large ens of orig. insts, 1951 (begun 1933); Oakland, CA, 14 March 1952; rev. as Oedipus (Partch and J. Churchill, after Sophocles), 1952–4; Oakland, 2 June 1954; final rev., 1967; New York, 24 April 1997
2 Settings from Lewis Carroll: O Frabjous Day!, The Mock Turtle Song, 1v, orig. insts, 1954; no.1, Mill Valley, CA, 13 Feb 1954
Ulysses at the Edge, vv, tpt, db, model skindrums, boo, 1955; final rev., vv, a sax, bar sax, orig. insts, 1961–2; added to The Wayward cycle
The Bewitched (dance satire, 1, Partch), S, chorus, dancers, large ens of orig. and trad. insts, 1955–6; Urbana, IL, 26 March 1957
Windsong (film score, dir. M. Tourtelot), large ens of orig. insts, 1958; rev. as Daphne of the Dunes (dance), 1967
Revelation in the Courthouse Park (1, after Euripides: *Bacchae*), 16 solo vv, 4 speakers, chorus, dancers, large ens of orig. and trad. insts, 1959–60; Urbana, 11 April 1961
Bless This Home (V. Prockelo), 1v, ob, orig. insts, 1961
Rotate the Body in all its Planes (ballad for gymnasts, based on Revelation in the Courthouse Park, Chorus 3), S, chorus, large ens of orig. and trad. insts, 1961; Urbana, 8 April 1962
Water! Water! (satirical 'intermission', 2, Partch), solo vv, choruses, large ens of orig. and trad. insts, 1961; Urbana, 9 March 1962
Jine the Calvary (trad.), 1v, orig. insts, 1963
Study, harmonic canon I and kithara I, 1963–4
And on the Seventh Day Petals Fell in Petaluma, large ens of orig. insts, 1963–6; Los Angeles, 8 May 1966
Delusion of the Fury: a Ritual of Dream and Delusion (2, Partch, after Jap. and African trad.), actors, chorus, dancers, large ens of orig. and small hand insts, 1965–6; Los Angeles, 9 Jan 1969
The Dreamer that Remains: a Study in Loving (film score, dir. S. Pouliot), vv, chorus, large ens of orig. insts, 1972; La Jolla, CA, 25 March 1973

recorded interviews in *US-NHoh*, *US-U*

RICHARD KASSEL

Part-crossing (Ger. *Stimmkreuzung*, *Stimmenkreuzung*). (1) In PART-WRITING, the rising of the lower of two parts above the higher or, conversely, the falling of the higher

of two parts below the lower. It is sometimes used as a means of avoiding consecutive 5ths or octaves (ex.1) or

other features regarded as bad part-writing. *See also* VOICE-EXCHANGE.

(2) The sounding of a voice or instrument higher (lower) than another which by nature lies above (below) it in register or tessitura, usually for emphasis or special effect; for instance, the tenors singing above the altos in a choir, or the cello in a string quartet taking the melodic line, accompanied below by the second violin and viola.

WILLIAM DRABKIN

Parte (i) (It.: 'part'). A vocal or instrumental part.

Parte (ii) (It.: 'part'). A section of a work or a variation (*see* PARTITA).

Partenio [Partenico], **Gian** [Giovanni] **Domenico** (*b* Spilimbergo, Friuli, before 1650; *d* Venice, 1701). Italian composer, singer, priest and probably adoctor of philosophy. He rose through the musical ranks at S Marco, Venice, beginning as a tenor in February 1666 and receiving an increase in salary from 80 to 100 ducats in January 1674. In July 1685 he succeeded Legrenzi as *vicemaestro di cappella* and in May 1692 succeeded Volpe as *maestro di cappella* after acting in this capacity since the previous December. He was energetic as *vicemaestro*, but his tenure as *maestro* coincided with a period of deteriorating musical standards. He served as *maestro di coro* at the Ospedale dei Mendicanti from 1685 to 1689. Enthusiastic comments in the Venetian monthly *Pallade Veneta* about his compositions for the Mendicanti indicate that many sacred vocal works (including settings of vespers psalms) are lost. In 1687 he was termed the 'Apollo of this virtuous Parnassus'. The singers who worked under his direction at the Mendicanti were highly praised for their ornamentation, intonation and naturalness (*franchezza*) of expression. His requiem mass may well have been composed for the funeral there in April 1688 of the Doge Marc'Antonio Giustiniani, when, according to *Pallade Veneta*, a 'chorus of innocent lambs ... wept in song' in a mass concerted with stringed instruments. It is believed that Partenio was also closely associated with the Ospedale degli Incurabili.

Sporadically active as an opera composer, Partenio enjoyed the patronage of the Duchess Benedetta of Brunswick (in 1669), Counts Giovanni Antonio Mesmes (in 1673) and Carlo Vicenzo Iovanelli (in 1682), and Prince Eugenio of Savoy (in 1687). As a priest he served the parish church of S Martino, which he made the headquarters for the guild (*sovvegno*) of S Cecilia, a league of 100 performers and music teachers. Partenio was the society's principal founder, and Legrenzi and Volpe were among its chief supporters. Elaborate celebrations of the saint's feast on 22 November began in 1685 at S Martino.

Considering Partenio's importance at S Marco, surprisingly little of his music survives, a fact lending credence to Caffi's claim that many of his works once in the archives of the Ospedale dei Mendicanti were dispersed and then lost in the early 19th century. Although he was perhaps more important in his own day for his church music he is now remembered chiefly as an opera composer.

WORKS

OPERAS

all performed in Venice

Genserico (N. Beregan), SS Giovanni e Paolo, 1669, *I-Vnm* IV–427 (= 9951) [some music by A. Cesti]

Iphide greca (N. Minato), I Saloni, spr. 1671 (Act 1 by Partenio, 2 by D. Freschi, 3 by A. Sartorio), *Vnm* IV–421 (= 9945)

La costanza trionfante (C. Ivanovich), S Moisè, 1673 (lost)

Dionisio, overo La virtù trionfante del vitio (M. Noris), SS Giovanni e Paolo, 3 Jan 1681 (Act 1 by P. Franceschini), *Vc* (score), *Vqs* Cl.VIII, Cod.VI (arias)

Flavio Cuniberto (Noris), S Giovanni Grisostomo, 29 Nov 1681, revived Jan 1687, *Bc* (score), *MOe* (score and arias), *Vqs* Cl.VIII, Cod.VII (arias and duets)

OTHER WORKS

Missa pro defunctis, 4vv, *Vlevi*, *Vnm* IV–1178 (= 10995)

2 motets: Jesum Nazarenum, 3vv, *Vnm* IV–1822 (= 11645); Confitebor tibi, 2vv, 2 vn, bn, bc, *D-Bsb* 30, 257

A volume of motets, op.1, 2–3vv, published in Venice, lost

Cantata, Il fervido meriggio, S, bc, without text, *Kl*

ELEANOR SELFRIDGE-FIELD

Partheneia [partheneusis, parthenia]. Dancing chorus of maidens. The maiden chorus is attested from the earliest days of ancient Greek musical culture. Reference is made to a dancing chorus of maidens and young men in the *Iliad* (xviii.590–606), and the *Homeric Hymn to Apollo* (156–64) refers to a chorus of maidens at Delos, who skilfully sang hymns to Apollo, Leto and Artemis. Scenes of dancing women appear on numerous vases, sometimes playing the crotala and dancing alone, at other times holding hands and dancing as a chorus. Pseudo-Plutarch (*On Music*, 1136f) referred specifically to *partheneia* composed by ALCMAN, PINDAR, Simonides and BACCHYLIDES. An extended excerpt from such a composition by Alcman is preserved in *PLouvre E3320* (1st century CE), running to more than 100 lines, organized in general in 14-line strophes. The text is rather fragmented until line 35, after which it is fairly well preserved until line 101. Although the text tends towards a style more intimate and personal than that of the other musical types, it does contain a few specific references to its musical nature. The chorus consisted of ten maidens led by an 'illustrious chorus-leader' (*ha klenna choragos*, 44), who is given the epithet *Hagēsichora* (53). Later, the poet introduced graceful similes to describe *Hagēsichora*'s role. Pseudo-Plutarch remarked that Alcman wrote Dorian

partheneia, and although the context of the passage may lead to the assumption that he was referring to the *tonos*, he carefully distinguished between *Dōria partheneia*, a purely generic usage, and *Dōriou tropou* or *en tēi Dōristi*, which are specific references to musical modes.

A few fragments survive from the two books of *partheneia* composed by Pindar. Employing some of the same images encountered in the Homeric hymn and the Alcman fragment, the first antistrophe and epode and the second strophe of frag.104d refer additionally to the accompaniment of the aulos and the practice of carrying laurel branches in the dance. It would appear from this passage that the *partheneia* made use of vivid onomatopoeia. In the lines describing the aulos's sound and the Zephyr wind, for example, the poet stresses the long, open vowel omega (*auliskōn hupo lōtinōn*) and diphthongs based on alpha (*auliskōn*, *aoidais* and *aipsēras*), as well as the whistling sounds of the sigma and the zeta (*Zephurou te sigazei pnoas aipsēras*). The presence of the laurel branches indicates that frag.104d must come from the *daphnēphorika*, a subcategory of the *partheneia* dedicated to Apollo Ismenios and Chalazios held every ninth year in Boeotia. Proclus's *Useful Knowledge* provides a detailed description of the participants in the procession who carry a special branch (*kōppō*) decorated with brass spheres and garlands representing the sun, the moon, and other heavenly bodies, while the maiden chorus follows, holding out branches of olive in supplication and singing a hymn (cf Pollux, *Onomasticon*, iv.53).

The term was used much later as the title of the collection of keyboard music presented to Princess Elizabeth and Prince Frederick on the occasion of their marriage (1613): *Parthenia or the Maydenhead of the First Musicke that ever was printed for the Virginalls*, a whimsical reference both to the newness of the venture and the wedding; it reappeared in the title of its companion volume, *Parthenia In-Violata* (*c*1624), which has a part for bass viol.

Parthia [parthie]. *See* PARTIE (i) and PARTITA.

Parthian Empire. Ancient state to the east of the Roman Empire, extending at the height of its power from Mesopotamia to the Indus, and independent from about 250 BCE until its overthrow by the Persians in 224 CE. Texts and pictorial representations illuminate the prominent role of minstrels (*gōsān* in the Parthian language) in the Parthian Empire and the subject of their songs is clear from a fragment of text written a few centuries after the fall of the empire, when the language was still spoken: 'like a *gōsān*, who proclaims the worthiness of kings and heroes of old' (Boyce, 11). The Greek writer Strabo (*c*64 BCE – 19 CE) noted that Parthians taught their young men songs about 'the deeds both of gods and of the noblest men' (*Geographica*, xv.3.18) and according to Plutarch (*c*46 – *c*120 CE) the *gōsān* praised Parthian heroes and ridiculed the Romans with equal gusto (*Crassus*, xxxii.3). The Parthian minstrels influenced the Armenians, whose courtly *gusanner* sang heroic tales to the accompaniment of drums, pipes, lyres and trumpets (see Boyce, 13–14). Parthian songs probably continued to be performed, at least in the north-eastern parts of greater Iran, long after the Empire had ceased and by being absorbed into the Iranian national epic, *Šāhnāme*, collected by Firdausi in about 1000.

To the bewilderment of the Romans, the Parthian army used large drums (Gk. *rhoptra*) to prepare for battle: 'they had rightly judged that, of all the senses, hearing is the one most apt to confound the soul, soonest rouses its emotions and most effectively unseats the judgement' (Plutarch, *Crassus*, xxiii.7). Many of the instruments mentioned in the surviving texts are also depicted in Parthian art, and the majority appear to have been patterned on Hellenistic models known in Greece, Rome and Egypt. The most magnificent depictions are those carved on ivory drinking horns (Gk. *rhuta*) of the 2nd century BCE found at the ancient Parthian capital of Nisa (modern Nessa, near Ashkhabad in Turkmenistan; see Colledge, fig.2 and Karomatov, 54–9) but probably made in Bactria (Boardman, 90). The carvings show auloi, kitharai and syrinxes played at Dionysian dances, ritual processions, and sacrificial offerings as well as at theatrical performances.

Musicians are also commonly shown on terracotta plaques, one of which, for example, portrays a female harp player (Colledge, pl.20*d*). Similar plaques from Babylon also depict harps, lutes, tambourines, syrinxes, lyres and clappers (Karvonen-Kannas, nos.277–336). Several bronze statuettes from Dura-Europus on the Euphrates (Qal'at as Sāliḥīyah, Syria) show a double aulos and unusually long panpipes; and bone tablets dating from the 1st or 2nd centuries CE and originating in Olbia, Ukraine, depict female dancers, musicians and acrobats. A temple at Hatra (Al Ḥaḍr, Iraq), dedicated to the Sun, the Moon and the goddess Atargatis, has a stone frieze dating from the 2nd century CE that shows a wedding procession. Among the celebrants is a singer surrounded by musicians playing tambourines, a 13-pipe syrinx, a transverse flute, double and single reed pipes and a trumpet (see Rashid, 156–65).

Christianity and with it the music of the East Syrian liturgy penetrated the area beyond the upper Tigris, via Edessa (now Urfa, Turkey) in Roman Syria, probably in the first half of the 2nd century (*see* SYRIAN CHURCH MUSIC). It coexisted with pagan minstrel traditions.

BO LAWERGREN

Partia. *See* PARTIE (i) and PARTITA.

Partial. One of the component vibrations at a particular frequency in a complex mixture. It need not be harmonic. The fundamental and all overtones may be described as partials; in this case, the fundamental is the first partial, the first overtone the second partial, and so on. *See also* SOUND, §5.

MURRAY CAMPBELL

Partial signature. A 'key' signature, usually a ♭, that is given in some but not all the voices of a polyphonic composition. Such signatures occur in 13th-century sources and were very common throughout the 14th and 15th centuries. For discussion of their significance *see* MUSICA FICTA, §III, (ii).

□

Particella (It.; Ger. *Particell*). A SKETCH or draft in compressed short score used by some composers as part of their standard composition procedure.

Partie (i) [parthia, parthie, partia] (Ger., Fr.: 'part'). A term for a suite or other multi-movement genre in the 17th and 18th centuries (*see* PARTITA).

Partie (ii) (Fr.). (1) A term used, synonymously with 'mouvement', for a movement ('sonate en quatre parties').

(2) Voice part ('fugue à trois parties').

Parties séparées (Fr.). *See* PARTBOOKS.

Partimen. *See* JEU-PARTI and TENSO.

Partimento (It.: 'division'). A term used fairly frequently in the late 18th and early 19th centuries to denote exercises in figured-bass playing, not so much as accompaniments to a solo instrument as self-contained pieces. Composers using this term were very often Neapolitan or Milanese, though the significance of this is unknown. The word may or may not refer to the 17th century practice of divisions, i.e. performing variations on a repeating (figured) bass; more likely it reflects the common Italian practice *c*1700 of writing bass lines for keyboard players to work into fully-fledged pieces. The definition is attested to as early as 1634 by G.F. Cavalliere in *Il scolaro principiante di musica* (Naples). Examples are common in MSS, e.g. the 'Arpeggi per cembalo' exercises in *GB-Lbl* Add.14244 (?A. Scarlatti), the organ 'Versetti ... per rispondere al coro' in *Lbl* Add.31501 (?B. Pasquini), and the complete solo and even duet figured-bass sonatas for harpsichord by Pasquini in *Lbl* Add.31501. Fugues were often intended by composers as realizations of their carefully planned figured basses (Keller, Handel, Pasquini); other instruments too were expected thus to develop their basses (Carulli's guitar tutors). Typical titles of the books devoted to such harmonic and contrapuntal instruction are F. Fenaroli: *Regole musicale per i principianti di cembalo* (Naples, 1775) and *Partimenti ossia basso* (Rome, *c*1800/*R*), G. Tritto: *Partimenti e regole generali* (Milan, 1816), and C. Cotumacci: *Regole dell'accompagnamento, e partimenti* (MS, Naples, listed by C.F. Becker: *Systematisch-chronologische Darstellung der musikalischen Literatur von der frühesten bis auf die neuste Zeit*, Leipzig, 1836–9/*R*). Other composers of *partimenti* include N. Sala and N. Zingarelli.

PETER WILLIAMS/ROSA CAFIERO

Partita [parte] (It.; Ger. *Partie*, *Parthie*, *Partia*, *Parthia*; Lat. *pars*). A term used at different times for a variation, a piece, a set of VARIATIONS and a SUITE or other multi-movement genres. Perhaps the earliest use of the term was in Vincenzo Galilei's manuscript *Libro d'intavolatura di liuto, nel quale si contengono i passamezzi, le romanesche, i saltarelli, et le gagliarde*, written in 1584 and probably composed over the preceding 20 years (Torrefranca), containing a *Romanesca undecima con cento parti*, a *Passemezzo sesto con* [5] *parti*, and *Aria del Gazzella con XII parti*. Shortly afterwards Prospero Luzi published a dance manual entitled *Opera bellissima nella quale si contengono molte partite et passaggi di gagliarda* (1589); to what extent 'partite' was consciously derived from 'parti' is unknown, but both seem to be equivalent in meaning to *mutanze* or *modi*, i.e. variations or elaborations on the bass of a traditional tune. 'Partite' or 'partite diversi' continued to be used by the Italians in this sense, though less and less frequently, throughout the 17th century; examples of pieces called 'partite sopra', *Ruggiero*, *zefiro*, *fidele*, *monica*, *folia*, then *ciaccona* and *passacagli* and finally miscellaneous tunes, exist by Mayone, Trabaci, Frescobaldi, Michelangelo Rossi, Gregorio Strozzi and Alessandro Scarlatti.

It may have been Frescobaldi's pupil Froberger who first used 'partite' in the sense of 'pieces' in his *Libro secondo di toccate ... gigue et altre partite* (autograph, 1649, *A-Wn*). The older Italian meaning survived, with acknowledgment by Spiridion, in an appendix called 'Adjunctum Frescobaldicum' to the fourth part of his *Nova instructio* (1675), containing *Partite sopra passacagli*, by J.A. Reincken (*Partite diverse sopra ... 'La Meyerin'*) and by Bach (*partite diverse* on various chorales), while the newer one reappeared with the first publications of Froberger's works in 1693.

In 1680 Biber divided the pieces of his *Mensa sonora* into six suites which he labelled *Pars I*, *Pars II* etc. He may have thought of 'pars' as a term for a group of pieces or simply as a division of a collection, but it was the former meaning that was taken up by Kuhnau as a designation for a suite in his *Neuer Clavier-Übung ... bestehend in sieben Partien* (1689). Johann Krieger followed in 1697 with a collection of suites whose title was given in German and Italian: *Sechs musicalische Partien, Sei partite musicali*, thus establishing a new meaning for 'partita' by a process of folk etymology. Krieger was echoed by J.A. Schmierer the next year: *Zodiaci musici in XII partitas balleticas ... Das ist, Dess in zwölff balletischen Parthyen ... Himmel-Creyses* (1698). Both 'partita' in its new meaning of suite and 'partie' and its variants thus appear to be the arbitrary constructions of late 17th-century German composers. Both terms were used in their various meanings by Bach.

'Partita' as a term for variation died out in the early 18th century, but it retained its meaning of suite, though often restricted in its number of movements. The orchestral partita in particular was popular in western Austria (a large collection survives at Stift Lambach) and in Salzburg, where partitas were widely composed between about 1720 and 1750. Thereafter the genre apparently gave way to the symphony (the last known example of a Salzburg orchestral partita, by Michael Haydn, dates from 1770; its three movements are now better known as parts of the symphony Perger 12). Ferdinand Seidl's sole extant *Parthia* (*A-LA*, 239), possibly composed in the 1740s, is typical: each of its four movements (Intrada, Menuet, Intermezzo, Finale) is moderate or fast in tempo and largely based on dances; like most partitas of the time it is scored for two violins, two trumpets, timpani and basso (lacking violas, which are also missing from Eberlin's lost partita in G major and Leopold Mozart's only extant work of the type; see Eisen, 1994). Some partitas, however, including a considerable number of works from the Viennese orbit, were conceived one-to-a-part; by and large these represent a subset of the divertimento, which at the time was a catch-all term for soloistic ensemble music (Webster, 1974). The term largely disappeared well before the end of the century, except in the case of outdoor wind music, where *Feldpartita* or *Feldpartye* continued to be used. Schilling's *Encyclopädie* (1840) says that *Parthie*, *Parthia* and *Partita* all have the same meaning, that of the successor to the suite, in which prestos, allegros and the like are interpolated among the dances.

Partition (Fr.; Ger. *Partitur*). *See* SCORE.

Partitura (It., Lat.). In its strictest sense *partitura* means simply 'score', and as such is the equivalent of *partition* (Fr.), *Partitur* (Ger.) etc. It is more specifically used, however, to describe sources of keyboard music of the 16th to the 18th centuries notated in open score (usually four staves), as opposed to those in keyboard score (on two staves) or one of the types of keyboard tablature. In many of the earliest uses of this notation, most of which are Italian, the word 'partitura' and its most common derivatives (*spartiti*, *partite* etc.), were used on title-pages to describe music that had originally been written for voices or other instruments but had later been 'scored' for solo instrumental performance, usually on a keyboard instrument. Some scholars consider that early *partiturae* of this nature may have been issued for study purposes rather than for performance, although the two functions are not mutually exclusive. The use of the term 'partitura' was later extended to include collections of works conceived originally for keyboard instruments. The earliest surviving source in *partitura* notation is Rocco Rodio's *Libro di ricercate a quattro voci* (Naples, 1575). Owing to its particular suitability for contrapuntal keyboard music the *partitura* became increasingly popular, and its use spread to other countries including Germany (where only tablature had previously been used for keyboard music) and Portugal. The earliest uses of the *partitura* in these countries include Samuel Scheidt's *Tabulatura nova* (Hamburg, 1624) and Manuel Rodrigues Coelho's *Flores de musica pera o instrumento de tecla & harpa* (Lisbon, 1620/*R*). The *partitura* was used for keyboard music as late as the 18th century, one of the last but most important instances being for J.S. Bach's *Art of Fugue* (published 1751). In some German publications this form of notation was loosely described as tablature (*Tabulatura*, *Tabulaturbuch* etc.).

Parton, Dolly (Rebecca) (*b* 19 Jan 1946, Pigeon Forge, TN). American country singer-songwriter. She was one of 12 children born to a sharecropper in a one-room cabin in the Tennessee Mountains. She learnt her first songs from her extended family and from the church. At an early age she began writing her own songs and playing a home-made guitar. By the time she was ten she was starring regularly on Cas Walker's 'Farm and Home Hour' television programme, earning $20 a week. In 1960 she made her first record and in 1964, having been the first in her family to graduate from high school, she moved to Nashville. By 1967 she had a recording contract and a spot on the long-running Porter Waggoner television show and was soon a regular on the famed 'Grand Ole Opry'. Her popularity increased consistently in the 1970s, with a number of crossover hits, including the title tracks from *Jolene* (RCA, 1974) and *Here you come again* (RCA, 1977), and a syndicated television show. Innumerable awards and increasing international success afforded her the opportunity to star with Jane Fonda in the Hollywood film *9 to 5*. Parton's title song (RCA, 1980) was a transatlantic hit and was nominated for an Academy Award. Since then she has starred in several other successful films. She has collaborated with a number of musicians, including Kenny Rogers and Smokey Robinson and on the bestselling album *Trio* (1987) with Linda Ronstadt and Emmylou Harris.

Parton is country music's most celebrated female practitioner and certainly its most successful. Her outrageous appearance is misleading, belying considerable talent. Her silvery voice with its affecting vibrato is most adaptable and is most striking on her own songs, which display a genuine gift for narrative verse and a sparkling wit. Like Loretta Lynn, Parton has often addressed the inequalities of the woman's lot, for example *Just because I'm a woman* (RCA, 1968). She has received some criticism from Nashville purists for her relocation to the mainstream, but in reality she has helped to broaden the

Dolly Parton

audience for country music and enabled other Nashville performers to expand their careers. She has paid tribute to her roots in such songs as 'Coat of Many Colors' (*Coat of many Colors*, 1974) and 'To Daddy'.

LIZ THOMSON

Partos, Oedoen [Ödön] (*b* Budapest, 1 Oct 1907; *d* Tel-Aviv, 6 July 1977). Israeli composer, string player and teacher of Hungarian origin. Born to an assimilated Jewish upper middle class family, he was a child prodigy and studied the violin with Ormandy. Hubay heard him play the violin at the age of eight and took him as a pupil at the Budapest Academy of Music, where he also studied composition with Kodály. After graduating from the academy in 1924, he was leader of the Lucerne Stadtsorchester (1924–6) and the Budapest Konzertorchester (1926–7). In 1927 he moved to Germany, working as a soloist, and in 1933 he became first violinist of the Jewish Cultural Centre. At the end of that year he returned to Hungary, moving then to Baku to teach the violin and composition at the conservatory (1935) and returning to Budapest as leader of the Konzertorchester (1937). During these years as a soloist in Europe he was very active in contemporary music and gave the premières of several works written for him, including Kadosa's Violin Concerto and Suite for violin and piano. In 1938 he was invited by Huberman to become first violist with the Palestine SO (later the Israel PO), after which he lived in Tel-Aviv. He stayed with the orchestra until 1956, also playing the viola in the Israel Quartet (1939–54) and appearing as a soloist in Israel and abroad. In 1951 he was appointed director of the Israel Academy of Music (later the Rubin Academy of Tel-Aviv University), and in 1961 he was made a professor. He travelled extensively as an adjudicator, lecturer and teacher, and received many honours, most notably the first award of the Israel State Prize (1954).

Partos arrived in Palestine steeped in contemporary European traditions, particularly those of Bartók and Kodály. From them he had come to see folk music as a source of inspiration and to develop his personal style by enlarging Western tonality through a mixture of modal, oriental and chromatic elements; the best example of his work under their influence is the Concertino for strings (1932). By building on these principles, Partos was able to acclimatize himself musically and, in a conscious effort to seek out his Jewish ancestry, he took a particular interest in the musics of the various Eastern Jewish communities. He soon began to make arrangements of their folksongs, first for the Palestinian singer Bracha Zefira (Four Folk Songs, 1939), then for unaccompanied chorus (Six Songs, 1941). The experience had a strong effect on his later instrumental works, including the Four Israeli Tunes for string instrument and piano (1948), *Hezionot* ('Visions') for flute, piano and strings (1957) and *Maqamat* for flute and string quartet (1959). He also used some folk elements of the Ashkenazi communities of eastern Europe, notably in *Yizkor* ('In memoriam') for strings (1947), a work written in response to the Holocaust. In all these works, he brought a Western technique to bear on Eastern material, whether whole tunes, fragmentary gestures or melismatic patterns.

In 1960 there came a change with Partos's turning towards 12-note technique; this is best exemplified in *Tehillim* ('Psalms') for string quartet or chamber orchestra and *Dmuyot* ('Images') for orchestra, both of which date from that year. It is important to stress, however, that his use of 12-note principles was never strict: fragments of three to six notes from the series were often cast as motifs or melodic cells and certain notes were also duplicated at the octave, thus implying a tonal hierarchy. Moreover, Partos always retained some connection with the music of his adopted environment, going as far as to affirm a connection between dissonant, serially-derived harmony and the clashes that result from heterophony. He found expressive force in the combination of serialism with an Eastern melos or biblical cantillation; the influence of *maqām* is still present, for example, in *Psalms*.

The size of Partos's output from the early 1960s bears witness to his stimulation by 12-note methods, but the genres he chose were dictated by his needs as a performer; the Sinfonia concertante for viola and orchestra comes from this period, as does as *Agada* ('Legend') for viola, piano and percussion: he gave the first performance

of the latter at the 1962 ISCM Festival. Strings are, indeed, predominant in the vast majority of his works, and his writing for the medium includes Eastern practices, such as very long notes, richly varied embellishments and microtones, all to be found in *Maqamat*, *Psalms*, *Netivim* ('Paths') for orchestra (1969) and *Shiluvim* ('Fusions') for viola and chamber orchestra (1970). Partos employed a generalized serialism in such works as *Arpiliyot* ('Nebulae') for wind quintet (1966), though construction and ordering always remained a means to an expressive end. After 1970 he used a freer technique, involving proportional notation, microtones, clusters and some degree of aleatory writing, which he associated with Eastern improvisation principles.

WILLIAM Y. ELIAS/R

Partridge, Ian (*b* London, 12 June 1938). English tenor. He studied at the RCM (1956–8) and subsequently at the GSM. After his début as a soloist in Bexhill (*Messiah*, 1958), he became one of Britain's most valuable oratorio tenors, prized internationally in Schütz, Handel and Bach (notably as the Evangelist) for his pleasing freshness of timbre, the natural musicality of his phrasing and the grace and clarity of his diction. He was also an admired recitalist, and with his sister Jennifer Partridge, recorded lieder (notably *Die schöne Müllerin* and *Dichterliebe*), *mélodies* and English song (including Vaughan Williams's *On Wenlock Edge* and songs by Delius, Gurney, Finzi and Britten). One of Partridge's rare operatic roles, later recorded, was Iopas in Covent Garden's second production of *Les Troyens* (1969).

MAX LOPPERT

Partsch [Bartsch, Parč], **Franz** [František] **Xaver** (*b* Dux [now Duchcov], 30 Jan 1760; *d* Prague, 6 April 1822). Bohemian composer. His father, a Kantor and organist at Dux, first taught him music; he then studied philosophy and law at Prague, but encouraged by Václav Praupner decided to make music his career. He completed his musical training and in 1790 was appointed music teacher for Prince Auersperg's family. At Prague he was also the assistant music director ('Flieglist') of Franz Spengler's German theatrical troupe (*c*1793–6), which first performed his Singspiel *Victor und Heloise*. Later he turned to sacred music and was Praupner's successor as choirmaster of the Týn Church in Prague from 1 July 1807 until his death. Partsch's musical idiom was a belated 'second' *galant* style. Some of his songs have hints of early Romantic expressivity, and his sacred works often have folklike pastoral and dance elements.

WORKS

Victor und Heloise, oder Das Hexengericht (Spl, 3, Illein, F. Hegrad), Prague, Nostitzsches Nationaltheater, 4 Dec 1794, lib pubd (lost)

Sacred (mostly CZ-*Pnm*): Mass, A, for S concertante; Vox clamantis, D, aria, S solo; Salve regina, E♭; 2 motets, G, C, pastorale, S solo; vocal qt, E♭, inc.; others

Other vocal: 12 Lieder für das schöne Geschlecht, 1v, pf (Prague, 1790); 6 Gesänge, 1v, pf (Prague, n.d.), 2 ed. M. Poštolka in *Songs*, ii (Prague, 1962); Die Feldflasche, 1v, pf (Prague, n.d.); unacc. vocal qts, *Pnm*

MILAN POŠTOLKA

Partsong. A piece of music in two or more voice-parts without independent accompaniment. In theory, the term encompasses forms such as the glee, madrigal and unaccompanied anthem. In practice, however, it usually refers to small-scale secular pieces for unaccompanied choral singing. No precise definition is possible: the supposition that partsongs differ from madrigals in moving homophonically with the melody in the top voice overlooks the textural variety of both madrigals and partsongs. Nor is the text definitive, since there are sacred examples such as Sullivan's *Five Sacred Partsongs* (1871). Partsongs are usually single entities, but there exist lengthy multi-sectional works, possibly intended as competitive showpieces, that are susceptible to no other definition. Other languages have no exact equivalent of the term: this may be a reflection of its breadth and inexactitude in all countries where partsongs flourish.

The partsong was cultivated in England from the early 17th century. Collections of rounds, catches and quodlibets, usually on topical, witty and sometimes bawdy texts,

provided material for convivial music-making. These pieces were simpler than madrigals. Composers such as Weelkes and, later, William and Henry Lawes, Arne and Purcell wrote many examples. In the late 18th century the inception of men's singing clubs led to a formalization of partsinging. The GLEE, typically a short, predominantly homophonic piece, superseded earlier forms, but members of glee clubs sang a wider variety of music, including madrigals and arrangements, than their name suggests. Competitions were established for the composition and performance of glees and partsongs.

In the 19th century, interest in music of the past stimulated a revival of the madrigal as a distinct type within the partsong. Pearsall and other composers transcended pastiche with richly expressive madrigals. Sterndale Bennett, Barnby, Sullivan, Macfarren, Pearsall, Benedict and numerous others produced partsongs, varied as much in length, substance, mood and texture as in quality and originality. Except where archaism was intended, the musical language of the partsong typified its time, and it often miniaturized standard forms of the period, ternary or rounded binary form being frequent choices. Reciprocal influence between partsong and anthem, canticle, hymn and even Anglican psalm-chant is evident. The increase in musical literacy, the popularity of choral singing, and the accessibility of relatively cheap printed music were both causes and effects of the partsong's enormous popularity.

The late 19th-century festival movement stimulated demand for partsongs that were technically more challenging and of greater musical worth. Partsongs by Parry, Stanford, Elgar, Charles Wood and others met this demand, with imaginative use of textures, sensitivity towards texts and regard for the organization, balance and sentiment of each piece. Their early 20th-century successors extended this tradition, some, such as Holst and Vaughan Williams, incorporating folksong arrangements. These composers and others such as Finzi, Ireland, Moeran and Howells produced partsongs of great originality that transcended the reflective, lilting style that characterized some English music of this period. Most of the later repertory was by lesser composers, although Britten was a notable exception: his *Five Flower Songs* (1950) showed that English partsongs about nature could be energetic, colourful and witty. Later composers have incorporated modern choral techniques, including improvisation, into the partsong, challenging even the most expert choirs.

Similar developments occurred in Germany from the 19th century. The Liedertafel, a male-voice music society, was founded in Berlin in 1808 by Mendelssohn's teacher Zelter and first met the following year. Its aim was convivial as well as musical, and it provided a model for other choirs (the men's choir movement, often linked to local customs and the wearing of traditional costume, survives). Some composers, such as Marschner, Weber and Wagner, confined their partsong output to male voices only. Later in the 19th century, mixed choirs and competitive choral festivals were established. The partsongs of composers including Schubert, Schumann, Franz, Mendelssohn, Cornelius and Brahms set much German Romantic poetry, and show parallels with their lieder in both style and sentiment. Reciprocal influence is apparent between Mendelssohn's partsongs and contemporaneous smaller English choral forms. Some of Bruckner's and Brahms's partsongs show affinities with their unaccompanied church music. Towards the end of the 19th century, partsongs diversified in character. Composers such as Wolf and Schoenberg produced longer unaccompanied secular choral pieces for highly accomplished choirs. In the 20th century the partsong tradition continued in Germany, and its boundaries were extended by composers such as Pfitzner, Distler, Webern, Hindemith, Pepping and Richard Strauss.

In France, men's choral societies ('Orphéons') were established from the mid-19th century. They travelled widely to competitive festivals, and large choirs went abroad to give concerts. Gounod and others wrote specially for these societies and for mixed choirs. A few partsongs were written by Saint-Saëns, Delibes, Debussy and Ravel. Those by d'Indy are more numerous but hardly more diverse. There are some examples by later French composers, but unaccompanied settings of sacred texts form the stronger tradition. In the Latin countries the partsong has been largely neglected. In eastern Europe partsongs were written by Tchaikovsky and Rimsky-Korsakov in Russia, by Bartók and Kodály in Hungary, and by Dvořák and Janáček in Bohemia and Czechoslovakia; in all these countries folksong has been influential. In the USA the partsong has been cultivated as part of a wider tradition of choral singing, particularly involving college choirs, by composers including Macdowell, Horatio Parker, Randall Thompson and, most conspicuously, Elliott Carter.

JUDITH BLEZZARD

Part-writing [voice-leading] (Fr. *conduite des voix*; Ger. *Stimmführung*; It. *condotta delle voci*). That aspect of counterpoint and polyphony which recognizes each part as an individual line (or 'voice'), not merely as an element of the resultant harmony; each line must therefore have a melodic shape as well as a rhythmic life of its own. In discussions of part-writing a distinction is made between linear or conjunct motion and movement by leap (i.e. by a 3rd or greater) in a single part, and between various types of relative motion between two or more parts: similar motion, two or more parts moving simultaneously in the same direction; parallel motion, two or more parts moving in the same direction and at the distance of the same interval or intervals; oblique motion, one part moving while another part remains stationary; and contrary motion, two parts moving in opposite directions. In good part-writing each part is shaped to a recognizable contour (such as an ascending or descending line, or an arc) having an identity in the polyphonic fabric of a composition or passage. Conjunct motion is generally preferred to movement by leap in all parts except the bass; similar motion among all the parts (except in two-part writing), hidden (covered) 5ths or octaves between

the outer parts and consecutive (parallel) 5ths or octaves between any parts are usually avoided.

WILLIAM DRABKIN

Pasacalle (Sp.). In Spain, a term signifying music to accompany walking, including religious processions. In Latin America it denotes various couple-dances, usually in slow tempo. *See* PASSACAGLIA, §1.

Pasaribu, Amir (*b* Tapanuli, Sumatra, 21 May 1915). Indonesian composer. His family, from the Batak nobility, was familiar with Western classical music. After studying music at the Dutch high school in Bandung, Pasaribu trained to be a pianist. The first Indonesian to take up a classical music education abroad, in 1936 he continued his piano and cello studies at the Musashino music school in Japan. On his return in 1939 he worked as a cellist in the radio symphony orchestra Oshio Kioku Kangen Goku during the Japanese occupation of Indonesia; in 1942 he studied composition with the Dutch composer James Zwart in Indonesia. Pasaribu was one of the few composers with an academic background in Indonesia in the period after the 1945 revolution. Melodies inspired by the Malay music of his native region and the gamelan music of Java often appear in his technically masterful compositions, written mainly for piano and small ensemble. His style was influential on the composers of the 1950s, when his was the only Indonesian music included in the classical repertory.

In the 1950s Pasaribu was known as an authoritative critic and a teacher devoted to the development of formal music schools in Indonesia. It may be said that he is largely responsible for the emergence in the 1950s and 60s of a generation of Indonesian musicians with a classical background. Appointed by the newly independent Indonesian government to develop the infrastructure of modern musical life, he established the League of Composers (a copyright organization), headed the music department of Radio Republik Indonesia and developed the music high school in Yogyakarta and the music teachers' school in Jakarta. In the country's uncertain economic situation in 1968, Pasaribu went to Suriname to work for the Dutch-Indonesian Institute for Cultural Cooperation as a cellist; after Suriname's independence in 1975 he became the conductor of the Paramaribo SO. In 1995 he returned to Indonesia and settled in Medan.

FRANKI RADEN

Pasaribu, Ben (M.) (*b* Medan, Sumatra, 1956). Indonesian composer. Beginning his musical career as a drummer in a rock group, he studied ethnomusicology at the University of North Sumatra. He also studied music at Marymount College in Tarrytown, New York, and composition with Alvin Lucier at the Wesleyan University in Middletown, Conneticut. After studying in America he produced many works for electronic media alone and in combination with acoustic instruments. A member of the Batak people, he has studied and absorbed many elements of their traditional music into his own work. This bringing together of two very different musical worlds has made his compositions highly distinctive. His use of ritual forms is a characteristic feature: in *Nerhen Surasura* (1992) for tape and instruments the players are required to be in a state of trance before beginning to perform. A composition teacher and dean of the arts faculty at the Huria Kristen Batak Prostestant Nommensen University in Medan, Pasaribu is an active and influential figure in the contemporary music scene in north Sumatra. His percussion group Medan Percussion Ensemble appears annually at the popular International Jakarta Percussion Festival.

FRANKI RADEN

Pasatieri, Thomas (*b* New York, 20 Oct 1945). American composer. A prolific composer by the age of 15, he studied with Boulanger before entering the Juilliard School of Music, where his composition teachers included Vittorio Giannini. At 19 he received the first doctorate awarded by the school. He has taught at Juilliard, the Manhattan School of Music and the Cincinnati Conservatory; he has also directed the Atlanta Opera (1980–84). Early in 1984 he moved to California to work in films and television.

Primarily interested in composing for the voice, Pasatieri wrote two operas in 1964, *Flowers of Ice* and *The Trysting Place*. His first opera to be staged was *The Women* (1965), performed at Aspen, Colorado, where he was a pupil of Milhaud. Its success convinced him that opera was his natural medium. His next two operas, *La Divina*, a comedy about the last performance of an aging coloratura soprano, and *Padrevia*, a gothic horror story based on Boccaccio, were given their premières in college opera theatres in New York. From 1971 to 1972 six of his operas were produced in Seattle, including *Calvary*, based on the play by W.B. Yeats, and *Black Widow*, his first full-length opera, staged by Lotfi Mansouri in 1972. Derived from Miguel de Unamuno's novella *Dos madres*, the work presents in stark tableaux the tragedy of a barren woman obsessed with motherhood.

Highly emotional characters in strong theatrical situations became characteristic of many of Pasatieri's operas. *The Trial of Mary Lincoln*, with a libretto by the television writer Anne Howard Bailey, is a moving portrait of the first lady in her later years during the court trial that judged her insane. Tailored to the intimacy of television, the opera uses flashbacks, dissolves and voice-overs.

The Seagull, Pasatieri's most successful opera, is based on Chekhov's play of 1896. To make it effective as musical theatre, Pasatieri and his librettist, Kenward Elmslie, concentrated the action of the story and heightened the personal and dramatic relationships: they added an aria to expand the role of Masha; an overtly incestuous duet between Madam Arkadina and Konstantin; and a dramatic final aria that coincides with Konstantin's offstage suicide. The work's lush, romantic score and the excellent cast and creative production of the Houston Grand Opera afforded *The Seagull* a favourable critical reception. The *Three Sisters* (1979) was the first of Pasatieri's operas to be recorded in its entirety.

With the exception of a somewhat more dissonant score for *Before Breakfast* (1980), Pasatieri's style has evolved little over the years. His music is conservative and melodic, with dramatic, soaring lines in the manner of Giacomo Puccini and Richard Strauss. The lyrical, singable nature of his works has convinced many fine singers to take part in premières of his operas, including Evelyn Lear, Frederica Von Stade, Richard Stilwell, John Reardon, Lili Chookasian, James Morris, Jennie Tourel and Theodor Uppman.

In addition to his operas, Pasatieri has composed more than 400 songs, many with chamber ensemble accompaniments. His *Sieben Lehmannlieder* (1988), commissioned by the Music Academy of the West, is a song cycle that sets poems by Lotte Lehmann. The songs, closely reflecting the texts, progress in lyrical melismatic flourishes and

often feature an especially high tessitura. *Canciones del barrio* for voice, string quartet and piano, was commissioned by UCLA for the Festival of American and Mexican Works, 1993.

In 1986 the Verdehr Trio commissioned Pasatieri to compose an 'opera for three instruments'. This request resulted in the neo-Romantic *Theatrepieces* for violin, clarinet and piano (1987), his first score in many years not to involve the human voice. In three movements, the work reflects Pasatieri's career in opera and film and his fascination with 'characters who sing without words' (disc notes, Crystal Records, 1990). *Theatrepieces* became the springboard for other instrumental works, such as the Concerto for Two Pianos and Strings (1994) and the Sonata for Viola and Piano (1995).

WORKS

OPERAS

Flowers of Ice (2, R. Rogers), 1964, unperf.
The Trysting Place (1, Pasatieri, after B. Tarkington), 1964, unperf.
The Women (chbr op, 1, Pasatieri), Aspen, CO, 20 Aug 1965
La Divina (comic op, 1, Pasatieri), New York, Juilliard School, 16 March 1966
Padrevia (1, Pasatieri, after G. Boccaccio), New York, Brooklyn College, 18 Nov 1967
The Penitentes (3, A.H. Bailey), 1967, Aspen, CO, 3 Aug 1974
Calvary (chbr op, 1, after W.B. Yeats), Seattle, St Thomas Episcopal Church, 7 April 1971
Black Widow (3, Pasatieri, after M. de Unamuno: *Dos madres*), Seattle, 2 March 1972
The Trial of Mary Lincoln (TV op, 17 scenes, Bailey), Boston, NET, 14 Feb 1972
The Seagull (3, K. Elmslie, after A.P. Chekhov), Houston, 5 March 1974
Signor Deluso (comic op, 1, Pasatieri, after Molière: *Sganarelle, ou Le cocu imaginaire*), Wolf Trap, VA, 27 July 1974
Ines de Castro (3, B. Stambler), Baltimore, 30 March 1976
Washington Square (chbr op, 2, Elmslie, after H. James), Detroit, 1 Oct 1976
Three Sisters (1, Elmslie, after Chekhov), 1979, Columbus, OH, 13 March 1986
Before Breakfast (1, F. Corsaro, after E. O'Neill), New York, City Opera, 9 Oct 1980
The Goose Girl (children's op, 1, Pasatieri, after J.L. and W.C. Grimm), Fort Worth, TX, 15 Feb 1981
Maria Elena (1, Pasatieri), Tucson, AZ, 6 April 1983

ELISE KIRK

Pascal, Florian. The pseudonym of Joseph Benjamin Williams, English composer who headed the firm of JOSEPH WILLIAMS.

Pascale [Paschali], **Francesco.** *See* PASQUALI, FRANCESCO.

Paşcanu, Alexandru (*b* Bucharest, 3 May 1920; *d* Bucharest, 6 July 1989). Romanian composer. He studied composition with Negrea, aesthetics with Cuclin, folklore with Brăiloiu and conducting with Perlea at the Bucharest Academy (1938–46), also graduating in law from Bucharest University in 1944. Paşcanu taught in lyceums and at the Academy, where he developed a valuable course manual. In 1951–2 he was barred from teaching for political reasons and worked as artistic secretary for the Army Ensemble. His music includes impressionistic, modal, folk and occasionally jazz elements and is descriptive and highly charged with emotion. While a preoccupation with harmonic colouring is a feature of his chamber music, for instance *Noapte de vară* (1955), a neo-classical rigour informs *Scherzo simfonic* (1948) and *Preludiu şi toccata* (1956). In *Suita română* (1967) and his many choral arrangements for children Paşcanu incorporates the melodic character of Romanian folk music.

OCTAVIAN COSMA

Pascarola, Giovanni Tommaso Benedictis da. *See* BENEDICTIS DA PASCAROLA, GIOVANNI TOMMASO.

Pasche [Passhe], **William** (*fl* *c*1513–37). English composer and church musician. In 1513 he was admitted to the Fraternity of St Nicholas (a guild of musicians and clerks of the collegiate and parish churches of London and its hinterland), and from *c*1519 to 1526 he occurs as one of the six lay vicars of the choir of St. Paul's Cathedral, London. He had left this employment by June 1534, and

may well be identifiable with the singing-man of this name who in 1527 and 1528 was a clerk of the choir of the parish church of St Peter, West Cheap, London. In 1547 the possessions of this church included books of polyphony and vestments for men and boys of the choir, and during the 1540s its rector was the composer John Gwynneth; it may well have enjoyed a musical culture sufficiently ambitious to require the services of a prominent musician to lead it. In addition, Pasche received payments from the parish church of Kingston-upon-Thames, Middlesex, in 1514–15 for the 'oversight of the organs', and again in 1536–7. The death of his wife Embryth was notified to the Fraternity of St Nicholas in 1517.

The composer must be distinguished from other persons of the same name with whom he has been confused, including one who was a Fellow of New College, Oxford, 1494–1506; one whose will was proved before Commissaries of the Prerogative Court of Canterbury sitting in St Paul's Cathedral in July 1525; and a Mr Pashe who in 1516 was a long-deceased founder of one of the chantries established in St George's Chapel, Windsor. Flood's claim that in 1476 the composer was a gentleman of the household chapel of Anne Holland, Duchess of Exeter, is clearly based on yet further misunderstanding of the source of this last misidentification.

'M[aster] Pashe' headed the list of English composers whose authority Thomas Morley acknowledged in his *A Plaine and Easie Introduction to Practicall Musicke* (1597), but only three works have survived, all extended and ornate. Four out of five voices of a *Magnificat* setting and of a votive antiphon *Sancta Maria mater Dei* (ed. N. Sandon, Newton Abbot, 1994) survive in *GB-Cu* Peterhouse 471–4. Into the latter the composer worked both a particular five-note motif common to certain other contemporary compositions and a brief phrase reminiscent of chants for the litany, which had provided the starting-point for its lengthy prose text. A five-voice mass, *Christus resurgens* (*Cgc* 667) has survived complete. Suggestions that he was the W.P. whose initials were inscribed beside a *Salve regina* in *Lbl* Add.5665 seem unlikely.

ROGER BOWERS

Paschil, Josif (*b* Bucharest, 17 Sept 1877; *d* Bucharest, 29 March 1966). Romanian composer and pianist. After studying with Wachmann at the Bucharest Conservatory he studied composition and the organ with Fauré in Paris (1901–2). As well as sustaining a career as a concert pianist (1893–1935), Paschil worked in Bucharest as organist at the Choral Temple (1901–25), conductor for several opera companies (1903–06), conductor of the choirs of the German Societies (1903–43) and organist at the cathedral of St Iosif in his later years. Most active as a composer in his early years, he favoured the theatre and was attracted to specifically Romanian subject matter. Rich in folk imagery and highly accessible, his music is notable for the clarity of its dramatic argument. Paschil wrote musical commentaries in German-language periodicals in Bucharest.

WORKS

OCTAVIAN COSMA

Pascual Ramírez (y Arellano), Francisco (*b* province of Segovia, 1683; *d* Palencia, 26 Dec 1743). Spanish composer. In 1711 he worked as a professional musician at El Burgo de Osma Cathedral, and in October of the same year he unsuccessfully competed for the post of *maestro de capilla* of Sigenza Cathedral, for which he composed the eight-part villancico *De dulces consonancias*. In October 1719 he was appointed *maestro de capilla* of Astorga Cathedral, and was required to be present at processions both inside and outside the church and to attend to the special music for feast days and Rogation Days. As a result, in addition to the known villancicos, he composed music for various theatrical festivities in the city; for instance, for the panegyric play *El escándalo de Grecia*, performed at the Corpus Christi celebrations in San Bartolomé de Astorga in 1720. From May 1723 until his death he was *maestro de capilla* of Palencia Cathedral, where he upgraded the musical staff by admitting several cantors and instrumentalists; he even used occasional reinforcements, such as the musicians of the Prince's regiment for the Christmas festivities of 1738.

His music has survived almost in its entirety in the archive of Palencia Cathedral as part of the legacy bequeathed by the composer four days before his death. In his Latin works he uses the traditional polychoral and contrapuntal language of the time, very elaborate and with obbligato instruments such as the oboe and pairs of violins. Of equal interest are his Spanish works, in which the change in taste that took place at the beginning of the 18th century is evident in the mixture of the polychoral tradition of the 17th century, with works that alternate the choral refrain (*estribillo*) with the stanza for solo voices (*copla*), and the italianate style, with its alternation of recitatives and arias. These works were written for a variety of occasions, including Christmas, Corpus Christi and various Marian feasts, as well as canonizations and enshrinements of saints. His scant surviving output of incidental music for sacred plays for Christmas and Corpus Christi bears witness to the role music played in the celebration of traditional feasts in the urban environment at the start of the 18th century.

WORKS

Lat. works, most in *E-PAL*, 1 in *SE*: 1 mass, 1 requiem, 4 pss, 20 lamentations, 6 motets, 3 hymns, 1 verse, 1 res, 1 lesson for the dead, 1 invitatory for the dead, 1 sequence for the Resurrection

Sp. works, *PAL*: 239 villancicos, 2–15vv, 83 cants., 1v, 2 pieces of incid music for sacred plays, 27 other works, 1–4vv

PABLO L. RODRÍGUEZ

Pasculli, Antonino (*b* Palermo, 13 Oct 1842; *d* Palermo, 23 Feb 1924). Italian oboist and composer. Known as perhaps the greatest oboe virtuoso of all time, Pasculli's legendary abilities have often stimulated comparisons with Paganini. Beginning his career at the age of 14, he toured in Germany, Italy and Austria. He was one of the first oboists active in the Italian-Austrian regions to use a French-style oboe, and was famed for his light and effortless bravura style. His appointment to the staff of the Palermo Conservatory in 1860 signalled the end of his itinerant career. In 1879 he took over the directorship of the Palermo municipal musical corps, a position to which he dedicated much time and energy. He had all the wind players learn a string instrument, so as well as conventional band repertory he was able to introduce contemporary music unfamiliar to Sicilian audiences, including works by Wagner, Debussy, Grieg and Sibelius. However, his sight was deteriorating seriously, and medical advice attributed this to his oboe playing; in 1884 he gave his last public performance. At his retirement in 1913 the symphony band dissolved. Like so many other virtuosos of the 19th century, Pasculli composed music for his own use. As well as a large number of variations on popular operatic themes, he wrote some pedagogical material and compositions for the corps, including a symphonic poem, *Naiadi e Silfidi*, and *Di qui non si passa*, an elegy on the death of his son, who was killed in action in World War I.

Pas de charge (Fr.). Double-quick march. *See* MARCH, §1.

Pasdeloup, Jules Etienne (*b* Paris, 15 Sept 1819; *d* Fontainebleau, 13 Aug 1887). French conductor and administrator. He won *premiers prix* for solfège (1832) and piano (1834) at the Paris Conservatoire. The death of his father, François Pasdeloup, who was a conductor at the Opéra-Comique, forced him to earn a living, and at the age of 14 he was already giving music lessons. He was a lecturer in solfège at the Conservatoire from 1841 and in the piano from 1847 to 1850, and in 1855 he became professor of choral music; he subsequently abandoned official teaching posts. In the wake of the political events of 1848 Pasdeloup was appointed *régisseur* of the Château de Saint Cloud, a post which enabled him to meet the most distinguished personalities of the Second Empire and to be a kind of impresario for the regime. He was then engaged by Nieuverkerke, superintendent of fine arts, to organize concerts at the Louvre, and later by Haussmann to set up a series of concerts at the Hôtel de Ville. He was also asked to arrange musical soirées in the apartments of Princess Mathilde.

The Société des Jeunes Artistes was Pasdeloup's first major success as a conductor. It is said that after offering a scherzo he had composed to Habeneck, who refused it without so much as looking at it, he decided to form a symphonic society to perform the music of young composers who had been reduced to composing for the stage or not at all. Pasdeloup contacted his pupils from the Conservatoire and started sessions in orchestral technique. In December 1852 the statutes of the society were laid down, and the first concert was given in the Salle Herz on 20 February 1853. In 1856 Auber, the director of the Conservatoire, became patron of the society, which then became known as the Société des Jeunes Artistes du Conservatoire Impérial de Musique. This offered it such benefits as free use of rehearsal rooms and instruments. During its nine years' existence the society gave the first performances of numerous works, including symphonies by Gounod and Saint-Saëns, and performances of Schumann's Symphony no.1 (performed 1857, ten years before it was given at the Société des Concerts du Conservatoire) and the Wedding March from Wagner's *Lohengrin*. But after nine years its deficit, until then borne by Pasdeloup, rose to 77,000 francs. Pasdeloup decided on a change of plan, and in 1861 hired the Cirque Napoléon for six Concerts Populaires de Musique Classique. The hall seated almost 5000, and the orchestra numbered 110. The aim of these concerts was to bring classical music to a culturally deprived public, which until then had not been permitted to enter the Société des Concerts du Conservatoire. The first of these concerts was given on 27 October. After three concerts, public support was so great that Pasdeloup was able to book the Cirque Napoléon for a year. Until the war of 1870 the Concerts Populaires were an unquestionable artistic and financial success. All the famous soloists of the day played at these Sunday concerts. The works of the five 'greats' – Beethoven, Haydn, Mozart, Weber and Mendelssohn – were played frequently, but Pasdeloup also gave an important place to contemporary French composers and performed works of the German symphonists then unknown in France. The names of Schumann and especially Wagner provoked hostile reactions which grew with the rising nationalism in the 1870s and assumed such political significance that these composers' works had to be excluded from the programmes.

Pasdeloup shared the directorship of the Paris Orphéon with Bazin. In 1868 he founded the Société des Oratorios, which gave the first Paris performance of the first part of Bach's *St Matthew Passion* at the Panthéon. He also joined the Théâtre Lyrique in 1868 and produced *Rienzi* there the following year. The Théâtre Lyrique collapsed at the beginning of 1870, a few months before war broke out. But the war did not interrupt the Concerts Populaires for long; Pasdeloup, who fought bravely with the National Guard, resumed his concerts during the siege, only to have them interrupted again during the Commune until October 1871. It was at this time that the rivalry began which eventually overcame Pasdeloup. First, the Société Nationale (1871) and later the Concert National (1873) were conducted by Colonne, who gave six concerts at the Odéon before moving to the Châtelet in 1874. For some time Pasdeloup's popularity withstood the undeniable technical superiority of Colonne; in 1878 he requested and obtained a grant of 20,000 francs. But the arrival of Charles Lamoureux, who inaugurated the Nouveaux-Concerts in 1881, proved the death-blow to the Concerts Populaires; Pasdeloup tried in vain to save his institution by increasing his appeals for financial aid and for new ideas, and was forced to abandon the struggle in 1884. His friends organized a farewell festival which raised

100,000 francs and assured him a comfortable retirement. He was asked to start a musical season at Monaco, but this, too, was a failure. In October 1886 he tried once again to establish his concerts at the Cirque Napoléon; he succeeded in giving five concerts and a festival devoted to the music of Franck before he died.

Pasdeloup was a great stimulus to French musical life. In creating an orchestra devoted to playing new works, he inspired the writing of symphonic music by composers who might otherwise have ignored this form. His promotion of Classical, German Romantic and French symphonic music contributed to the creation of a new, larger and more diverse musical public. He also wrote music for the voice, for the piano and for orchestra, though none of his works was performed at any of his concerts or has since enjoyed any popularity.

ELISABETH BERNARD

Paseo [passeo] (Sp.). A type of *ripresa* or ritornello similar to the Spanish *passacalle* (*see* PASSACAGLIA). It first appeared in J.C. Amat's *Guitarra española* (originally published in 1586/1596, though the earliest surviving copy dates from 1626). Sanz (1674) described Amat's *paseos* as *passacalles* and used the two terms interchangeably in the titles of his own compositions. Pablo Minguet y Yrol in the guitar portion of his *Reglas y advertencias generales* (Madrid, 1754/*R*) quoted extensively from Amat's book and substituted the word 'passacalle' for 'paseo'. Cabanilles wrote five sets of keyboard variations called *passacalles* and four others entitled *paseos* (see HAM, no.239). The term occurs with a choreographic meaning in Juan de Esquivel's *Discursos sobre el arte del dançado* (Seville, 1642), where it refers to a complete cycle of dance steps.

RICHARD HUDSON

Pasero, (Giacinto Tommaso) Tancredi (*b* Turin, 11 Jan 1893; *d* Milan, 17 Feb 1983). Italian bass. He studied with Arturo Pessina and made his début at the Politeama Chiarella, Turin, as the King of Egypt (*Aida*) in 1917. In 1924 he appeared at the Teatro Costanzi, Rome, and at the Colón, Buenos Aires, where he returned until 1930. In 1926 he made his début at La Scala in *Don Carlos*, and sang there, almost continuously, until 1951. He was engaged at the Metropolitan (1929–33), at Covent Garden (1931) and at the Paris Opéra (1935). He retired in 1955. His voice was full, mellow and even across a wide range, and he sang with a fine sense of style in a repertory extending from Sarastro to Escamillo. He was outstanding in such Italian *basso cantante* roles as Oroveso (*Norma*), Zaccaria, Ramfis, Fiesco, Padre Guardiano and Philip II; and in the latter part of his career he became a renowned Boris Godunov.

Pasetto, Giordano [Pasetus, Jordanus]. *See* PASSETTO, GIORDANO.

Pashchenko, Andrey Filippovich (*b* Rostov-na-Donu, 3/15 Aug 1885; *d* Moscow, 16 Nov 1972). Russian composer. As a child he sang in a church choir, received violin lessons, studied at a charitable music school and took correspondence courses. He directed amateur choirs and wrote reviews for the Moscow periodicals *Muzïkal'nïy truzhenik* and *Muzïka i zhizn'*. From 1911 he was librarian of the St Petersburg Court Orchestra and he took an active part in its reorganization as the State Orchestra (1917) and finally as the Petrograd (later Leningrad) Philharmonic Orchestra (1921), remaining in this post until 1931. Meanwhile he had received his formal compositional training as a mature student at the St Petersburg Conservatory under Witohl and later Steinberg (1914–17). The result of his library work was the *Muzïkal'nïye proizvedeniya P.I. Chaykovskogo: istoriko-bibliograficheskiy ukazatel'* [The musical works of Tchaikovsky: a historical and bibliographic index] (1918–21). The manuscript was accepted for publication but lost. Together with Glazunov, Findeyzen and Steinberg he founded the Society for the Propagation of Contemporary Russian Music (1922–3). He became a member of the Artistic Council of the Leningrad Philharmonic Orchestra in 1926 and the State Academic Theatre of Opera and Ballet in 1928. In 1957 he received the title Honoured Representative of the Arts of the RSFSR, and in 1961 he settled in Moscow.

Pashchenko's name first appeared on concert programmes in 1914 with the scherzo-fantasy *Arlekina i Kolombina* ('Harlequin and Columbine') and the symphonic poem *Vakkhanki* ('The Bacchantes'). During the years of the Revolution and revolutionary construction Pashchenko enthusiastically immersed himself in the new socialist culture. Pashchenko's output is extensive, particularly in the field of choral music, where his epic, monumental style is most fully evident, its objective tone conveying mass feelings and impulses. His subjects may be taken from Greek mythology, pagan Slav legend (*Viriney*) or heroic contemporary events, as in the *Rekviyem pamyati geroicheskikh boytsov* ('Requiem in Memory of the Heroic Warriors') written during the Leningrad blockade of 1942. Both in original choral pieces and free folksong arrangements Pashchenko displayed a deep understanding of Russian peasant singing and polyphony: his choral writing employs a diversity of techniques, often to illustrative effect. Close links with Russian folk music are also apparent in the texture of Pashchenko's orchestral music, indigenous polyphony is combined with classical counterpoint, in which he was particularly interested: he wrote about 200 fugues at the beginning of the 1920s. But it is the broadly presented choral music that distinguishes his opera *Orlinïy bunt* ('The Eagle Revolt'), concerning the Pugachyov uprising.

This work played an important role in shaping Soviet music drama, particularly in the portrayal of historical and revolutionary themes – for example, the theme of Vasily Chapayev, the hero of the Civil War, was embodied in the aria *Chyornïy yar* ('The Black Ravine'). However, Pashchenko's reputation as an opera composer was established later with his comic and satirical works: *Tsar' Maksimilian* is a 'buffoon play' based on ideas from folk tales and is linked with Rimsky-Korsakov's *Zolotoy petushok* ('The Golden Cockerel') and traditional Russian farce; it has all the mordancy of a political pamphlet. In general, Pashchenko's music is tonally simple and lapidary, with a somewhat rough energy, a winning straightforwardness and resoluteness of expression.

Pashchenko was a productive composer. His contemporaries noted his irascible temperament and his exceptional industriousness (he wrote several operas and his choral symphony, no.12, in the period 1966–7). Throughout his life Pashchenko was noted for his impulsive reaction to events taking place around him. When seriously ill, he completed his Symphony no.16 which he dedicated to the 50th anniversary of education in the USSR. For many decades (from the 1950s to the 90s) his works were not performed and as a whole were not advocated.

WORKS
(selective list)

Operas: Orlinïy bunt (Pugovshchina) [The Eagle Revolt (The Pugachyov Affair)] (S. Spassky), 1925; Tsar' Maksimilian (A. Remizov), 1926–9; Chyornïy yar [The Black Ravine] (I. Seyfullina), 1931; Pompadurï [The Pompadours] (A. Ivanovsky, V. Rozhdestvensky, after M. Saltïkov-Shchedrin), 1936; Svad'ba Krechinskogo [Krechinsky's Wedding] (Spassky, after Sukhovo-Kobïlin), 1947; Shut Balakirev [The Buffoon Balakirev] (A. Mareingof), 1949; Goryachiye serdtsa [Passionate Hearts] (N. Tokunova), 1952; Kapriznaya nevesta [The Capricious Bride], 1953; Radda i Loyko [Radda and Loyko] (after M. Gor'ky: *Makar Chudra*), 1957, rev. 1966; Nila Shnishko (after A.D. Salinsky), 1961; Velikiy soblaznitel' [The Great Seducer] (after A.K. Tolstoy), 1963–6; Alpiyskaya ballada [The Alpine Ballad] (D. Kulakov, after V.V. Bïkov), 1963–6; Afrikanskaya lyubov' [African Love] (Pashchenko, after P. Merimée), 1966; Zhenshchina, èto d'yavol [Woman, She is the Devil], 1966; Kon' v senatye [A Horse in the Senate] (after L. Andreyev), 1967; Portret [The Portrait] (after Gogol'), 1968; Master i Margarita [The Master and Margarita] (after M. Bulgakov), 1971

Choral: Russian folksongs, 2 suites, 1920, 1923; Viriney (S. Gorodetsky), suite, 1922; Osvobozhdyonnïy Prometey [Prometheus Unbound] (I. Sadofeyev), solo vv, chorus, orch, 1934; Pesn' solntsenostsa [Song of the Sun-Bearer] (N. Klyuyev), soli, chorus, orch, 1924, rev. 1941; Rekviyem pamyati geroicheskikh boytsov [Requiem in Memory of the Heroic Warriors] (Pashchenko), solo vv, chorus, orch, 1942; Lenin (orat, N. Khikmet, K. Seytliyev, V. Voyzhenin, A. Yashin), 1957; Vozvïs'te golos, chestnïye lyudi [Raise your Voices, Upstanding People] (cant., A.A. Surkov), 1962; Oda Sovetskomu Soyuzu [An Ode to the Soviet Union] (O. Orlinova), 1969

Other works: 16 symphonies (1915–72); 4 sinfoniettas, sym. poems, 9 str qts, over 60 songs

Principal publishers: Muzgiz, Sovetskiy kompozitor

GENRIKH ORLOV/LYUDMILA KOVNATSKAYA

Pashe, William. English composer, possibly identifiable with PASCHE, WILLIAM.

Pashkevich, Vasily Alekseyevich (*b c*1742; *d* St Petersburg, 9/20 March 1797). Composer and singer, possibly of Russian birth (the name is Polish). He probably received his training from Vincenzo Manfredini, the chief composer in the early 1760s at the court of Peter III and later at that of Catherine II. From 1763 he is listed as a member of the court orchestra, and he presumably also sang in the court chapel choir. In 1773–4 he taught singing at the Academy of Fine Arts. His first musical comedy, *Neschast'ye ot karetï* ('Misfortune from a Coach'), was produced at the Hermitage in 1779, Pashkevich himself appearing in one of the roles. The next year he was among those entrusted with the preparation of a grandiose 'theatrical festival' in honour of the empress's name-day, the others all being Italians (none of the music survives). After the success of his early operas in a privately owned enterprise, Pashkevich was re-employed by the court (1783) as a violinist in the 'first' orchestra; six years later he was put in charge of music for the royal balls, and was leader of the orchestra. At the same time he held the rank of soloist (*bol'shoy pevchiy*) in the chapel choir. Catherine II put him to work setting her own librettos and in 1790, after *Nachal'noye upravleniye Olega* ('The Early Reign of Oleg'), made him an award of 1600 rubles 'for divers composing of music and efforts beyond his obligation'. By the end of his career Pashkevich had attained the salary rank of Collegiate Assessor, the civilian equivalent of colonel (only Giuseppe Sarti equalled his standing, and not until the reign of Tsar Paul). His closeness to Catherine cost him dearly in the end, for on the accession of her son Paul he was dismissed without pension; he died shortly thereafter.

Pashkevich and Fomin were the most important native composers of opera in 18th-century Russia. Pashkevich's output can be divided into two groups. The earlier consists of five comedies (of which three survive) that formed the core repertory of Karl Knipper's 'free' (public) theatre on Tsaritsïn Lug (Queen's Meadow), where Pashkevich directed the music for the duration of its existence as a private enterprise (1779–83). This was primarily a dramatic theatre, and all of the musical plays written for it, though called comic operas, were of the type *comédie mêlée d'ariettes*, a spoken comedy interspersed with modest musical numbers that could be performed by actors. The first Russian specimen, *Anyuta* (1772; text by the court actor Mikhail Popov, music lost) has been attributed to Pashkevich; but while he may have taken part in the performance (at the Tsarskoye Selo palace, by members of the court chapel choir), it is more likely that

Anyuta, like many of its French prototypes, was made up of contrafacta to folk and popular tunes.

The libretto of *Misfortune from a Coach*, like that of *Skupoy* ('The Miser', 1781), Pashkevich's second opera, was by Knyazhnin, an outstanding neo-classical poet and playwright. One of the classics of 18th-century Russian drama, it is a typical satirical tale of rustic wit. Though it seems an indictment of serfdom (and was much touted as such by Soviet scholarship), it was not regarded so by contemporary audiences (indeed, the play was a great favourite of Catherine II). Pashkevich's music, in keeping with the literary style of the libretto, is devoid of the popular tone one might expect in an opera with peasant characters. Instead, the music sung by the peasant couple, especially in the duet in Act 2 through which they make their appeal to their master, is couched in a parodistically sentimental idiom, full of exaggerated appoggiaturas and *soupirs* (quaver rests). By contrast, Pashkevich's third surviving opera, *Sanktpeterburgskiy gostinnïy dvor* ('The St Petersburg Bazaar', 1782), to a libretto by Mikhail Matinsky, is a bench-mark of the emergent Russian national style. The music to a second libretto by Matinsky, *Tunisskiy pasha* ('The Pasha of Tunis', 1782), has not survived.

Three works to librettos by the Empress Catherine (written with the help of her literary secretary, Aleksandr Khrapovitsky) make up the second group of Pashkevich's operas. These were lavish court productions, in up to five acts, with choruses, ballets, large instrumental forces and singers capable of a decorative vocal idiom. Nevertheless, they all remained true to the simple conception of a play with musical numbers. Only the music of the first of them, *Fevey* (1786), was wholly by Pashkevich. The title character of this work – based on a fairy-tale by Catherine – is a Siberian prince (tenor), who pursues a dream vision of a beautiful princess to the ends of the earth. Curiously foreshadowing the technique of certain 19th-century Russian masters, Pashkevich based his score on the contrast between a selfconsciously Russian idiom and an 'oriental' one, in this case an imaginary Mongol style. His 'Kalmyk chorus', a concoction of Lombard rhythms and drone 5ths, attracted a great deal of favourable attention, many spectators taking it as authentic. Pashkevich's contribution to the other operas with texts by Catherine – *The Early Reign of Oleg* (mainly by Sarti) and the one-act *Fedul s det'mi* ('Fedul and his Children'; mainly by Martín y Soler) – was (apart from the attractive overture to *Fedul*) largely confined to interludes of local colour in the form of choral harmonizations of Russian folksongs. The wedding scene in Act 3 of *The Early Reign of Oleg*, with its three finely wrought choruses, a refinement on the bride's party in *The St Petersburg Bazaar*, is perhaps Pashkevich's most elegant and characteristic achievement in the national vein.

WORKS

all first performed in St Petersburg; all extant MSS in RU-SPtob

Neschast'ye ot karetï [Misfortune from a Coach] (comic op, 2, Ya.B. Knyazhnin), Hermitage, 7/18 Nov 1779, excerpt in *IRMO*

Skupoy [The Miser] (comic op, 1, Knyazhnin, after Molière and A. Sumarkov), Knipper's, sum. 1781; ed. Ye. Levashov (Moscow, 1973); excerpt in *IRMO*

Lzhets [The Liar] (Knyazhnin), 1 no. pubd (1781), music otherwise lost

Tunisskiy pasha [The Pasha of Tunis] (comic op, 2, M.A. Matinsky), Knipper's, 22 June/3 July 1782, music lost

Sanktpeterburgskiy gostinnïy dvor [The St Petersburg Bazaar] (comic op, 3, Matinsky), Knipper's, aut. 1782; rev. as Kak pozhivyosh', tak i proslïvyosh' [You'll be Known by the Way you Live], Bol'shoy, 2/13 Feb 1792; ed. Ye. Levashov (Moscow, 1980); excerpts in *IRMO*

Fevey (comic op, 4, Catherine II), Bol'shoy, 19/30 April 1786; vs arr. I. Pratsch (St Petersburg, 1789); excerpt in *IRMO*

Nachal'noye upravleniye Olega [The Early Reign of Oleg] (5, Catherine II), Hermitage, 15/26 Oct 1790 (St Petersburg, 1791), collab. G. Sarti and C. Canobbio

Fedul s det'mi [Fedul and his Children] (play with music, 1, Catherine II and A.V. Khrapovitsky), Hermitage, 16/27 Jan 1791; vs (Moscow, 1895); collab. V. Martín y Soler

RICHARD TARUSKIN

Pashta. Sign used in Hebrew EKPHONETIC NOTATION. *See also* JEWISH MUSIC, §III, 2(ii).

Pasillo. A dance-music genre descended from the Austrian waltz and cultivated during the colonization of Colombia and Ecuador as a formal ballroom dance. The modern *pasillo* survives in folk tradition in two forms: the slow *pasillo* is known for its nostalgic texts and melancholy melodies; the faster instrumental *pasillo* is in rondo form, each section in a contrasting tonal area, and is characterized by syncopated melodies and both horizontal and vertical polyrhythmic effects created between the 3/4 and 6/8 alternation in the guitar and *tiple* (small 12-string guitar) accompaniment and the *bandola* (bandurria: flat-backed lute) melodies.

WILLIAM GRADANTE

Pasindén. Female singer in Sundanese gamelan. *See* PESINDHÈN. *See also* INDONESIA, §V, 1.

Pasino, Stefano [Ghizzolo] (*b* Brescia, ?early 17th century; *d* ?Lonato, nr Brescia, after 1679). Italian organist and composer. He worked for a time as a priest at the church at Cona, near Chioggia. In 1635 he had become town organist of Lonato. By 1651 he had moved a few miles north to Salò, where he was *maestro di cappella* of the cathedral. From the dedication of his sonatas (1679) it appears that he had to give up his musical activities for a time before returning to Lonato, presumably in old age. In this dedication, addressed to the town authorities of Lonato, he mentioned the composers G.A. Bertoli, G.M. Lanfranco and Pietro Verdina, but not Giovanni Ghizzolo,

whose name he shared as a nickname. Though both came from Brescia, both were priests and both wrote masses *da concerto e cappella*, there is no evidence of any association between them. Pasino was clearly an inventive composer, whose surviving publications show that he was interested in writing in both *prima* and *seconda pratica* styles.

WORKS

Messe da concerto, e cappella & per li defunti, 4vv, op.4 (Venice, 1635)

Motetti concertati, 2–4vv, 2 vn, va, Laetatus, 5vv ... con un Pater noster da cappella sopra il canto fermo, 5vv, op.6 (Venice, 1651)

Ricercari, op.7; lost, cited in *FétisB*

Sonate de quali, una è composta in canone, & un'altra ad imitatione di versi sogliono fave diversi animali bruti, a 2–4, op.8 (Venice, 1679)

JOHN HARPER

Paskalis, Kostas (*b* Levadia, Boeotia, 1 Sept 1929). Greek baritone. He studied in Athens, making his début there in 1951 as Rigoletto. In 1958 he sang Renato in Vienna, where he was a member of the Staatsoper for 20 years. He made his British début in 1964 as Macbeth at Glyndebourne, where he also sang Don Giovanni (1967), and his Metropolitan début in 1965 as Don Carlo (*La forza*), returning as Ford. At Salzburg he created Pentheus in Henze's *The Bassarids* in 1966 and at La Scala sang Valentin (1967). He made his Covent Garden début in 1969 as Macbeth, returning for Iago, Scarpia and Rigoletto. His repertory included William Tell, Escamillo (which he recorded), Barnaba (*La Gioconda*), Yevgeny Onegin and Harlequin (*Ariadne auf Naxos*), but it was in Verdi that he excelled, as Posa, Rigoletto, Amonasro, Boccanegra, Luna, Germont, Nabucco and, his finest roles, Iago and Macbeth (the latter preserved on video). He was an arresting actor and had a warm, resonant voice with a wide range, although his concern for powerful characterization sometimes caused him to distort his vocal line.

ALAN BLYTH

Paso doble (Sp.: 'double step'). Hispanic-derived dance genre, generally in 6/8 metre. *See* MEXICO, §II; PHILIPPINES, §III, 5(iv).

Pasoqa. Accent denoting a main pause in Syriac EKPHONETIC NOTATION.

Pas ordinaire (Fr.). Slow march. *See* MARCH, §1.

Pasoti, Giovanni Giacomo. Italian printer. *See under* DORICO, VALERIO.

Paspy. *See* PASSEPIED.

Pasquale [Pasquali], **Bonifacio** (*d* Padua, Feb 1585). Italian composer. He is recorded as a monk at the monastery of S Francesco, Bologna, on 18 November 1565, and as *maestro di cappella* there on 3 September 1567. He then moved to Padua where he was *maestro di cappella* of S Antonio from 16 Jan 1569 until his death. On 27 May 1576 he was paid 30 ducats for the publication of his psalms. In 1584 he was invited to take charge of the *cappella* of Piacenza Cathedral but he declined. Fétis's statement that he was appointed *maestro di cappella* of Parma Cathedral is not documented and conflicts with Pasquale's documented activities between 1567 and 1585; moreover, as Busi noted, it seems unlikely that Pasquale held the post at Parma before 1567, since the only document to refer to him before that date names him only as a monk. Pasquale was also a member of the academy at Padua. His only known volume of compositions is *I salmi che si cantano tutto l'anno al Vespro ... et un Magnificat* (Venice, 1576[7]), for five and eight voices, which ends with a *Magnificat* by Giulio Rinaldi. Martini quoted three extracts from this work and mentioned another of Pasquale's works, the *Completorium lib. 8*, of which no copies survive.

PIER PAOLO SCATTOLIN

Pasquali [Pascale, Paschali], **Francesco** (*b* Cosenza, late 16th century; *d* after 1634). Italian composer. He is described as 'nobile cossentino' in his 1615 publication. He studied in Rome and seems to have spent some time in or around that city. From 1622 to 1631 he was *maestro di cappella* of Viterbo Cathedral. He dedicated his *Madrigali* of 1627 and *Varie musiche* (1633) to Cardinal Tiberio Muti, Bishop of Viterbo and Toscanella, whom he served for many years. He may have been the Cecco Pasquali who was a singer at Assisi, probably about 1628–9, and the dedication of his *Varie musiche* was dated at Ancona on 20 December 1632. In 1635 he applied, unsuccessfully, for the position of *maestro* of Urbino Cathedral. He published at least six books of music. The secular ones, of which only that of 1627 survives complete, reflect the contemporary shift in interest from the polyphonic to the concertato madrigal, dialogue and solo song. The four-part dialogue *Che fai, Tirsi gentile* (1627) reveals Pasquali as a competent composer in the Roman style.

COLIN TIMMS

Pasquali, Niccolo (*b c*1718; *d* Edinburgh, 13 Oct 1757). Italian composer, violinist, theoretician and impresario. It is assumed that Pasquali was born about 1718, since the Edinburgh burial records give the age at which he died as 39. According to Burney he came to London about 1743 and from then on was extremely active in the three main British musical centres. He spent the period 1748–9 in Dublin, where he produced an oratorio, *Noah*, and a masque, *The Temple of Peace*. By 1750 he was back in London, returning to Dublin in 1751. From

October 1752 onwards he lived in Edinburgh, where he led the orchestras at both the Canongate Theatre and the Musical Society, wrote and acted in a 'whimsical Farce' entitled *The Enraged Musician* (based on Hogarth's print), and composed, among other works, a *Stabat mater* which continued to be performed in Edinburgh after his death. His arrangement of Corelli's concerto grosso op.6 no.4, with additional parts for horns, trumpets and timpani, survived in the concert repertory until the 1770s (see Fiske, 260).

Much of Pasquali's music is no longer extant. He was a fluent, prolific writer, accustomed to working in the theatre; he probably learnt a great deal from Handel. Cudworth suspected that he had a valuable influence on Boyce. Several of his Twelve Overtures of 1751 have subtitles which show they belonged to theatrical productions for which the rest of Pasquali's music is lost.

Pasquali also wrote a figured bass instruction book, *Thorough-bass made Easy*, which was published in Edinburgh in 1757 at the end of his short, energetic career. It went through at least three British editions and – translated into French and Dutch – one in Amsterdam; it contains excellent advice which is still of value, e.g. on different ways to break chords when accompanying recitative. In restrospect it seems to be Pasquali's most important achievement.

WORKS

ORATORIOS

Noah, lost; David, lost, hpd part, *GB-Lcm*

MASQUES

The Temple of Peace, Apollo and Daphne, The Grand Festino, Venus and Adonis, The Nymphs of the Spring, The Triumphs of Hibernia; only ovs. survive

COMIC OPERA

The Enraged Musician, or The Tempest Rehearsed, advertised in *Edinburgh Evening Courant*, 13 Jan 1753; lost

CANTATAS

DAVID JOHNSON

Pasqualini, Marc'Antonio ['Malagigi'] (*b* Rome, bap. 25 April 1614; *d* Rome, 3 July 1691). Italian soprano castrato and composer. The son of a barber from Imola, he studied with Vincenzo Ugolini while employed as a boy soprano at S Luigi dei Francesi in Rome from 1623; in 1629 his contract of apprenticeship was bought out by the younger Cardinal Antonio Barberini, who remained his patron and promoter. Imposed upon the Cappella Sistina by Barberini in 1631, the boy became a full member of the choir in July 1634. Despite fulfilling the needs of his patron ahead of those of the choir, Pasqualini eventually served as *puntatore* (penalty scorer) for the choir in 1648 and as *maestro di cappella* in 1655; he retired in 1659 but returned occasionally to sing as a substitute.

Pasqualini was among the earliest singers with steady experience on the operatic stage. He sang in the 1628 Farnese wedding festivities in Parma, and in Rome he performed leading roles in the Barberini productions of *Sant' Alessio* (1632, 1634), *Erminia sul Giordano* (1633), *Didimo e Theodora* (1635, 1636), *Chi soffre speri* (1637, 1639) and *Il palazzo incantato* (1642), as well as singing in the French ambassador's production of *La Sincerità trionfante* (1638–9). After Cardinal Antonio had fled to Paris, Pompeo Colonna presented him in his own *Ratto di Proserpina* (1645, Rome). Pasqualini's final stage appearance was in *Orfeo* by Luigi Rossi, given in Paris in 1647. Short in stature, he specialized in unhappy characters (often women disguised as men), such as the lamenting Bradamante of Rossi's *Palazzo incantato*. Such roles provided poignant, triple-metre lyrical arias as well as distressed or vengeful recitative soliloquies.

The music he performed for the Barberini – by Stefano Landi, Marco Marazzoli and, after 1641, Luigi Rossi – influenced Pasqualini's own compositions. It appears that many of the manuscript scores that he owned remained in the Barberini collection (*I-Rvat*). These include anthologies (dated between 1638 and 1676) of secular and devotional vocal chamber music and undated scores and parts of oratorios in Italian. Much is in Pasqualini's own hand; some are compositional sketches. To complicate matters of authorship in the oratorios, some portions are contrafacta and arrangements of earlier, seemingly independent pieces. Over 40 chamber cantatas, however, are securely identified as his through attributions in concordant sources; he may well have composed over 100 others (see Murata, 1985). Most of the attributed works are among the Pasqualini autographs in the Barberini collection. In other sources Pasqualini's music appears from the mid-century, at the height of his fame as a singer and about the time that Andrea Sacchi painted the full-length portrait of him now in the New York Metropolitan Museum of Art.

MARGARET MURATA

Pasquin (*fl* 1469–74; *d* before 1497). Franco-Flemish composer. He joined the choir of Cambrai Cathedral in 1469, and was still active there in 1474. In 1472–3 Tinctoris criticized his (as yet unidentified) *Missa authenti prothi irregularis* for its contradictory use of minims (citing two excerpts from the 'Cum sancto'), and described the work generally as 'lacking in all art and melody'; this was the only work Tinctoris censured for its style as a whole, and its identification might shed interesting light on the early history of music criticism. Yet Pasquin was famous enough to be mentioned by Guillaume Cretin in his *Déploration* for Johannes Ockeghem (1497), where he is among the 13 deceased composers who pay musical tribute to Ockeghem in the underworld.

Pasquin's only surviving work is a four-part *Missa 'Da pacem'* (*I-Rvat* C.S.41), a setting whose style suggests a date in the 1470s. The plainchant cantus firmus, though rhythmicized differently in each movement, is treated like a traditional 'scaffold' tenor, in long note values with occasional *prolatio maior* augmentation. The setting strongly recalls the sacred music of Busnoys in its use of these and other mensural contrasts, its employment of the signature O2, the retention of plainchant text in the tenor, the introduction of three-part imitations around the long-held tenor notes, and especially the tendency for the outer voices to move in parallel tenths.

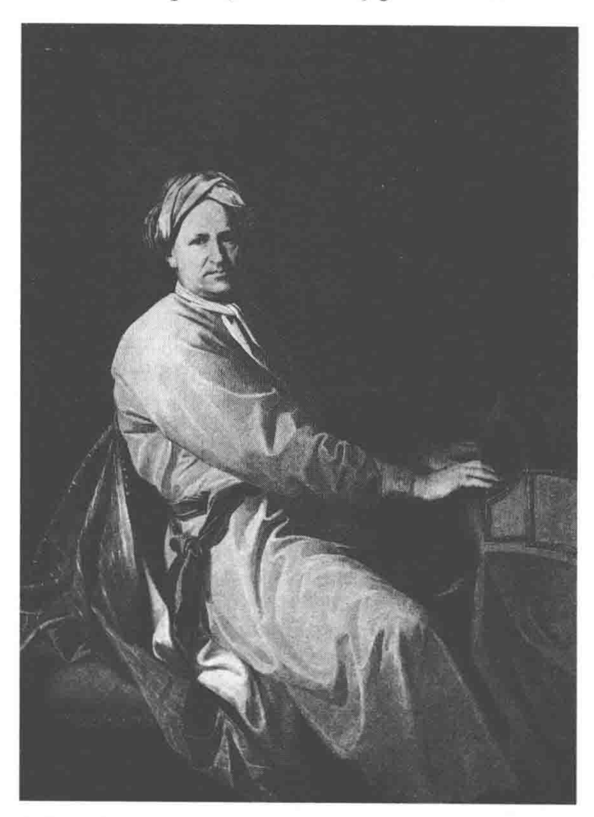
ROB C. WEGMAN

Pasquini, Bernardo (*b* Massa Valdinievole [now Massa e Cozzile, Pistoia], 7 Dec 1637; *d* Rome, 22 Nov 1710). Italian composer, harpsichordist and organist. Renowned in his day as a virtuoso keyboard player, he was the most important Italian composer of keyboard music between Frescobaldi and Domenico Scarlatti. He also made a significant contribution to the traditions of Roman opera and oratorio.

1. Life. Pasquini claimed to have attended the school at Uzzano, near his birthplace; according to G.B. Martini he was brought up by an uncle at Ferrara. He had reached Rome by 1650, and he lived there for the rest of his life. It has always been maintained that his teachers were Antonio Cesti and Loreto Vittori, but he made a detailed study of the works of Palestrina and Frescobaldi; he copied Frescobaldi's *Il primo libro delle fantasie* (1608, *D-Bsb*). He held a series of organist posts in Rome: at S Maria in Valicella from 1657 (following F. Fontana); then at Chiesa Nuova and S Luigi dei Francesi after the death of Mutii in 1661 (also at S Luigi, 1973–5); and at S Maria in Aracoeli from 8 February 1664 until his death, with the title 'organist of the Senate and Roman people'. In 1664 he played as a harpsichordist for Louis XIV while in the entourage of the papal legate, Cardinal Flavio Chigi. From 1664 to 1685 he was one of the organists in the oratorio performances at the oratory of S Marcello.



Pasquini's contemporary reputation rested largely on his outstanding virtuosity as a keyboard player and gained him the patronage of Queen Christina of Sweden, Prince Colonna, Cardinal Ottoboni, Cardinal Pamphili and, above all, Prince Giambattista Borghese. In November 1666 he became harpsichordist and musical director to Prince Giambattista and about 1669 he moved into an apartment on the third floor of the recently completed Palazzo Nuovo of the Borghese. The census records of the parish of S Lorenzo in Lucina confirm that he lived there from at least 1671 until his death, sharing the accommodation at first with two other musicians and later with his nephews, notably, from 1691 to 1710, Bernardo Felice Ricordati, who studied with him and eventually took his surname.

Outside the Borghese household Pasquini was involved in performances of secular music throughout Rome. His stature as a keyboard player was equal to that of Corelli as a violinist, and they performed together not only in oratorios but in operas and chamber concerts. Corelli led the orchestra for the performances of Pasquini's opera *Dov'è amore è pietà* at the Teatro Capranica in 1679 and of his cantata *Accademia per musica* at the palace of Queen Christina of Sweden in 1687. In the musicians' guild, the Congregazione di S Cecilia, each rose to become 'guardian' of his respective section – Pasquini of the organists and Corelli of the instrumentalists. On 26 April 1706, together with Alessandro Scarlatti, they became members of the Arcadian Academy (founded in 1690), where they were known respectively as Protico Azeriano, Arcomelo Erimanteo and Terpandro; their patron Cardinal Ottoboni also belonged to it. Here, and on other occasions, Pasquini must have met Handel during his stay in Rome. He apparently travelled to the court of the Emperor Leopold I at Vienna, where at least one of his oratorios was performed, and in 1664, in the company of Cardinal Flavio Chigi, nephew of Pope Alexander VII, he went to Paris, where he played to Louis XIV. He also visited Florence and other Italian cities. He attracted pupils to Rome from far and wide: in addition to the Italians G.M. Casini, T.B. Gaffi, Francesco Gasparini, Domenico Zipoli and possibly Francesco Durante and Domenico Scarlatti, he taught J.P. Krieger, Georg Muffat and pupils sent from Vienna by the emperor.

Pasquini's reputation was such that medallions bearing his portrait were struck after his death. He was buried in the church of S Lorenzo in Lucina, where there is a memorial bust carved by Pietro Papaleo. There is a portrait of him by Andrea Pozzo (in *I-Fc*; fig.1).

2. Works. Though Pasquini enjoyed a reputation as a keyboard player comparable to that of Frescobaldi earlier in the century, little of his music was published. Three pieces by him, ascribed to 'N.N. di Roma', were published by G.C. Arresti (in RISM *c*1697[8]), and he was represented in a collection of toccatas and suites issued in Amsterdam by Roger (RISM, 1698[4]/*R*). Most of his keyboard music survives in four autograph manuscripts compiled between 1691 and about 1705 (facs. in SCKM, vii–viii, 1988) and intended for the use of his nephew B.F. Ricordati, for whom he probably wrote his practical instruction manual *Saggi di contrappunto* (1695) and possibly also the lost *Regole per ben suonare il cembalo o organo*.

The better and larger part of Pasquini's keyboard output consists of dance suites, variation sets, arias and individual dances, but 11 contrapuntal pieces and 35

1. Bernardo Pasquini: portrait by Andrea Pozzo, late 17th century) (Conservatorio Statale di Musica 'Luigi Cherubini', Florence)

toccatas recall the sterner influences of Frescobaldi and early Baroque music. Though Frescobaldi's techniques of thematic variation can be seen in the *Ricercare con fuga in più modi*, the two fugal sonatas in Arresti's print, on the other hand, display contrasting, lively subjects and are clearly tonal. The toccatas, sometimes called *tastatas*, are equally varied in style and structure. One is a long pedal-point toccata, recalling those 'sopra i pedali' in Frescobaldi's 1627 volume, while another is only 15 bars long. Some are in a single section, while one is divided into five sections with alternating common and triple metres. The passage-work is often brilliant, but sequences, parallel writing, scales and tonal figuration replace the angularity and rhetorical drama of the early Baroque toccata.

Pasquini's suites and variations were evidently conceived for the harpsichord. Here he showed great melodic inventiveness, supported by an increasing balance of phrase, tonality and form that looks forward to the *galant* style. Following the Italian tradition of grouped dances found in Frescobaldi's ballettos (1637) and the instrumental music of Cazzati, G.B. Vitali, G.M. Bononcini and Corelli, he established the keyboard suite in Italy. Of his 17 suites, five have two dances, five have three, six have four, and one has five, each suite being in one key. The basic pattern is that of allemanda-corrente-giga (an arrangement found in several of Corelli's sonatas of 1685), but any one movement may be replaced by an aria, *bizzaria*, *tastata* or unspecified dance. Eight of the suites include the basic grouping, which in six of them is followed by an additional unspecified dance or dances. All the dances are in binary form. The influence of dance music is apparent in the 14 sets of variations, which range in length from a dance movement with a single variation to the 24 of the *Partite di bergamasca*. In most of them the individual sections are either bipartite or binary, and several are identified as dances. The most famous are the 14 variations on the folia, which typically illustrate the influence of violin figuration on keyboard music. The four passacaglias range from 12 to 24 sections.

He composed 28 sonatas written only in figured bass, the most curious and individual group in his output. Exactly half are for two harpsichords, almost all being in three movements, arranged Allegro-Andante-Allegro; the other half, for a single instrument, are in two to five movements. They have no obvious precedent.

In recent decades scholarly attention has been given to Pasquini's dramatic and vocal music, though the majority remains unpublished and much work still remains to be done. Scores for 12 of his 18 known operas and seven of his 13 oratorios survive. There are also cantatas, arias and solo motets. Most of the early operas are comedies. *L'Idalma* is a typical example both dramatically and musically. The late operas include a *festa teatrale*, *La caduta del regno dell'Amazzoni*, for the wedding of Carlos II of Spain to Marianna, Countess Palatine. It was probably the most extravagant production in Rome at that time. Pasquini's oratorios received performances in Florence, Modena, Naples and Vienna though most may have been intended for Rome in the first instance. In his dramatic music Pasquini made frequent use of the da capo principle in short arias, but ostinato bass and strophic procedures are often more important. Many of the arias have only continuo accompaniment, and where other instruments are used it is normally in refrains and short interjections. Vocal ensembles are generally through-composed. His arioso style, especially in the oratorios, is

2. Autograph of the opening of the first of Pasquini's 14 sonatas for two harpsichords, 1704, written in figured bass only (GB-Lbl Add.31501, f.3v)

fluent, expressive and affective, and in his changes of metre he recalls fluid, less continuous style of the mid-17th century. There is also more formal dramatic writing, for example the bravura arias sung by the abandoned Idalma.

Pasquini was regarded as the leading dramatic composer in Rome in the 1670s. In the 1680s his popularity was equalled and then surpassed by his younger contemporaries, notably Alessandro Scarlatti. After 1690 he wrote only one opera, *Eudossia*, and a contemporary account suggests that he may have been stuggling to meet the current demands of taste and fashion.

JOHN HARPER/LOWELL LINDGREN

Pasquini, Ercole (*b* Ferrara, mid-16th century; *d* Rome, 1608–19). Italian composer and organist. According to Superbi he studied with Alessandro Milleville and played 'i primi organi' for many years in Ferrara before moving to Rome in 1597. In the 1580s he taught the harpsichord, organ and composition to the daughters of G.B. Aleotti, court architect at Ferrara: in 1593 Aleotti referred to Pasquini as a 'buon vecchio' in the dedication of a book of four-part madrigals by his daughter Vittoria. Pasquini may be the 'organist Ercole' who is mentioned in the *ridotto* of Mario Bevilacqua of Verona in 1593. The same year his *favola boscareccia* entitled *I fidi amanti*, written for the forthcoming marriage of Leonora d'Este to Carlo Gesualdo, was published in Verona. Pasquini addressed Leonora as his patron in this work of which only the text survives. Pasquini succeeded Luzzaschi as organist of the Accademia della Morte, and was succeeded there by

Frescobaldi. On 6 October 1597 he was elected organist of the Cappella Giulia, Rome. He was also organist of the nearby Santo Spirito in Sassia in 1604. During 1605 he was in hospital and on 19 May 1608 was dismissed from his post at S Pietro. According to Superbi, 'he had a very delicate and nimble hand; on occasion he played so splendidly that he enraptured the people and truly amazed them'. Superbi added that he died under unfortunate circumstances. Pietro della Valle and Luigi Battiferri (in his Ricercari op.3, of 1669) attested to Pasquini's fame well into the 17th century.

By virtue of the 30 keyboard compositions that have survived in manuscript, Pasquini must be counted among the important predecessors of Frescobaldi. The toccatas consist of several short sections containing novel figuration, 7th chords and experimental harmonies which generate great nervous tension. The *durezze e ligature* are among the earliest works of this type. Most of the canzonas are in three sections, with the central one in triple time. In several of them the opening subject reappears in varied form in one or more of the remaining sections; they are therefore among the earliest examples of the variation canzona. Ex.1 gives the subject of a *canzona francese* of 1600 (CEKM, xii, p.38) and its variants. The variations on the Ruggiero, *passamezzo antico* and romanesca employ the same type of nervous figuration found in the toccatas. The correntes are the earliest known examples in Italy; they consist of two or three sections of irregular length. Only five of Pasquini's vocal compositions have survived. The most impressive is the motet *Quem vidistis, pastores*, which is for two five-part choirs.

WORKS

2 motets, 5, 10vv, in R. Aleotti, Sacrae Cantiones (Venice, 1593); 1, 4vv, in 1618[3]
1 madrigal, 5vv, 1591[9] (contrafactum, in 1606[6]); 1 in 1604[8]
6 toccatas, 2 durezze e ligature, 12 canzonas, 1 intabulation of C. Rore, Anchor che col partire, 5 sets of variations, 4 dances, 1 untitled (doubtful); all ed. in CEKM, xii (1966)
1 mass, 10vv; Missa 'Vestiva i colli', 3 choirs; Cantiones, 16 vols.; Madrigali alla Sma. Vergine, 5vv: lost, cited in inventory of Archduke Siegmund Franz, Innsbruck, 1665

W. RICHARD SHINDLE

Pas redoublé (Fr.). Quick march. *See* MARCH, §1.

Pass, Walter (*b* Feldkirch, 22 Jan 1942). Austrian musicologist. He studied the piano and singing at the Vienna Musikhochschule (1960–1964) and musicology from 1961 with Schenk, Graf and Wessely at the University of Vienna, where he took the doctorate in 1967 with a dissertation on Jacob Regnart and his Latin motets. He completed the *Habilitation* in 1973 with a study of music at the court of Maximilian II and joined the staff of the musicological institute in Vienna in 1964. In 1971 he began to work for Denkmäler der Tonkunst in Österreich and he was appointed chief editor of the series Thesauri Musici that same year. A board member of the International Schoenberg Society (from 1973), he organized, with Rudolf Stephan, the first international Schoenberg congress (in Vienna in 1974). Pass has concentrated on the works of Renaissance composers active in the regions of modern Austria; in his later writings he has examined Austrian music and politics during the 20th century.

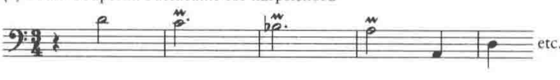
□

Passacaglia (It.; Fr. *passacaille*; Ger. *passacalia*; It. *passacaglio*, *passagallo*, *passacagli*, *passacaglie*; Sp. *pasacalle*, *passacalle*). In 19th- and 20th-century music, a set of ground-bass or ostinato variations, usually of a serious character; in the earliest sources, a short, improvised ritornello between the strophes of a song. The term is sometimes used interchangeably with 'chaconne' (the forms 'chaconne' and 'passacaglia' are used throughout this article regardless of the national tradition under discussion). This article concentrates on the early years of the passacaglia, when the term had a quite distinct meaning. Its subsequent history, which largely parallels that of the chaconne, is summarized here; the two genres and their close relationship are explored in greater detail in the article CHACONNE.

1. BEGINNINGS IN SPAIN AND ITALY. The passacaglia appears to have originated in early 17th-century Spain as the *pasacalle*, a brief improvisation (usually barely more than a few rhythmically strummed cadential chords) that guitarists played between the strophes of a song, somewhat in the nature of a vamp. The term comes from *pasar* (to walk) and *calle* (street), possibly deriving from outdoor performances or from a practice of popular musicians to take a few steps during these interludes. The first references to *pasacalles* appear in Spanish literature in about 1605; in certain contexts the term seems to have been used interchangeably with PASEO.

The term was soon exported to France and Italy, at first, again, to allude to ritornellos (or *riprese*) improvised between song strophes. As with the chaconne, the earliest written examples are found in Italy in *alfabeto* (chord) guitar tablatures, and take the form of brief, rhythmic chord progressions outlining a cadential formula, most commonly I–IV–V–I or an elaboration of it (ex.1*a*). The progressions usually appear in a range of keys, rhythms and strumming patterns, and in duple as well as triple

Ex.1 Passacaglia bass patterns (all transposed and reduced to equivalent note values)



(a) Sanseverino (1620): strumming formula (chords strummed in direction of arrows)

(c) Louis Couperin: *Passacaille* for harpsichord

(d) Kerll: Passacaglia for harpsichord (*c*1670)

time; their purpose appears to be primarily pedagogical. In Italy 'passacaglio' was most often used to refer to a single statement of a chord scheme, and the plural 'passacagli' for a succession or collection of more than one statement; but both terms, as well as the feminine *passacaglia* and its plural *passacaglie*, as well as variants like *passagallo*, *passagalli*, *passachaglie* and numerous other spellings, were used with little distinction throughout the century.

2. ITALY FROM 1627. No examples of notated compositions entitled *passacagli* (or one of its variants) other than the guitar-strumming formulae can be dated before 1627, when Frescobaldi published a *Partite sopra passacagli* for keyboard, along with a *Partite sopra la ciaccona*. It is not clear whether he should be credited with the creation of the passacaglia as an independent musical genre (as opposed to an improvised ritornello for another composition), but the 1627 set contains many of the characteristics of the numerous passacaglias for all kinds of instrumental and vocal combinations that appeared in subsequent years. The newer passacaglias are typically in the form of continuous (linked) variations over a bass that may itself be subject to considerable variation. The old I–IV–V–I strumming formula is expanded into innumerable variants, often in the form of elaborations of a descending tetrachord bass (e.g. i–v^{6}–iv^{76}–V), usually with the metrical phrase remaining as four groups of three beats (ex.1*b*). Chromatic intermediary steps are frequent, as are other digressions, as well as ascending versions (e.g. i–VII^{6}–i^{6}–iv–V). The earlier notion of the passacaglia as an improvised ritornello, sometimes on a specified bass, survived for some time, and is encountered, for example, in Monteverdi's *L'incoronazione di Poppea* (1642). No doubt connected with this practice is a continuing tradition of presenting sets of passacaglias for the guitar in a full range of modes or keys, both major and minor, thus providing the player with models and exercises for improvising preludes and interludes of arbitrary length. A similar purpose may have been intended for a collection of 44 anonymous and untitled variation sets for keyboard on descending bass patterns (in *I-Rvat* Chigi Q IV 27, a manuscript probably associated with Frescobaldi and his pupils). The pieces are ordered by key, ascending by step from C, and include sets in both duple and triple time; those in triple time closely resemble Frescobaldi's passacaglias. Improvised guitar interludes continued to be called 'passagalli' in the folk music of some areas of Italy into the 19th century (Hudson, 1981, p.281).

In its new guise as an independent variation chain, the passacaglia shared many features with the chaconne, including the linking of variations, cadential articulation and the use of triple metre. Yet Frescobaldi's passacaglias also show some distinctions (not necessarily in every instance), such as a less exuberant, more restrained character, slower tempo, minor rather than major key, smoother, often conjunct, melodic motion and more frequent dissonant suspensions on downbeats. The similarities, differences and ambiguities between the passacaglia and the chaconne are explored to the fullest in Frescobaldi's extraordinary *Cento partite sopra passacaglie* (1637), with its alternating sections marked 'passacaglie' and 'ciaccona', and sometimes a gradual, subtle metamorphosis from one into the other (see Silbiger, 1996).

Some of these distinctions between the two genres continued to be present in the works of later composers in Italy and elsewhere, particularly when a chaconne and a passacaglia appear side by side or in the same collection; however, when one or the other appears by itself, the distinctive features may be less evident or altogether absent (for Italian composers who published such chaconne-passacaglia pairs, *see* CHACONNE, §2). Composers such as Bernardo Storace also followed in Frescobaldi's footsteps by shifting key, mode and metre in some of their passacaglias.

In vocal settings, Italian passacaglias were sometimes interrupted by recitatives (e.g. Frescobaldi's *Così mi disprezzate*, 1630). Sections that resemble a passacaglia without being identified as such are found in operas, cantatas and sacred works. However, the present-day tendency to regard any lament with a descending tetrachord bass as a passacaglia does not appear to have historical precedence unless the piece also shows other genre markings. By the beginning of the 18th century the passacaglia was rapidly losing ground in Italy, but it continued to flourish in France, Germany and elsewhere for some time.

3. LATER HISTORY IN SPAIN. In Spain an active and artistically significant passacaglia tradition survived independently of the chaconne; it remained rooted in the old ritornello practice and was relatively unaffected by the passacaglia developments in Italy and France. Like the early strumming exercises, the later passacaglias continued to be presented in sets covering a full range of commonly used keys, in major as well as minor modes and in duple as well as triple metre. The passacaglias of Francisco Guerau (1694), Antonio de Santa Cruz (*c*1700) and Santiago de Murcia (1732) were not simple chord formulae, however, but extended variation sets that took full advantage of the guitar's technical and expressive possibilities. Very similar passacaglias can be found in the contemporary keyboard repertory, including some wonderful examples by Cabanilles.

After Santiago de Murcia's *Passacalles y obras* (1732) the passacaglia vanished from the Spanish written tradition. The term 'passacalle' continued to be used in folk practice, however, to refer to instrumental preludes and interludes during dancing (for example for the *seguidillas* in La Mancha; see Russell, 1995, p.88) as well as to music accompanying actual dances (for example for stick dances in Castille; Russell, 80). In some areas of Latin America

guitar ritornellos for popular dance music are still called 'passacalles' (Hudson, 1981, pp.280–81).

4. France. In France the Hispanic-Italian passacaglia, like the chaconne, was transformed during the mid-17th century into a distinctive native genre, although before that the genre had already had some impact as an exotic Spanish import. A 'passacalle' (in the earlier sense of ritornello) occurs in an *air* to a Spanish text by De Bailly (1614), and in 1623 the Spanish expatriate Luis de Briçeño published in Paris a guitar method that included in chord tablature brief chaconnes and passacaglias similar to the early Italian examples. During the 1640s the promotion of Italian music and musicians by Cardinal Mazarin brought wider familiarity with the two genres in their newer incarnations. A harpsichord passacaglia by Luigi Rossi (who visited Paris in 1646 and whose *Orfeo* was performed there the following year) enjoyed wide manuscript circulation. Francesco Corbetta, who settled in Paris around 1648 and became guitar teacher to the future Louis XIV, was perhaps the greatest Italian guitar virtuoso of his time, and the composer of numerous chaconnes and passacaglias.

By the late 1650s the French passacaglia tradition was firmly in place, already showing many of the characteristics that would mark the genre during the later 17th century and the 18th. Like the chaconne, the passacaglia was cultivated both in chamber music, especially by guitarists, lutenists and keyboard players, and on the musical stage. Among the earliest surviving examples are two *passacailles* for harpsichord by Louis Couperin, which are based on ostinatos that outline descending tetrachords (ex.1*c*). French composers generally seem to have favoured the chaconne over the passacaglia (*see* Chaconne, §4); Schneider (1986) lists 18 chaconnes but only five passacaglias in Lully's theatrical productions, for example. Nevertheless, Lully's lengthy and impressive *passacaille* from *Armide* (1686) became a much admired model of the genre, emulated by many, including Purcell and J.S. Bach. According to theorists such as Brossard (1703) and Rousseau (1767), the passacaglia was ordinarily in the minor and the chaconne in the major ('rules' often violated), and passacaglias were performed at more deliberate tempos than chaconnes (18th-century reports indicate *c*100 beats a minute compared to *c*120–160 for chaconnes; see Miehling, 1993).

A continuing favourite among French passacaglias is François Couperin's searingly chromatic *Passacaille* in B minor from his *Ordre* no.8 for harpsichord (1717), an extended rondeau structure. After 1740 the passacaglia fell largely out of fashion in instrumental solo and chamber music, but maintained a place on the musical stage throughout the final decades of the century, albeit still far outnumbered by the chaconne.

5. Germany. Distinct German forms of the passacaglia developed only in the later years of the 17th century, most strikingly in solo organ music. The German organists, drawing on traditions of cantus-firmus improvisation and ground-bass divisions, created a series of majestic ostinato compositions, shaped by increasingly brilliant figurations. A passacaglia from well before 1675 by J.C. Kerll (who had studied in Rome) still used the traditional descending tetrachord as ground-bass formula (ex.1*d*); however, later composers such as Buxtehude and Pachelbel introduced bass formulae of their own devising, which were treated during at least the first part of the composition as rigorous ostinatos. These bass progressions assume a thematic significance not present in the traditional formulae, as various techniques borrowed from chorale improvisation were brought to bear on them. The busy passage-work and contrapuntal density largely obliterated any dance feeling, and relationships to the genre's origin became increasingly tenuous. Such is the case in the most famous passacaglia of this tradition, J.S. Bach's Passacaglia in C minor (BWV582), which concludes with a lengthy fugue on its ostinato subject (possibly derived from a short passacaglia in an organ mass of 1687 by André Raison).

Passacaglias written during the same period for instrumental ensemble more closely followed French models or combined the French and Germanic approaches, as did those conceived primarily for harpsichord. Bach also used the genre in some vocal works, although not indicated as such (BWV12, later reworked into the 'Crucifixus' of the Mass in B minor; BWV78). Some might argue that the opening chorus of BWV12 (like the 'Lamento der Freunde' in the keyboard Capriccio BWV992) should be classified as a lament rather than as a passacaglia, but there can be no such doubt about the magnificent opening of BWV78, which has all the musical hallmarks of a French operatic chaconne/passacaglia number; indeed, the passacaglia from Lully's *Armide* may have been its direct source of inspiration.

6. England. Pieces called 'passacaglia' or 'passacaille' are rarely encountered in English sources; compositions that might have been given such titles on the Continent are usually designated 'chaconne' or 'ground'. A notable exception is the *passacaille* 'How happy the Lover' in Purcell's *King Arthur* (1691). With its alternating instrumental, solo and vocal sections, this seems to be modelled on the passacaglia in Lully's *Armide* (to which there also is a textual reference).

7. After 1800. When 19th- and 20th-century composers returned to writing passacaglias, they found their models in a handful of 'rediscovered' pieces by the German masters, especially Bach's Passacaglia for organ and perhaps also the Passacaglia from Handel's Suite no.7 in G minor, works deserving of their canonic status, but atypical of the former mainstream genre traditions (Handel's passacaglia was in fact in duple metre). From Bach's passacaglia they took what now became the defining feature: the ostinato bass. The theme-and-variation idea, often incidental to earlier passacaglias (if present at all) became central to the revived genres. As with Bach, the ostinato theme is usually stated at the outset in bare form and in a low register. The association of the passacaglia with Bach and with the organ also contributed to a mood of gravity; most 19th- and 20th-century examples call for a slowish tempo. Some writers attempted to define a distinction between the passacaglia and the chaconne based primarily on the examples by Bach, but no consensus was ever reached and for the most part the terms continued to be used interchangebly. For a more detailed discussion of the modern revival of the chaconne and passacaglia, *see* Chaconne, §7.

ALEXANDER SILBIGER

Passage. A term used, much as in a literary reference (as, e.g. in 'a passage in Shakespeare'), to refer to part of a composition generally characterized by some particular treatment or technique but without implications as to its formal position, e.g. 'a passage in double counterpoint' or 'a scale passage'. The term 'passage-work' is often used pejoratively to describe transitional sections (especially of keyboard works) consisting of brilliant figuration or virtuoso display but with little if any thematic substance, a sense possibly deriving from the Italian passaggio (*see* PASSAGGIO (ii)).

MICHAEL TILMOUTH/R

Passaggio (i) (It.: 'passage'). A transition or modulation.

Passaggio (ii) (It.: 'passage'). In Italy from the late 16th century to the 18th, an improvised vocal or instrumental DIVISION moving primarily by step. In early Baroque music the term may also refer to ornamentation in general, including semi-formulaic ornaments such as the *trillo* and *gruppo* (*see* ORNAMENTS) as well as diminutions. Both meanings are evident in Rognoni's *Selva de varii passaggi* (1620); Rousseau (*Dictionnaire de musique*, 1767) gave 'passage' as the equivalent French term but noted that the practice of inserting these divisions was more common among Italian than among French singers.

MICHAEL TILMOUTH/STEWART A. CARTER

Passaggio (iii) (It.: 'passage'). In Baroque music a florid piece or section of a piece designed to show off the skill of the performer, though usually of negligible thematic content. The elder Matteis used a *passaggio* in the A minor and E minor suites of the second and fourth books respectively of his *Ayrs for the Violin* (1685), that in A minor being marked '*passaggio rotto*', i.e. in broken-chord figurations.

MICHAEL TILMOUTH/STEWART A. CARTER

Passamezzo [pass'e mez(z)o, passo e mezzo, passomez(z)o] (It.). An Italian dance in duple metre popular from the mid-16th century to about 1650; its musical scheme was frequently used as a subject for instrumental variations until the 1680s. The meaning of the term is uncertain. Among the various etymologies proposed in modern times, the most widely accepted suggests a derivation from *passo e mezzo* ('a step and a half'), possibly referring to the step pattern of this dance. Mersenne proposed an analogous interpretation in his *Harmonie universelle* (1636–7), but he also subscribed to other hypotheses, providing an eloquent illustration of the uncertainty that, even in the early 17th century, surrounded the term.

A significant proportion of the pieces labelled 'passamezzo' are based on two different but related chord progressions known as the *passamezzo antico* (or *passamezzo per B molle*) and the *passamezzo moderno* (or *nuovo*, or *comune*, or *passamezzo per B quadro*). Although in the extant sources this distinction emerges only in the late 1550s, both types are already clearly defined in earlier examples simply entitled 'passamezzo'. The most common progression for the *passamezzo antico* takes the form i–VII–i–V–III–VII–i–V–I, while the *moderno* usually follows the scheme I–IV–I–V–I–IV–I–V–I. The framework chords are spaced at metrically equal intervals as the music unfolds in two phrases, the first leading to V, the second to I. The basic musical scheme was usually repeated a number of times in succession during a dance. Intermediary harmonies, relating as V or IV–V to I, may precede or follow any framework chord. Ex.1 shows a *passamezzo antico* for lute published in 1552 by Hans Gerle. Ex.2, from an Italian keyboard manuscript of the early 17th century, illustrates both melodic and chordal variation applied to the opening two framework chords of a *passamezzo moderno*. According to the Renaissance practice of grouping dances in duple and triple time into pairs or suites, the passamezzo is often followed by one or more triple dances, such as the saltarello, gagliarda or paduana, based on the same chordal scheme. The triple dance and occasionally the passamezzo itself were sometimes provided with smaller units called *riprese* or ritornellos, which occurred in pairs between repetitions of the main scheme and in longer chains at the end.

The chord progression of the *passamezzo antico* is virtually identical to that of the ROMANESCA, with the exception of the opening chord (usually III in the romanesca). This has generated some confusion about the nature of such formulae, confusion also fostered by the fact that there has been a tendency in modern scholarship to equate these genres with their bass progressions. In all probability the passamezzo, like many other Renaissance dances, was defined not by a single chord sequence but by a complex of elements including metric patterns, reference pitches, characteristic melodic and rhythmic gestures and stylistic conventions tied to performance practice. Although deceptively similar in their bass lines, the passamezzo and the romanesca must have differed in other respects, equally vital to the identification of the genre. A clue may be found in Galilei's *Primo libro della prattica del contrapunto* (1588–91), where the excited sound of the romanesca is compared with the quiet one

Ex.1 Rosseto: *Passemeso* (Hans Gerle: *Ein newes sehr künstlichs Lautenbuch*, 1552)

of the passamezzo. Other characteristics of the passamezzo include smooth rhythmic motion, suggestive of walking dance steps, and recurring figurations consisting principally of regularly moving scale segments (Silbiger). The analogies between the chord progressions of the passamezzo and the romanesca (progressions partly recognizable in the FOLIA as well) seem simply to point to a common musical idiom characterized by certain standard sequences which cannot be regarded as exclusive to any single genre.

There is some evidence that the passamezzo was closely related to the pavana. Francisco de Salinas reported that the two terms were confused ('pavana milanesa, sive passoemezzo vulgo vocatur', *De Musica*, 1577), and Arbeau mentioned the passamezzo in his *Orchésographie* (1588) as a pavana 'performed less heavily and to a lighter beat'. J.-B. Besard ignored this rhythmic distinction, stating in the preface to his *Thesaurus harmonicus* (1603) that 'pavana' is simply the Italian name for *paduana*, that is to say passamezzo; he added that most French composers called their passamezzos 'pavanas' ('cum Pavana Italicum nomen nil aliud sit quam Paduana, id est Passemezzo, et plerique Galli non aliter suas passemezas quam pavanas nominent'). The few extant choreographies, which appeared much later than the earliest musical examples, in Fabritio Caroso's *Il ballarino* (1581) and *Nobiltà di dame* (1600) and in Livio Lupi's *Libro di gagliarda, tordiglione, passa e mezzo, canari e passeggi* (1607), seem to confirm such a connection. Sutton (p.39) concluded that 'there is no simple choreography, nor is there any apparent vestige of what may once have been a step or step pattern generic to the passo e mezzo and different from other dances. What is certain is that all 'passo e mezzo' choreographies are elaborated variants of the pavana'. Although choreographically similar, the two dances did retain some individual features; and towards the end of the 16th century the passamezzo seems gradually to have superseded the pavana in popularity. The distinction between them probably rested in the music: although the two forms share many features, there are differences, particularly in the overall structure and in the presence of an ostinato bass controlling the harmonic design (*see* PAVAN). The histories of each dance do appear ambiguously intertwined, however. There are examples of pavanas constructed upon the chord progression characteristic of the passamezzo, yet it is not difficult to find passamezzos in which the same progression is altogether absent. Titles such as *pavana passamezzo* (Claude Gervaise, *Sixième livre de danceries*, 1555; Antony Holborne, *The Cittharn Schoole*, 1597) or *pavana in passo e mezzo* (*I-Vnm* Ital.IV.1227) further emphasize the indistinctness of the two dances, while at the same time suggesting that the passamezzo and the pavana did indeed differ in subtle ways that encouraged some musicians to create hybrid forms by artfully exploiting their inherent ambiguities.

The *passo e mezzo* in *Vnm* Ital.IV.1227 (*c*1530) is perhaps the earliest extant composition based on the formula of the *passamezzo antico*. Although the passamezzo developed mainly in Italy, both types appeared in lutebooks published in Nuremberg by Hans Neusidler: the *B molle* type in 1536, with the curious title *ein welscher Tantz Wascha mesa*, the *B quadro* type in 1540 (*Passa mesa, ein welscher Tantz*). Hundreds of passamezzos in both printed and manuscript sources followed these early examples. Settings and variations for lute include works by Abondante, Domenico Bianchini, Antonio Rotta, Gorzanis, Terzi, Vincenzo Galilei and Simone Molinaro in Italy; Hans Gerle, Wolff Heckel, Matthäus Waissel, Kargel and Reymann in Germany; Adriaenssen, Denss and Le Roy in France and the Low Countries; and Alison and Holborne in England; numerous passamezzos may be found also in Phalèse's collections. etc

examples appear in Gardane's *Intavolatura nova di varie sorti de balli* (1551) as well as in works by Ammerbach, Bernhard Schmid (i) and Jacob Paix in Germany; Facoli, G.M. Radino, Valente and Andrea Gabrieli in Italy; Byrd, Morley, Philips and Bull in England; and Sweelinck from the Netherlands. Other 16th-century passamezzos were written for instrumental or vocal ensemble (examples by Bendusi and Mainerio and in the collections of Phalèse and Susato), guitar and cittern. Of particular interest are two manuscript collections from the second half of the 16th century, each containing a cycle of passamezzos composed on the 12 degrees of the chromatic scale. The first, compiled by Gorzanis (*D-Mbs* Mus.ms.1511a, 1567), contains 24 passamezzos, 12 *per b molle* and 12 *per b quadro*, paired with a saltarello. The second, completed by Vincenzo Galilei in 1584 (*I-Fn* Anteriori di Galilei, 6), extends the entire cycle to 24 passamezzo–romanesca–saltarello suites, 12 with a *passamezzo antico* and 12 with a *passamezzo moderno*, arranged according to the ascending series of semitones.

Passamezzos from the 17th century include works by Besard for lute, Kapsberger for chitarrone, Ercole Pasquini, Picchi, Scheidt, Martino Pesenti and Bernardo Storace for keyboard instruments, Biagio Marini, Gasparo Zanetti and G.B. Vitali for chamber ensemble, and a rare example for voices and instruments by Giovanni Valentini (1621). Most of these 16th- and 17th-century examples consist of sets of continuous variations on one of the harmonic grounds given above; many are very lengthy compositions. In addition to these variation forms, almost all the Italian guitar tablatures from the first half of the 17th century contain single statements of the passamezzo ground notated in the form of chord-strumming formulae. Several 16th-century passamezzos are not based on the musical structures of the *antico* and *moderno* types. Some bear descriptive names, such as *passamezzo della bataglia*, *ala bolognese*, *de Bruynswick*, *de hautbois*, *du roy*, *la paganina*. Other titles possibly refer to pre-existing popular tunes or vocal compositions, often French chansons, that provided the thematic material for the passamezzo. Examples are *pas'e mezo sopra una canzon francese*, *pass'e mezo sopra Je presigne*, *pas'e mezo detto Loisa core per el mondo* and *pass'e mezo sopra Gie vo deser d'un bois ah* in Gorzanis's *Opera nova de lauto* (*c*1575–8), *passo e mezo deto Caro fier homo* in Gorzanis's *Secondo libro de intabulatura di liuto* (1562), *Gitene Ninfe, pass'e mezo a 5* in Orazio Vecchi's *Selva di varia ricreatione* (1590), and *passemezo Il est jour* and *passamezo Tuti porti core mio* in Viaera's *Nova et elegantissima in cythara ludenda carmina* (1564). That such pieces were identified as passamezzos reinforces the hypothesis that other characteristic genre markings were as important to the definition of the genre as the chord progression traditionally associated with it. By the 1560s, however, an increasing number of passamezzos display the familiar chordal schemes, and the great popularity of the dance no doubt helped in consolidating a dual system of modality in Italian popular music.

In English sources the names 'passemeasure', 'passingmeasure', 'passy-measures' or 'passemeasure(s) pavan' are usually associated with the chord progression of the *passamezzo antico*, whereas compositions entitled 'quadro pavan' or 'quadran(t) pavan' tend to exhibit the scheme typical of the *passamezzo moderno* (a chronological list of settings of both the 'passingmeasure' and the 'quadro pavan' may be found in Ward). The terms 'quadro' and 'quadran(t)', which appear from the 1570s, have been explained as a corruption of *B quadratum*, referring to the chord progression in the major mode underlying both the *passamezzo per B quadro* and the quadro pavan. However, it remains uncertain whether the quadro pavan may simply be equated with the *passamezzo moderno*. It is more likely that the English quadro pavan, like its continental counterpart, flourished in a stylistic climate that thrived on the ambivalence between the passamezzo and the pavana.

GIUSEPPE GERBINO, ALEXANDER SILBIGER

Passarini [Passerini], **Francesco** [Camillo] (*b* Bologna, 10 Nov 1636; *d* Bologna, 23 Sept 1694). Italian composer. On 17 January 1652 he entered the S Francesco monastery, Bologna, receiving the tonsure on 28 January. It was presumably then that he changed his first name to Francesco. From 1662 to 1663 he was an organist at Ferrara; some authorities have him at Correggio in 1663, Bologna in 1664 and Ravenna in 1666, but he was certainly *maestro di cappella* of S Francesco, Bologna, from 1666 to 1672. In 1672 he was appointed *maestro di cappella* for the parish of S Giovanni in Persiceto. In 1673 he moved to Venice and was *maestro di cappella* of S Maria Gloriosa dei Frari there until 1680. In 1676 he wrote a *Te Deum* which was performed at Venice to celebrate the instalment of Pope Innocent XI. He returned to his former post of *maestro* at S Francesco, Bologna, in 1680; apart from a short time in Florence as *maestro di cappella* of S Croce (1691–2) and a visit to Pistoia (1692–3) he remained at S Francesco until his death. He may have had connections with Mantua, for his op.3 is dedicated to Isabella Gonzaga and his op.2 to a Mantuan ecclesiastical dignitary.

Passarini's extant music consists entirely of sacred vocal works, many of which are in the concertato style typical of the mid-17th century. In his works for double choir he showed a preference for lively, imitative part-writing and made prominent use of instruments, particularly trumpets and cornetts. Numerous extant manuscript copies of his music testify to his popularity and esteem; an autograph inventory of his works drawn up in 1694 (now in *I-Bc*) indicates that much of his music is lost.

JUDITH NAGLEY

Passau. City in Bavaria, Germany. A bishopric was set up there in 739. The cultivation of music in the cathedral school from the 9th century established a tradition that came to maturity when a succession of Renaissance prince-bishops gave distinguished musicians, including Hofhaimer, his pupil Johann Schachinger (who was born there) and Senfl, the opportunity to work at Passau. The *Kläglich Lied* (1584) of M. Steinbach and the Passauer Liedertisch (1590) indicate a broader interest in secular music in the late 16th century. At this time too several instrument makers worked at Passau. Urban Loth and Georg Kopp were among the leading musicians there in the earlier 17th century, but they were overshadowed by Georg Muffat, who was Kapellmeister to the Bishop of Passau from 1690 to 1704.

The city had fleeting associations with both Mozart and Haydn: for instance, Joseph Friebert, the bishop's director of music from 1763 to 1799, added words to Haydn's *Die sieben letzten Worte* about 1792 and Haydn heard this version at Passau in 1795. Burney, who visited the city in 1772, admired the cathedral organ built by Johann Egendacher in 1733. Edmund Holmes later described the Passau organist Seytl as 'one of the remnants of the Bach school of organ playing'.

During the 19th century a strong secular choral tradition developed at Passau. At this period a more general awareness of the 16th-century polyphonic tradition was much stimulated by the musicological and practical endeavours of F.X. Haberl, and his disciple C. Bachstefel continued his work. The five-manual organ in the cathedral built by G.F. Steinmeyer & Co. in 1928 was said at the time to be the largest in the world.

The Fürstbischöfliches Opernhaus, converted from an existing ballroom into a theatre, was inaugurated in 1783. After coming into state ownership in 1803 it was known first as the Kurfürstliches and then as the Königliches Theater. Throughout the 19th century it was threatened with closure because of inadequate funds. In 1833 the city acquired the building and set up a permanent opera company, which continued until 1914. From 1914 to 1946 touring companies performed at the theatre. In 1952 the Südostbayerisches Stadttheater was founded, combining the companies of Passau, Landshut and Straubing.

Passecaille. *See* PASSACAGLIA.

Passenger, Aegidius. *See* BASSENGIUS, AEGIDIUS.

Passeo. *See* PASEO.

Passepied [passe-pied, paspy, passe-pié] (Fr.). A French court dance and instrumental form that flourished in the 17th and 18th centuries. It was a faster version of the minuet, usually written in 3/8 or 6/8 (dotted crotchet = *c*46–54) with an upbeat, and having two sections, four-bar phrases, and fairly constant movement in quavers and semiquavers. It was frequently used in French opera and ballet, often in pastoral scenes, as well as in orchestral and keyboard suites of the mid- and late Baroque period. These passepieds usually appeared in pairs, the first to be repeated (da capo) after the second was played.

The passepied was first mentioned in 1548 by Noël du Fail as a court dance common in Brittany. Both Rabelais (*Voyages et navigations des îles inconnues*, 1557) and Thoinot Arbeau (*Orchésographie*, 1588) mentioned the dance as the characteristic BRANLE of Brittany. Examples of the branle-passepied, a fast duple-metre dance with the three-bar phrases characteristic of the *branle simple*, appeared in Praetorius's *Terpsichore* (1612; ex.1) and Mersenne's *Harmonie universelle* (1636–7). The one passepied included in the Kassel Manuscript of early 17th-century dances (Ecorcheville: *Vingt suites d'orchestre du XVIIe siècle français*, Paris, 1906/*R*) is a branle-passepied.

Ex.1 M. Praetorius: from *Terpsichore* (1612)

It is difficult to see the relationship between these passepieds and the dance as it was 'remodelled' for use in the court of Louis XIV. The dance was written in triple metre and constructed of two- and four-bar phrases rather than the three-bar groups characteristic of the branle. The steps of the passepied were identical with those of the

minuet, i.e. four steps were performed during two triple-time bars of music, the steps ordinarily coming on the first, third, fourth and fifth (or sixth) beats of the six-beat pattern (*see* MINUET, §1). Like the minuet, the passepied was usually performed at a ball by one couple at a time, while the rest of the company looked on; because of its faster tempo, however, the interest of the passepied was not so much in the elegance of individual steps as in the geometrical patterns described on the floor. Individual choreographies for the passepied were published in the Beauchamp-Feuillet notation beginning in 1700; 15 French choreographies and five English ones survive, and others in German and Spanish publications, all for social dancing (see Little and Marsh for sources). Some choreographies are set to two pieces of passepied music with various repeat schemes (e.g. Little and Marsh, no.6620), and others are one of a 'suite' of several different dances (e.g. *La Bourgogne*, Little and Marsh, no.1560). In a somewhat simplified form, with less intricate steps, the passepied was also performed by several couples as a CONTREDANSE.

The passepied was danced in many French operas and ballets, including Lully's *Persée* (1682), Campra's *L'Europe galante* (1697), Destouches' *Amadis de Grèce* (1699), Desmarets' *Iphigénie en Tauride* (1704), Destouches' *Callirhoé* (1712), Mouret's *Le triomphe de sens* (1732) and Rameau's *Platée* (1745). Usually pairs of passepieds appeared in these works, often linked with pairs of rigaudons; like the rigaudon, the passepied was often associated with pastoral and maritime scenes. No theatrical choreographies have survived.

Instrumental pieces entitled 'Passepied' showing the dance's characteristic rhythm and phrase structure appeared in many 17th- and 18th-century suites and overtures. The music is usually in 3/8 time, with an upbeat, long phrases in a length divisible by four measures, and strongly accented hemiolas in unexpected places. Ex.2 shows part of a keyboard passepied by François Couperin in which this possibility is exploited. In the pair of passepieds in Bach's Orchestral Suite in C major the idea of combining bars in a hemiola is the basis of the main rhythmic motif of both movements, as shown in the top voice in ex.3. Bach also set passepieds for keyboard in his Fifth English Suite, the Fifth Partita, and the Overture in the French Style. Other instrumental composers who favoured the passepied include Gaspard Le Roux (*Pièces de clavessin*, 1705), M.P. de Montéclair (*Concerts*), J.C.F. Fischer (*Blumen-Büschlein*, 1698), J.J. Fux (DTÖ, lxxxv), Telemann (Werke, xii, xviii), and J.E. Pestel (*Andreas-Bach-Buch*). In the 20th century Debussy, Delibes, Lachaume and Percy Turnbull were among those who used the title 'passepied'.

MEREDITH ELLIS LITTLE

Passereau, Pierre (*fl* 1509–47). French composer. His output consists almost entirely of chansons, a single motet representing his sole contribution to the sacred repertory. According to an unsubstantiated statement by Fétis, he was a priest at the church of St Jacques-de-la-Boucherie in Paris. In 1509 he sang tenor in the chapel of the Duke of Angoulême (later François I) and between 1525 and 1530 he may have sung at Cambrai Cathedral. Lesure asked in *MGG1* whether Passereau was a family name or a nickname, but later reported that the composer's identity and background had been uncovered in the archives of Bourges Cathedral (Lesure, 1972, p.72).

Most of Passereau's chansons were published by Pierre Attaingnant, the first royal printer of music. It is possible that François I recommended his former singer to Attaingnant, who published the work of several poets and musicians associated with the French court.

Although Passereau wrote music for a few doleful texts (his *Ce fut amour* could easily be taken for a piece by Sermisy, a master of the lyrical chanson), most of his works are narrative or descriptive songs of a more cheerful nature, with graceful melodies, syllabic settings in freely imitative polyphony occasionally alternating with chordal passages, and with lively rhythms and repeated notes. For these he usually chose unsophisticated literary texts of the sort found in *chanson rustique* collections, with indelicate subjects emphasized by blunt language and unsubtle puns.

Passereau has often been considered merely a minor master. Attaingnant, however, devoted a whole collection (RISM 1536[6]) to the work of Janequin and Passereau, an exceptional procedure for the time and a measure of their popularity. The ever popular *Il est bel et bon*, with its onomatopoeic imitation of the clucking of hens, was sung in the streets of Venice, according to Andrea Calmo. This and other chansons by Passereau enjoyed several editions and were transcribed for various instruments in France and elsewhere. Fragments of some of his works appear in three *fricassées*. The tune of *Je ne seray jamais bergere* was used in a farce entitled *Amoureux qui ont les botines*. The text of *Il s'est fait écosser le jonc*, an anonymous satirical song directed against Diane de Poitiers, official mistress of Henry II, has the lines 'Bon, bon, bon, mon compère' and 'O le joli jonc' in the refrain. These seem to refer to *Il est bel et bon* and *Sur le joly, joly jonc*. Rabelais paid a fitting tribute to Passereau by including him in his list of 'merry musicians'.

WORKS

all for 4 voices

Edition: *Passereau: Opera omnia*, ed. G. Dottin, CMM, xlv (1967) [contains all works except 'Il me convient']

CHANSONS

A ung Guillaume, apprenti, dist son maistre; Au joly son du sansonnet; Ce fut amour dont je fus abusée; Ce joly moys de may; Ce n'est pas jeu, mais c'est bien cas pour rire; Et gentil mareschal (also attrib. Janequin); Hellas, madame, faictes-luy quelque bien

Il est bel et bon, commere, mon mary; Il me convient (lute transcr. in 1582[15] attrib. 'Paserau'; not printed in Dottin; vocal model not known); Je ne seray jamais bergere; Je n'en diray mot, bergere, m'amye; Je n'en puis plus durer, Marquet; L'oeil est a vous, le cueur et la pensée; Marie monstroit a sa dame; Mon mari est allé au guet

Nostre dince, mon con, mon compere (Superius and T have 'Saincte Barbe, mon con, mon compere'; erroneously attrib. Janequin in 1538[13]); Perrin, Perrinette et Perrot; Pourquoy donc ne fringuerons nous; Si vous la baisez, comptez quinze; Sur la rousée fault aller; Sur le joly, joly, jonc, ma doulce amye

Tous amoureux qui hantes le commun; Ung compaignon gallin gallant; Ung petit coup m'amye, ung petit coup, hellas (erroneously attrib. Janequin in 1538[19]); Ung peu plus hault, ung peu plus bas; Va, mirelidrogue, va

Pourquoy voulez-vous, cousturier, attrib. Passereau in 1538[19] is by Janequin (1534[12])

ISABELLE CAZEAUX

Passerini, Christina (*fl* 1750–76). Italian soprano. In 1750, on the recommendation of Telemann, she and her husband, Giuseppe Passerini, a violinist, conductor and composer, on their way from Russia to Scotland, met Handel at The Hague. He was immediately impressed by her and promised to further her career. They gave a concert at the Edinburgh Musical Society on 14 August 1751, when she took part in a Handel duet and sang 'several English and Scots tunes', and he promised to 'exhibit a new instrument, called the Viole d'Amour'. They moved to London about 1752 and were engaged in operas at the King's Theatre in 1753–4. Christina sang Thrasymedes in *Admeto* (1754), the last revival of a Handel opera for more than a century. Handel engaged her for his 1754 and 1755 oratorio seasons when she took leading parts in *Alexander Balus, Deborah, Saul, Joshua, Judas Maccabaeus Samson, Messiah, L'Allegro Alexander's Feast, Esther* and *Joseph*, and in *Messiah* at the Foundling Hospital. In 1755 she sang in J.C. Smith's *The Fairies* at Drury Lane. After appearing at the Musicians Fund benefit concert at the King's Theatre in March 1757, she rejoined the opera company at the King's Theatre for the closing weeks of the season. The Passerinis were very active in promoting performances of Handel's oratorios in the provinces; between 1754 and 1760 they performed at Salisbury, Oxford, Bath, Bristol and Birmingham. About 1762 they settled in Dublin, where they continued to present oratorios. Christina sang in Purcell's *King Arthur* (1763) at Crow Street Music Hall and as Arbaces in the first Dublin production of Arne's *Artaxerxes* at Smock Alley Theatre (1765). Her career came to an end after she and her husband were assaulted in September 1776. Their son, Francis (*d* 8 March 1809), also a singer, appeared in *King Arthur* (with his mother), and in operas by Giordani (1766) and Arne, Gazzaniga, Piccinni (*La buona figliuola*), Paisiello and Anfossi at Smock Alley (1776–8).

WINTON DEAN

Passerini, Francesco. *See* PASSARINI, FRANCESCO.

Passet (*fl* early 15th century). French composer. His rondeau *Si me fault faire departie* (ed. in CMM, xi/2, 1959, p.101) is ascribed 'Passet', to which a later hand added 'de Tonnaco', perhaps in error for 'de Tornaco' ('from Tournai'). The rondeau *Se vous scaviés* (ed. in CMM, xi/1, 1955, p.26) also appears with an ascription to Cesaris, which Reaney rejected on stylistic grounds (CMM, xi/1, p.xiv); its music was used for the *lauda Se vuoi gustare el dolz' amor Jesù* by Feo Belcari and was therefore evidently well known in Florence in the mid-15th century. Both works are in the simplest polyphonic song style of their time. (See also D. Fallows: *A Catalogue of Polyphonic Songs, 1415–1480*, Oxford, 1999)

DAVID FALLOWS

Passetto [Pasetto], **Giordano** [Frater Jordanus Pasetus; Fra Jordan] (*b* Venice, *c*1484; *d* Padua, 8 Nov 1557). Italian composer. He was a Dominican friar at the church of SS Giovanni e Paolo in Venice at a time when the *maestro di*

cappella was Petrus Castellanus, Petrucci's editor. A Credo of his was sent to Ercole d'Este by the Ferrarese ambassador in Venice in 1504, with the remark that he was 'very gifted in these things'; the mass followed shortly thereafter. An organist, he was given permission to play at the nunnery of Santo Spirito in Venice in 1505, and in 1509 he became organist in SS Giovanni e Paolo. He was elected *maestro di cappella* at the Cathedral of Padua in 1520, and held this position until shortly before his death. He is chiefly remembered as the composer of a set of madrigals *a voce pare* printed in 1541 (dedicated to a cathedral canon, Benedetto Contarini): this is the only 16th-century print of secular works known to contain exclusively pieces for equal voices (in this case low, or men's, voices). Passetto's vesper psalms are all for double choir, with the second choir consisting of voices of low range.

A collection of 127 motets (*I-Pc* A 17) is signed 'Frater Jordanus Pasetus Venetus ... scripsit hec manu propria ... 1522'. One motet is ascribed to Mouton; the remainder bear no ascriptions, but a number have been identified with French and Flemish musicians of the same generation. The repertory is closely related to that of Petrucci's *Motetti de la Corona* and probably represents what was sung at Passetto's church in Venice; some of the unidentified compositions may be by him. He also copied another manuscript in the same library (MS D 27), containing works of the Gombert generation. Presumably Passetto copied both manuscripts in fulfilment of a promise made at the time of his appointment to provide the cathedral with 'good and new songs and motets'.

WORKS

[25] Madrigali nuovi a voce pare ... 4vv, libro primo (Venice, 1541)
Audi bone persone (villotta alla padoana con quatro parte), 1552[23]

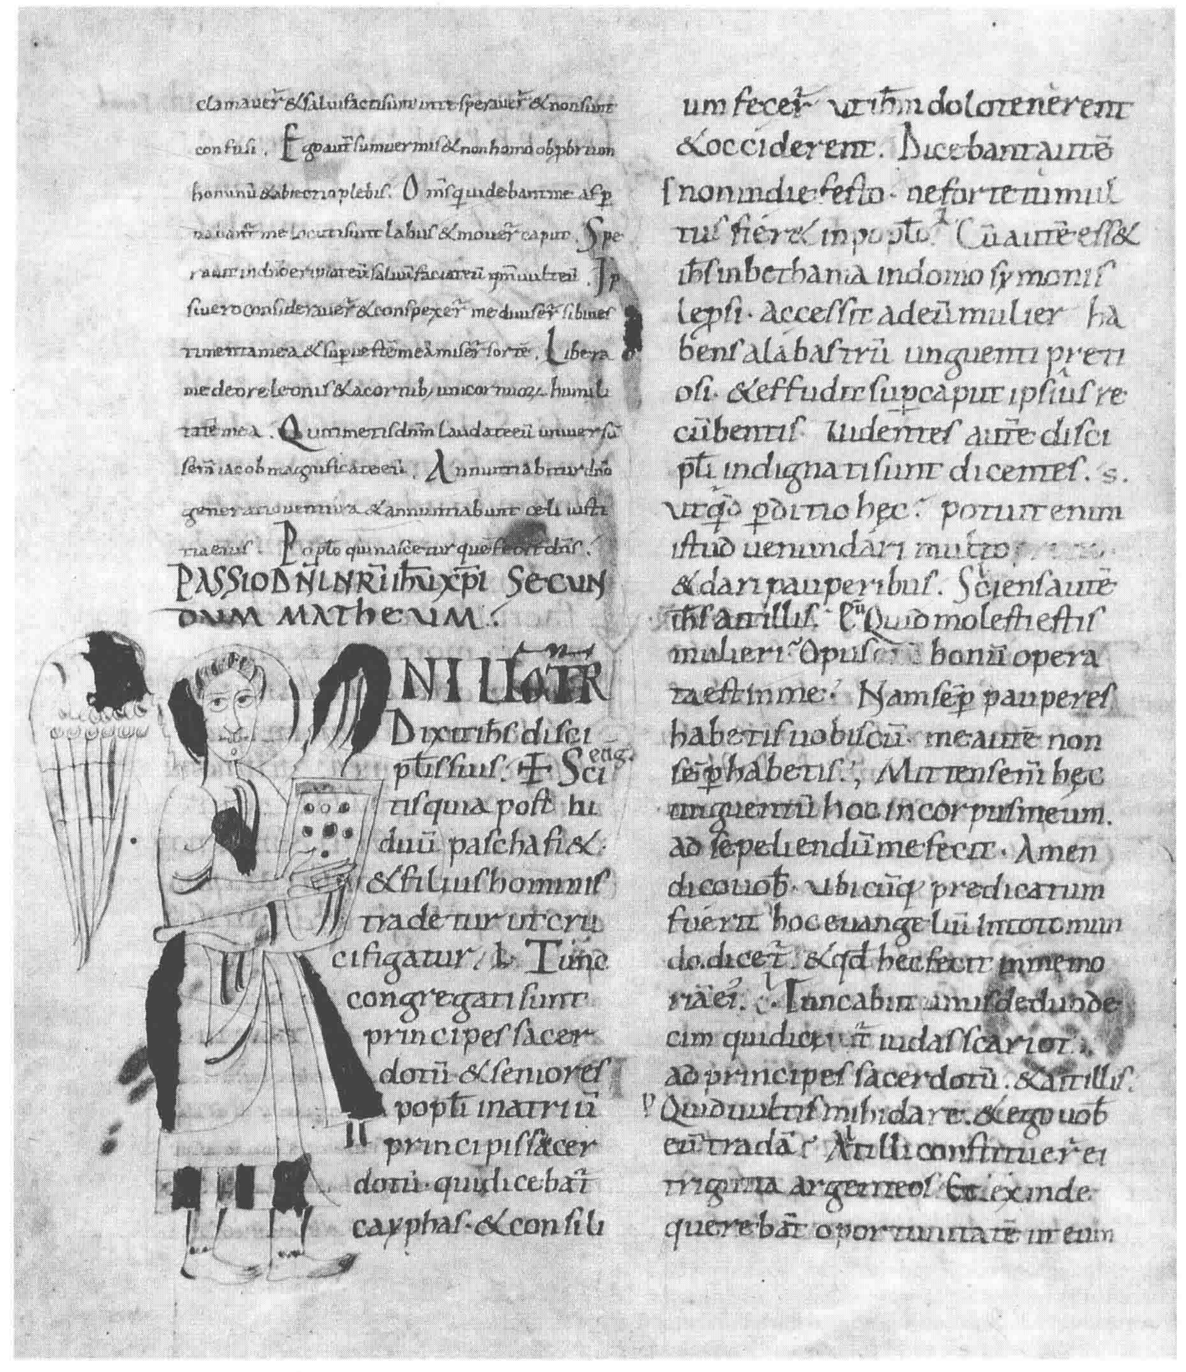
Passing note (Ger. *Durchgang*). A NON-HARMONIC NOTE that leads from one note to another in a single direction and usually by conjunct motion.

Passion. The story of the Crucifixion as recorded in the Gospels of Matthew (xxvi–xxvii), Mark (xiv–xv), Luke (xxii–xxiii) and John (xviii–xix). In the Roman liturgy the Passion texts are recited as Gospel lessons during Mass on Palm Sunday (*Matthew*), Thursday of Holy Week (*Mark*), Wednesday of Holy Week (*Luke*) and Good Friday (*John*). At a very early date special lesson tones were developed for reciting the Passion, and polyphonic settings of its texts have been made since the 15th century.

1. Monophonic Passion. 2. Beginnings of the polyphonic Passion. 3. Catholic Passion after 1520. 4. Protestant Passion to 1600. 5. 17th century. 6. 18th century. 7. 19th and 20th centuries.

1. MONOPHONIC PASSION. The earliest report of the use of the Passion in a religious ceremony is that of the pilgrim Egeria who visited Jerusalem in the 4th century and described the services held there during Holy Week. These readings were essentially commemorative in nature, while those in the Western Church (according to patristic theology) took on a didactic function as Gospel lessons. Indeed, Augustine emphasized the need for a solemn delivery ('Solemniter legitur passio, solemniter celebratur'). About the middle of the 5th century Pope Leo the Great decreed that the St Matthew Passion should be read during the Mass for Palm Sunday and the Mass for the Wednesday in Holy Week, while that of St John should be read on Good Friday. Some 200 years later the St Matthew Passion was replaced by that of St Luke for use during the Wednesday Mass, and from the 10th century it became the custom in the Roman Church to sing the Passion according to St Mark on the Tuesday of Holy Week. In the Gallican, Ambrosian, Mozarabic and southern Italian liturgies the texts were allotted somewhat differently and sometimes only single verses from the Passion were read.



Ex.1 *St John Passion*, *F-RS*, 258 (12th century)

As indicated in the Roman Ordines, the Passion texts were originally chanted by a single singer (*diakon*), and there is no reliable evidence that they were sung by more than one until the 13th century. Manuscripts survive from as early as the 9th century in which pitch, tempo and volume are indicated by the so-called *litterae significativae* ('significative letters') but these should not be interpreted as evidence for the distribution of parts to different people.

But the letters do reveal an essentially dramatic approach to the Passion at an early stage of development and may be divided into three groups accordingly: letters for the narrative sections (Evangelist), letters for the words of Christ, and letters for the words of the turba (direct speech by groups or individuals). In the narrative portions of the text the letter *c* (*celeriter*, later interpreted as *cronista* or cantor) occurs especially frequently. There also occur the letters *m* (*mediocriter*), *d* (*tonus directaneus*) and especially in southern Italian sources *l* or *lec* (*lectio*). The words of Christ often bear the letter *t* (*tenere* or *trahere*), which was often transformed into a cross after the 12th century.

Other letters used for the words of Christ are *i* (*iusum*, *inferius*), *b* (*bassa voce*), *d* (*deprimatur* or *dulcius*), *l* (*lente*, *leniter*), *s* (*suaviter*) and, in the Jumièges manuscripts, *a* (*augere*). The words of Christ, sometimes distinguished by the colour red, are also prescribed in certain manuscripts to be delivered in the Gospel tone by

1. Significative letters in a monophonic setting of the St Matthew Passion, from a missal from central Italy, 11th century (I-Rvat Barb.lat.560, f.33v): Evg, ev – evangelium (a cross is added at the beginning to indicate the words of Christ); l – lectio (narration); s – sursum (turba); p – ?pressio (used here for the words of Judas)

the letters *evg* (see fig.1). Occasionally, as in the Sarum rite, the words of Christ on the cross are specially emphasized, either by a higher pitch or by a special use of neumes. The turba is most often marked by the letter *s* (*sursum*, later interpreted as *synagoga*), as well as by the letters *a* (*altius*), *l* (*levare*) and *f* (*fortiter*). In certain sources a distinction is made between the turba of the disciples (*lm* for *levare mediocriter*) and the turba of the Jews (*ls* for *levare sursum*).

From the 12th century there are sources in which the pitches of the Passion recitative are fixed exactly by means of Roman letters, but the *litterae significativae* continued to be used. The earliest manuscripts with precise pitch notation came from Corbie (fig.2) and Reims (12th century), and in these the recitation note for the words of Christ is *d* (alternating with *f*), while that for the Evangelist is *a* and that for the turba *d′*. In these sources the various formulae of melodic punctuation may also be determined

2. *Opening of the melody of the Palm Sunday St Matthew Passion, in alphabetic notation, from a MS from Corbie, 12th century (F-Pn lat.11958, f.75)*

(ex.1). From the 13th and 14th centuries, once again in France before elsewhere, Passions may be found in which lesson tones are written in neumes or square notes on the staff (fig.3). Here the recitation notes for Christ, Evangelist and turba (in that order) are most commonly *f/d, g, c′*; *f, a, d′*; or *f/e, a, c′*.

The English Sarum Gradual, on the other hand, has its own Passion tones: the recitation notes are *e/f, c′/b, f′/c′*; Christ's words on the cross *d′/e♭′*. Spain also had its own tradition, and while hardly any Passion tones written down before the second half of the 15th century have survived (at least in southern Spain), towards the end of the 15th century and in the 16th there are, among others, tones with the recitation notes *e♭, g, c′* (rite of Toledo Cathedral) and *f/d, a, c′/d′* (Escorial, chapel of Felipe II). In Hungary, alongside *f, c′, f′* (somewhat rare), *e/d, a, d′* occurs particularly frequently. The Passion tone F Lydian (*f, c′, f′*) appeared for the first time in German sources of the 14th century and was first used in Rome in the late 19th, succeeding *g, c′, f′*, used in most Italian sources since Guidetti (1586).

The earliest definite distribution of the parts of the Passion lesson among several people is to be found in the *Gros livre* of the Dominicans dating from 1254. Here the words of Christ are recited on the notes *B, A* or *c*, the Evangelist sections on *f*, and the turba sections on *b♭*. It is conceivable that the Passion text in the *Rationale divinorum officiorum* of Durandus, which indicates that the words of Christ are to be spoken softly and those of the Jews with loud cries and coarse voices, is related to Dominican practice.

In a Sarum Gradual at Parma (*I-PAc* 98; *c*1300) the Passion lesson is divided between five singers (recitation notes *e* and *d′/e♭–c′–g* and *f′*) and the words of Christ on the cross are chanted by a special singer. Indeed, the division of the Passion lesson among three singers became universal in the course of the 14th and 15th centuries. The first indication of a choral (monophonic) presentation of the turba is found in the manuscript *PL-WRu* I-F459, written in 1348. These various elements of performing practice (the use of the *litterae significativae*, the division of the parts among several characters and the use of a chorus for the turba) increased the dramatic impact of the Passion text, and their presence suggests that a new element of *compassio* had infiltrated the older didactic Passion. The origin of this new attitude is to be sought on the one hand in the mysticism of suffering propagated by Bernard of Clairvaux and in Franciscan-Dominican piety on the other.

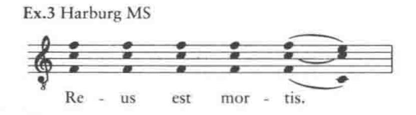
3. *Opening of the melody of the St John Passion from a Spanish MS, 16th century (E-E Passionario N.2)*

2. Beginnings of the polyphonic Passion. In the 15th century theological trends reached beyond *compassio* to an *imitatio Christi* in the sense of a tangible first-hand experience of the Passion. Passion plays became increasingly longer, and polyphony was introduced for the turba of the Passion proper in imitation of the older polyphonic lessons for Christmas. Indeed, those types of Passion that served as models far into the 17th century originated in the 15th and 16th centuries. Here two main groups may be distinguished: responsorial and through-composed.

In the responsorial Passion (which is referred to in the older literature as 'choral Passion' or, less happily, 'dramatic Passion') the narrative sections of the Evangelist are chanted monophonically while the words of Christ and the turba may be set polyphonically in one of four different ways: only those parts of the turba that are the speeches of groups of people are set polyphonically; all the turba is polyphonic, i.e. all direct speech apart from the words of Christ; the words of Christ as well are set polyphonically (only after about 1535–40); and in connection with any of the above, the title of the Passion (the so-called *exordium* 'Passio Domini nostri') and later also a *conclusio*, which is not taken from the Gospel accounts, are both included in the polyphonic setting.

The earliest extant example of a responsorial Passion is of English origin, a *St Luke Passion* and a fragmentary *St Matthew Passion* in the manuscript *GB-Lbl* Eg.3307 (ed. McPeek, 1963, pp.48, 54) compiled between 1430 and 1444. Written in three-part English discant style, the settings include the *exordium* and the words of the turba and individual characters, but not the words of Christ (ex.2). Closely related to these Passions are those of

Ex.2 Exordium, *St Luke Passion*, *GB-Lbl* Eg.3307



another English source, a single surviving partbook (*GB-SHRs*, olim III, 42), which dates from the same period and contains settings of Passions according to St Matthew and St John. The next known Passion of English origin is the four-part *St Matthew Passion* by Richard Davy, found in the Eton Choirbook (*c*1490; ed. in MB, xii, 1961), which uses the Sarum Passion tone to some extent.

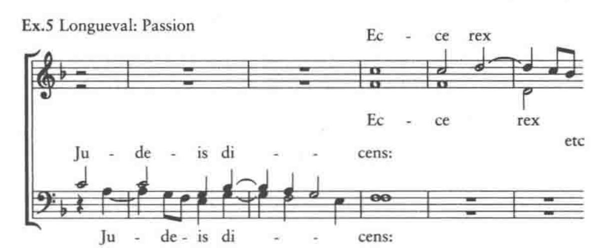
Apart from these early English sources there is a short treatise written in south Germany about the middle of the 15th century (*D-HR* ii.lat.2.2°6) that is specially important for the German Protestant Passion (ed. in Göllner, *Die mehrstimmigen liturgischen Lesungen*, 1969, ii, 130ff), as well as for the continental responsorial Passion as a whole.

Ex.3 shows how a three-part *turba judaeorum* originated by combining the three recitation notes *f*, *c'*, *f'*. Another example of a 15th-century responsorial Passion

Ex.3 Harburg MS

that remains unique comes from a manuscript compiled in northern Italy between about 1470 and 1480 (*I-MOe* α.M.1.12). Here the turba sections of the St Matthew and St John Passions are written in a three-part fauxbourdon style with the cantus firmus (recitation tone) in the upper voice (ex.4).

Ex.4 *St John Passion*, *I-MOe* α. M.1.12



The three turba sections of the disciples in the St Matthew Passion ('Ut quid perditio haec', 'Ubi vis paremus', 'Numquid ego sum') are written for six or even eight parts. Even more remarkable, however, is the fact that the monophonic choral sections for the words spoken by individual characters are differentiated according to male and female pitch registers, suggesting that these pieces are part of a Passion play and not liturgical. Both Passions have survived anonymously, but they are quite possibly the works of Johann Martini, Brebis or even Binchois, who is supposed to have written 'Passions en nouvelle manière'.

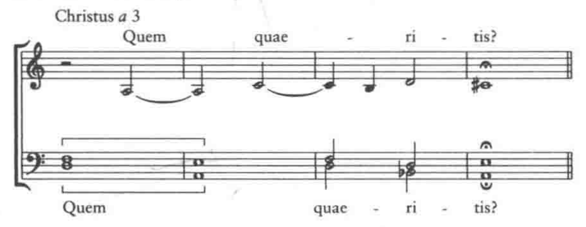
In the through-composed Passion (often referred to in literature as the 'motet Passion') the complete text including the narration is set polyphonically. From the 16th century onwards three types may be distinguished according to text: those setting the complete text according to one Evangelist; the so-called *summa Passionis* (Passion harmony), made up of sections taken from all four Gospels, including all seven words of Christ on the cross, an *exordium* and a *conclusio*; and the setting of a shortened version of the text from one Gospel (found only in Protestant Germany).

The earliest example of a polyphonic *summa Passionis* is of Italian origin. In the two oldest manuscripts in which it is recorded (*I-Rvat* C.S.42, 1507, and *I-Fn* II. I.232, 1514) Johannes a la Venture and Antoine de Longueval are named as the composer of the work (ed. in Kade, 1893, pp.246–73). The same composition appeared in Georg Rhau's collection of 1538 in Wittenberg where it is attributed to Obrecht (ed. in *Georg Rhau: Musikdrucke*, x, 1990, pp.34–56). The text is divided into three sections somewhat analogous to the stations of the *via crucis* that came into vogue at exactly that time. The tradition of the harmony of the Gospels or the Passion, however, is considerably older. It can be traced back to early Christian times and was popularized above all by the *Monotessaron* of Johannes Gerson (*c*1420). The Longueval Passion, which survives in more than 30 manuscripts, is written in a very loose *falsobordone* style of Italian stamp and the Passion tone is found mostly in the tenor part. The turba sections are mostly four-part; the words spoken by individual characters (including the words of Christ) are two-part with some exceptions, and the sections of the Evangelist are for two, three or four parts (ex.5). Since the *summa Passionis* could not be used as a Gospel lesson within the Mass itself, the Longueval Passion may have been written in 1502–4 to celebrate Good Friday in the private chapel of Ercole d'Este in Ferrara (Heyink, 1990). The work did not find widespread acceptance in Catholic areas, except for Bohemia, but was to be of

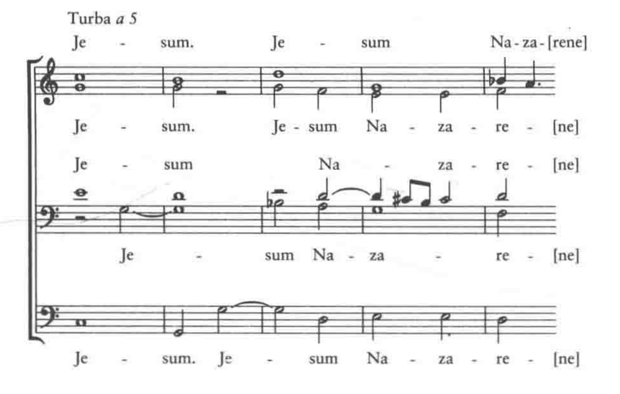
Ex.5 Longueval: Passion

great importance for the Protestant Passion in Germany (see §4 below; for the introduction of polyphony in the Spanish Passion in the late 15th century and the early 16th, see §3).

3. Catholic Passion after 1520. The responsorial Passion was the most widespread type in Italy. Settings of the texts from St Matthew and St John are most common, those from St Mark and St Luke being less frequent and less ambitious. Among the oldest are those of Corteccia (St John, 1527, and St Matthew, 1532), in which only the *exordium*, the turba sections and the final *evangelium* (the last section of the Evangelist's Passion narrative) are set polyphonically. Corteccia's Passions may have been written in imitation of works by Bernardo Pisano, which have not survived. Similar settings include those of P. Ferrarensis (St Mark and St Luke, 1565), Vincenzo Ruffo (St Matthew and St Luke, 1574–9), P.A. Giacobetti (1601) and Charles d'Argentille, who was active in Rome before 1543. Among the large number of Italian Passions in which the speeches of individuals (apart from Christ) are also set polyphonically are a fragment of an anonymous six-voice *St John Passion* written in the *falsobordone* style (*I-MOd* IX), the *St John Passion* of Jacquet of Mantua (*c*1540), in the style of Sermisy's Passion, and the works by Giovanni Contino (1561), Manfred Barbarini Lupus (1562–4, written for the monastery at St Gallen), Paolo Isnardi (before 1570), Floriano Canale (1579), G.M. Asola (1583), Francesco Rovigo (*c*1580) and a *St Mark Passion* written for Mantua in about 1580 by Giaches de Wert.



A most important innovation, setting the words of Christ polyphonically, was introduced in certain responsorial Passions no later than the 1540s. The earliest examples are a St Matthew Passion and two St John Passions (*I-BGc* 1207–8) by Gasparo Alberti, who was active in Bergamo between 1508 and 1560 (ex.6). Hardly justifiable from a liturgical point of view, such settings



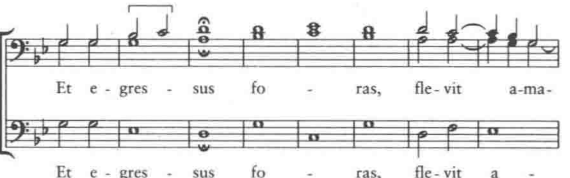
Ex.6 Gasparo Alberti: *St John Passion*

are basically chordal and reveal the same tendency to expressive declamation as the contemporary madrigal. The inclusion of the words of Christ among the polyphonic settings was prefigured in Longueval's *summa Passionis* and possibly too in the lost *Parole di Christo in cantu figurato* (*c*1534) of the Spaniard Juan Escribano, who was a singer in the papal chapel in Rome. Other Italian composers of responsorial Passions who set the words of Christ polyphonically were P. Ferrarensis (St Matthew and St John, 1565), Ruffo (St John, *c*1570), Placido Falconio (four Passions, 1580), Paolo Aretino (St John; ed. in Musica liturgica, i/6, 1958), Asola (St John, 1583), Francesco Soriano (four Passions, *c*1585, printed for the first time in 1619), Teodoro Clinio (four Passions, 1595) and Serafino Cantone (St Matthew and St John, 1604). In some of these works the contrast between the majestic utterances of Christ and the emotionally intense cries of the Jews is developed in a way reminiscent of the madrigal (ex.7). In some Italian Passions of this type the close of the Passion lesson (Evangelist) is included in the polyphonic setting as well, providing an opportunity for a dramatic multi-voiced conclusion. At the end of his *St Luke Passion* ('Et mulieres quae secutae'), for example, Clinio united the six turba parts, the four individual characters and the three parts of the *vox Christi* into a 13-part setting.

Ex.7 Paolo Aretino: *St John Passion*

In Italy, alongside the responsorial Passion, the type of setting in which the text of one Evangelist appears in its entirety in a simple note-against-note style appears only rarely. The only known examples are the *St Matthew Passion* by Jan Nasco (before 1550, printed in 1561), who was active in northern Italy (this work is also known in a divergent form in Spanish manuscripts from Valencia and Montserrat), and the *St John Passion* by Cipriano de Rore (*c*1550, printed in 1557). Ruffo also composed a *St John Passion* along these lines, the style of which was influenced by the reforms of the Council of Trent.

16th-century Catholic Passions of German origin are linked with the Italian responsorial type in which the *vox Christi* is not set polyphonically. Chief among these are the four Passions that Lassus composed for the Bavarian Hofkapelle between 1575 and 1582. In these works Lassus combined a polyphonic motet style with Italian *falsobordone* elements; the turba sections are set chordally for full chorus, but the words of the individual characters are composed as bicinia and tricinia. His St Mark, St Luke and St John Passions (1580–82) are distinguished from the older *St Matthew Passion* (1575) by a stricter liturgical attitude; verbal repetition is largely avoided and the Passion tone is usually clearly recognizable. To the tradition of Lassus belong an anonymous *St Matthew Passion* (*D-Mbs* Mus.76) and possibly also the three lost Passions by Jacob Reiner. Indeed, the settings of Lassus served as models for the responsorial Passion in Catholic areas far into the 17th and 18th centuries, a fact attested to by adaptations of his works from Freising (1707) and Weingarten (1745). Stylistic cross-references to Lassus's Passions also occur in late 16th-century Protestant works, particularly those of Leonhard Lechner. Other Catholic Passions of the responsorial type include a *St Matthew Passion* by Johannes Mangon (1574; in *D-AAm*), and four from the Austrian monastery at Rein, which show Italian influence; only their turba sections are set in polyphony. The only definitely new compositions for *summa* texts in the Catholic areas of Germany, apart from Longueval's work and a *summa* by Mangon, originated in Silesia, Moravia and Prague, which belonged to the German Empire in the 16th century. These include three Passions by Jacob Handl (1578, printed in 1586) and one by Jacob Regnart (*c*1580). One of the settings by Handl, for two choruses of contrasting register, is especially outstanding. The turba sections are in eight parts, the words of the Evangelist in four to eight parts; the *vox Christi* is sung by a deeper chorus and the individual parts by a higher one. New discoveries provide proof of the existence of Hussite Passions in late 16th-century Bohemia that translated the Longueval text into Czech.



The Catholic Passions composed in Spain, Portugal, Mexico and other Spanish- and Portuguese-speaking countries during this period (and indeed in the following centuries) may be divided into three broad groups: (1) Passions following the Roman rite and style; (2) Passions 'in the Spanish style' (*more hispano*); and (3) Passions in which the narrative words of the Evangelist (but not Christ's words) are set to polyphony, a type found exclusively in Aragon after 1550.

The influence of the Roman rite is seen in the earliest known Spanish reponsorial Passions, by Juan de Anchieta (*E-V*; ed in Preciado, 1995). Probably composed before 1523, these were written for four voices in chordal style on the Toledan lesson tone. The Italian responsorial style is also found in Victoria's two Passion settings (Rome, 1585), in two Passions by Melchior Robledo (ed. P. Calahorra, Opera polyphonica, i, Zaragoza, 1986), and in a few works from the monastery of Montserrat (*E-MO* 750, 752).

The most important type of Iberian responsorial Passion, sometimes designated as *more hispano*, originated in the late 15th century and the early 16th. It was described in the diary of Johannes Burkhard, who was *clericus caeremoniarum* at the papal court of Alexander VI (himself a Spaniard) from 1483 to 1506. Burkhard reported that three Spaniards performed the Passion and, departing from the Roman rite, sang the Evangelist's narrative words 'Flevit amare', 'Emisit spiritum' and 'Contra sepulcrum'; he also mentioned certain of Christ's words that were sung polyphonically. This practice is confirmed by a great number of Passions in 16th- and 17th-century manuscripts from Spain, Portugal, Mexico and Central and South America (ex.8). Three of the five Passions by Guerrero also show traces of the *more hispano*. In his five-voice Passions according to St Matthew and St Luke and the four-voice Passion according to St Mark, the Evangelist's words 'Flevit amare' and 'Et cepit flere' are set polyphonically in addition to the usual turba sections. Some of Christ's words are set in polyphony in other Iberian Passions: for example, in a Mexican Passion (Codex del Convento del Carmen, *c*1600; ed. in Bal y Gay, 1952) the following words of Christ are set in polyphony: 'Tristis est anima mea', 'Eli, Eli lamma', 'Mulier ecce filius tuus' and 'Consumatum est'. (For polyphonic settings of the various sentences of the Evangelist and Christ, probably following local traditions, see J.V. González-Valle, ed., MME, xlix, 1992, and R. Snow, ed., MRM, ix, 1996.) That such emotionally charged utterances received special treatment in the Spanish Passion may perhaps be explained by the fact that Iberian piety was closely linked with a mystique of suffering. It should also be pointed out, however, that in the Mozarabic rite, which was newly revived about 1500, the Passion lesson for Maundy Thursday closed with the words 'Et egressus foras, flevit amare'.

The third type of Iberian polyphonic Passion, from Aragon, was probably derived from an Italian model, Nasco's through-composed *St Matthew Passion*, transmitted by Ferdinand of Aragon from Italy to the cathedral of Valencia before 1550 as a 'cosa rara' (Fischer, 1995). Nasco's work was adapted to fit the liturgical use of Valencia, with the polyphonic words of Christ and other

Ex.8 *Matthew Passion, E-MA*

individuals omitted (see MME, xlix, 1992, where it is erroneously attributed to B.C. Comes, who also wrote several Passions of this type in the early 17th century). Another important Passion composer, one of the first to imitate Nasco, was Juan Oloron, *maestro de capilla* at Huesca Cathedral from 1551 to 1560. Polyphonic settings of the *processus*, the narrative sections of the Passion, also appeared in Spanish-dominated Naples, where G.M. Trabaci composed his four Passions (1635) based on the Aragonese lesson tone.

Very few Catholic Passions of French origin from this period are known, possibly because Calvinist influence was strong in France at exactly the time when the setting of the Passion was among the most important concerns of lesson composition in other countries. Apart from the Passions of Longueval and d'Argentille, who were active in Italy, and the Passions of Rore (St John, 1557) and Lassus (St Matthew, 1575), which were printed in Paris, there are only two other settings, one anonymous and the other by Claudin de Sermisy. Both are responsorial types and are contained in Attaingnant's *Liber decimus: Passiones* (Paris, 1534; RISM 1535[2]). The Reformation was apparently responsible for the almost total lack of Passion settings in England. Apart from an anonymous setting in the Gyffard Partbooks which is stylistically related to the Passion composed by Richard Davy about 1490, the only known setting is the three-part turba section of the *St John Passion* by Byrd (1607). The only documentary evidence for the polyphonic Passion in 16th-century Poland is the *Exclamationes Passionum* (turba sections and individual parts in polyphony, but not the *vox Christi*) by Wacław z Szamotuł, printed in Kraków in 1553.

4. PROTESTANT PASSION TO 1600. The theological basis for the Protestant Passion, at least in the first half of the 16th century, was formed by Luther's *theologia crucis*: 'The Passion of Christ should not be acted out in words and pretence, but in real life'. In his *Deutsche Messe* (1526) Luther pronounced against the 'Vier-Passionen-Singen', referring apparently to the *summa Passionis*. The text of a Passion harmony by Luther's friend the Reformer Johann Bugenhagen, which appeared at the same time, was intended to be read, not sung. However, since Bugenhagen's text soon enjoyed great popularity, along with the responsorial Passion (which was never criticized by Luther), the monophonic and polyphonic *summa* in Latin and German soon came into vogue despite Luther's objections.

In the Lutheran rite the reading of the Passion was spread out over the entire Passion period. Both monophonic and polyphonic Passions as well as *summae* of various kinds were sung from the Sundays 'Laetere' and 'Judica' (i.e. two weeks and one week before Palm Sunday) through Palm Sunday until Good Friday, the *summa* texts being restricted mostly to Matins and Vespers. The *Psalmodia* of Lucas Lossius (1553), compiled for the church at Lüneburg, prescribes the monophonic Latin St Matthew Passion for Mass on Palm Sunday and the monophonic *summa* for Matins on Good Friday; a polyphonic Passion was to be provided for Matins on Wednesday of Holy Week. The monophonic Passion was performed according to Luther's Gospel tone (as well as pre-Reformation tradition) by three people on the recitation notes *f*, *c'*, *f'*. Mention should also be made of a monophonic *Liedpassion*, which was used in the Protestant (not only Lutheran) sphere as early as the 1530s. This is a text from Bugenhagen's *summa* put into verse and sung to Sebald Heyden's melody 'O Mensch, bewein dein Sünde gross'.

In Lutheran-Protestant Germany the polyphonic Passion occurs both as a responsorial Passion (particularly those of St Matthew and St John) in German and as a Latin or German *summa Passionis*. The models for the responsorial Passions are the so-called 'Walterian Passions' of Luther's friend Johann Walter (i), which are regarded not so much as compositions in their own right as examples of how Passions were to be sung (*St Matthew Passion*, ed. in Kade, 1893, pp.274–305, and in Handbuch der deutschen evangelischen Kirchenmusik, i, 1974, pp.26–38). Various types developed out of these models, the simplest of which had only the turba of the disciples and of the crowd in four parts; everything else was performed monophonically with the Passion notes *f*, *c'*, *f'*. In use as early as 1530, its simple settings are closely related to the three-part versions of the Füssen Passion Treatise (ex.9). After about 1550–60 a polyphonic

Ex.9 Walter: *St Matthew Passion*

exordium ('Das Leiden unseres Herrn Jesu Christi') and a polyphonic *conclusio* were added to the turba sections (e.g. *PL-WRu* Mus.11), possibly in imitation of Longueval's *summa*, which achieved wide popularity in Germany. However, Longueval's *conclusio*, 'Qui passus est', was usually replaced by a specifically Lutheran thanksgiving, 'Dank sei unserem Herren', presumably borrowed from Heyden's *Liedpassion*. The polyphonic sections of Walter's prototype were often revised and composed anew, as in Johannes Keuchenthal's *Kirchen Gesenge latinisch und deudsch* (Wittenberg, 1573), where the *exordium* and *conclusio* are artfully revised and the turba section 'Herr, bin ich's' is set canonically. In the works of Keuchenthal and Jacob Meiland (1568–70) there is a gradual move away from the use of the cantus firmus, always clearly recognizable in Walter's prototype, and the use of more skilful techniques of composition.

The German responsorial Passion was further modified when the words of Christ were set polyphonically after the Italian fashion, leaving only the narrative portions of the text monophonic. The first work of this kind in German was Antonio Scandello's *St John Passion* (1561; ed. in Kade, 1893, pp.306–44). Scandello, who was active at Bergamo Cathedral from 1541 to 1547, probably borrowed this type of Passion chant from Alberti. With this development Passion music in Germany moved even further away from Luther's theology in a line of development that led to the Passion oratorios of the 17th century. Bartholomäus Gesius (St John, 1588) followed the pattern set by Scandello, and the two Passions by Rogier Michael, composed in Dresden before 1619 (now lost), also belong to this type.

The *summa Passionis* in both Latin and German was composed in Protestant Germany in monophonic and polyphonic form. Lossius's *Psalmodia* (1553) transmitted Longueval's Latin text with the exception of the *conclusio*, but the anonymous 'Auszug der Historien des Leidens

unseres Herren Jesu Christi, durch die vier Evangelisten beschrieben, in eine action gestellet, gesangsweise' (1552) is a special case. In its design this work is based on the responsorial prototype of Walter, where *exordium*, *conclusio* and turba sections are sung in four parts. Like the other versions of Walter's original, this type of Passion was also handed down until the late 17th century, as in the so-called 'Glashütter Passion' (*c*1680; ed. in Ameln and Mahrenholz, 1932, i/4, 79–94).

Apart from the Walterian models themselves, the most widespread Passion in Germany was that of Longueval, which was published by Rhau in Wittenberg in 1538 under Obrecht's name; the work appears in over 30 sources in four- and six-part versions. Included in the same print is a four-part *summa* by Johannes Galliculus (identified in the source as a St Mark Passion) that was textually identical with Longueval's and was also through-composed; the use of the Passion tone as a cantus firmus is also similar to that of Longueval. Paulus Bucenus (1578) composed a Latin *summa* after the pattern of these two models, in which the part-writing is extended and a greater degree of independence from the liturgical cantus firmus is achieved. Johannes Herold (1594) also set a German translation of Longueval's *summa* text for six parts.

Apart from these *summae*, the texts of which are based on Longueval's model, through-composed works were written in Germany that were based on the text of only one Gospel (St John). In these works, however, the Latin text is shortened, the seven words of Christ on the cross completed (following Longueval's example) and the whole is divided into five sections. It is also characteristic for this type that the Passion tone furnishes the basis for the polyphonic setting. The Latin Passions by Balthasar Resinarius (1544) and Ludwig Daser (1578) belong in this category. That of Daser, presumably written for the Stuttgart Hofkapelle, is directly dependent on that of Resinarius, but the texts of the *exordium* and *conclusio* are different in each case; those of Daser coincide with Longueval's, but not those of Resinarius. There is a direct path from Daser's work to one of the most representative German Passions of the 16th century, Lechner's *St John Passion* (1594), which is also in five sections; the fifth section gives an exact translation into German of the third section of Longueval's Passion. In Lechner's setting the Passion notes *f*, *c'*, *f'* still form the basis of the four-part setting.

A final group of German Passions is based on the four-part German Passion of Joachim a Burck (Wittenberg, 1568). Burck's text is a greatly abridged version of St John's Gospel, but in contrast to the works mentioned above there are no additions from the other gospels (with the exception of the *conclusio* borrowed from *Mark* ix.24). Since the composer himself made mention of the Longueval Passion in his foreword, this work may also be included within the tradition of that model. A new feature in Burck's work, however, is the almost total abandonment of the Passion tone, which is represented only by the F-Ionian mode. Regrettably, the only surviving part of Burck's *St Luke Passion* (1597) is that of the tenor. Burck's *St John Passion* (ed. in PÄMw, xxii, 1898/*R*) itself became the model for later compositions, particularly the four-part *St John Passion* by Johann Steuerlein (1576) and the five-part *St Matthew Passion* by Johann Machold (1593), which uses the shortened version of the St Matthew text and a verse of a song ('O Jesu Christe, Gottes Sohn') as a *conclusio*. The inclusion of the latter marked the beginning of the tradition of inserting song strophes into the Passion.

5. 17TH CENTURY. As an independent form occupying a position halfway between a biblical reading and an oratorio, Passion composition is concentrated after 1600 in German-speaking areas, particularly those dominated by Lutheranism. The essential ambiguity of the form is responsible for the juxtaposition of artlessness and artifice, of the archaic and the novel, and (in literature) of polemics and tranquil reflection. In Catholic parts of Germany and in other European countries much less appears to have been made of these inherent and explicit conflicts in the later history of the Passion, and the form either has comparatively little artistic or liturgical significance, or it developed fairly smoothly along its own lines, as in the Viennese *sepolcri*. Although many influences of Catholic south Germany can be detected in the Passion of central Germany, it alone represents the most vital evolution of the form throughout much of the 17th and 18th centuries.

The responsorial and through-composed types served as models well into the 17th century and even into the 18th. Scandello's German version of the figural Passion of north Italy remained important, particularly as it influenced the development of the Easter *historia* (*see* ORATORIO, §7) and the oratorio Passion of the second half of the century, but its only notable offspring among Passions proper in the first half was that of Ambrosius Beber (St Mark, 1610). In Beber's Passion the traditional recitation tone of the monophonic sections is replaced by a new one in G-Dorian, and the polyphonic sections appear to have been influenced by the settings of Lassus. The *summa Passionis* of Longueval is also represented in a six-part setting by Gesius, published in 1613, but by this time the Latin version was falling into disfavour. The most successful alternative to the text in Latin was not a straight translation into German, as in the Passion of Herold, but a reformulation of text and music, modelled on the setting of Burck. A specifically central German tradition was hereby established that based the text (divided once more into three parts) on a drastically abridged and in places free Lutheran translation of the Passion according to St John (together with the introduction 'Höret das Leiden unsers Herren Jesu Christi aus dem Evangelisten Johanne' and the conclusion 'Wir glauben, lieber Herr, mehre unsern Glauben, amen'). In this type of Passion the music is through-composed in a declamatory style with reminiscences of a cantus firmus and with varying, inconsistent groups of voices characterizing the protagonists. The texture seems rather stiff in comparison with the more melismatic polyphony of its Latin counterparts, but it is more in line with the expressive declamation of the contemporary motet. The style was intensified and perfected, harmonically and expressively, by the Freiberg Kantor J.C. Demantius in his six-part German Passion published in 1631.

The strongest tradition of Passion setting in the first half of the 17th century, however, was that based on the responsorial models of Walter. As in the preceding decades the composer whose name was printed was responsible only for the newly written polyphonic sections (pieces representing dramatic action or the utterances of the turba); it long remained standard practice to use the traditional recitation tone for the monologues, including

the narrative of the Evangelist. The contrast between one voice and several was made even more dramatic by increasing the rhythmic and harmonic variety in the polyphonic settings, as in those of Melchior Vulpius (St Matthew, 1613) and Christoph Schultze (St Luke, 1653). With their copiously fugued turbae the three Dresden Passions of Schütz (St Matthew, St John and St Luke, *c*1665) belong to this tradition, in spite of the fact that he created his own highly expressive recitation tones. The style of Schütz was adopted by the slightly later Dresden Kapellmeister M.G. Peranda (St Mark, 1668), although in the monophonic sections he reverted to the old practice. All the surviving Dresden Passions of the 17th century remained in manuscript, being intended primarily for use at the electoral court of Saxony. In the original compositions of Passion choruses written for other places the number of voices was increased from four to five, as in the *St John Passion* by O.S. Harnisch (1621), or even, occasionally, to six (Vulpius and Schultze).

A new epoch in the history of the Passion began to develop about 1650, when musicians in the north German Hanseatic cities introduced fundamental and ornamental instruments to the delivery of the Passion. Such settings, called 'oratorio Passions', were broken up by the insertion of reflective episodes, sinfonias, parallel biblical texts, new madrigalian verses and hymns. The earliest instrumental accompanied Passions were those by Thomas Selle of Hamburg, who also fully exploited the heritage of the central German tradition of the Passion. His *St Matthew Passion* (1642) consists of the old Protestant type in the version of Grimm (1629), with the addition of continuo throughout and two melodic instruments for the parts of Christ and the Evangelist. In his *St John Passion*, which appeared in 1643 with three 'Intermedien' (motets), there are many relics of the old recitation tone, and the text is in the tradition of Burck and Demantius. Schütz's *Sieben Wortte Jesu Christi am Kreuz* (manuscript, undated) also included two sinfonias as well as two melodic instruments for the part of Christ and may represent a direct link with north Germany. It was not until somewhat later (about 1665), however, especially in the region of Brunswick and Lüneburg, that settings 'mit einer Stimm und Instrumenten' and the sinfonia became firmly established. This oratorio-like expansion, first found in the Wolfenbüttel *St Matthew Passion* of Martin Köler (text published in 1664), consisted of biblical sayings in connection with the Last Supper ('Kleine geistliche Konzerte'), sinfonias (some with chorale tunes), old chorales (chorale arias), Latin text (the motet *Ecce quomodo moritur justus*) and two hymns of Johann Rist (new or free arias). The troping of the Passion in Hamburg seems to have taken a different and somewhat less uniform course; there is a gap in extant settings between those of Selle and the printed texts (from 1676). The Königsberg *St Matthew Passion* by Johann Sebastiani (which appeared in manuscript in 1663, and in print in 1672) may have been influenced by practices in Hamburg, whereas the Riga Passions are closer in construction to the Brunswick-Lüneburg type; the Danzig *St Matthew Passion* of Thomas Strutz (1664, text alone) steered a somewhat different course with an aria for Jesus.

In addition to providing settings for the inserted material, composers wrote choruses (turbae, *exordium* and *conclusio*), and for court churches composers such as Sebastiani, Köler and Johann Theile (1673) also provided recitative. By contrast, in non-aristocratic circles the monophonic recitation tone was retained in spite of strong inroads made by the new Baroque styles. The completely original music of Theile's *St Matthew Passion* could have been performed by unaccompanied voices, the arias being replaced by German chorales 'where instrumental music is not customary during Lent' (preface of 1673).

6. 18TH CENTURY. In the 18th century there were basically four different types of Passion setting. The simple old type without instruments was by this time commonly embellished with hymns, but was more or less ignored by the best composers. A second type, the oratorio Passion, was more artistic, but still adhered to the biblical text; and a third was the Passion oratorio in operatic style with completely original text. Finally, there was the lyrical meditation on the Passion without direct dialogue. The only respect in which nomenclature has distinguished between these varieties is that the oratorio Passion, in contrast to the Passion proper and the Passion oratorio, is often called 'Passions-Music' (coupled with the name of the Gospel), while the textually freer Passion, generally based on all four Gospels, often has a poetic title. The former is the type most commonly found in the first third of the 18th century. By adhering closely to a single Gospel text (written in red ink in the autograph score of Bach's *St Matthew Passion*) it met the devotional requirements of orthodox Lutheranism. In its traditional form (e.g. J.V. Meder's *St Matthew Passion*, autograph score, 1700) it became established in north Germany, just as the old Protestant Passion had done long before in central Germany. Compositions of this type (for example the *St Matthew Passion* by J.G. Kühnhausen, *c*1680) competed with the older liturgical Passion (such as those by Thomas Mancinus, 1620), and compositions by well-known masters (such as Telemann) competed with local settings (for example the *St Matthew Passion* by J.T. Römhild of Danzig, *c*1750). Of the five Passions attributed to Bach after his death, it must be assumed that two have disappeared completely. The genre reached its highest achievements in his dramatic *St John Passion* (1724) and the *St Matthew Passion* (1727 or 1729) with its dialogue of double choir.

The oratorio Passion played practically no part in the Catholic parts of Europe during the 17th and 18th centuries (the Latin settings of the *St John Passion* by Alessandro Scarlatti, *c*1680, and Gaspare Gabellone, 1756, are untroped and are fairly isolated examples), but the Passion oratorio in Italian is one of the most important phenomena in the history of the oratorio proper, especially in Vienna (*see* ORATORIO, §6). The Protestant counterpart is found in Hamburg, where the roots of the operatic, German Passion oratorio with original text can clearly be traced. The type became fully established with the omission of the Evangelist in C.F. Hunold's *Der blutige und sterbende Jesus* (set by Keiser, 1704) and the substitution of expressive paraphrase in B.H. Brockes's *Der für die Sünden der Welt gemarterte und sterbende Jesus*, set by Keiser (1712), Telemann (1716), Handel (?1716), Mattheson (1718) and others. To conservative minds, these works contained 'the spirit of opera more than God's Word', with the effect of 'ear-tickling' rather than 'edification' (Hörner, 1933, 32–3), and they were little used in divine worship. In Danzig, churches were permitted only simple Passion formulae without madrigalistic arias. However, the cantata of later times, both

sacred and secular examples, owed much to them for its development.

The lyrical passages and symbolic roles (including the all but indispensable 'daughter of Zion') found in the German Passion oratorio were models for the lyrical Passion meditation in oratorio form. It is represented in Italy and italianized Germany from 1730 onwards by Metastasio's *La Passione di Gesù Cristo* (set by Caldara, Jommelli, Paisiello and others). An increasing aversion to operatic qualities in sacred music, aesthetic objections to sung narratives and dialogues (J.A.P. Schulz, 1774), and the general excess of feeling in the age of sentiment favoured the development of this type in Evangelical parts of Germany. As early as 1720 it is discernible in several Passions by G.H. Stölzel, Kapellmeister of Gotha, but is best exemplified in C.H. Graun's *Tod Jesu* (text by K.W. Ramler, commissioned by Princess Anna Amalia of Prussia). After its first performance in Berlin on 26 March 1755, *Tod Jesu* enjoyed considerable success for two reasons: it presented the Passion story as it reflected the image of a sensitive and contemplative Christ, and it used the simplified musical language of pre-Classicism. As a 'Passion cantata' it could have been performed liturgically either in its entirety or in part, as was the case with Graun's 'Zweite Passion' of about 20 years earlier, *Ein Lämmlein geht und trägt die Schuld*. No other setting of Ramler's libretto was able to compete with Graun's, not even Telemann's (1755). Even though its influence has been very little researched, *Tod Jesu* seems to have marked an important departure in the history of the Passion similar to those initiated earlier by the works of Longueval, Walter, Burck and Scandello. Other Passion oratorios from the second half of the 18th century include that of J.E. Bach (1764), which won renown for its 'thoroughly German' choral writing. Even better known, however, were the *Passions-Kantate* of G.A. Homilius (Leipzig, 1775), edited by J.A. Hiller and celebrated as 'classical', and the Passion oratorios of J.H. Rolle (1753–83).

Classification of the 18th-century Passion is made difficult by a multitude of hybrid forms. Telemann's *St Luke Passion* of 1728, for example, combines elements of oratorio and Gospel history in turn, and each of the five principal sections is preceded with a 'poetical prelude' ('poetische Vorbereitung'). Parody and pasticcio are also important factors; pieces by various composers were transferred to 'new' works, where they either retained their original function (e.g. in a Hamburg Brockes Passion in manuscript form) or else took on a new one (cantata movements by Telemann and J.S. Bach are found in a manuscript Passion pasticcio based on Graun). The Passion oratorio yielded texts and modern musical forms ('free' recitatives, da capo arias etc.) for the oratorio Passion (J.S. Bach, Telemann), or even provided complete pieces (two arias by Graun were introduced into the *St Matthew Passion* of Meder long after the latter's death).

7. 19TH AND 20TH CENTURIES. The function of choral music altered radically in the first half of the 19th century with the advent of public concerts, choral societies and great music festivals. As a result, works such as Beethoven's *Christus am Ölberge* (1803) and Spohr's *Des Heilands letzte Stunden* (1834–5) belong more to the history of the oratorio than the Passion. Indeed, the church could offer no satisfactory liturgical alternative, and more traditional works such as Bach's 'newly discovered *St Matthew Passion*' or Graun's *Tod Jesu* were performed in public concert halls or in churches made to serve as concert halls. This situation began to change only with the revival of interest in the history of church music that took place around the middle of the century (Giuseppe Baini's *Passion turbae*, Rome, 1830; reprints, 1861, of early Passions) and with the musicological research that the Cecilian movement brought in its wake. Heinrich von Herzogenberg's *Die Passion* (1896) marked the return of the original composition of the liturgical Passion, but thenceforth composers were to base their works less on the old types of musical setting of the Passion than on the works of great historical figures, particularly Schütz (Hugo Distler's *Choral-Passion*, 1933) and Bach (dialogue of double choir in Ernst Pepping's *Passionsbericht des Matthäus*, 1950). A distinction must still be made between works intended specifically for liturgical use, such as Eberhard Wenzel's Passion of 1968, and those intended primarily for concert performance, such as Herbert Collum's *Johannespassion* (1953) or Penderecki's *Passio et mors Domini nostri Jesu Christi secundum Lucam* (1965). Penderecki's references to Bach were surpassed in Mauricio Kagel's *Sankt-Bach-Passion* (1985), which tells the 'passion story' of Bach's life and is based on the B–A–C–H motif. Arvo Pärt's *Passio Domini nostri Jesu Christi secundum Joannem* (1982) is another well-known example from the late 20th century.

Passion play. The dramatic representation of Christ's Passion and Crucifixion. The subject is rare in medieval Latin church drama but is a regular feature of vernacular religious plays. The Passion plays in which music plays the largest part are those closely associated with the Complaint of Mary beneath the cross (*see* PLANCTUS; MARIENKLAGE; MEDIEVAL DRAMA, §III, 2(i)).

The term is used also for the vernacular civic plays of France and elsewhere that enact the story of the Passion. In these music often played a considerable part.

JOHN STEVENS/RICHARD RASTALL

Passy, Ludvig Anton Edmund (*b* Stockholm, 3 Sept 1789; *d* Drottningholm, 16 Aug 1870). Swedish pianist and composer of French parentage. He studied the piano with Luigi Piccinni, who was then living in Stockholm, and composition with J.N. Eggert. Subsequently he became a piano pupil of John Field in St Petersburg, and from 1817 he lived in Sweden. He was the most famous Swedish pianist of his time, and was very active as a concert soloist. He was also attached to the royal court, and was the pianist in the royal orchestra (1818–23), organist of the royal chapel (1833–66), and music teacher to Crown Prince Oscar and his wife. In 1840 he was elected to the Stockholm Academy of Music and given the title of professor.

Passy's compositions display a virtuoso pianistic style, in the tradition of Hummel and Clementi; most of them are superficial virtuoso music, though some do have more profound qualities. Among his works are two operas, *Den nordiska kvinnan* ('The Nordic Woman') and *Inbillning och verklighet* ('Fancy and Truth'); a movement of a symphony; Fantasy for piano on motifs from Meyerbeer's *Robert le diable*; Fantasy and Variations for piano on Swedish national melodies (op.6, Leipzig, 1826), a piano trio, four string quartets, fugues for organ, solo songs and choruses. Most of his works are unpublished (manuscripts in *S-Skma*).

Pasta, Carlo Enrico (*b* Milan, 17 Nov 1817; *d* Milan, 31 Aug 1898). Italian composer. He studied at the Milan Conservatory and in Paris. Claiming to be a nephew of Giuditta Pasta, he succeeded in having his first opera, *I tredici*, produced at Turin in 1851. He went to Lima in November 1855, announcing himself as having been the Sardinian king's director of military bands for several years. In 1857 he joined the Lima fraternity of S Cecilia. The première of his zarzuela *La cola del diablo* at the Teatro Principal on 3 October 1865 was so successful that the work was repeated several times and his female pupils gave him a large gold medal inscribed 'Al eminente compositor Enrique Pasta, sus discípulas'. On 11 April 1867 Pasta directed the première of his one-act zarzuela *Rafael Sanzio*, the first of his works to a libretto by Juan Cossio (1833–81). In 1871 his four-act *La Fronda* was advertised as the first opera composed in independent Peru. After further stage successes, in 1873 he returned to Italy, where he composed the opera *Atahualpa* (first performed at Genoa in 1875). In 1876 he was back in Lima, where *Atahualpa* was produced to great acclaim on 11 January 1877; the first opera on an Inca subject to be presented there, it received eight more performances. He was rewarded by the dedicatee the banker Dionisio Derteano, and on his final departure from Lima, newspapers announced (February 1877) that his total profit from *Atahualpa* (including sales of the vocal score published by the composer, 1875) exceeded 5000 soles. *Atahualpa* was also performed in Milan at the Teatro Dal Verme in September 1877.

ROBERT STEVENSON

Pasta, Giovanni (*b* Milan, 1604; *d* Milan, ?1663/4). Italian composer, organist, author and cleric. He appears to have been most active as a musician in his early years. He was organist of S Alessandro in Colonna, Bergamo, from at least 1626 to early in 1634. He then became a canon at S Maria Fulcorina, Milan, and later chaplain of the Collegio Tuffo there. His two known volumes of music are *Affetti d'Erato: madrigali in concerto* for two to four voices and continuo, with the addition of four solo songs (Venice, 1626); and *Arie a voce sola* op.2 (Milan, 1634; referred to by Eitner but now apparently lost). His was a very ordinary talent, and music seems not to have lost by his subsequent devotion to the church and to writing; 16 literary works are listed by Calvi, including two for which he provided music – two sets of *Le due sorelle: musica e poesia concertate in arie musicali* (Venice, after 1634), which are lost. Calvi also stated (in 1664) that Pasta had just died.

NIGEL FORTUNE

Pasta [née Negri], **Giuditta (Angiola Maria Costanza)** (*b* Saronno, nr Milan, 26 Oct 1797; *d* Como, 1 April 1865). Italian soprano. She studied in Milan with Giuseppe Scappa and Davide Banderali and later with Crescentini and Paer among others. In 1816 she made her début at the Teatro degli Accademici Filodrammatici, Milan, in the première of Scappa's *Le tre Eleonore*; soon after, she appeared in Paris at the Théâtre Italien as Donna Elvira, Giulietta in Zingarelli's *Giulietta e Romeo* and in two operas by Paer. Her London début at the King's Theatre in 1817 was as Telemachus in Cimarosa's *Penelope*. She also sang Cherubino and Despina.

After singing in all the main Italian centres from 1818 (her roles included Rossini's Cenerentola and Cimarosa's Curiazio), she achieved her first great triumph singing Rossini's Desdemona at the Théâtre Italien, Paris, in 1821, subsequently appearing there as Tancredi and Queen Elizabeth. In the following decade she established herself as Europe's greatest soprano, exerting a major influence on the styles of Bellini and Donizetti and becoming one of Rossini's favourite singers. Her great roles included Zingarelli's Romeo, Mayr's Medea and Paisiello's Nina. She made a triumphant return to London in 1824 as Desdemona and also sang Zerlina and Semiramide (one of her greatest interpretations). For the

Giuditta Pasta in the mad scene of Donizetti's 'Anna Bolena', Act 2: painting by Aleksandr Bryullov (Museo Teatrale alla Scala, Milan)

next few years she alternated between London and Paris, adding roles by Meyerbeer and Rossini (she created Corinna in *Il viaggio a Reims* in 1825) to her repertory. In 1826–7 she sang in Naples, creating the title role of Pacini's *Niobe* at the S Carlo.

Her first Bellini role was Imogene in *Il pirata* (1830, Vienna). Subsequently she created Amina in *La sonnambula* (1831, Teatro Carcano, Milan) and the title roles in *Norma* (her début at La Scala in 1831) and *Beatrice di Tenda* (1833, La Fenice). For Donizetti she created the title role in *Anna Bolena* (1830, Teatro Carcano; see illustration) and Bianca in *Ugo, conte di Parigi* (1832). After 1835, when she retired from the stage, Pasta's appearances were infrequent, though she performed in London in 1837 and Berlin and Russia in 1840–41. Her voice had begun to show signs of wear and she lost the desire to compete with the legend she had created.

Pasta's greatness lay in her naturalness, truth of expression and individual timbre, which enabled her, within a phrase, to achieve soul-stirring emotion. She could execute intricate *fioriture* but channelled her bravura to illuminate the drama, though she was often criticized for faulty intonation. An accomplished actress, her deportment and portrayal of dignity were without peer.

KENNETH STERN

Pasta, La Piccola. *See* TACCHINARDI-PERSIANI, FANNY.

Pasterla, La. Pseudonym of Costanza Piantanida, wife of GIOVANNI PIANTANIDA.

Pasterwiz, Georg [Robert] **(von)** (*b* Bierhütten, nr Passau, 7 June 1730; *d* Kremsmünster, 26 Jan 1803). Austrian composer. He was educated at Niederaltaich and later in Kremsmünster, where he entered the Benedictine monastery in 1749. He received his theological training at the University of Salzburg, where he also attended courses in law and mathematics in order to qualify himself to teach at the monastery's Ritterakademie. His musical abilities brought him into contact with Johann Ernst Eberlin, who became his teacher. After his ordination in 1755 he was allowed four years to complete his education. In 1755 he composed the music for the comedy *Abul Granatae rex*, which was followed by a series of other stage works. In 1759 he began teaching philosophy, later mathematics and physics, finally political science and economics. From 1767 to 1783 he was the monastery's *regens chori*. During Joseph II's restrictions he had to give up these duties to act as treasurer at the monastery; when it was threatened with dissolution in 1785 he went to Vienna as its representative. He spent the last eight years of his life in Kremsmünster, where he remained dean of the Upper School until 1801.

In addition to 17 articles published in connection with his teaching at the Ritterakademie, Pasterwiz left over 500 musical compositions, mostly liturgical. Almost every year a new dramatic work was produced for the monastery, initially in Latin, after 1773 in Italian and eventually in German. The edition of *VIII fughe per l'organo o clavicembalo* opp.1–3 shows his mastery of counterpoint and of the organ. Several of these fugues were included in later collections, and a new edition was issued in 1972.

ALTMAN KELLNER

Pasticcio (It.: 'jumble', 'hotch-potch', 'pudding'; Fr. *pastiche*). An opera made up of various pieces from different composers or sources and adapted to a new or existing libretto. The practice began in the late 17th century but the term came into general use only after about 1730 to describe an *opera seria* or *buffa*, typically based on popular librettos of Metastasio or Goldoni. Arias were selected mainly by the singers in a given production, the recitatives and ensembles being supplied by the house composer, music director or even the theatre manager.

1. Definition. 2. Origins. 3. The early London pasticcios. 4. The composer as pasticheur. 5. The later pasticcio.

1. DEFINITION. As applied to opera, the term was at first somewhat pejorative. J.J. Quantz, during a visit to Florence in 1725 (though writing in 1755), heard several operas 'patched together with arias of various masters, which is called "pastry" by the Italians, "un pasticcio"'. The verb form was used more loosely to describe the process of revision. In 1735, when Vivaldi asked Goldoni to fit aria texts into an existing libretto, the poet said he had to 'accommodate or cook up the drama' to the composer's taste, 'for better or worse' ('accomodare o impasticciare il Dramma a suo gusto, per mettervi bene o male le Arie'). During the second half of the 18th century the pasticcio acquired a degree of respectability. In 1742 Horace Walpole wrote: 'Our operas begin tomorrow with a pasticcio, full of most of my favourite songs'. Later, the designation appears without stigma on the title-pages of

librettos and in composers' contracts. Most first-rank opera composers – including Vivaldi, Bononcini, Handel, Hasse, Gluck, Mozart and Haydn – arranged or at least willingly contributed to pasticcios. Nevertheless, 18th-century critics and modern historians have tended to dismiss such pieces as inartistic medleys. This attitude is unjustified, but no discussion should skirt the issues of originality and authorial integrity.

The term 'pasticcio' has been applied to several different kinds of work:

(*i*) Revival with substitutions: arias by various composers are substituted for pieces thought unsuitable for the available singers;

(*ii*) True pasticcio:

(*a*) a patchwork in which singers, librettist or impresario fill out an existing libretto entirely with *arie di bagaglio* ('suitcase' arias), or

(*b*) a composite original, in which diverse arias by several composers are fashioned into a new plot;

(*iii*) a composer patchwork: a composer incorporates his own arias, old or new, into another's score; and

(*iv*) a self-pastiche: an amalgam of a composer's own arias in a new context.

There is considerable overlapping among these various types. Parody, defined here as the adding of new words to old music, is a process common to those pasticcios in which care has been taken to fit the borrowed arias into the new dramatic context. Related to the pasticcio is the collaborative medley, a fairly rare type, in which two or more composers divide the labour of setting a new or specially adapted libretto, usually act by act. Examples are *Muzio Scevola* (1721, London: Act 1 by Filippo Amadei, Act 2 by Giovanni Bononcini, Act 3 by Handel) and *La virtù trionfante* (1724, Rome: Act 1 by Benedetto Micheli, Act 2 by Vivaldi, Act 3 by Romaldo). Though usually called a pasticcio, Haydn's *La Circe ossia L'isola incantata* (1789, Eszterháza), which incorporates parts of J.G. Naumann's *L'ipocondriaco* and an anonymous opera based on the Circe story, as well as large chunks of original music by Haydn, would be more accurately described as a 'collaborative medley' or a 'composer patchwork', type (*iii*).

2. ORIGINS. The pasticcio arose from practical exigency. The opening of many new public and court theatres at Venice and then throughout Italy in the 1640s and 50s increased the demand for opera and caused companies to become ever more dependent on revivals. Because operas were almost always composed for specific singers and adapted to local conditions, revivals with new singers in different theatres required extensive changes; even a perennial favourite such as Cavalli's *Giasone* was revised from production to production. In works of this period, recitative, aria and ensemble are closely bound together; revisions accordingly tended not to be of the piecemeal kind characteristic of the later pasticcio. But when, by about 1670, the aria had acquired greater musical weight and detached itself from the recitative, it became easier for an impresario to allow singers to substitute arias they already knew than to hire someone to adjust the original music to suit new voices and characters.

Almost all revivals of Italian operas in the last 20 years of the 17th century were subjected to the pasticcio process, in that they comprised diverse arias by more than one composer. The practice seems to have had only one major drawback, apart from the inevitable disturbance of the work's original integrity (assuming it had any): without the composer or an enlightened impresario to guide them, singers might make substitutions which were inappropriate to the dramatic context or might overlook the need for variety and contrast between arias.

Few 17th-century operas are of type (*ii*), that is, works assembled entirely from existing arias to old or new librettos. An exception is the Milan production of *Arione* (1694), the libretto of which lists 27 different local composers whose arias were assembled in a deliberate patchwork. When Italian opera was exported to northern European courts and cities in the early years of the 18th century, local companies without experienced or capable *opera seria* composers had to turn to the pasticcio. Such works were common in Hamburg, Brunswick, Brussels and especially London.

3. THE EARLY LONDON PASTICCIOS. The first extended discussion of the pasticcio appears in the English translation of François Raguenet's *Paralèle des italiens et des françois, en ce qui regarde la musique et les opéra* (*A Comparison between the French and Italian Musick and Opera's*, 1709). Raguenet opined provocatively that Italian operas were 'poor, incoherent Rapsodies without any Connexion or Design ... patch'd up with thin, insipid Scraps'. In a footnote the English translator qualified this sweeping remark, explaining that Raguenet meant revivals, in which for 'Convenience or Necessity ... Airs are alter'd or omitted, according to the Fancy or Ability of the Singers, without the Approbation or Knowledge of the Composer'. Appended to the translation of Raguenet is the anonymous 'Critical Discourse on Opera's and Musick in England', an account of the London opera scene during 1705–9 which centres on the pasticcio (called here 'a patchwork' or 'medley'), the dominant kind of Italian opera heard in London before Handel arrived in 1710. Included is the following satirical recipe, which nevertheless describes how several of the London pasticcios were actually concocted:

> Pick out about an hundred *Italian* Airs from several Authors, good, or bad, it signifies nothing. Among these, make use of fifty five, or fifty six, of such as please your Fancy best, and Marshall 'em in the manner you think most convenient. When this is done, you must employ a Poet to write some *English* Words, the Airs of which are to be adapted to the *Italian* Musick. In the next place you must agree with some Composer to provide the Recitative ... When this is done, you must make a Bargain with some Mungril *Italian* Poet to Translate the Part of the *English* that is to be Perform'd in *Italian*; and then deliver it into the Hands of some Amanuensis, that understands Musick better than your self, to Transcribe the Score, and the Parts.

The principal target of this paragraph is *Thomyris, Queen of Scythia* (1707), produced by J.J. Heidegger, who helped choose the arias by Alessandro Scarlatti, Dieupart, Francesco Gasparini, Albinoni and Giovanni Bononcini. J.C. Pepusch arranged the music, composed fresh recitatives and directed from the harpsichord, while P.A. Motteux provided the libretto *post facto*. The castrato Valentino Urbani sang in Italian, the rest of the cast in English.

The author of the 'Critical Discourse' did not condemn the pasticcio *per se*; rather, he claimed that there was no Italian opera which 'will go down here without some Alterations'. Moreover, he praised the pasticcio version of Scarlatti's *Pyrrhus and Demetrius* (1708) in which the

arranger Nicola Haym 'first consider'd what Places of Necessity required new Airs' and composed them himself according to 'the Taste of the *English*'. Perhaps with some knowledge of Handel's imminent arrival, the author concluded that no Italian operas ought to be produced in London that were not 'intire, and of one Author, or at least prepar'd by a Person that is capable of uniting different Styles so artfully as to make 'em pass for one'. The implied distinction between good and bad pasticcios resurfaces in criticism throughout the 18th century.

4. THE COMPOSER AS PASTICHEUR. During the heyday of *opera seria*, the pasticcio became a genre in its own right, no longer simply the unwelcome by-product of a hasty revival or the last resort of an opera company without a resident composer. Even Handel and Vivaldi, who exceptionally for the time were their own impresarios, produced significant numbers of pasticcios. These works were generally mounted either early in the season, before a new opera was ready, or near the end to fill out the repertory or to appease certain star singers. Though a pasticcio required much less labour than an original opera, the composer-arranger could claim it as his own and be paid accordingly.

Elpidia (1725, London) will serve as an example of Handel's procedure. He took the dramatic skeleton from a 1697 libretto by Zeno, retaining only the text of two duets and some recitative. Eschewing the first setting by M.A. Ziani, he then selected most of the arias from recent works – Vinci's *Ifigenia* and *Rosmira fede* and Orlandini's *Berenice* – while composing himself only the secco recitative and perhaps the duets. The arias were chosen with reference to his singers (Cuzzoni, Senesino, Francesco Borosini and others), some of the pieces being already in their repertories. Naturally, the result is stylistically removed from Handel, but it is not less dramatic or coherent than many of his own operas; and (as Strohm has observed) the pasticcios allowed Handel to test the *galant* tastes of the fickle London audience more radically than he dared to do in his own operas.

Handel's *Oreste* (1734, London), consisting of arias borrowed from his own works with only the recitatives and ballet music newly composed (type (*iv*)), presents an aesthetic dilemma. Since most Italian operas contained significant amounts of previously composed music (the proportion increased with each revival), and since Handel was anyway a prodigious borrower and adapter of his own and others' music, there is only a fine line of distinction between this self-pastiche and, say, *Rinaldo* (1711), his first London opera and the supposed vanquisher of the despised polyglot pasticcios. Ironically, *Rinaldo* was constructed much like a pasticcio: several arias were taken with little change from earlier works; some were given parodied texts; a few were borrowed from other composers. As with *Oreste*, the only part of *Rinaldo* that is entirely new is the secco recitative.

5. THE LATER PASTICCIO. London did not of course have a monopoly on pasticcios; all Italian opera houses indulged in the practice to some extent. But the King's Theatre continued to be the largest consumer till the end of the century. After Handel abandoned opera for oratorio in the 1730s, the Haymarket opera house, which was run as a commercial venture without government subvention, was left with no first-rank composer and tended to pander to the fickle tastes of the audience. Vast sums were spent on singers, while virtually the entire repertory was imported. Later, even with reputable house composers such as J.C. Bach (1762–72), Sacchini (1772–81) and Anfossi (1782–6), the King's Theatre still relied on revivals and pasticcios for the bulk of its repertory.

Charles Burney, who chronicled this era from direct experience in his *General History of Music*, did not belittle the pasticcio; with its infinite capacity for substitution, it was an ideal showcase for the latest Italian music and singers. Neither did he make much distinction between the dramatic quality of one-composer operas and pasticcios. One of Burney's rare criticisms of the pasticcio as drama is directed at the popular 1770 revival of Gluck's *Orfeo*, to which J.C. Bach had added recitatives and arias as well as some pieces by P.A. Guglielmi, while the Haymarket house poet Giovanni Bottarelli made the necessary adjustments to Calzabigi's original libretto: 'the unity, simplicity, and dramatic excellence of this opera, which had gained the composer so much credit on the Continent, were greatly diminished here by the heterogeneous mixture of Music, of other composers, in a quite different style'. Burney expected less of true pasticcios (type (*ii*)), such as the 1786 *Didone abbandonata*, for which he complimented the prima donna Gertrud Mara on her choice of songs.

Other English critics identified 'a general defect of all pasticcios', namely, 'the want of proper light and shade in the disposition of the songs'. A reviewer of Antonio Andrei's 1784 *Silla* (music selected from Anfossi, Gluck, Alessandri, Martini, Sarti and Tommaso Giordani) elucidated this defect: 'the sole objection which can be urged against this opera, with regard to the music, lies in its superlative excellence ... a feast, where the viands were entirely of sugar ... where the singers, regardless of the necessary imposition of the shades, the chiaroscuro, have no other aim but to elevate and surprize'.

Opera seria, still essentially a succession of self-contained virtuoso arias, was better suited for pastiche treatment than *opera buffa*, with its much longer and more complicated librettos and greater reliance on secco recitative and through-composed finales. But, while serious pasticcios constitute the vast majority, comic opera was subjected to the same process. Even the early intermezzos, such as Alessandro Scarlatti's *Lesbina e Milo* (1701, Naples), were liable to be transformed by patchwork revivals. Full-length *buffo* pasticcios had become well established by the middle of the century, both reworkings of Goldoni classics (type (*iia*)) and those with new plots fashioned from diverse pieces (type (*iib*)). An example of the latter is *La donna di spirito* (1775, London), which includes arias and duets by 12 different composers; interestingly, the borrowed pieces are found only in the first few scenes of each act, the much longer finales being newly composed, presumably by the anonymous pasticheur.

By the third quarter of the century 'pasticcio' had lost its pejorative connotation. Two *drammi giocosi* (1759, Venice, and 1791, Udine) were actually titled 'Il Pasticcio', the latter being an adaptation of various works by Da Ponte and Vicente Martín y Soler. The adapter of the former explained in a preface that, with apologies to all composers concerned, he had selected the most popular arias from recent Goldoni operas and devised a plot ('una comica azione') to link them together. A further sign of acceptance if not respectability is Joseph Mazzinghi's

contract as house composer at the King's Theatre, London, in 1790–92: he agreed to 'compose and select all such new Music' as required and to 'arrange all the Pasticcios'.

Related to the various types of Italian pasticcio are ballad opera, English comic opera, *opéra comique* and Singspiel – all of which incorporated diverse, existing music into a framework of spoken dialogue, or mixed traditional or popular tunes with newly composed ones (see illustration). Among the various types of national quasi-opera, perhaps the closest to the spirit of the Italian pasticcio is the late 18th-century English melodrama, such as Stephen Storace's *The Siege of Belgrade* (1791, London). Music of various composers (both vocal and instrumental – all but Mozart's 'Rondo alla turca' being clearly identified in the published score) had been fitted with parodied texts, rescored, arranged and abridged. Storace's pastiche technique resembles Grétry's plan (not implemented) to produce an *opéra comique* by selecting certain symphonic movements of Haydn, working out a vocal line from the texture and, finally, adding suitable words.

It is difficult to say exactly when the Italian pasticcio died out. In the 1790s few operas were so billed, but Da Ponte and Martín y Soler, both employees of the King's Theatre at the time, provided parodies, arrangements and substitute arias for works which are pasticcios in all but name. A growing awareness of the complexity and unity of contemporary opera, together with the establishment of the operatic canon, gradually rendered the pasticcio obsolete. In 1828 John Ebers, a former manager of the King's Theatre, acknowledged the existence of the canon, but also confirmed the late survival of the pasticcio in London: 'Experience sufficiently proves to us, that the operas imported from the continent are, both in music and poetry, such as to render nugatory here [in London] the employment either of a poet, or a composer (other than as a conductor and arranger)'.

Never *ACTED* Before.

AT THE

THEATRE ROYAL

In COVENT-GARDEN.

This present *Wednesday*, being the 8th of *December*,

Will be perform'd a NEW DRAMATIC OPERA, call'd

LOVE in a VILLAGE.

The MUSIC,

By HANDEL, BOYCE, ARNE, HOWARD, BAILDON, FESTING, GEMINIANI, GALLUPPI, GIARDINI, PARADIES, AGUS, ABOS.

A New Overture, composed by Mr. ABEL.

The PRINCIPAL PARTS to be Perform'd by

Mr. BEARD,	Mr. DUNSTALL,
Mr. SHUTER,	Miss BRENT,
Mr. MATTOCKS,	Miss HALLAM,
Mr. DYER,	Mrs. WALKER,
Mr. COLLINS,	Miss DAVIES,

Mr. *Baker*, Mr. *Barrington*, Mr. *Holtom*, Mr. *Bennet*, Mr. *Davis*, Mrs. *Younger*, Mrs. *Stephens*, Miss *Miller*, Mrs. *White*.

With DANCES incident to the OPERA,

By Signor *MARANESI*, Miss *TWIST*, &c.

LIKEWISE

End of Act II. The *JEALOUS WOOD-CUTTER*,

By Signor *DUQUESNEY*, Signora *MANESIERE*, Signor *Tassoni*, &c.

Boxes 5s. Pit 3s. First Gall. 2s. Upper Gall. 1s. [Vivant *Rex & Regina*.

No Persons to be admitted behind the Scenes; nor any Money to be return'd after the Curtain is drawn up.

Nothing under the *FULL PRICE* will be taken.

BOOKS of the OPERA will be Sold at the Theatre.

Playbill for the original production of Arne's pasticcio 'Love in a Village', Covent Garden, London, 8 December 1762

CURTIS PRICE

Paston, Edward (*b* ?Norwich, ?1550; *d* Norfolk, 1630). English music collector and amateur musician. He was the second son of Sir Thomas Paston and the head of a junior branch of the Norfolk family that wrote the 'Paston' letters. A Roman Catholic country gentleman who, in the words of his epitaph in Blofield church, was 'most skillfull of liberall Sciences especially musicke and Poetry as also strange languages', he played the lute, translated Spanish poetry, and probably wrote the English verses set to Italian madrigals in some manuscripts of his collection (e.g. *GB-Lbl* Eg.2009–12). In his will (PCC, Scroope 43) his library, divided between his three Norfolk houses, is described in some detail. The surviving music manuscripts are in English and North American libraries. Some have his name stamped on their bindings (e.g. *Lbl* Add.31992, *Lcm* 2089 and *Ob* Tenbury 340–44); others have been identified by their contents, bindings and

scribes. Many of the books are devoted to continental music, sacred and secular, from Gombert to Giovanni Gabrieli. Paston's taste in English music extended backwards even to Fayrfax and Taverner. His collection is most important, however, as the sole source of many compositions by Byrd, who appears moreover to have written songs celebrating events in the Paston family life (see Brett, 1970).

PHILIP BRETT

Paston Manuscripts (*c*1590–*c*1620). *See* SOURCES OF INSTRUMENTAL ENSEMBLE MUSIC TO 1630, §7 and SOURCES, MS, §IX, 19.

Pastoral [pastorale] (Fr., It. *pastorale*; Ger. *Hirtenstück*, *Hirtenspiel*, *Schäferspiel* etc.). A literary, dramatic or musical genre that depicts the characters and scenes of rural life or is expressive of its atmosphere. The term has been used in musical titles as both an adjective (Beethoven's Pastoral Symphony) and a noun (Franck's *Pastorale*) and may be used both ways in referring to the type in general.

1. General. 2. Antiquity. 3. Secular vocal forms: (i) Up to 1700 (ii) After 1700. 4. Christmas and instrumental pastorals in Italy. 5. 17th- and 18th-century Christmas and instrumental pastorals outside Italy. 6. 19th and 20th centuries.

1. GENERAL. In its long history, the pastoral tradition has served a variety of audiences and artistic purposes. Accounts of it often stress the literary aspects of the tradition at the expense of the musical and pastorals addressed to cultivated audiences at the expense of the more popular, and in consequence the tradition often appears essentially artificial and unreal. Yet it has proved vital and flexible, not only as a self-contained genre, but (as in German Romantic music) occasionally in its ability to colour a variety of music not necessarily considered pastoral either by its composers or by critics. Arcadia or its equivalent can be an eschatological religious symbol, where the wolf lies down with the kid or where Christ is the Good Shepherd (as in Bach's cantata no.104). Or it may be a symbol of Nature whose response to the sacred, or to art, is immediate and authentic (as in the Orpheus legend and in the popular pastoral tradition where animals speak on Christmas Eve). Or it may be a symbol of the ideal to which the artist vainly aspires. Moreover, within the pastoral setting, disruptive events may occur, and they are not always negligible or accountable in terms of *double entendre*: the idealized surroundings may only heighten the sense of loss (as in Schubert's *Die schöne Müllerin*).

Pastoral depends upon the projection of a philosophical opposition, generally one between art and nature or between country and city. In pastoral music this opposition is usually reinforced by the use of distinctive styles, with the 'natural' style falling appreciably short of the complexity of the conventional style of the day. Even when pastoral appears to deal purely with rural life, its implied audience is almost invariably a knowing one, for whom the confrontation with 'natural' values traditionally represents a moral challenge. Accordingly, pastoral is often associated with political and religious allegories; indeed, most Renaissance and Baroque courtly operas, and other musical entertainments seeking to celebrate the status of a ruler, drew on pastoral.

The form and character of pastoral works are often influenced by notions of rhetorical persuasiveness, and in consequence the history of pastoral is often understood as a parallel to the history of rhetoric. New attitudes to the rhetorical force of pastoral took root in the 18th century. These have been associated (Halperin, 1983) with the critical attitude crystallized in Schiller's essay *Über naive und sentimentalische Dichtung* (1800), in which the category of the idyll was first defined as a 'mode of experience' (*Empfindungsweise*) – that is, in terms of its psychological and expressive value rather than its subject matter (see §6 below). Indeed, pastoral is today often defined as a 'mode' rather than as genre or style (see Loughrey, 1984).

The philosophical oppositions in pastoral have been a preoccupation of the secondary literature, especially in English, since Empson (1935; see in particular Kermode, 5/1954), and encourage very general definitions of pastoral that often transcend limitations of subject matter, genre or medium. A distinction has also been drawn between 'hard' and 'soft' pastoral, following the definitions of hard and soft primitivism (Lovejoy and Boas, 1935), and reflecting the ease or lack of ease presupposed by the pastoral model; the parodies of pastoral so important in its history usually arise from the substitution of hard for soft pastoral or vice versa. The term 'pastoral oasis' has also been used (Poggioli, 1975) to describe a section featuring pastoral characteristics within a longer, non-pastoral work; such 'oases' can be shown to be subject to different constraints from those governing a work that is completely pastoral.

2. ANTIQUITY. Shepherds playing the syrinx – for the ancient Greeks, a typically pastoral instrument – appear in Homer's *Iliad* (xviii, ll.525–6). Pastoral music, as a subject of interest in its own right, may have first appeared with Stesichorus (6th century BCE): according to Aelian, Stesichorus was the first to compose 'pastoral songs' (*boukolika melē*; see *Varia historia*, x, 18), and he may have composed a lament for Daphnis (C.M. Bowra: *Greek Lyric Poetry*, Oxford, 2/1961, pp.84–5). Other origins were also claimed for pastoral song in antiquity, some, like that of Diodorus Siculus quoted below, no doubt mythical.

The pastoral song was first elevated to a considerable literary genre by THEOCRITUS (3rd century BCE) in his *Idylls*, which were probably intended for semi-dramatic public recitation. The pastoral *Idylls* include laments, strophic songs with refrains and singing matches, and the protagonists often play the syrinx as a literary device.

1. Scene from Torquato Tasso's 'Aminta', Act 2: woodcut (Venice, 1583)

These motifs perhaps originated in popular Sicilian shepherd music: Diodorus Siculus, for example, attributed the invention of pastoral song (*boukolikon poiēma kai melos*) to Daphnis, who played the syrinx (iv, chap.84). Other Alexandrians imitated Theocritus, and pastoral features are occasionally found in other musical genres. Greek terms for pastoral song include *boukoliasmos* (linked by Hesychius with 'rustic' music and dance), *boukolika* and so on. The closest to pastoral drama in antiquity was the satyr play; Euripides' *Cyclops*, for example, makes use of pastoral subject matter.

In ancient Rome, pastoral poetry was completely separated from music. Nevertheless, Virgil's *Eclogues* (or *Bucolics*), partly in imitation of Theocritus, and set in a fictitious Greek 'Arcadia', were performed as sung mime in the 1st century BCE (for the importance of musical concepts in the poetry of the *Eclogues*, *see* VIRGIL). It is no doubt primarily to Virgil that the persistence of Latin, and later vernacular, pastoral poetry is due.

Ancient dramatic theory (Aristotle and Horace, for example) takes no account of pastoral, however, and there are no contemporary accounts of the music used in satyr plays (see Brommer, 1944). This embarrassed some later 'neo-classical' pastoralists, who sought to conform to ancient precedent, for the use of traditional pastoral is itself virtually a statement of loyalty to classical ideals.

3. SECULAR VOCAL FORMS.

(i) Up to 1700. The themes of pastoral poetry were revived in Carolingian times, especially in the works of Alcuin (?735–804), and they occur also in the repertory of the troubadours and trouvères in the PASTOURELLE, where the earliest musical settings of pastoral poetry survive. The 13th-century *Jeu de Robin et Marion*, ascribed to Adam de la Halle, is an entire pastoral play set to music; from the 14th century ecclesiastical dramas featuring shepherds and lowly characters were accorded similar treatment.

Between the late 15th and mid-18th centuries, Virgil's *Eclogues* and other classical models, in Italian translation, inspired a series of notable original productions, the first of which was Jacopo Sannazaro's *Arcadia*, a set of 12 eclogues (written 1481, published 1502). Pastoral themes occur occasionally in chansons and frottolas around 1500 but became ubiquitous during the subsequent history of the Italian and English madrigal. As the polyphonic madrigal gave birth to the monodic madrigal in the early 17th century, and the latter was superseded in due course by the cantata, the pastoral language was carried forward, with frequent references to Filli, Lilla, Clori, Dorillo, Silvio, Damone and other stock figures and use of devices such as the echo (*see* ECHO, (2)). Cantatas with two or three pastoral characters were particularly common; as these works grew in proportions and acquired instrumental support they served as the chief point of departure for the later SERENATA.

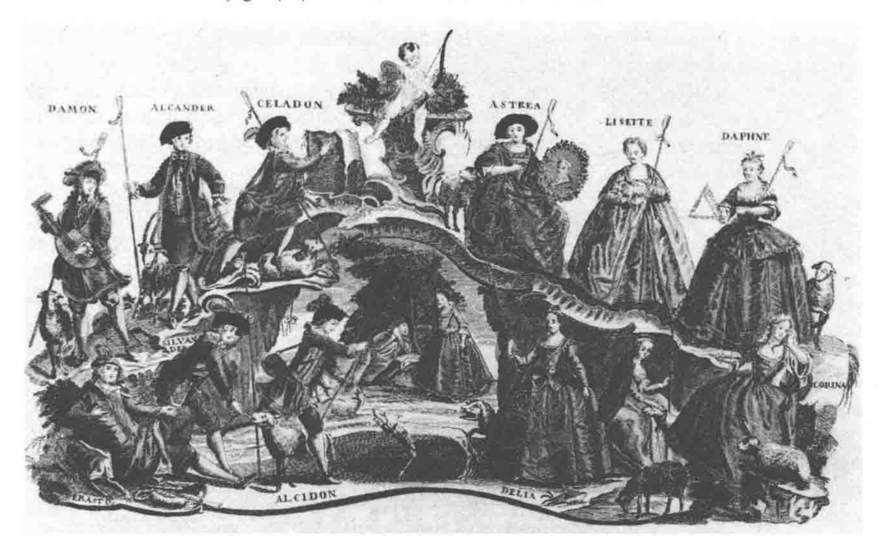
Even in the late 15th century, however, pastoral poems had been drawn out to large theatrical dimensions and associated with music. Angelo Poliziano's *Favola d'Orfeo* (1471) included various instrumental episodes and dances; and throughout the 16th century dramatic and musical pastorals became increasingly popular in Italian courts and academies, and strongly influenced early opera. They generally took the form of elegant courtly entertainments with a classical veneer, especially for weddings. The most influential pastoral dramas of the Renaissance, Torquato Tasso's *Aminta* (1581; fig.1) and G.B. Guarini's *Il pastor fido* (1589), were produced in courts such as Mantua and Ferrara, from which emerged also many other musical versions of pastoral: *intermedi* and similar celebratory occasional pieces (*see* INTERMEDIO); a flood of semi-dramatic polyphonic madrigals setting Guarini and other poets (*Il pastor fido* provided the texts of well over 500 madrigals); and the earliest operas, notably Monteverdi's *Orfeo* (1607; on Tasso, Guarini and opera, see Abert, 1970). Related to these is Cavalieri's sacred allegorical pastoral *Rappresentatione di Anima et di Corpo* (1600). Pastoral tales formed the basis of most of the early operas of the late 16th and early 17th centuries, the two most

popular being *Dafne* (libretto by Ottaviano Rinuccini, 1597), set by Peri, Gagliano and Schütz, among others, and *Euridice* (Rinuccini, 1600), based on the story of Orpheus, set by Peri and Caccini. The ORPHEUS legend has had lasting appeal for composers since Poliziano and Monteverdi, forming the subject of operas by Stefano Landi, Antonio Sartorio, Antonio Draghi and many others up to Birtwistle in the late 20th century.

Pastoral operas declined in popularity in Italy towards the middle of the 17th century, as interest shifted to historical themes in *opera seria* and to a *commedia dell'arte* spirit in *opera buffa*. Yet the use of pastoral 'oases', supplying a distinctive, affective colouring for the sake of variety, became part of the opera composers' stock in trade for centuries to come (see Bianconi, 1970, for an example). Late 17th-century Italian secular pastorals are usually small-scale, sometimes termed *favole boscareccie*, and often intended as occasional entertainments (e.g. *La Circe*, a two-act pastoral 'operetta' with text by G.F. Apolloni and music by Cesti and Stradella, performed in the garden of the Villa Aldobrandini, Frascati, on 10 May 1668 in honour of Cardinal Leopoldo de' Medici). At the end of the 17th century, however, literati patronized by Queen Christina of Sweden and other aristocrats in Rome, together with composers such as Alessandro Scarlatti, sought to reconstruct Italian literary culture according to the traditional Christian classical pattern of Petrarch. Pastoral operas as such once more took their place in the repertory of this circle (see Dent, 1951, for an example). (For 17th-century Italian sacred pastorals, *see* §4 below.)

Guarini's *Il pastor fido* remained the chief model for pastorals in the 17th century, and was translated into all the principal European languages and various dialects (Bergamasque, 1600; English, 1602; Spanish, 1604; French, 1622; Neapolitan, 1628; vernacular Greek, 1658; German, 1671 etc.). It eventually lent itself to parody, as in *Il pastor infido* (a 'scherzo drammatico', Padua, 1715).

Of the countries in which pastoral drama and prose were cultivated in the Renaissance, Spain was also influential; a well-known early example of Spanish dramatic pastoral is the *Diana* of Jorge de Montemayor (*c*1560), and the Spanish pastoral romance was burlesqued in Cervantes's *Don Quixote* (1605–15). The most characteristic pastoral genre of the 17th century in Spanish musical theatre was the ZARZUELA, with spoken dialogue and songs; the earliest such piece sung throughout was Lope de Vega's *La selva sin amor* (1627). This repertory persisted until the introduction of Italian opera to Spain in the early 18th century.



French pastoral dramas drawing on Italian and Spanish precedents, with music, choruses, dancing and machines, appeared first in the late 16th century. Although the pastoral drama retreated in France in the 17th century in the face of French classical tragedy, pastoral theory formulated at that time (notably by Rapin and Fontanelle) was influential in France, England and elsewhere (see Congleton, 1952). The first pastoral to be sung throughout in France was *Le triomphe de l'Amour* of Charles de Bey and Michel de La Guerre (first performed 1655); subsequent pastorals included the *Pastorale d'Issy* of Cambert and Perrin (1659), an important part of the establishment of opera in France, Lully's *Les fêtes de l'Amour et de Bacchus* (1672) and Destouches's *Issé* (1697). At the same time a perhaps paradoxical subgenre, the PASTORALE-HÉROÏQUE, is found.

Italian pastoral opera was performed as early as 1618 in the Steintheater at Hellbrunn (Salzburg) and also in other places in central Europe, including Bohemia and Poland, in the early 17th century. The earliest German operas were also chiefly indebted to the pastoral opera of the Italian courts (for example Schütz's *Dafne*, 1627, now lost, and S.T. Staden's sacred pastoral *Seelewig*, 1644). Pastorals remained popular in German-and Slavonic-speaking areas, largely because musical institutions were centred on local aristocratic courts; later examples include J.S. Kusser's *Erindo* (1694).

Italianate pastoral drama was established in England by Lyly, Shakespeare and Fletcher, among others, about 1600; this tradition, together with court masques, which reached their peak in the early 17th century, and pastoral entertainments such as Henry Lawes's setting of Milton's *Comus* (1634), represented the chief manifestations of dramatic pastoral in England before pastoral operas such as Blow's *Venus and Adonis* (*c*1683) and, perhaps, Purcell's *Dido and Aeneas* (1689; see Harris, 1980). However, the traditional pastoral opera was never strongly established in England during the Baroque or later.

(ii) After 1700. During the 18th century traditional pastoral opera retained its usefulness as a vehicle for graceful entertainments before noble patrons (fig.2), especially in France and Germany; examples range from Fux's *Orfeo ed Euridice* (1715) and Caldara's *Dafne* (1719) to Haydn's 'dramma pastorale giocoso' *La fedeltà premiata* (1780). The expression of the polarity of 'art' and 'nature' continued to develop, however, in accordance with the evolution of the conception of 'naturalness'. In the early 18th century German composers could allude to pastoral by means of simple, 'folklike' aria structures, often with vernacular texts, probably first found in pastorellas and other non-operatic genres. One such is 'Mein Kätchen ist ein Mädchen' from Keiser's *Croesus* (1711). Similar pastoral touches occur also, for example, in Bumbalka's Czech aria 'Já jsem plná veselosti' from the vernacular intermezzos to František Antonín Míča's opera *L'origine di Jaromeriz in Moravia* (1730; see Helfert, 1925). They are of great importance for the later creation of national styles in central European and German opera.

In Germany and elsewhere, this simple pastoral style contributed to the rise of the BALLAD OPERA, and (particularly in theatres subject to commercial pressures) to the pastoral parody, a wide variety of which was manifested in the 18th and 19th centuries; this at first often presupposed a fairly sophisticated understanding of the pastoral tradition. Among the most inventive parodies of the early 18th century are those of the 'Scriblerus Club' in England (Swift, Pope, Gay and others), whose aim was to ridicule 'all the false tastes in learning'. Gay's absurd versions of pastoral include the enormously successful *Beggar's Opera* (1728). Another, rather different product was his pastoral 'serenata' *Acis and Galatea*, set by Handel (1718); here the parodistic element is absent, and the work perhaps stands as a manifesto of contemporary English neo-classical pastoral. In Scotland Allan Ramsay's *The Gentle Shepherd* (first published in 1725 and often reprinted) was transformed on several occasions into a ballad opera, on the model of *The Beggar's Opera*, first in Edinburgh (1729) and later in London. A version with

2. *'La representacion de la opera pastoral': engraving (Bassano: Remondini, c1780) showing characters conventionally associated with pastoral opera*

music by Thomas Linley (i) was produced in 1781. Of later 18th-century parodies, this time of the traditional Italian Platonic love pastoral, Lorenzo da Ponte's libretto for Mozart's opera *Così fan tutte* (1790) particularly deserves mention, though Mozart's setting is scarcely pastoral in any distinctive sense.

The French equivalents to the simple melodies of German and British ballad operas were the vaudevilles (popular melodies to which new texts were added), from which so-called vaudeville comedies were constructed in the first half of the 18th century (*see* VAUDEVILLE). These became the basis of a tradition of soft pastoral, of which J.-J. Rousseau's *Le devin du village* (1752) is an early example: this comprises *opéras comiques* in rural settings, often with deliberately simplified music, whose plots reflect a mythical, idealized view of the peasantry along the lines of Rousseau's own thought. Analogous works were also produced in England (for example the pasticcio *Love in a Village*, 1762); the Singspiele composed by J.A. Hiller in Leipzig in the second half of the century (for example *Die Jagd*, 1770) also represented adaptations of French librettos of this type. All such works reflect a simplified musical style which was regarded as the 'natural' pastoral style of the period – a natural style comparable, perhaps, to the soft pastoral of Marie Antoinette's milkmaid disguise.

In the 19th century the eclectic approach of composers such as Meyerbeer ensured the survival of pastoral 'oases' among other means of creating local colour in French grand opera and elsewhere; among the most original of these should be counted the shepherd's 'alte Weise' in Act 3 of Wagner's *Tristan und Isolde* (1865). Otherwise, in the French repertory as in the Italian, pastoral traits are not very evident, even with subject matter that would in earlier times have virtually demanded their use.

The 'folk-based' pastoral style in 18th-century opera became the basis, however, for many new developments in national opera repertories. Since the common conception of 'nature' at this period comprised landscape, often a specifically national landscape, the SINGSPIEL pastoral idiom acquired powerful new ideological and psychological content. From the early 19th century it was able to symbolize national aspirations, both in German Romantic operas such as Weber's *Der Freischütz* (1821) and subsequently (through the rediscovery of equivalent idioms: see especially Nejedlý, 1929, iii) in works of the Czech nationalist school, of which the most prominent example is Smetana's *The Bartered Bride* (1866).

Pastoral parody, normally comic, also continued throughout the century, principally in French operettas and their offshoots elsewhere; to an unexpected extent these returned to Renaissance and Baroque pastorals for their basic subject matter or style (for example, Offenbach's *Orphée aux enfers*, 1858, and Sullivan's *Iolanthe*, 1882). In addition a new form of pastoral, the 'pastoral of childhood' (see Empson, 1935), may be discerned later in the century in the MÄRCHENOPER ('fairy-tale opera') such as Humperdinck's *Hänsel und Gretel* (1893).

The new soft Mediterranean pastoral idiom which had been developed from the late 19th century in French orchestral music and ballet, as in Debussy's *Prélude à l'après-midi d'un faune* (1892–4) and Ravel's *Daphnis et Chloé* (1912), in turn suggested hard equivalents in the early 20th century, as in Stravinsky's *The Rite of Spring* (1913) and *The Wedding* (1923), or later in the crude primitivism of Carl Orff (*Der Mond*, 1939; *Die Kluge*, 1943). Other deliberately 'simple' and by that token pastoral styles were developed from various styles of commercial popular music, often drawn from jazz, either directly or via the Broadway or Hollywood American musical (for example, in Milhaud's ballet *La création du monde*, 1923; Krenek's *Jonny spielt auf*, 1927; Gershwin's *Porgy and Bess*, 1935, among many others); these form an obvious hard counterpart to the soft pastoral both of the continuing folksong tradition, exemplified in Vaughan Williams's *Hugh the Drover* (1924), and of the musical-comedy tradition itself (e.g. Rodgers and Hammerstein's *Oklahoma!*, 1943). Another source of 'simple' music has been found in the styles of past ages, as in a number of the works of Stravinsky.

In some works composers did not merely cultivate 'simple' idioms but also rejected 19th-century notions of realism in opera, at the same time succeeding in returning to a more profound, moral version of pastoral. With Brecht and Weill, the use of a 'hard' cabaret idiom at odds with conventional expectations of opera is seen in *Die Dreigroschenoper* (1928) as in *Aufstieg und Fall der Stadt Mahagonny* (1930). Stravinsky's *The Rake's Progress* (1951) appears to represent a different, religious conception of pastoral, both Auden's libretto and Stravinsky's

music setting up a pastoral opposition between country and city against which the spiritual progress of the hero can be measured.

4. Christmas and instrumental pastorals in Italy. It is generally assumed that 17th- and 18th-century Italian composers created a vocabulary of instrumental motifs, associated with music for Christmas Eve, which eventually became the common property of all European music. This assumption is adopted here, although the history of pastoral music is as yet imperfectly understood: explicitly pastoral sacred songs are attested in Germany before they are in Italy (see §5 below), and it is not known whether the Spanish and Latin-American Villancico – another explicitly pastoral tradition – had any links with pastoral music elsewhere in Europe.

Reference to pastoral music for Christmas was made by Castaldo (*Vita del B. Gaetano Tiene*, Rome, 2/1616, p.85), and he is one of several who claimed that the custom had been instituted by St Cajetan (Gaetano) of Thiene after a vision he had had on Christmas Eve 1517.

The earliest surviving collection of Christmas pastorals in Italy is the *Pastorali concenti al presepe* of Francesco Fiamengo (1637), written for the domestic Christmas Eve celebrations of his patron at Messina. This collection contains prototypes of most later Italian pastorals, both vocal and instrumental, including a *Sonata pastorale* 'a 2 Violini, Viola, e Trombone ò Leuto', and it contains, intermittently, many of the pastoral motifs later popularized by Corelli. These motifs include lilting melodies in triple time (here 3/2, later usually 6/8 or 12/8) mainly in conjunct motion, prominent use of parallel 3rds, drone basses and symmetrical phrases (ex.1). Such features are prominent in the music-making of Italian shepherds (*pifferari*), who have been recorded playing the shawm (*piffero*) and bagpipe (*zampogna*) at Christmas in towns since the 19th century (ex.2); it has been reasonably suggested that this music may have been cultivated in the 17th century and that it was being imitated in these and later pastorals.

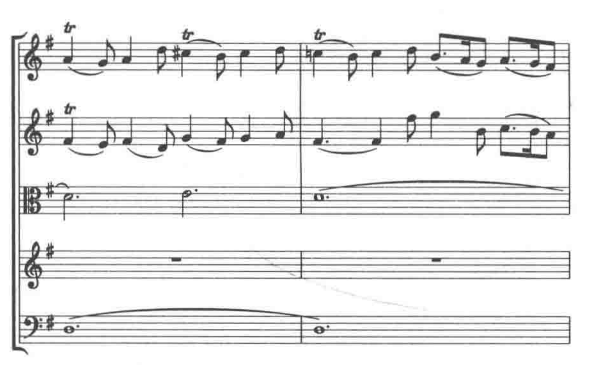
Picturesque motifs of the same sort occurred in art music as early as 1581, in a madrigal by Marenzio, and they occur also in Frescobaldi's *Capriccio fatto sopra la Pastorale*, published in his *Toccate d'intavolatura di cimbalo … libro primo* in the same year as Fiamengo's collection. Pastorals for organ similar to the latter were written in Italy and elsewhere from the 17th century by many composers, including Bernardo Pasquini, Zipoli and possibly Bach (BWV590: the authenticity of this work has been questioned). Harpsichord pieces were also occasionally pastoral, notably (outside Italy) in the musette (*see* Musette, (3)).

Fiamengo's vocal pieces include a lullaby to the Christ child; its text, like those of other 17th-century Italian and German pastorals, was designed to heighten the emotional pitch of devotion. This piece seems to be the earliest example of the Ninna, a category of Italian vocal Christmas pastoral in the form of a lullaby: *ninne* were written by Francesco Durante, Paisiello and Cimarosa, and the tradition survived until at least the 19th century.

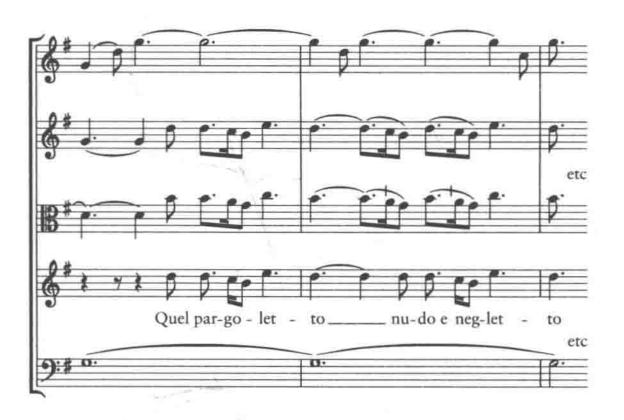
Fiamengo's pastorals and those of other 17th-century Italian composers sometimes contain echo effects: these continued as an occasional feature of the later pastoral outside Italy. Other pastoral devices, such as dialogues between allegorical characters, also occur in 17th-century Italian pastorals, and there are 17th-century Italian

Ex.1 F. Fiamengo: *Pastorali concenti al presepe* (1637)

Ex.2 Transcribed from a record (Baines, *Bagpipe*)



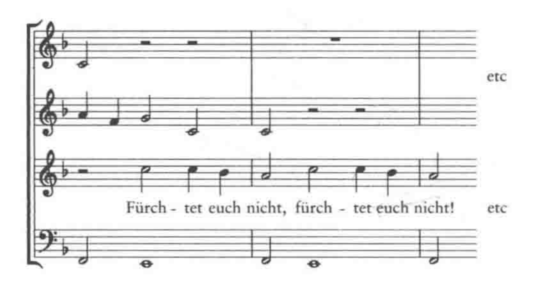
Christmas motets containing sections with drone basses and melodies harmonized in 3rds. Leichtentritt (*Geschichte der Motett*, Leipzig, 1908/*R*) described one such motet by Carissimi, dating from 1675.



In the early 18th century the conventions of pastoral music were applied to the oratorio and concerto grosso. At the Vatican, in the first and second decades of the century, vernacular cantatas were given at banquets on Christmas Eve after First Vespers of Christmas (A. Adami, *Osservazioni per ben regolare il coro dei cantori della cappella pontificia*, 1711; the relevant passage is reproduced in U. Kirkendale, *Antonio Caldara: sein Leben und seine venezianisch-römischen Oratorien*, Graz, 1966, p.71). Cantatas with allegorical characters and pastoral characteristics were written for this purpose by Alessandro and Domenico Scarlatti and by Caldara; Domenico Scarlatti composed similar cantatas in Lisbon in the 1720s for the king's name day, which fell in the Christmas season. Pastoral motifs were used also in liturgical music: Durante wrote a Gloria *in pastorale* as well as other pastoral music. Pastoral masses subsequently enjoyed a great vogue, particularly in Germany (see §5 below).

Christmas cantatas contained vocal and instrumental pastorals (for example, at the end of introductory instrumental sinfonias) in which the pastoral vocabulary of the previous century reached its classic expression (ex.3). These pastorals are in many respects almost indistinguishable from sicilianas. Their tempo is often *larghetto* (although opinion about the correct tempo of Italian pastorals – whether they should be fast or slow – was not unanimous even in the 18th century); the time signature is often 12/8 or 6/8; the melodies are harmonized predominantly in 3rds and 6ths; long drone basses, or at least pedal points, on tonic and dominant are frequent; a distinction between concertino and ripieno groups of players is often drawn. Such features are best known, however, from the pastoral concerti grossi which were published by Italian composers at this time, especially in Corelli's 'Christmas' Concerto, 'fatto per la notte di Natale', published posthumously in 1714 as op.6 no.8. In this work, the pastoral ('ad libitum', a phrase admitting of varying interpretations) is placed at the end of a substantial concerto grosso.

Ex.3 Caldara: Cantata a 3 voci con stromenti per la notte del Ssmo Natale (performed 1713), 'Quel pargoletto', *GB-Lam*



Numerous concertos and, later, symphonies incorporating pastoral motifs in this style, presumably in imitation of Corelli (though their chronology is not clear), were written by a number of his Italian contemporaries and successors, including Torelli (published 1709), Manfredini, Locatelli, Schiassi, Ferrandini, Giuseppe Valentini and Geminiani. They subsequently came to be written throughout Europe.

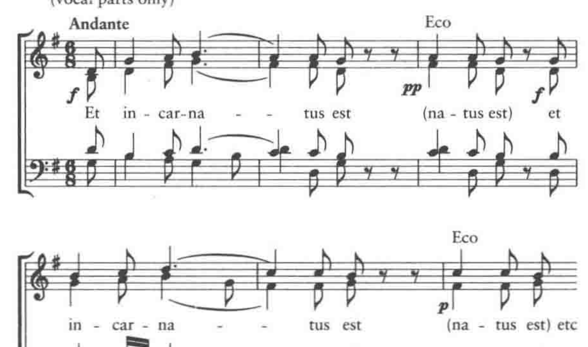
5. 17TH- AND 18TH-CENTURY CHRISTMAS AND INSTRUMENTAL PASTORALS OUTSIDE ITALY. In the 17th century Germany and the Slavonic countries possessed a distinctive tradition of Christmas pieces in which well-known Christmas songs were quoted, often in a deliberately simple and perhaps 'popular' style. A mass by Tomasz Szadek of 1578 quotes the well-known song *Dies est laetitiae* (WDMP, xxxiii, *c*1957); a mass, *Exultandi tempus est*, by Franz Sales is in a simple homophonic style, with unusually extensive use of triple time, and it has been described as the German prototype of the pastoral mass (P. Wagner, *Geschichte der Messe*, i, Leipzig, 1913/*R*, 219ff). This tradition persisted even after the introduction of explicitly pastoral imagery (see below): instrumental pieces quoting Christmas songs include the *Concerto secundo* of Adam Jarzębski, copied in 1627 (WDMP, li, 1964–5, pp.10ff) and various works by Pavel Vejvanovský dating from the 1660s and 1670s (e.g. MAB, xlviii, 1982–4 nos.16, 21). In Poland the well-known Christmas songs were themselves termed pastorals and were published in collections.

In a *Pastorale nel nascimento di Christo sopra il Joseph lieber Joseph mein* (before 1628), Daniel Bollius of Mainz may have attempted to reconcile the German and Italian traditions: an ornamented version of *Joseph lieber* (i.e. *Resonet in laudibus*) is quoted, and some Italianate motifs occur within it. *Joseph lieber* was associated with the German and Slavonic custom of 'rocking the Christ child'; Schütz in his *Historia der … Geburth Gottes* (1664) also alluded to this custom by adopting a 'rocking' motif in the bass (ex.4), resembling those used by Merula (*see*

Ex.4 Schütz: *Historia der . . . Geburth Gottes* (1664), *Intermedium I* ('Der Engel zu den Hirten auf dem Felde . . . Worunter bisweilen des Christkindleins Wiege mit eingeführet wird')

NINNA) and by Monteverdi, in Arnalta's lullaby 'Oblivion soave' in Act 2 of *L'incoronazione di Poppea* (1642).

A more lasting influence was exerted through Catholic hymnbooks in Germany and Bohemia (*see* CANTIONAL). In the 17th century the Jesuits seized on the hymnbook as a weapon of the Counter-Reformation; and the new texts, many written to old melodies, in these collections included pastoral texts which, like those of 17th-century Italian pastorals, were intended to evoke intense religious emotion. The Jesuit Friedrich Spee von Langenfeld included a number of pastoral texts in his popular *Trutznachtigall* (1628), which was widely imitated and translated into Czech (1665). Many Czech songs in earlier hymnbooks had been responsorially performed; this quasi-dramatic style, together with the pastoral convention and with idyllic Christmas songs such as those of Adam Michna, contributed to the formation of the PASTORELLA.



In France, Charpentier introduced popular noëls (melodies with strong pastoral connotations) into his Christmas Midnight Mass setting (*see* NOËL). Other French composers arranged noëls either for organ (Le Bègue, Dandrieu, Daquin, Michel Corrette and others; the tradition survived in the work of Guilmant) or for orchestra as 'symphonies' or 'suites de noëls' (Lalande, Gossec). From the second half of the 17th century the French court indulged a taste for the pseudo-pastoral also in secular music: the bellows-blown bagpipe (musette) and hurdy-gurdy were cultivated in instrumental and operatic music. The musette in turn gave its name to a movement in many 18th-century instrumental suites coupled with the gavotte and using drone basses.

A lasting tradition of instrumental pastorals began in Germany in the late 17th and early 18th centuries, when composers in and near Vienna wrote instrumental pastorals using the Italian pastoral vocabulary of Corelli and his contemporaries. *Sonate pastorali* (pastoral trio sonatas) were written by Fux, J.H. Schmelzer and others (manuscripts in *A-Wn* and *Wsp*). Besides the Italian conventions, the style of Austrian peasant music was imitated, presumably for comic rather than idyllic effect (e.g. in Heinrich Biber's *Bauernkirchfahrt*; later pieces in this tradition include the *Bauernhochzeit*, 1755, of Leopold Mozart, ed. in DTB, xxvii, Jg.ix, vol.ii, 1908). Animal and bird sounds were imitated; Sandberger showed that this was an old tradition in German music (an example from this period is Poglietti's *Capriccio über das Henner- und Hannergeschrei* for keyboard).

From the late 17th century, in Poland, Moravia, Austria and elsewhere, the pastoral tradition developed in the music of provincial church choirs into the pastorella, the pastoral mass and settings of other liturgical texts (e.g. the *Pange lingua* and *Alma Redemptoris mater*) in pastoral style. These categories enjoyed an enormous vogue in the second half of the 18th century. Tittel (1935) enumerated many characteristics of the pastoral mass, which besides italianate features included fanfare motifs (reminiscent of the alphorn or *tuba pastoralis*), occasional sections in unison, omission of sections of text not in accordance with the Christmas mood and the predominance of even-bar phrases. An independent echo chorus of soloists is occasionally found, as in the punning echo effect from the most celebrated of Abbé Vogler's pastoral masses (1775; ex.5). Though Tittel termed this the 'Viennese' pastoral mass tradition, it was diffused throughout central Europe. Pastoral masses and other pastoral music remained traditional in many places in Austria even after the rise of Cecilianism; modern Austrian composers have occasionally written pastoral masses or mass sections.

In the early 18th century a pastoral style of instrumentation was developed in both sacred and secular pastorals, especially in German areas. Wind instruments symbolized the fluting or playing of reed pipes by classical shepherds: for this purpose such instruments as the chalumeau, oboe d'amore and oboe da caccia were used (as for example in the sinfonia of the second section of Bach's *Christmas Oratorio*, whose pastoral conventions otherwise resemble those of Corelli). Flutes and oboes, often in pairs, eventually became more usual; but the 'Pifa' ('pastoral symphony') of Handel's *Messiah* is still a simple string setting. The Italian pastoral conventions of the early 18th century came to be adopted in the works of Bach, Handel and their contemporaries wherever the text referred to shepherds, in both sacred and secular music – for example, in pastoral pieces such as Handel's *Acis and Galatea*, in Christmas works and in sacred works where Christ was referred to as the Good Shepherd (e.g. Bach's cantata *Du Hirte Israel, höre*, BWV104).

Ex.5 Abbé Vogler: Pastoral Mass (1775), 'Et incarnatus est' (vocal parts only)

At an early date the pastoral tradition entered that of the symphony and solo concerto in Austria, Germany and Bohemia, sometimes in works written for Christmas. These works, by composers such as Leopold Hofmann, Linek and G.J. Werner, were virtually instrumental pastorellas; they contain pedal points and alphorn-like fanfares, as do the pastoral symphonies and concertos of Mannheim composers (Cannabich, Toeschi and others). Other such works stand more directly in the line of descent from Corelli.

Some works of this period include picturesque nature motifs, such as those in Vivaldi's 'Four Seasons' and bird-calls (Boccherini, G.J. Werner), and programmatic representations of storms and the thanksgiving of Nature at their abatement (Steibelt; J.H. Knecht, *Le portrait musical de la nature*, *c*1785; organ improvisations representing storms had been performed by Abbé Vogler and Knecht). A wide variety of picturesque motifs of this type occur in Haydn's *Creation* (1796–8) and *Seasons* (1798–1801). (For pastoral Christmas pieces in the Iberian peninsula and Latin America, *see* VILLANCICO).

6. 19TH AND 20TH CENTURIES. Beethoven adopted many of the conventions of 18th-century pastoral music in his Pastoral Symphony op.68 (1808), but he carefully described the work as 'more the expression of feeling than [realistic] painting', thereby revealing a preoccupation with the subjective psychological effects of the pastoral scene that was more thorough-going than that of his predecessors. The pastoral qualities of the work are due in part to an avoidance of the dynamic drive often associated with the tonal design of Beethoven's forms, in part to an unusual emphasis within the formal scheme on the subdominant and to the adoption of a generally slow harmonic rhythm. The first movement, moreover, is constructed almost entirely from major triads.

The picturesque and idyllic motifs of Nature already adopted in some 18th-century music (see above) and unconnected with the Christmas pastoral tradition, such as motifs suggesting running water or hunting scenes in the forest, came to permeate much of the music of composers such as Schubert and Weber (e.g. in the piano accompaniment to Schubert's *Die Forelle*, or Weber's *Freischütz* overture). They are indicative of an idealization of Nature, but may be given an ironic twist (as in Schubert's *Schäfers Klagelied*).

Some 19th-century composers increasingly preferred to use the forbidding and irrational aspects of Nature as models, or to attempt to re-create the pastoral music of an archaic period when, some believed, it had possessed a power later lost under the constraints of civilization. No doubt it is in this light that one should consider the pastoral convention, perhaps invented by Berlioz, of a melody comprising irregular expressive arabesques on a solo instrument, with all accompaniment totally jettisoned. There is an example (ex.6) in the *ranz des vaches*,

Ex.6 Berlioz: *Symphonie fantastique*, 'Scene aux champs'

or pastoral alphorn melody, for oboe and english horn in the 'Scène aux champs' from Berlioz's *Symphonie fantastique* (1830, subsequently revised; see N. Temperley, ed., *New Edition of the Complete Works*, xvi, Kassel, 1972, esp. pp.x, 191). Expressive, unaccompanied, rhythmically free passages contrasted with their immediate contexts had occurred earlier (e.g. in the first movement of Beethoven's Piano Sonata op.31 no.2, 1802), but Berlioz invested his with new significance: he intended this example specifically to evoke a mood of unsatisfied passion in a romantic northern pastoral setting. (The effect may have been suggested to Berlioz by a passage in Chateaubriand's *René* of 1805.)

Similar symbolic, imaginative re-creations of archaic pastoral melodies occur in the works of many later composers. Examples may be seen in the sailor's song in Act 1, and the shepherd's piping in Act 3, of Wagner's *Tristan und Isolde* (1857–9) and in the passages for natural E♭ trumpet and wordless voice in Vaughan Williams's *Pastoral Symphony* (1922). Debussy used similar melodies (e.g. ex.7, from *L'après-midi d'un faune*,

Ex.7 Debussy: *Prélude à l'après-midi d'un faune*

1891–4) to suggest the pastoral music of Greek antiquity – in other words, to create a specifically Mediterranean pagan pastoral convention. The works of a number of early 20th-century composers, notably in France, reflect a vogue for ancient Greek pastoral imagery, sometimes coupled with the influence of Debussy: these include Roussel's *Le poème de la forêt* (1906) and other works, Ravel's *Daphnis et Chloé* (1906–11), Carl Orff's *Tanzende Faune* (1914), and Dukas' *La plainte au loin du faune* (1920).

Throughout the 19th century and well into the 20th, composers continued to cultivate the older italianate pastoral inherited ultimately from Corelli (e.g. 'How lovely are the messengers' from Mendelssohn's *St Paul*, 1836), whose conventions came to be thought particularly well suited to performance during church services. Non-italianate characteristics were occasionally added to this type of pastoral, as in Dohnányi's *Pastoral* for piano, subtitled 'Hungarian Christmas Song' (1921). Berlioz chose this type of pastoral for the 'Shepherds' Farewell' in *L'enfance du Christ* (*c*1850–54) to create an 'archaic' effect; a similar neo-classical intention lies behind the italianate pastoral conventions of the second *Interludium* from Hindemith's *Ludus tonalis* for piano (1943).

Pastorale-héroïque (Fr.). A type of BALLET-HÉROÏQUE whose plot often turns on the loves of nobles or gods (or goddesses), usually in disguise, for shepherdesses (or shepherds) in Arcadian settings. The tone is sentimental, rather than comic. It could be in several acts (e.g. Rameau's *Acante et Céphise*, 1751) or a single entrée or act in a larger work (e.g. Floquet's 'La cour d'amour' in *L'union de l'Amour et des arts*, 1773).

For bibliography *see* OPÉRA-BALLET.

□

Pastorella [pastorela, pastoritia] (It. or Lat., diminutive of *pastorale*). A church composition for Christmas, found in central Europe from the second half of the 17th century to the 20th century, in Roman Catholic areas. In one or more movements, it is usually for choir or soloists and small orchestra (less often purely instrumental), and usually represents events from a sequence based partly on *Luke* ii: the announcement of midnight, appearance of angels, awakening and dialogue of shepherds and their offering of gifts (or singing and playing, sometimes of a lullaby) to the Christ child. Some deal with the Magi; some were probably designed as edifying substitutes for an ancient ceremony of rocking the Christ child (*Kindelwiegen*, *kolébání*).

A 'pastorella', mentioned in 1669 in a letter to Karl Liechtenstein-Castelcorn, Prince Bishop of Olmütz, may be an offertory, *Venito, ocyus venito*, by J.H. Schmelzer, which formed the basis for a number of later pastorellas, such as a pastoral trio sonata attributed to Schmelzer in the Rost Codex (*F-Pn* Rés.Vm[7] 673), and an anonymous Łowicz pastorella of 1699, *Parvule pupule*. There are early pastorellas by Gottfried Finger (attested in an English source), J.D. Zelenka (like the Schmelzer offertory, attested at Dresden), and Fux. Other early sources include Christmas plays with songs and arias, such as the anonymous (Jesuit?) Rakovník *Pastýřská hra o narození Páně* (after 1684) and other plays of religious orders; the *Harmonia caelestis*, a collection of church songs published by Pál Esterházy at Vienna in 1711 but compiled some 10 years earlier (pastorellas continued to be written by Esterházy court composers up to and including Haydn); and quasi-dramatic songs in CANTIONAL such as the *Slavíček rajský* of J.J. Božan (1719).

From the early 18th century, pastorellas with Latin and vernacular texts spread rapidly within Austria (including the Czech lands), Bavaria, Poland and elsewhere in Central Europe, mainly outside the cities. Baroque pastorellas are 'pastoral' by virtue of more or less emphatic allusions to a so-called *stylus rusticanus*, no doubt based on aspects of contemporary folk music; they are often comic in tone, and were often designed to appear to an unsophisticated audience. Some of the allusions are those used by Corelli or Bach (drone basses, melodies harmonized in 3rds and 6ths), but most are indigenous: they include Scotch snaps, fanfare motifs with duple time signatures (alluding to the *tuba pastoralis* or alphorn), melodies or harmonies in exotic scales, and sections entirely in unison for chorus and instruments. Many pastorellas feature folk (or toy) instruments such as the pastoral trumpet, hurdy-gurdy, bagpipes and cuckoo, and many pastorella texts are in dialect.

A great many pastorellas survive in manuscript from the second-half of the 18th century and the 19th century, a period regarded by Berkovec (1987) as the apogee of the genre. Many of these draw on the 'tuneful' style of church music used by composers such as F.X. Brixi. Some are symphonies – a pastoral symphony in this tradition was in effect an instrumental pastorella; some are contrafacta of well-known opera arias (e.g. by Mozart). From the mid-18th century, the Latin Mass Ordinary text was also set in pastoral style in Czech-speaking areas, then Czech vernacular pastorellas were interpolated, and after 1780 the Czech pastoral mass often consisted of a series of vernacular pastorellas entirely replacing the Ordinary, as in the best-known of the Czech Christmas Masses by J.J. Ryba. But the comic tone of Baroque pastorellas became increasingly unacceptable in the second half of the 18th century, and survived mainly only in rural productions; in places aspiring to good taste, the pastorella was often transformed in various ways (for example, by being sentimentalized), and the allusions to the *stylus rusticanus* were toned down.

The tradition remained popular in Bohemia and Moravia throughout the 19th and 20th centuries. Smetana quoted a well-known pastorella melody in *Hubička*, no doubt for its associations with the folk heritage; Czech historians have emphasized the role of the pastorella during the 17th and 18th centuries in preserving a sense of Czech nationality, through language and music, that nourished the Czech National Revival in the 19th century.

As liturgical music, pastorellas may usually have been intended for the offertory (or gradual) of the Christmas Midnight Mass; but practice varied widely, and it can only be said that pastorellas were almost always performed in church, and between Christmas Eve and the Purification.

GEOFFREY CHEW

Pastorita. *See* PASTOURELLE.

Pastorius, Jaco [John Francis] (*b* Norristown, PA, 1 Dec 1951; *d* Fort Lauderdale, FL, 12 Sept 1987). American bass guitarist. He grew up in Fort Lauderdale and as a teenager accompanied rhythm and blues and pop artists, including the Temptations and the Supremes. In 1975 he worked with Pat Metheny in Boston, and the following year he attracted widespread notice with his performances on the album *Heavy Weather* (Col.) by Weather Report, with whom he had a long association. From that time he was much in demand as a bass player and producer in a wide variety of settings, which included performances on a number of albums by Joni Mitchell in the late 1970s. From 1980 to about 1983 he toured with his own group, Word of Mouth. He died as a result of injuries sustained during a brawl at the Midnight Club in Fort Lauderdale.

Unlike many jazz and rock bass guitarists, Pastorius used a fretless instrument, and played with immaculate intonation and melodic clarity, as heard on *Donna Lee* (from his album *Jaco Pastorius*, *c*1975, Epic). Although sometimes faulted for his flamboyant stage personality and eclecticism, he won the admiration of jazz and rock bass players for his fleet technique, incorporating among other features an unprecedented facility for producing artificial harmonics on the instrument (*Portrait of Tracy*, from *Jaco Pastorius*), and the imaginative fusion of styles in his solos. In his own groups, he often preferred to omit chordal instruments from the line-up, thereby leaving space for his own chords and those he implied in his imaginative lines (for example the title track from *Invitation*, 1982, WB). Stanley Clarke should be credited with pioneering a new melodic role for the electric bass guitar in jazz fusion, but Pastorius soon proved to be the greater player, pursuing creative new paths as Clarke

settled into a lightweight fusion style. Pastorius's performances set the standard for this style of bass playing.

J. BRADFORD ROBINSON/BARRY KERNFELD

Pastourelle [pastorelle, pastorella, pastorita]. A French medieval lyric characterized by its pastoral theme. Unlike the bergerette, its form is variable, but it generally includes a refrain and follows the pattern of a dialogue between a gallant knight and a shepherdess (*pastourelle*) whose favours he seeks. Its origins may be popular, but classical precursors are found in Ovid, Theocritus and Virgil. Latin goliard verses (10th–12th centuries) provided prototypes for the many examples found in the courtly repertory of the troubadours and trouvères. Pastourelles were no doubt played and danced by the jongleurs; the oldest ones surviving with monophonic music are probably those of Marcabru (*c*1100–50), but the heyday of the musically notated form was not reached until the late 13th century. Echoed in the jeu-parti and notably in Adam de la Halle's *Jeu de Robin et de Marion*, the genre survived for many centuries in both folksong and art song; there are examples with the common opening lines 'L'autre jour par un matin' and 'L'autrier me chevalchoie' in modern folksong as well as in numerous 15th- and 16th-century polyphonic settings. The tradition was essentially French and rural, but it was affected by Arcadian manners and consequently flourished in post-Renaissance Italy as the PASTORELLA (*see also* PASTORAL); the Italian type in turn influenced the cultivation of the French pastourelle in 18th-century society.

FRANK DOBBINS

Pastrana, Pedro de (*b* Toledo, *c*1490; *d* after 1558). Spanish composer. He was appointed chaplain to Charles V in Valladolid on 12 July 1527. On 13 August 1529 Clement VII made him abbot of the Cistercian abbey of S Bernardo, near Valencia, and he took up the appointment on 3 December without resigning as chaplain to the emperor. He visited Rome in 1533 and at about that time acquired a third appointment, as chaplain and *maestro de capilla* to the Duke and Duchess of Calabria, Ferdinand of Aragon and Germaine de Foix. José de Sigüenza later reported that the Duke had 'assembled the best *capilla* of musicians in Spain, of singers and of players of all kinds of instruments': between 1546 and 1550 (the year the duke died) it employed about 20 singers, two organists, three sackbut players, three or four shawm players, a harpist and two music copyists (Pompeo de Russi and the composer Bartolomé Cárceres).

In 1544, in view of the state into which the monastery of S Bernardo had fallen, the duke contrived to have it transferred to the Hieronymites and converted into a family pantheon. Pastrana was relieved of his abbacy, and although he continued to enjoy the economic benefits he had derived from it, his relations with the duke were affected; in 1546 his place in the *capilla* was taken by Juan Cepa, and he probably returned to the imperial court to profit from his remaining post as chaplain.

A few months later – in about the middle of 1547 – he was appointed *maestro de capilla* to Don Philip, the future Philip II, on the death of Juan García de Basurto. From the time he entered the service of the prince until his death he must have been permanently in residence in the Spanish court. Due to his age he was not one of the singers who accompanied Philip during his stay in Flanders (1548–50), nor was he part of Philip's retinue when he went to Winchester for his second marriage, to Mary Tudor, in 1554. In 1558 he added to his considerable income a benefice of 400 ducats a year from the diocese of Córdoba. On 9 February 1559 he gave his approval for the publication of Martín de Tapia's *Vergel de música*; he probably died shortly after.

According to an inventory of 1597, made a few months before Philip II's death, the Spanish royal chapel library owned at least two books containing works by Pastrana, one of 'psalms . . . beginning with *Dixe Dominus*' and the other 'beginning with a Magnificat . . . and some motets': neither appears to have survived. Two other inventories, of works belonging to Tarazona Cathedral, indicate that in the last third of the 16th century it possessed seven books containing works by Pastrana: only two of these survive. An untitled piece, possibly for keyboard, once formed part of the repertory of S Miguel Acatán, Guatemala. Pastrana was clearly a composer of strong personality, and wrote the earliest known villancico with two alternating choruses, *Señores, el qu'es nascido* (the next villancico with this feature is *Soleta y verge* (*E-Bc* 1166), by Bartolomé Cárceres and Juan Cepa).

WORKS

Mass, ?5vv, *E-TZ* 17, inc.

Magnificat, 5vv, *Bc* 1967; 3 Magnificat, 4vv, *TZ* 5; Magnificat, 4vv, *V* 5

Motets and hymns: Benedicamus Domino, 4vv, *TZ* 5; Domine memento, 4vv, *Tc* 21; In te Domine speravi, 4vv, *TZ* 5; Miserere mei, Deus, 4vv, *TZ* 5; Pater dimitte illis, 4vv, *TZ* 5; Secundum multitudinem dolorum, 6vv, *TZ* 17, inc.; Sicut cervus, 3vv, *TZ* 5; Tibi soli peccavi, 5vv, *TZ* 5; Beata nobis gaudia, 4vv, *Bc* 454 [doubtful]; Exultet celum laudibus, 4vv, *Bc* 454 [doubtful]

Psalms: Beati omnes, 4vv, *Zcc* C-3-14, anon.; Credidi, 4vv, *Zcc* C-3-14, anon.; De profundis, 4vv, *Zcc* C-3-14, anon.; Dixit Dominus, 4vv, *Zcc* C-3-14; Domine probasti me, *Zcc* C-3-14, anon.; In convertendo, 4vv, *Zcc* C-3-14, anon.; Memento Domine David, 4vv, *Zcc* C-3-14, anon.

Sacred villancicos: Qué lindo es el zagal, donzellas, 4vv, *TZ* 17, inc.; Señores, el qu'es nascido, 5vv, *TZ* 17 (ed. Gómez), 1556[30], 3vv, anon. (ed. Mitjana and Querol Rosso)

Secular villancicos: Ay dime señora, di!, 4vv, *Bc* 454; Llenos de lágrimas tristes, 3vv, *Bc* 454 (and in original index of *Mn* 2-1-3), also in *P-Em* 11973, ed. Joaquim
8 Fauxbourdons, 4vv, *E-Bc* 454 [doubtful]
Lost works: Te Deum; Asperges me; Ave maris stella; Beata quoque agmina; Benedictus dominus; Christus resurgens; Circundederunt; Cor mundum crea in me; Deus, deus meus; Dulcis amica mea; Ecce nos reliquimus; Et exultavit; Gaude quia deo plena; Hostis Herodes; Ibant magi; Ignis vibrante; In passione; Jure te laudamus; Maria, mater gratie; Montes Gelboe; Nobis natus, nobis datus; Non ex virili; Nuncius celso; O crux, ave spes unica; Pange lingua; Quare tristis est; Regina celi; Scandans tribunal dextere; Tota pulchra inmaculata; Ubi patres precellentes; Vexilla regis; Vidi aquam; Vidi dulcedo; Vita et audivi; Vivo ego; 5 'Salmos de Nuestra Señora'; 3 'Gozos de Nuestra Señora'

MARICARMEN GÓMEZ

Pászthory, Casimir von (*b* Budapest, 1 April 1886; *d* Wermelskirchen, 18 Feb 1966). Austrian composer of Hungarian origin. His mother, Gisela von Pászthory, was a pupil of Liszt, and his stepfather was August Göllerich, a biographer of Bruckner. After initial training with his mother he studied in Vienna, Paris and Brussels. His first public success came with the melodrama *Die Weise von Liebe und Tod des Cornets Christoph Rilke* (1914), which received particular praise from Rilke himself. He taught the cello at the Vienna Volkskonservatorium (1927–34) and then lived as a freelance composer. Grounded in the late Romanticism of Strauss or Pfitzner, Pászthory's works are in an original harmonic style; his chamber music, while being strongly expressive, retains a strictness and classicism in form and the spirit of counterpoint. His operas are characterized by an unusual vocality and keen sense of dramaturgy, such as in *Die Prinzessin und der Schweinehirt*.

WORKS
(*selective list*)

Operas: Die drei gerechten Kammacher (after G. Keller), Graz, 1932; Die Prinzessin und der Schweinehirt (after H.C. Andersen), Weimar, 1937; Tilman Riemenschneider (after L.G. Bachmann), Basle, 1959
Ballets: Erlenhügel, Karlsruhe, 1936; Isbrand und Isigildis, Weimar, 1938; Arvalány, Dresden, 1939; Tristan-Legende
Melodramas: Die Weise von Liebe und Tod des Cornets Christoph Rilke (after R.M. Rilke), 1914; Die wilden Schwäne (after Andersen), 1937
Orch: Thijl Uilenspiegel, 1933
Vocal: Das Jahr (J. Weinheber), 1v, orch; Sabine (P. Verlaine), 1v, orch; song cycles (H. Hesse, Rilke, T.W. Storm, Bierbaum), other songs and folksong arrs., choral works

JOSEPH CLARK/MATTHIAS SCHMIDT

Patachich, Iván (*b* Budapest, 3 June 1922; *d* Budapest, 9 May 1993). Hungarian composer. He studied composition under Siklós, Viski and Farkas at the Liszt Academy of Music (1941–7) and was a conducting pupil of Ferencsik. Répétiteur at the Hungarian State Opera (1943–7), he was afterwards conductor at the Comic Opera and Madách Theatres, and in 1953 he was appointed director of music to the Budapest Film Studios. His Sextet for harp and wind took first prize at the Moscow World Youth Festival (1957). After a period influenced by Bartók and Kodály he began to adopt new techniques, with which he came into contact at Darmstadt summer courses. Patachich pioneered electronic music in Hungary: he established the studio EXASTUD (Experimentum auditorii studii) in Budapest in 1971, and his electronic score for the film *Immortality* won first prize at the San Francisco Film Festival. His *Metamorphosi* for marimba and tape was awarded the electro-acoustic prize at Bourges (1978) and *Ludi spaziali* the Grand Prix at CIME (Confédération Internationale de Musique Electronique, France, 1984). He experimented with electro-acoustic and computer music in Stuttgart and Utrecht, and realized works at Columbia University, New York (1969), Stockholm (1974), Bourges (1980) and Paris (1988).

MELINDA BERLÁSZ

Pataky, Kálmán [Koloman von] (*b* Alsólendva, 14 Nov 1896; *d* Los Angeles, 3 March 1964). Hungarian tenor. After little serious study, he made his début at the Budapest Opera in 1922, as the Duke of Mantua, which led to an invitation to sing under Schalk at the Vienna Staatsoper in 1926. Until the Nazi invasion of Austria, Vienna remained his base, although he often sang in Budapest and abroad (usually as Koloman von Pataky), notably at the Paris Opéra (1928), Glyndebourne (1936), La Scala (1940), Stockholm and, frequently, at the Colón, Buenos Aires. He sang Florestan under Toscanini at Salzburg in 1936. He spent the war in Hungary, returning to the Colón for a few performances in 1946. Pataky was not an accomplished actor, but his classically beautiful voice and thorough understanding of style (developed largely during his years in Vienna), his wide cultural background and gift for musical characterization made him one of the leading Mozart tenors; he was an outstanding Don Ottavio, Belmonte and Tamino. Other roles included Puccini's Rodolfo and Des Grieux, and (though he was perhaps less well suited to these heroic roles) Radames, Cavaradossi and Turiddu. Pataky's sweet tone and refined technique are well displayed in his recording of Don Ottavio in Busch's Glyndebourne *Don Giovanni*.

PÉTER P. VÁRNAI/ALAN BLYTH

Patanè, Giuseppe (*b* Naples, 1 Jan 1932; *d* Munich, 30 May 1989). Italian conductor. The son of the conductor Franco Patanè (1908–68), he studied the piano and composition at the Naples Conservatory and made his conducting début at the Teatro Mercadante there with *La traviata* in 1951. He was engaged as répétiteur and assistant conductor at the Teatro S Carlo, Naples, until 1956, and began to make appearances in other cities. During the 1960s he worked mainly in Austria and Germany, at the Linz Landestheater as principal conductor (1961–2), and as resident conductor at the Deutsche Oper, Berlin (1962–8). Patanè first appeared at La Scala in 1969, conducting *Rigoletto*, and later worked at Naples, Rome, Munich, Dresden, San Francisco and Covent Garden, where he made his début with *La forza del destino* in 1973. Patanè appeared at the Metropolitan Opera in 1978, and from 1982 to 1984 was co-principal conductor of the American SO in New York. He became musical director of the Arena di Verona (1983), and after a period at the Nationaltheater in Mannheim (1987), became chief conductor of the Munich RO in 1988. Patanè was appointed musical director at the Rome Opera in 1989, but died before he could take up the post. His opera recordings include *Madama Butterfly*, *Il trittico*, *Maria Stuarda*, *La Cenerentola* and Bellini's *I Capuleti ed i Montecchi*. Patanè was a dynamic conductor in both the operatic and symphonic repertory, with much of Toscanini's rhythmic ebullience and tensile line; some of his Beethoven performances in particular stood worthily in the Toscanini tradition.

BERNARD JACOBSON

Patart [Batardi, Partart, Patard, Patarto, Pätard, Pedardo, Pedart], **Antonio** (*fl* 1582–1605). Italian composer and instrumentalist, active in Austria, Bavaria and Poland. He was a trumpet and cornett player to the Archduke Karl II at Graz from 1 September 1582 to 1590; he then moved to Munich, where, until 1595, he served in the court chapel, which until 1594 was directed by Lassus. His last known appointment was as a wind player in the Italian chapel at the Warsaw court of Sigismund III. He is first mentioned in court records there in 1598, and he remained at Warsaw until at least 1605, when, on the occasion of the marriage of Sigismund to the Austrian archduchess Konstanza, he conducted his own compositions. His only surviving works are two six-voice motets (RISM 1604^2 and 1621^2) and an incomplete mass for eight voices (in *PL-GD*). Like Alfonso Pagani, who worked at the Warsaw court around 1604, Patart created a direct link with the Munich tradition of Lassus, who remained popular in Poland until about 1630. At least seven other members of the Patart family were wind players at the courts of Graz, Munich and Warsaw in the late 16th century and early 17th: Antonio's father, Giovanni (*d* Graz, 1603), and his brothers Bernardo, Carlo, Giovanni Giacomo and Rinaldi; Simon (*c*1574), a cornett player whose relationship to Antonio is not known; and Sigismundus (*fl* 1626–36), who is mentioned in the records of the court and of the collegiate church of St John the Baptist in Warsaw and was probably Antonio's son. In Federhofer's opinion, the Patart family exerted a marked Italian influence on the wind music performed at German and Polish courts in the early 17th century.

Pate, John (*d* Hampstead [now in London], bur. 14 Jan 1704). English tenor-countertenor. Evelyn described him as 'reputed the most excellent singer, ever England had' (30 May 1698). Pate's first recorded appearance was in Purcell's *The Fairy Queen* (1692), in which he sang Mopsa 'in woman's habit' in the duet 'Now the maids and the men'. Purcell's autograph score *GB-Ob* Mus. Sch.C.26 names him as the singer of ''Tis Nature's voice' in his 1692 St Cecilia ode, although the *Gentleman's Journal* stated that it was sung 'with incredible Graces by Mr. Purcell himself'. In 1695 Pate was involved in a Jacobite riot and subsequently travelled to Italy. He returned in 1698 with Italian songs in his repertory and had two successful stage and concert seasons. In September 1700 he was reported to be imprisoned in the Bastille and condemned to death on the wheel for 'killing a man'. However, he sang in Richard Steele's *The Funeral* in December 1701 and performed songs in Italian and English at Drury Lane in February 1703.

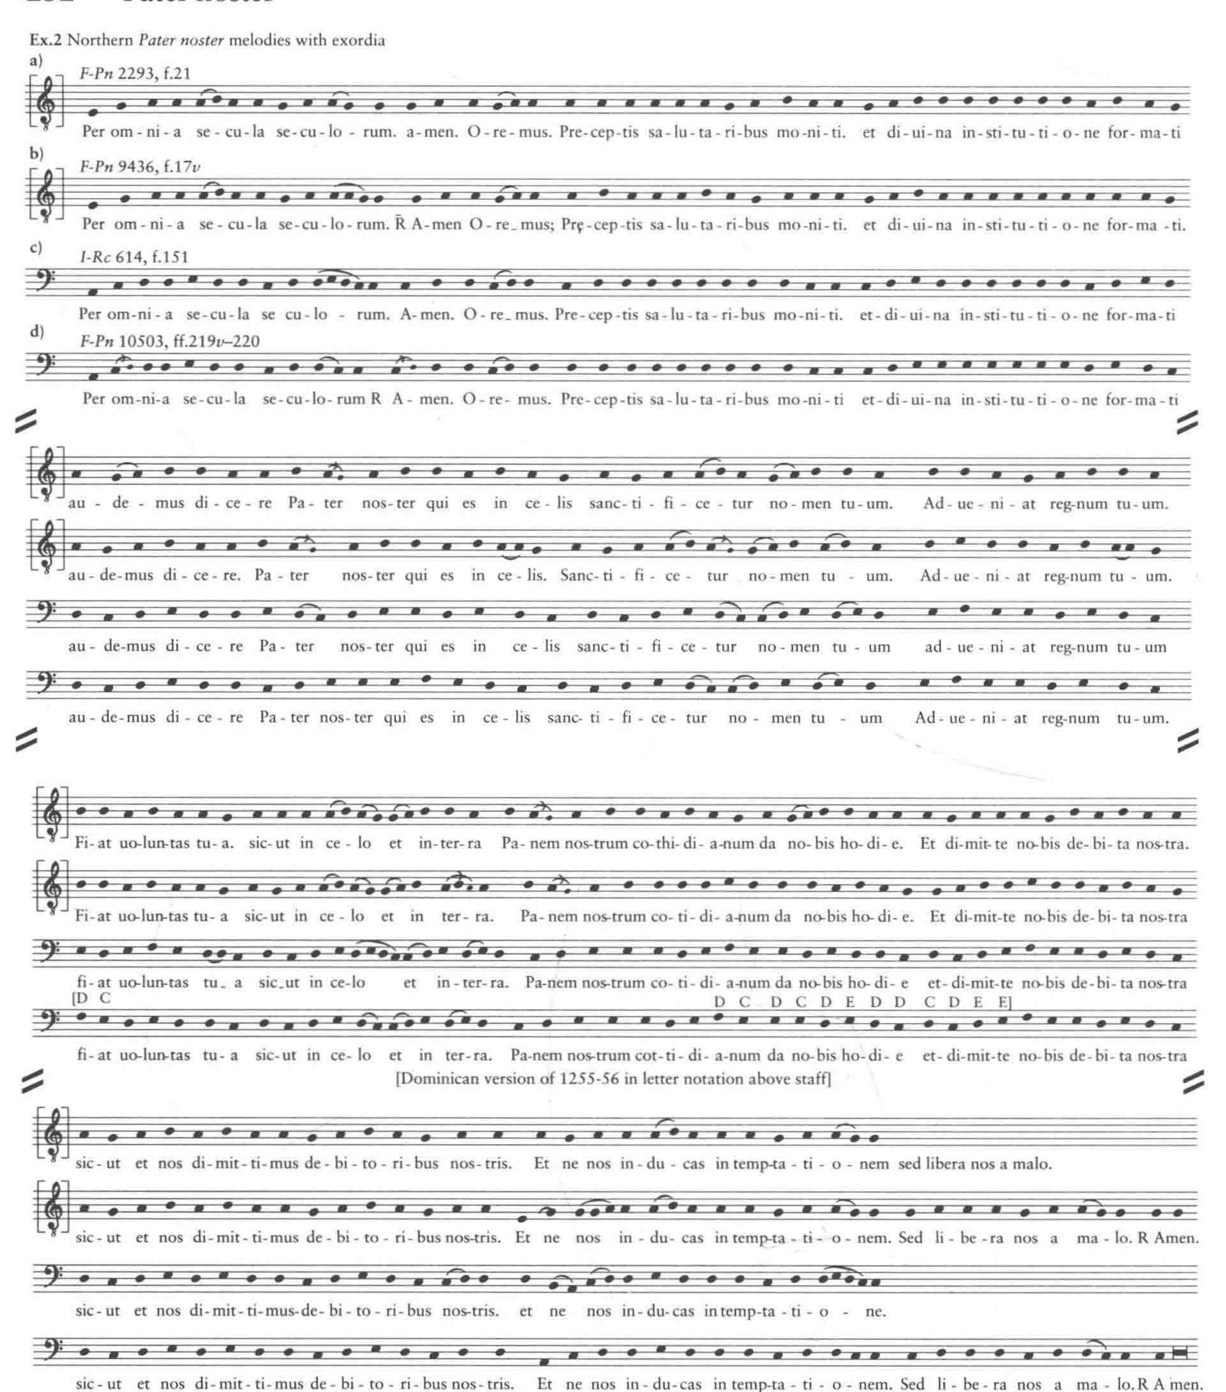
Pater noster [Lord's Prayer]. The prayer that Christ taught his disciples (*Matthew* vi.9–13; *Luke* xi.2–4). Variants of the biblical texts reflect early Aramaic-Syriac and Greek oral traditions as well as liturgical and semi-liturgical accretions. The liturgical Latin text was established within the Roman rite by the early 7th century; Pope Gregory I moved it from its place after the Fraction in the Mass to its present position after the Eucharistic Prayer, as in the Eastern rites. In Gregory's reform it was recited only by the celebrant. The exordium introducing the prayer and a simple form of the concluding embolism (beginning 'Libera nos quesumus domine ab omnibus malis') may also date from Gregory's time; but similar accretions are found in Eastern and in other Latin rites (see Boe, 1998). The prayer also originally concluded each service of the

1. *Pater noster, F-Pa 135, ff.150v–151*



Ex.1 South Italian *Pater noster* melodies with exordia and embolisms

Divine Office, where it was prayed silently, the officiant raising his voice only at the phrase 'Et ne nos inducas in temptationem' so that all might answer 'Sed libera nos a malo'; but according to the Rule of St Benedict the prayer was to be sung aloud at the end of Lauds and Vespers by the senior monk present.

Before about 1050 the *Pater noster* was generally transmitted orally, the celebrant knowing only the local version of the melody, which would have been in so-called 'anaphoral chant' (for a description of anaphoral chant, see K. Levy, 'The Byzantine Sanctus and its Modal Tradition in East and West', *AnnM*, vi, 1958–63, pp.7–67). The embolisms of the melodies in ex.1 are different contemporary versions of an anaphoral chant formula using the pitches *ut*, *re* and *mi*. However, as early as the late 10th century, notation for the *Pater noster* began to be inserted in sacramentaries and missals in order to control or replace local versions, or simply to act as an aide-mémoire for the celebrant. Three separate melodic traditions dating from the late 10th century and

Ex.2 Northern *Pater noster* melodies with exordia

the 11th are identifiable: two were sung mainly in southern Italy and the third principally north of the Alps.

The first melodic formulation is found as the sole chant in votive missals for parish and chantry priests and in miscellaneous collections, especially those containing Masses for the Dead. The melody appears first in a votive missal from the Monte Cassino region (*I-MC* 426, *c*1000), and in later Cassinese manuscripts is given the rubric 'In cotidianis diebus' ('for daily use'). It appears in a number of south Italian manuscripts from the 12th and 13th centuries; ex.1 shows the version from *I-Rvat* 7231 (13th century), which, as in other later manuscripts, has internal phrases that are notated one step higher than in the earlier manuscripts (*I-MC* 426, f.35*v*; *MC* 339, f.65*v*); these phrases are indicated by brackets above the staff. The earliest source for the second melody is a gradual (*I-BV* 40) probably copied at the abbey of S Sofia in Benevento in the first half of the 11th century; the melody is

transcribed in ex.1 for comparison with the melody for daily use. This formulation was used for Sundays and feast days at Monte Cassino (*I-MC* 339: rubric 'In dominicis seu festis diebus'); it was also used in the churches of Salerno and adjoining areas, in regional monasteries and at the Lombard court.

The third melody appears in 11th-century manuscripts from all over northern Europe, but only occasionally in southern Italy, where it was given the rubric 'Francisca' ('Frankish' it may have been entered in Cassinese altarbooks as an alternative chant for use by northern clergy; for more detailed discussion see Boe, 1998). Ex.2 shows the versions of the melody from the abbey of Figeac in Aquitaine (*F-Pn* 2293; 11th century, melody in heighted Aquitanian neumes) and St Denis (*Pn* 9436, mid-11th century, melody in northern French neumes, slightly heighted), in contrast to a decorated southern Italian version (*I-Rc* 614; 12th century, Beneventan script and notation) and the 13th-century Franciscan festal version (*F-Pn* 10503; second half of 13th century, notated with F-clef on five-line staff), which is almost identical to the festal tone of the Vatican edition. This formulation also resembles the Sarum and Dominican chants (see below).

All three formulations arrange the pitches *ut re mi fa* in a repeated series of inflections generally moving by step. The first formulation (ex.1a) originally employed the initial pitches *ut re mi*, a medial cadence *út–re(re) re*, and a final cadence *ré–mi re*. It may derive from a Milanese chant resembling a psalm tone (see Cabrol, 1929; and Boe, 1981). In the second and third formulations (ex.1b and ex.2), each repeated member of the series begins with one or two similar forephrases and ends with a distinct afterphrase – in similar manner to the recitation tones for prefaces and readings. While the two south Italian formulations (though independent in origin) both use the initial *ut re mi mi*, the northern melody instead used the inverted form *mí re–ut re mi* for 'Páter noster' and 'Pánem nostrum'. But in the north after about 1200, this form came to be replaced (possibly owing to Cistercian reforms: see Choisselet and Vernet) by the rising inflection *ut re mi mi* found in the Dominican standard melody of 1255–6 and notably in the Franciscan festal and ferial chants, which were soon adopted by the Roman curia and eventually in the Vatican edition of 1907, as well as in Sarum books after about 1300. (See fig.1, from *F-Pa* 135, an early Sarum missal where the original inverted initial at these words was erased and replaced by the rising inflection.) Nevertheless, the northern melody remains distinct from the southern Italian ones in several respects: for example, the ecphonesis 'Per omnia secula seculorum' begins on *la* below *ut* in the northern melody but not in the southern formulations (see Boe, 1998). Conservative institutions like Cluny and some cathedrals long retained the old inverted form of the initial figure. Local variants of all melodies exist, especially where *mi*, when accented or climactic, was raised to *fa*: for example, the initials *ut re FÁ mi* or *FÁ re–ut re mi*.

In the 13th century a new penitential *Pater noster* chant appeared in response to the purgatorial aspects emphasized in the ever more numerous votive Masses for the Dead. This austere, unornamented ferial chant, supplied in Franciscan missals, was developed from the Franciscan festal melody (and is therefore related to the northern chant); it should not be confused with the nearly syllabic reformed chant that was sung by the Cistercians at all masses.

In Masses of the Gallican rite, *Pater noster* seems to have immediately preceded the Communion and to have been recited by all; if sung, no source survives. The Mozarabic *Pater noster* formula found in a 1755 edition of Cardinal Ximenes's *Missale mixtum* of 1500 is well known: the 'Amen' interjections are authentically Mozarabic, but the oral tradition for the melody must have been slender at best. At Rome, the tradition for *Pater noster* was purely oral before northern pontificals arrived (cf *I-Rc* 614 in ex.2) and before Franciscan chants and notation were adopted in the 13th century. Thus the origins of the northern melody remain unclear: it may have gone north from Rome in the 8th century, or it may have been reshaped from anaphoral chant by Frankish celebrants.

Rare instances of tropes for *Pater noster* are found in some manuscripts of the 12th and 13th centuries, generally in unusual liturgical contexts. Later examples were nonliturgical. (See Stäblein, 1977.) The festal melody was used as a cantus firmus by Renaissance composers (there are settings by Willaert, Gombert, Lassus and Palestrina, among others); many settings of the text do not use the chant melody at all.

In the Anglican rite the Lord's Prayer, complete with exordium, was first set to English for the Communion service of 1549 by John Marbeck in his short-lived *Booke of Common Praier Noted* (1550). Marbeck freely adapted the northern *Pater noster* chant, using one note per syllable but notes of different lengths. At Mattins and Evensong, Marbeck treated the last two phrases of the Lord's Prayer as versicle and response, just as at the Latin lesser Hours, the rest of the text being either monotoned or possibly spoken. A few composers set the Lord's Prayer chorally, but most Tudor and Jacobean choral settings for the cathedral Office do not include it. The choral settings by Robert Stone and John Farmer (i) are now sometimes sung with such responses. During the late 19th and early 20th centuries, the Sarum and 1907 Vatican chants for *Pater noster* were more closely adapted to the English text for the Anglican Eucharist by G.W. Palmer and C.W. Douglas, among others. Following the Second Vatican Council, new chants have been composed and older chants (such as that of the Mozarabic *Pater noster*) have been fitted to the revised texts of the Anglican rite and the Roman rite in English.

JOHN BOE

Paterson, Robert Roy (*b* Edinburgh, 16 July 1830; *d* Edinburgh, 3 Dec 1903). Scottish musician and music publisher. He was the son of Robert Paterson, who founded the music dealers and publishersPATERSON & SONS. He received a thorough musical education both in Edinburgh, where he studied the violin and flute, and in 1847 at the Leipzig Conservatory, where he studied the piano with Moscheles and composition with Otto Richter. He later gained experience of the music trade in London at the piano makers Collard & Collard and Broadwood before entering the family firm. In 1859, at the death of his father, he undertook the direction of the firm, which expanded to become one of the most important of its kind in Scotland, with branches in numerous Scottish cities. At the same time he played an active part in Edinburgh's musical life, particularly in the city's Musical Association, then the most active in Scotland. In 1887 he took over the management of the Choral Union Orchestra concerts when they ran into financial difficulties; they then continued as Paterson's Concerts until 1931, except for a short interruption during World War I, and mostly engaged the Scottish Orchestra from its inception in 1893. Paterson composed songs and piano music which he published under the pseudonym of Alfred Stella. (Obituary, *MT*, xlv (1904), 31 only)

PETER WARD JONES

Paterson & Sons. Scottish music dealers, publishers and instrument makers. The firm was started in Edinburgh about 1819 by Robert Paterson (*d* 1859) and others as Robert Paterson, Mortimer & Co. In 1826 Peter Walker Roy (*d* Edinburgh, 7 Dec 1851) joined the firm, which became Paterson & Roy and later opened a London branch. After Roy's death the business traded as Paterson & Sons. Paterson was succeeded at his death by his son Robert Roy Paterson, under whose direction the firm expanded to become one of the most important of its kind in Scotland, with branches in Glasgow (1857, directed by Paterson's elder brother John Walker Paterson), Perth (1864), Ayr (1868), Dundee (1882), Dumfries (1886), Paisley (1887), Kilmarnock (1892), and later Aberdeen and Oban. Its 19th-century publications included Scottish music of all kinds, with many reprints of standard editions of Scottish songs. During the 20th century its publishing activities were gradually taken over by the London branch, which, as Paterson's Publications Ltd, concentrated largely on choral and piano music for school and amateur use. The Scottish branch of the business ceased in 1964; the London branch was bought by Novello & Co. in 1989.

PETER WARD JONES

Patey [née Whytock], **Janet (Monach)** (*b* London, 1 May 1842; *d* Sheffield, 28 Feb 1894). Scottish contralto. She studied under John Wass and made her début in Birmingham in 1860 (as Ellen Andrews); thereafter she studied under Mrs Sims Reeves and Ciro Pinsuti. In 1866 she married the baritone John (George) Patey (*b* Stonehouse, Devon, 1835; *d* Falmouth, 4 Dec 1901), who had studied opera singing in Paris and Milan. He had made his London début in 1858 and was well known as a singer of light roles at Covent Garden and Italian opera at the Lyceum Theatre. Mrs Patey, after the retirement of Sainton-Dolby in 1870, came to be regarded as the leading British contralto, being referred to as the 'English Alboni'. She and her husband toured widely abroad, in the USA, Australia and elsewhere. John Patey retired from singing in 1888 and joined the music publishing firm of Willis in London. (*DNB* (R.H. Legge))

JEAN MARY ALLAN

Pathet. An Indonesian term often translated as 'mode'. *See* INDONESIA, §III, 4; MODE, §V, 4(ii); SOUTH-EAST ASIA, §3(iii).

Pathie [Patie, Patye], **Rogier** [Roger] (*b* ?Cambrai, *c*1510; *d* ?Valladolid, after 1564). Franco-Flemish composer and organist. In May 1530 his father, Jean Pathie, a singer at the court of François I, was paid 35 livres to cover food and medical expenses for his son Rogier, 'petit organiste' to the king. Becker's biography of C. Marot claimed that 'Roger' fled from Paris in 1534. By 1536 Rogier Pathie had succeeded Sigismund Yver as organist to the Netherlandish chapel of Queen Mary of Hungary, a post he retained until her death. He is also mentioned in the accounts of her court between 1536 and 1565 as her *valet de chambre* and as her almoner or treasurer. (The inventory of her instruments and the catalogue of her library, which he compiled, are printed in *Vander StraetenMPB*, vii, 439–94.) He was a prebendary at St Baaf Cathedral, Ghent, from 1540 to 1542. Although Mary's court was based at Brussels or Lille, it travelled frequently; Pathie was called upon to enlist singers for Charles V from Tournai in 1541 and from Arras, Brussels, Ghent and Lille in 1542. He probably ended his days in Spain.

Only two motets and four chansons by Pathie have survived. The motet *O altitudo*, published in Paris in 1535, was reprinted in Ferrara with an ascription to Dominique Phinot. The second motet, a double canon by inversion, was published posthumously in Nuremberg. The chanson *D'amour me plains* was a resounding success, appearing in more than 26 editions between 1539 and 1644, and in at least 21 instrumental arrangements printed between 1545 and 1583. Its fame no doubt caused the misattribution to 'Rogier' of other popular pieces included in Phalèse's seventh book of chansons, notably *Doulce memoire* by Sandrin, *Ce moys de May* by Godard and *Si pur ti guardo* by Ferrabosco or Baldassare Donato, an error followed in many of the later instrumental transcriptions.

FRANK DOBBINS

Patinkin, Mandy [Mandel] (*b* Chicago, 30 Nov 1952). American actor and singer. He is the most versatile of performers, known for his work on Broadway, film and television. For Broadway he created the roles of Che Guevara in Lloyd Webber's *Evita* (1979), George Seurat in Sondheim's *Sunday in the Park with George* (1986), and Archibald Craven in Simon's *The Secret Garden* (1991), all of which received critical praise. He won a Tony award for his performance in *Evita*. He has released a number of solo albums, including *Mandy Patinkin* (1989), *Dress Casual* (1990), *Oscar and Steve* (1995) and the entirely Yiddish *Mamaloshen* (1998). In addition to his singing activities, Patinkin has appeared in a number of dramatic roles on both film and television. Film credits include *Ragtime* (1981), *Yentl* (1983), *The Princess Bride* (1987), and *Dick Tracy* (1990), although the last of these is the only one in which Patinkin utilized his musical talents. In the mid-1990s, Patinkin starred in the television series 'Chicago Hope', for which he won an Emmy Award in 1995; his character in this provided the opportunity for Patinkin to display his vocal abilities numerous times for television audiences. Perhaps the best way to describe his very distinctive sound is as a 'falsetto tenor'. His ability to create musical line and his exceedingly innate sense of musicianship have brought emotional life to every song he has sung and to every character he has portrayed.

WILLIAM A. EVERETT, LEE SNOOK

Patiño, Carlos (*b* S María del Campo Rus, Cuenca, bap. 9 Oct 1600; *d* Madrid, 5 Sept 1675). Spanish composer. He was a choirboy at Seville Cathedral from 22 June 1612, where he studied with Francisco Company, Juan de Vaca, and Alonso Lobo. He also had important contact with Francisco de Santiago. From 25 January 1622 until early 1625 he was married to Laura María de Vargas Texeda Lozano. After her death following childbirth he seems to have studied for the priesthood, a requirement for his subsequent positions.

Meanwhile, on 19 January 1623 he became *maestro de canto de órgano* at Seville Cathedral. In 1628 he competed unsuccessfully for the position of *maestro de capilla* at Salamanca Cathedral, but on 8 March of that year he was appointed *maestro de capilla* of the Monasterio de la Encarnación, Madrid, where he succeeded Gabriel Díaz Bessón. In that year he was entrusted with the final preparation for publication of López de Velasco's *Libro de misas, motetes, salmos, Magnificas, y otras cosas tocantes al culto divino* (Madrid, 1628). On 1 January 1634 Patiño succeeded Mateo Romero as *maestro de capilla* in the royal chapel; simultaneously he served as *vice-maestro* and rector of the college of choirboys until 7 February 1657. In 1660 he asked for retirement, pleading ill health; his request was denied, but he was provided with an assistant and substitute. In addition to his musical activities, he was a painter.

Patiño was one of the finest musicians in Spain in the 17th century and along with Romero established the Baroque style there. He is specially important for replacing the Italian madrigal style by a specifically Spanish one. A few of his sacred works are for a single chorus but most are for two or three choruses. Nearly all include continuo, often designated for organ, harp, clavichord, or *bajoncillo* (small dulcian); vocal parts are occasionally doubled by instruments. The polychoral works include imitative sections alongside more chordal ones featuring word-generated motives and the dramatic juxtaposition of quick and slow segments. In both melody and harmony Patiño can be quite bold, his style including leaps of a diminished 4th, false relations (sometimes simultaneous) and unprepared dissonances alongside mild chromaticism. While Patiño was principally a composer of Latin sacred music, he also composed sacred music in Spanish as well as theatre music (*cuatros de empezar*) to be sung as preludes to dramatic productions. The *tonos humanos* are characterized by lively rhythms with frequent hemiola; several of them were composed for court occasions involving the Spanish royal family. Patiño's works enjoyed wide circulation in the Spanish colonies of Latin America, as shown by the many well-used and incomplete manuscripts found there. Many sacred works were lost in the great Lisbon earthquake of 1755.

WORKS

Editions: *Carlos Partiño: Obras musicales recopilades*, ed. L. Siemens Hernández (Cuenca, 1986–) [SH]
Las obras humanas de Carlos Patiño, ed. D. Becker (Cuenca, 1987) [B]

Latin sacred, 4–12 vv, some with obbl insts, bc: 13 masses, 4–12vv, *E-MO*, *V*, 1 ed. in MME, xli (1982); 49 motets and other sacred Latin works; 6 litanies; 11 cantos evangelicos; 21 psalms: *Mn*, *Zac*, *Mba*, *Bc*
Spanish sacred, mostly for 4vv, some for 3–12vv: Missa de la bakella 'Escoutes', 12vv, ed. in MME, xli (1982); 2 eucharist hymns; 14 villancicos for the Holy Sacrament; 18 Christmas villancicos; 12 tonos humanos: *Mn*, *Zac*, *Mba*, *Bc*; 2 tonos humanos ed. in MME, xxxii (1970)
Theatre music: Cuatros de empezar

BARTON HUDSON

Patiño Carpio, Adrián (*b* La Paz, 19 Feb 1895; *d* La Paz, 4 April 1951). Bolivian composer, woodwind player and band director. He studied at the La Paz Conservatory

with Rosendo Torrico. He played in several orchestras and ensembles and taught woodwind instruments in schools and at the La Paz Conservatory. From 1926 he directed the 'Loa' and 'Perez' regimental bands, giving concerts in La Paz and other cities in Bolivia. During the Chaco War (1932–5) he was appointed general band director of the Bolivian army. After his retirement he maintained a youth chorus and orchestra, with whom he performed new works.

He was awarded several honours, including the French Palmes Académiques. He composed tone poems, suites and preludes for orchestra such as *Alborada andina*, *En los Andes bolivianos*, *La cancion del Kilko*, *La tristeza del Arachi* and *La huerta* (incidental music for a drama by Angel Salas), almost 100 military and funeral marches, *boleros de caballería*, and hymns, three masses, Christmas carols, religious hymns and several traditional dances such as *cuecas*, *hauyños* and *bailecitos*.

CARLOS SEOANE

Paton, Mary Anne. *See* WOOD, MARY ANNE.

Patouilles. An early XYLOPHONE, illustrated and described by Mersenne.

Patricio, Andrea [Patricij, Andrija] (*b* Cres; *fl* 1550). Croatian composer. He came from the same family as the philosopher and musician Francesco Patrizi (1529–97). He is known only by four pieces in Antonio Barges's *Il primo libro de villotte* (Venice, 1550[18]; all ed. M. Asić, *Zvuk*, lxxxi, 1968, and V.L. Županović, Spomenici hrvatske glazbene prošlosti, i, Zagreb, 1970). *Solea lontan'in sonno* is predominantly homophonic, *In quel ben nat'aventuroso giorno* and *Madonna, quel suav'honesto sguardo* show a greater concern for word-painting, and *Son quest'i bei crin d'oro* is both melodically and harmonically a richly expressive piece.

LOVRO ŽUPANOVIĆ

Patrick, Nathaniel (bap. Worcester, 9 March 1569; *d* Worcester, bur. 23 March 1595). English cathedral musician and composer. He was the son of William Patrick, weaver. Nathanial was Master of the Choristers at Worcester Cathedral from Michaelmas 1590 until his death. On 23 September 1593 he married Alice Hassard, who became Thomas Tomkins's second wife in 1597. Patrick's will was proved on 25 May 1595, and is printed in Atkins, together with an inventory of his belongings. On 22 October 1597 a licence was granted by the Stationers' Company to Thomas East to print the 'Songes of sundrye natures, whereof somme are Divine, some are madrigalles, and the rest psalmes and hymnes in Latin composed for 5 and 6 voyces and One for 8 voyces by Nathanaell Patrick sometyme master of the Children of the Cathedrall Churche of Worcester and Organist of the same'. No copy of this publication has survived, if indeed it was ever printed.

Patrick's only extant compositions are the consort songs *Clime not to high*, *Prepare to die* and *Send forth thy sighs* (*GB-Lbl*; all ed. in MB, xxii, 1967), and a Short or Whole Service (in many MSS; ed. W. Shaw, London, 1963). Three anthems *I will lift up mine eyes*, *Look down, O Lord* and *O clap your hands* (*GB-Ckc* 416; *Ob*) may possibly be by Richard Patrick, a lay clerk at Westminster Abbey from *c*1616 to 1626.

E.H. FELLOWES/PETER LE HURAY

Patta, Serafino (*b* Milan; *fl* 1606–19). Italian composer and organist. He was a monk of the Benedictine order based at the monastery of Monte Cassino, near Naples. His career as organist took him to Cesena, where he was at the Madonna del Monte in 1606, to Reggio nell'Emilia, where he is known to have served at SS Pietro e Prospero between 1609 and 1611, and to Pavia, where he was at S Salvatore in 1613 and 1614. By 1619 he had returned to his former post at Cesena.

Patta's output, which is all of sacred music, includes settings of masses and vesper psalms in a conventional five- or six-part texture and also early examples of concertato motets for a small number of voices. Indeed his 1614 collection is one of the earliest volumes of sacred monody: it consists of 13 Latin settings alternating with 12 Italian ones – spiritual madrigals marked 'pietosi affetti' – all the texts being by the dedicatee, Angelo Grillo. The music is of high quality: the sensitive declamation is responsive to the words, and vocal line and bass are well integrated. That such music was intended primarily for domestic devotional use is suggested by the inclusion on the title-page of the harpsichord and chitarrone as suitable continuo instruments.

In his second motet book (1613) Patta shows craftsmanship in the use of refrain and dialogue forms. The *Veni, Sancte Spiritus* has a thrice-repeated triple-time refrain alternating with solo and duet sections. *Quem vidistis pastores* is suitably set as a dialogue between angels and shepherds (SA and TTB respectively); the shepherds' response is taken up by the tutti at the end. *Forte* and *piano* markings are found in the doxology of the *Magnificat* and in a two-part canzona also found in this publication. (J. Roche: *North Italian Church Music in the Age of Monteverdi*, Oxford, 1984)

JEROME ROCHE

Patterson, Annie (Wilson) (*b* Lurgan, 27 Oct 1868; *d* Cork, 16 Jan 1934). Irish folksong collector, composer, writer on music, organist and lecturer. She studied at the Royal

Irish Academy of Music and the Royal University of Ireland (BA, MusB 1887; MusD 1889). From 1887 to 1897 she worked in Dublin as an organist, conductor and music examiner. In 1897 she organized the first Feis Ceoil festival of Irish music and in the same year acted as music adviser for the first Oireachtas, the national Irish-language festival. After settling in Cork in 1909, Patterson became organist at St Anne's, Shandon, and held a lectureship in Irish music at University College, Cork (1924–34). She continued as a music examiner, contributed to various periodicals and broadcast frequently on the national radio station. Her deep interest in Irish traditional music stimulated the collection, arrangement and publication of folksongs and she composed art music inspired by Irish mythology. Her works, few of which were published, include three operas, *The Ardrigh's Daughter*, *Oisín* and *The Bard of Éire*, a choral work *The Bells of Shandon*, several cantatas including *Finola* (1888), Six Original Gaelic Songs (1896), symphonic poems, choral marching songs and many arrangements of Irish airs. She wrote a number of music appreciation books, including a volume on the oratorio, a monograph on Schumann, and a study of the native music of Ireland (London, 1926).

WILLIAM H. GRATTAN FLOOD/PATRICK F. DEVINE

Patterson, Paul (Leslie) (*b* Chesterfield, 15 June 1947). English composer. After studying composition with Stoker at the RAM (1964–8), he received private tuition from Bennett (1968–70) and Lutyens (1967–70). He has taught at the RAM as Manson Fellow and lecturer (1969–86) and head of composition and contemporary music (1985–97). He came to attention with a Stravinskian Trumpet Concerto (1969); however, friendships with Polish composers, in particular Penderecki, Lutosławski and Stachowski, led to a radical change in direction apparent in *Kyrie* (1972) and *Time Piece* (1973), in which he adopted the graphic notation and textural techniques of the Polish school. These formative influences dominate Patterson's music of the 1970s, exemplified by the Requiem (1975), Clarinet Concerto (1976), *Cracowian Counterpoints* (1977, rev. 1978) and the large-scale choral work *Voices of Sleep* (1979). During the 1980s he increasingly moved towards a language that may be summarized as a rapprochement between the textural configurations of his earlier works and the 20th-century English tradition of composers like Britten. This process is traceable through three major choral works, *Mass of the Sea* (1983), *Stabat mater* (1985–6) and *Te Deum* (1987–8). Such evident flair for handling choral forces has continued with *The End* (1989) and *Magnificat* (1994), while other works of the early 1990s, for example the Violin Concerto (1992), show neo-classical traits. Communication has been a major preoccupation for Patterson, which led him to undertake several residencies, including at the King's School, Canterbury (1981–3). Several works have been composed for young performers or listeners: a youth orchestra work, *Sonors* (1973), *The Canterbury Psalms* (1981) and *Little Red Riding Hood* (1992) based on Roald Dahl's eponymous poem.

ANDREW BURN

Patter song. A comic song in which the humour derives from having the greatest number of words uttered in the shortest possible time. The technique was foreshadowed by such composers as Alessandro Scarlatti (the duet 'Non ti voglio' from *Tiberio imperatore d'Oriente*, 1702) but was not in common use until the second half of the 18th century, when composers often introduced the idea into *buffo* solos (e.g. Bartolo's aria 'La vendetta' in Act 1 scene iii of Mozart's *Le nozze di Figaro*). Other examples are found in the works of Logroscino, Piccinni, Paisiello, Haydn, Rossini (notably the 'confusion' ensemble in the Act 1 finale of *Il barbiere di Siviglia*), Donizetti and Sullivan (whose patter song in *Ruddigore* includes the lines: 'this particularly rapid, unintelligible patter isn't generally heard and if it is it doesn't matter').

□

Patti. Italian family of singers.

(1) Salvatore Patti (*b* Catania, 1800; *d* Paris, 21 Aug 1869). Tenor. Engaged as second tenor at the Real Teatro Carolino, Palermo, for the 1825–6 season, which was directed by Donizetti, he sang Pippetto in *L'ajo nell'imbarazzo* and Ismaele in the first performance of *Alahor di Granata* (6 January 1826). For the next decade he appeared at other theatres in Sicily and Italy, then in 1836 at the Teatro Valle, Rome, he sang Ugo in Donizetti's *Parisina* and Tamas in *Gemma di Vergy*, repeating the latter role in Naples the following year. His career as a singer continued in Italy and Spain until 1844, when he went to New York to manage seasons of Italian opera first at Palmo's, then at the Astor Place Opera House.

(2) Caterina Chiesa Barilli-Patti (*b* Rome; *d* Rome, 6 Sept 1870). Soprano, wife of (1) Salvatore Patti. She studied singing with Barilli, her first husband, and sang Eleanora at the first performance of Donizetti's *L'assedio*

di Calais in 1836 at the S Carlo, Naples, also appearing there in *I puritani*, *Gemma di Vergy* and Coppola's *La pazza per amore*. She is said to have sung Norma in Madrid the night before the birth of her youngest child, (4) Adelina Patti. After singing for a time in New York, she retired to Rome. The children of her first marriage, Clotilde (a contralto), Ettore (a baritone), Antonio and Nicolo (basses) Barilli, all had successful careers. Her eldest daughter by Patti, Amalia (*b* Paris, 1831; *d* Paris, Dec 1915), appeared as a soprano in opera and on the concert platform in the USA until her marriage to the pianist and impresario Maurice Strakosch.

(3) **Carlotta Patti** (*b* Florence, 30 Oct 1835; *d* Paris, 27 June 1889). Soprano, daughter of (1) Salvatore Patti and (2) Caterina Chiesa Barilli-Patti. She first studied the piano with Henri Herz, then decided to be a singer, making her début in January 1861 at a concert in New York. The following year she appeared in opera at the Academy of Music but, owing to the lameness from which she had suffered since childhood and to a temperamental unsuitability for the stage, did not repeat the experiment. She first sang in London in 1863 at Covent Garden, in a concert after the opera, and for the next 15 years pursued a highly successful career on the concert platform. In 1879 she married the Belgian cellist Ernest de Munck. Her voice was of considerable size, extremely flexible and extended up to g''' and even $g\sharp'''$. After her retirement she taught singing in Paris.

(4) **Adelina** [Adela] **(Juana Maria) Patti** (*b* Madrid, 19 Feb 1843; *d* Craig-y-Nos Castle, nr Brecon, Wales, 27 Sept 1919). Italian soprano, daughter of (1) Salvatore Patti and (2) Caterina Chiesa Barilli-Patti. She received her first singing lessons from her half-brother, Ettore Barilli, and when she was seven sang in a charity concert at Tripler Hall, New York. Accompanied by her brother-in-law, Maurice Strakosch, and the violinist Ole Bull, she toured the USA as a child prodigy for three years, and in 1857 she went on another long tour, with the pianist Gottschalk. She made her stage début in 1859 at the New York Academy of Music, in the title role of *Lucia di Lammermoor*, which she had studied with the conductor Emmanuele Muzio. After a tour of Philadelphia, Boston, Baltimore and other cities, during the winter of 1860–61 she sang in New Orleans and in Cuba.

She made her European début at Covent Garden on 14 May 1861, as Amina in *La sonnambula*; by the final curtain, the audience had succumbed completely to the spell of the 18-year-old prima donna, and Patti's quarter-century reign at Covent Garden had begun. After a tour of the British Isles, she sang in Berlin, Brussels, Amsterdam and The Hague.

She made her Paris début at the Théâtre Italien in 1862 and her first appearance in Vienna at the Carltheater in 1863, on both occasions as Amina. In October that year she sang Marguerite in Gounod's *Faust* for the first time, at Hamburg. In the winter of 1865–6 she made her first visit to Italy, singing at Florence, Bologna, Rome and Turin. In November 1868 she sang a duet from the *Stabat mater*, with Marietta Alboni, at Rossini's funeral in Paris and she spent the following winter in St Petersburg and Moscow.

Patti was London's first Aida in 1876 at Covent Garden, and she made her début at La Scala in *La traviata* in 1877. Her partner on those and many other occasions was the tenor Ernest Nicolini, whom she married in 1886, after obtaining a divorce from her first husband, the Marquis de Caux. Returning to New York after an absence of over 20 years in 1881, she embarked on a concert tour, and for the following three winters she was engaged by Mapleson for his operatic tours of the USA, during which her fee rose to £1000 a performance. In 1885, her 25th consecutive season at Covent Garden, she sang the title role of *Carmen*, one of the very few misjudgments of her career. After another tour of the USA, she gave six farewell performances at the Metropolitan in April 1887. In 1888, after singing in Madrid and Lisbon, she appeared in Buenos Aires and Montevideo, then sang *Roméo et Juliette* at the Paris Opéra, with Gounod conducting, and Jean and Edouard de Reszke in the cast.

Adelina Patti as Marguerite in Gounod's 'Faust', Act 3, with Jean-Baptiste Faure (Mephistopheles) and Giovanni Mario (Faust), Covent Garden, London, 1864: photograph by Caldesi & Co

In 1895 Patti gave six farewell performances at Covent Garden, two each of Violetta, Zerlina and Rosina, her last operatic appearances in London, though in 1897 she sang at Monte Carlo and at Nice, where she created her final operatic role, *Dolores* by André Pollonnais. Her final American tour opened at Carnegie Hall, New York, on 4 November 1903, and her official London farewell took place at the Albert Hall on 1 December 1906, but she continued to take part in charity concerts until 1914.

During the later stages of Patti's career, the legends that surrounded her tended to obscure the fact that at the zenith of her vocal powers, between 1863 and 1880, she was also a remarkable actress, especially in comedy. In

the early years, when the compass of her perfectly placed and produced voice extended easily to *f'''*, Amina, Lucia, Violetta, Norina and Rosina were the roles in which she excelled, and her interpretations were marred only by an over-use of ornamentation. Later, her secure technique enabled her to continue to sing many of these parts, but she also became pre-eminent in a slightly heavier lyric repertory, in such roles as Semiramide, Marguerite (which at first she had found uncomfortably low), Leonora (*Il trovatore*) and Aida. Although she rarely chose to sing in works lying outside her vocal, histrionic or emotional range, *L'Africaine* and *Les Huguenots* both exceeded these limits; the other two Meyerbeer operas in which she appeared, *Dinorah* and *L'étoile du nord*, suited her talents much better. Her amazing purity of tone and vocal flexibility after singing for more than half a century are amply illustrated by the recordings she made when in her 60s and testify to her exemplary care for her phenomenal gifts.

ELIZABETH FORBES

Pattiera, Tino (*b* Cavtat, nr Dubrovnik, 27 June 1890; *d* Cavtat, 24 April 1966). Croatian tenor. He studied in Vienna and after gaining experience in operetta made his début at the Dresden Hofoper in 1914 as Manrico in *Il trovatore*. His fine voice was matched by good looks, and he became the most popular tenor in Dresden, especially when paired in the 1920s with the soprano Meta Seinemeyer. With her, and under Fritz Busch, he sang in some notable productions, including *La forza del destino*, *Don Carlos*, *The Queen of Spades* and *Andrea Chénier*. Although he specialized in the Italian repertory, he also sang Tannhäuser, and Bacchus in *Ariadne auf Naxos*. He joined the Chicago Opera Company in the 1921–2 season, and was a guest artist in Berlin, Vienna, Budapest and Belgrade. He gave his last concert at Dresden in 1953 and taught for some years in Vienna. Although a highly gifted singer, he lacked the secure technique and stylistic discipline to make the best use of his voice. Recordings preserve its distinctive timbre, and his duets with Seinemeyer make it understandable that their performances together in Dresden created an enthusiasm comparable to the Melba-and-Caruso evenings in London.

J.B. STEANE

Patto, Angelico (*fl* 1613). Italian anthologist and composer. He is known only for his anthology *Canoro pianto di Maria vergine sopra la faccia di Christo estinto: poesia del ... Abbate Grillo ... posta in musica da diversi autori ...* for one voice and continuo (Venice, 1613[3]). On the title-page he is called 'Academico Giustiniano', and since the dedication is signed from S Giorgio Maggiore, Venice, he was possibly a priest there. The collection consists of 24 madrigals and a dialogue. The better-known of the composers represented are Barbarino, Stefano Bernardi, Dognazzi, Franzoni, Amedeo Freddi and Girolamo Marinoni. Patto included three settings of his own, but they are negligible. At least two of the contents, both by Barbarino and one of them the dialogue – *Ferma, ferma, Signore* (in J. Racek: *Stilprobleme der italienischen Monodie*, Prague, 1965, pp. 246–8), a version of *Ferma, ferma, Caronte* (1607) – are spiritual contrafacta of previously published secular pieces.

NIGEL FORTUNE

Patton, Charley (*b* nr Bolton, MS, *c*1891; *d* Indianola, MS, 28 April 1934). American blues singer and guitarist. In 1912 he moved to the Dockery plantation near Drew, MS, where he performed with Tommy Johnson, Willie Brown and other Mississippi blues singers who exchanged songs and techniques. He claimed to have been a lay preacher and recorded a few gospel items, including *Prayer of Death* (1929). A professional musician and songster, Patton was noted for his clowning and entertaining, but the majority of his recordings, made from 1929 until his death, present a more serious artist. Generally regarded as the archetypal Mississippi black American blues singer, he travelled as far as Milwaukee to play, and his fame extended far beyond the Mississippi area. He had a rasping voice of the 'heavy' kind admired by many other singers. *Pony Blues* (1929, Para.), included in his first recording session, was his most celebrated blues item, though *Down the Dirt Road* (1929, Para.) and *Moon Going Down* (1930, Para.), the latter with Willie Brown playing the flat-pick guitar in accompaniment, are perhaps his best recorded blues. The themes of his blues were often autobiographical, though sometimes the stanzas were confused; *High Sheriff Blues* (1934, Voc.) is among the more consistent narratives. Patton's recordings are sombre, often with percussive accompaniment on a guitar in open G tuning. He also performed ballads, including *Elder Greene Blues* and *Frankie and Albert* (both 1929, Para.), ragtime or dance-songs, such as the spirited *A Spoonful Blues* (1929, Para.), and spirituals from the songster repertory. His blues influenced Bukka White, Howlin' Wolf and many later singers.

PAUL OLIVER

Patye, Rogier. *See* PATHIE, ROGIER.

Patzak, Julius (*b* Vienna, 9 April 1898; *d* Rottach-Egern, Bavaria, 26 Jan 1974). Austrian tenor. After studying music and conducting under Guido Adler, Franz Schmidt and others he took up singing in earnest, being entirely self-taught. Provincial engagements led to an invitation to join the Staatsoper in Munich in 1928, where he stayed until he joined the Vienna company in 1945. For more than three decades he was much in demand, particularly for Mozart tenor roles, and as his voice grew larger he became an incomparable Florestan and Palestrina, the only two of his grandest roles to have been recorded completely (and these only semi-officially). His extensive

repertory ranged from Singspiel and operetta through the lighter Wagner roles and Richard Strauss to Verdi, Puccini and Musorgsky. Late in his career he was still a marvellously subtle and stylish performer of lieder, old Viennese theatre songs and the *Heurigen* songs of his native city, and he also took up conducting again. He was much sought after as a soloist in oratorios (the Evangelist in Bach's Passions and in Franz Schmidt's *Das Buch mit sieben Siegeln*). Among his many lieder and oratorio recordings, the version of *Das Lied von der Erde* with Walter and Ferrier is one of his finest. He was the first Austrian artist to be engaged by the BBC after the war, and he appeared at Covent Garden (where he had sung Tamino in 1938) as Florestan and Herod during the 1947 Vienna Staatsoper season; he returned to sing Florestan and Hoffmann with the resident company. His advocacy for new music, both opera and song, deserves mention, and he taught both at the Vienna Music Academy and at the Mozarteum, Salzburg.

Although Patzak's voice was generally considered small it was so finely projected and allied to such intelligent phrasing, meticulous enunciation and effective stage deportment that it seldom failed to make its mark. His slightly nasal timbre was immediately recognizable. When well into his 50s he was able to stand in as Lohengrin or continue to sing in the Beethoven, Mozart and Pfitzner operas with no loss of impact. He recorded several smaller roles, notably Mime in Furtwängler's RAI *Ring* of 1953, and made memorable recordings of operatic excerpts.

PETER BRANSCOMBE

Pauer, Ernst (*b* Vienna, 21 Dec 1826; *d* Jugenheim, nr Darmstadt, 9 May 1905). Austrian pianist, editor and teacher, father of MAX VON PAUER. His father was a Lutheran minister, and his mother a member of the great piano-making family of Streicher. He studied the piano under Theodor Dirzka (until 1839) and F.X.W. Mozart (1839–44), harmony and counterpoint under Simon Sechter (1839–44) and orchestration and composition under Franz Lachner in Munich (1845–7). In 1847 he became director of the musical societies at Mainz, where he was active until 1851 conducting and composing theatrical music. However, his début as a pianist in London (23 June 1851) and subsequent appearances there were so successful that he decided to remain. He succeeded Potter as professor of the piano at the RAM (1859–64) and in 1861 began the first of three series of historical chronological performances of harpsichord and piano music. He also gave concerts abroad and was appointed Austrian court pianist in 1866. From 1870 he lectured on the history of keyboard music, the oratorio, modern music, the practice of teaching and other subjects. He was for many years principal professor of the piano at the Royal College of Music, London, from its foundation in 1876 as the National Training School for Music. In 1896 he retired to Jugenheim.

An assiduous editor, Pauer produced attractive and inexpensive editions of much 17th- and 18th-century keyboard music: *Old English Composers for the Virginal and Harpsichord*, 12 books of *Alte Klaviermusik*, 65 numbers of *Alte Meister*, *Alte Tänze*, etc. He made good piano arrangements (for two, four and eight hands) of the symphonies of Beethoven and Schumann, and edited much 19th-century piano and vocal music including Clementi sonatinas, Moscheles studies, Mendelssohn songs, Schubert songs as transcribed by Liszt, and Schumann ballads for declamation. Some of his dramatic music was published by Schott in the 1850s and 1860s, as were instrumental works including a Violin Sonata op.46 and a Symphony in C minor op.50; he also produced several books of studies for piano.

A.J. HIPKINS/R

Pauer, Jiří (*b* Libušín, nr Kladno, 22 Feb 1919). Czech composer. He first studied composition privately with Otakar Šín, and then with Alois Hába at the Prague Conservatory (1943–6) and with Pavel Bořkovec at the Academy of Musical Arts (1946–50). From 1945 to 1949 he was the treasurer of the Přítomnost association for contemporary music; later he held various positions in the Union of Czechoslovak Composers, being secretary-general from 1963–5. He was principal of opera at the Prague National Theatre (1953–5, 1965–7), director of the Czech PO (1958–80), professor of composition at the Academy of Musical Arts (1965–89) and general manager of the Prague National Theatre (1979–90). As a composer Pauer has undergone several stages of development. In the 1940s he was influenced by Hába, writing a set of *Burlesques* for quarter-tone piano. The next decade saw him committed to socialist realism in the composition of many mass songs expressing Communist Party principles. His move to a romantic style in the late 1950s was prompted by strictures concerning the need for music to be comprehensible to the people, but in the 1960s his music grew more complicated and began to show a synthesis of his earlier styles. Several of his works, among them the Bassoon Concerto (1949) and the opera *Žvanivý slimejš* ('Prattling Slug', 1949–50), have won a permanent place in the repertory due to their melodiousness and vigorous musicianship. His numerous honours include the Gottwald State Prize and the titles Artist of Merit (1965) and National Artist (1979).

WORKS
(*selective list*)

Stage: Žvanivý slimejš [Prattling slug] (fairy tale op, M. Mellanová, after J. Hloucha), 1949–50; Zuzana 'Vojířová (op, after J. Bor), 1954–7; Červená Karkulka [Red Riding Hood] (op, l, Mellanová), 1959; Manželské kontrapunkty [Matrimonial counterpoints] (5 operatic grotesques, Pauer, after S. Grodzieńska), 1961; Zdravý nemocný [The Hypochondriac] (comic op, 3, Pauer, after Molière: *Le malade imaginaire*), 1965–8; Labutí píseň [Swan Song] (monodrama, 1, Pauer, after A.P. Chekhov), low male v, chbr orch, 1973; Ferda mravenec [Ferdy the Ant] (children's ballet, J. Rey, after O. Sekora), 1975

Orch: Bn Concs., 1949; Ob Conc., 1954; Hn Conc., 1958; Symfonie, 1962–4; Panychida, 1969; Canto Festivo, 1970–71; Delfín, wind, 1972; Tpt Conc., 1972; Iniciály [Initials], 1974; Furiant, wind, 1974; Aurora, wind, 1976, arr. orch, 1977; Symfony for Str 1978; Mar Conc., mar, str, 1986; Symfonické sondy [Symphonic Probes], 1990

OLDŘICH PUKL/MOJMÍR SOBOTKA

Pauer, Max von (*b* London, 31 Oct 1866; *d* Jugenheim, nr Darmstadt, 12 May 1945). German pianist, teacher and music administrator, son of ERNST PAUER. He studied with his father until 1881, and then went to Karlsruhe, where for four years he was a composition pupil of Vincenz Lachner at the conservatory. Pauer made a successful début in London at the age of 19 and then for two years devoted himself to concert work, but without making the impact he had hoped for. From 1887 he was a teacher at the Cologne Conservatory and in 1897 moved to Stuttgart, where he took over Dionys Pruckner's class. He became director of the Stuttgart Conservatory in 1908 and in 1924 succeeded Stephan Krehl as head of the Leipzig Conservatory, which under his leadership was reorganized as a Hochschule für Musik. Pauer remained director for ten years, after which he retired from administration. Especially effective in large-scale works of the piano literature, he developed into a notable Beethoven and Brahms player, and introduced numerous works by contemporary composers such as Reger and Rachmaninoff. He can be heard as pianist in a recording of Schubert's 'Trout' Quintet dating from the late 1920s. Admired as a flexible and inventive teacher, Pauer numbered among his pupils Julian von Karolyi, the teacher Walter Georgii and the accompanist Hubert Giesen. He composed some piano pieces, edited a large quantity of music, brought out a new edition of the Lebert-Stark Klavierschule (Stuttgart, 1904) and wrote an autobiography, *Unser seltsames Ich: Lebensschau eines Künstlers* (Stuttgart, 1942). For his service to Swabian musical life he was ennobled by the King of Württemberg.

JAMES METHUEN-CAMPBELL

Pauk, György (*b* Budapest, 26 Oct 1936). British violinist of Hungarian birth. He began studying the violin at the age of five and entered the Franz Liszt Academy as a pupil of Zathureczky, Weiner and Kodály. At 14 he made his début with an orchestra and, while a student, toured throughout eastern Europe. He won three important competitions: the Paganini, Genoa (1956); the Munich Sonata (1957, with his regular duo partner Peter Frankl); and the Long-Thibaud, Paris (1959). He made his Royal Festival Hall début in December 1961, having that year chosen London as his home. A well-schooled virtuoso in the central European tradition, Pauk is at his best in the concertos and sonatas of Bartók (all of which he has recorded), to which he brings vigorous commitment and sure technique; his tone, not large but admirably pure and fine in focus, is also heard to advantage in Mozart, Beethoven and Brahms. His other recordings include the complete Mozart violin concertos and Brahms's three violin sonatas. He plays in a piano trio with Frankl and Ralph Kirshbaum, which celebrated its 25th anniversary in 1997. Pauk took part in the première of Tippett's Triple Concerto (1980) and is the dedicatee of concertos by István Láng and William Mathias. In 1987 he was appointed professor of violin at the RAM.

Pauke (ii) (Ger.). *See under* ORGAN STOP.

Paul, Les [Lester Polfuss] (*b* Waukesha, WI, 9 June 1915). American guitarist and guitar maker. He was one of the pioneers of the solid-bodied electric guitar, creating his first prototype in 1941, a four-foot wooden board known as 'the Log'. He had previously enjoyed some success as a hillbilly performer and with a jazz-oriented trio which broadcast from New York radio stations. His subsequent inventions included the floating bridge, electrodynamic pickups, dual pickup guitars and the Les Paulveriser, a machine to be used during performances to record sounds, play them back and electronically modify them. In 1952 the guitar manufacturer Gibson introduced its Les Paul model which became one of the most popular instruments among professional guitarists. He was also an innovator in the recording studio, developing such techniques as multitracking, echo delay and close-miking (the differential positioning of microphones). These techniques were put to use on a series of recordings made by Paul with the singer Mary Ford in the early 1950s. Among them were *Mocking Bird Hill*, *How High the Moon* and *Vaya Con Dios*. In subsequent decades Paul collaborated on recordings with country music guitar virtuoso Chet Atkins and jazz guitarist Al Di Meola.

DAVE LAING

Paul, Oscar (*b* Freiwaldau [now Jesenik], Silesia, 8 April 1836; *d* Leipzig, 18 April 1898). German writer on music. He was educated at the University of Leipzig, where he first studied theology, but soon changed to classical philology. At the same time he studied the piano at the Leipzig Conservatory with Plaidy, and history and theory of music with E.F. Richter and Moritz Hauptmann, taking his PhD at the university in 1860 under Hauptmann's direction. After spending some time in various German towns and abroad in pursuit of a career as a pianist, Paul

returned to Leipzig in 1866, and was appointed to the university with an *Habilitationsschrift* on ancient Greek music theory (*Die absolute Harmonik der Griechen*). In 1869 he also became a teacher of music history, piano and composition at the Conservatory. In 1872 he published his most important work, a commentary on Boethius's *De institutione musica* together with a translation of the work into German – the first vernacular translation of *De institutione musica* to be published. (Paul's translation relied on printed sources, though Gottfried Friedlein had published the standard critical edition of the work in Leipzig in 1867, and had used the manuscript sources as well.) Paul became associate professor at the university in 1872. He edited for a short time two musical periodicals, *Tonhalle* and its successor, the *Musikalisches Wochenblatt*, and was for many years music critic of the *Leipziger Tagblatt*.

Paul edited Hauptmann's *Die Lehre von der Harmonik* for publication, and completed the last three chapters of the manuscript (occasionally using Hauptmann's words from his *Die Natur der Harmonik und der Metrik* of 1853). The opening of Paul's own *Lehrbuch der Harmonik* (1880) describes it as an attempt to combine ideas of both of his teachers, Richter and Hauptmann (though the latter remains most prominent); an abridged translation of the *Lehrbuch* written by Paul's pupil Theodore Baker introduced Hauptmann's theory of harmony in diluted form to an American audience. Besides Hauptmann, Paul was influenced by Rudolf Westphal (likewise a classicist who had studied theology), who valued in Paul the 'skilled musician with philological training'; this type of grounding was also very influential on Paul's pupil Hermann Kretzschmar.

ROBERT W. WASON

Paula, Innocentio di. *See* DI PAULA, INNOCENTIO.

Paulet, Angélique (*b c*1591; *d* 1650). French singer and lutenist. Her father, *secrétaire ordinaire* of the *Chambre des Comptes*, was a gentleman from the Languedoc. She lived at court, where she attracted attention for her beauty and good nature, her musical talent and her ability to dance gracefully. Her first great success at court was as Arion in the *Ballet de la reine*, performed on 31 January 1609 with Queen Marie de Médicis in the role of Amphitrite. From 1620 until her death she frequented the famous *chambre bleue* of the Hôtel de Rambouillet, where the Marquise of Rambouillet received poets, musicians and members of the aristocracy who disliked the vulgarity of the French court, and where she met Tallemant des Réaux, who wrote extravagant anecdotes about her. According to Mlle de Scudéry she was a pupil of Pierre Guédron. She exercised a wealth of imagination in entertaining her friends. During a performance of Jean de Mairet's play *Sophonisbe* she gave a musical *entr'acte*, dressed as a nymph and singing to her own accompaniment on the theorbo; the Abbé Arnaud wrote that 'her admirable voice left us feeling no regrets for even the best violin ensemble as generally employed to play in the intervals'. Jean Chapelain (1595–1674) wrote the '*Récit de Mlle Paulet*' for her to perform in the *Ballet des Dieux, représentant l'astre du lion* (now lost).

GEORGIE DUROSOIR

Pauli, Hansjörg (*b* Winterthur, 14 March 1931). Swiss music journalist and film maker. He studied music at the Winterthur Conservatory (1953) and musical analysis under Hans Keller in London. His career as a musicologist, journalist and film maker began in 1956 when he wrote his first music reviews for Swiss newspapers. From 1960 to 1965 he was editor-in-chief at Radio Zürich's department of new music. Subsequently he directed the music department of the North German television network in Hamburg (1965–8), but resigned to live as a freelance author and film-script writer at Bergamo. In 1969 he took up a lecturing post in audio-visual drama at the Munich Hochschule für Film und Fernsehen.

Pauli belongs to the generation of German-speaking music journalists who base their work on the prevailing social contexts and conditions of composition and performance; he draws largely on the doctrines of Marx and Adorno and aims in his combination of a visual medium with music at the fusion of the various media into an integrated whole. These principles were applied in Mauricio Kagel's first films under Pauli's editorial supervision in Hamburg, and later in his work on contemporary music. The films he has written and directed himself include *Webern, oder Ein Leben für die Kunst* (1971–3), *Strawinsky Weekend* (1972–3), *Klänge machen Leute: Funktion und Mechanik von Filmmusik* (1973); among his substantial radio programmes are 'Weberns Spätwerk und Goethes Metamorphosenlehre' (1962), 'Virtuosenstück oder sinfonisches Werk' (1970, on Beethoven's Violin Concerto), 'Webern, Revisited' (1973), 'Westlich von Sante Fé: über das politische Potential von Filmmusik' (1974), 'Luc Ferrari' (1974–5) and 'Filmmusik: Geschichte, Funktion und Aesthetik' (1975).

HANSPETER KRELLMANN

Paulin, Frédéric Hubert (*b* Paris, 1678; *d* Paris, 25 Jan 1761). French composer. The son of a Parisian furrier, he was orphaned at the age of ten and from 1688 until June 1693 sang as choirboy at the church of the Cimetière des Innocents under the direction of Pierre Ferrier. He then studied composition with André Campra before taking up a post as serpent player at Notre Dame, Paris, on 18 August 1698. On 30 August he was appointed to a similar post at St Honoré; he was made *maître des enfants de choeur* there on 3 July 1715 and remained at St Honoré for the rest of his life. He won some success with his compositions, notably at the Concert Spirituel, but only a few have survived. His motets are in an unmistakably French style, somewhat backward-looking but showing clear Italian influence here and there.

Paulin's son Nicolas Hubert (*b* Paris, 1713; *d* Versailles, 29 Aug 1785) worked as an organist successively at St Pierre-des-Arcis, Paris (from 20 August 1731), Ste Opportune, Paris (from 12 January 1741), and Notre Dame, Versailles (from 13 February 1743). On 21 April 1755 he was made one of the four organists of the royal chapel and in 1769 he became also *maître de clavecin* to the pages of the Musique du Roi.

WORKS

Te Deum, Paris, 6 July 1704, lost
Airs sérieux et à boire (Paris, 1705)
Ier livre de motets . . . à l'usage des dames religieuses, 1–2vv, bc (Paris, 1705)
Works perf. at Concert Spirituel, all lost: Le triomphe de Daphné (divertissement), 1728; Les titans vaincus (divertissement), 1729; Les amans constans (pastorale), 1729
Airs pubd in *Mercure de France* (1734–6, 1738)
Absterget Deus, motet, CtTB, bc, *F-LYm*

ÉRIK KOCEVAR

Paulirinus, Paulus (*b* Prague, 1413; *d* after 1471). Czech theorist. He was the author of an encyclopedic work, *Liber viginti artium*, which includes a discussion of music as one of the arts. He was also known as Paulus de Praga and as Paulus Židek, the latter suggesting that he was of Jewish origin although he may have been brought up as a Christian. He studied in Vienna and in Padua but the claim of a stay in Bologna has not yet been documented. Between 1443 and 1447 Paulirinus taught liberal arts at Prague University. From 1451 to 1455 he was involved in studies as well as political events at Kraków and Breslau. After 1455 he apparently retired to Plzeň where, between 1459 and 1463, he wrote his voluminous encyclopedia in which, besides the liberal arts, he discussed zoology, mineralogy, medicine and metaphysics. The only known copy of this large manuscript is now in the Biblioteka Jagiellónska, Kraków (*PL-Kj* 257). It consists of 359 folios covering only 15 of the 20 arts. The section on music is on ff.153–62 and is not complete. Of the five *partitiones* (1. general discussion; 2. notation; 3. musical instruments; 4. Gregorian chant and 5. liturgical prescriptions for church music) the last two are lost and the section dealing with instruments is incomplete, but does contain the earliest known reference to the virginal. Critical editions of the chapters on musical instruments and mensural notation, and some of Paulirinus's definitions, have been published by Růžena Mužíková, who has also published an authoritative account of his life (1988).

MILOŠ VELIMIROVIĆ

Paullet (*fl* ?1380–1414). French composer. He is known only from one extant work, the three-voice ballade *J'aim. Qui? Vous. Moy? Voyre douce figure* (ed. in CMM, xi/2, 1959) in the seventh fascicle of *GB-Ob* Canon.misc.213, where the ascription 'Paullet' is in a slightly later hand. He may be identical with the man variously named as Macé, Mahieu, Mahieu de St Pol or Mattheo de Sancto Paolo among the chaplains of the Ste Chapelle of the Bourges palace in 1405–14. It appears significant that fascicles V–VIII of the Oxford manuscript, generally acknowledged as its earliest layer, contain several other works by composers associated with the Bourges chapel at the same time: Guillaume Legrant, Nicolas Grenon, Pierre Fontaine, Johannes Cesaris, Jean Charité. The ballade also survives in the Cambrai fragments (*F-CA* 1328), possibly dating from the 1380s, with a virtually illegible top voice and the opening of what seems to be a different contratenor. The clever text is unusual in being a dialogue between a male and a female persona; it is complete only in the top voice, but is underlaid to the two lower voices at three points where all voices are in imitation.

PAULA HIGGINS

Paulli, Holger Simon (*b* Copenhagen, 22 Feb 1810; *d* Copenhagen, 23 Dec 1891). Danish conductor, composer

and violinist. He studied the violin with Claus Schall, conductor at the Royal Theatre, Copenhagen, and later with F.T. Wexschall, becoming an assistant in the Royal Orchestra in 1822 and a member in 1828. He never pursued a solo violin career, but always remained an enthusiastic quartet player (viola). From 1835, and permanently from 1842, he conducted the Royal Orchestra's ballet music rehearsals, and in 1849 he succeeded Wexschall as leader. He was a close collaborator with the ballet-master August Bournonville and composed music for more than ten of the latter's ballets, many of which are still in the Danish repertory (e.g. *Napoli*, 1842, composed with Helsted, Gade and Lumbye, *Conservatoriet*, 1849, *Kermessen i Brügge*, 1851, the second part of *Blomsterfesten i Genzano*, 1858). He also composed two Singspiels (1850 and 1851), a concert overture (1841), violin pieces and songs. As conductor of the Royal Orchestra from 1863 to 1883 he was in charge of opera performances and introduced to Denmark operas by Verdi (*Il trovatore*, 1865) and Wagner (*Lohengrin*, 1870, *Die Meistersinger von Nürnberg*, 1872). He was also conductor of the Caeciliaforening (1872–7) and chairman of the Chamber Music Society (1868–91). Upon the founding of the Copenhagen Conservatory in 1866, he was appointed director jointly with Gade and Hartmann.

TORBEN SCHOUSBOE

Paulus, Stephen (Harrison) (*b* Summit, NJ, 24 Aug 1949). American composer. He studied composition with Paul Fetler and Dominick Argento at the University of Minnesota (BA 1971, MA 1974, PhD 1978). From 1973 to 1984 he was one of the managing composers of the Minnesota Composers Forum, an organization which he co-founded. He has served as composer-in-residence with the Minnesota Orchestra (1983–) and the Atlanta SO (1988–), and has completed commissions for Thomas Hampson, Evelyn Lear, Håken Hagegård and many others. His awards include Guggenheim Fellowships and a Kennedy Center Friedheim prize (1988).

A prolific composer, most of Paulus's works show the influence of Romanticism, employing a melodic style that can be considered tonal. *Quartessence* (1990), described by the composer as 'lyrical with angularity attached', extends the string quartet tradition. Several other compositions reflect Paulus's spiritual ideology. A play of 'light and shadow' forms multi-layered textures in the First Violin Concerto (1987), while a mystical journey from darkness to light is suggested in the Concerto for String Quartet and Orchestra 'Three Places of Enlightenment' (1995). The Concerto for Violin, Cello and Orchestra 'The Veil of Illusion' (1994), inspired by Shakti Gawain's *Living in the Light*, draws the listener through a 'veil' of materialism into a world of spiritual truth.

Paulus's operas, four of which were commissioned and first performed by the Opera Theatre of St Louis, Missouri, focus on ordinary people in small communities who become involved in intense dramatic situations. *The Village Singer* (1979) is set in New England around 1900, *The Postman Always Rings Twice* (1982) takes place on the California Coast in 1934, and *The Woodlanders* (1985) is set in a hamlet in England in 1870. *The Woman at Otowi Crossing* (1995) tells the story of an American woman poised between ancient Pueblo Indian culture and the modern scientific world. Both eerie and poetic, the most powerful moments in the opera are the heroine's encounter with the Amerindian spirit world. Paulus's music provides clear characterizations, as well as dramatic and lyrical expressivity, which can be heard in *The Postman Always Rings Twice* (1982) his most successful opera. Coloured by a lush, symphonic score, the work combines a well-structured libretto with relentless cinematic flow.

WORKS
(*selective list*)

Op (first perf. at St Louis, MO, Op Theatre unless otherwise stated): The Village Singer (1, M.D. Browne, after M.W. Freeman), 1979; The Postman Always Rings Twice (2, C. Graham, after J.M. ELISE KIRK

Paulus Abbas de Florentia. *See* PAOLO DA FIRENZE.

Paulus de Praga. *See* PAULIRINUS, PAULUS.

Paulus de Roda [de Rhoda, de Broda] (*fl* late 15th century). Composer. Compositions are attributed to Paulus de Rhoda in the Casanatense Chansonnier of about 1480 (*I-Rc* 2856) and in the slightly later Apel manuscript (*D-LEu* Cod.1494) one in each source. The Glogauer Liederbuch of around 1475–85 (formerly *D-Bsb* Mus.40098; now in *PL-Kj*) ascribes two other pieces, both untexted, to a 'Paulus de Broda'. Although there are few stylistic similarities between these pieces and the two credited to Paulus de Roda, the attributions would all seem to refer to the same person. Bibliographical support for that view comes from the Nikolaus Leopold manuscript (*D-Mbs* Mus.3154), which transmits the piece in the Apel manuscript (with a different Latin text, suggesting the work was conceived for instrumental performance) and one of the two pieces in the Glogauer Liederbuch, though both are without attribution. Paulus was probably identifiable with the 'Pauwels van Rode' who appears in the account books of the Confraternity of Our Lady (Illustre Lieve Vrouwe Broederschap) at 's-Hertogenbosch and the Guild of Our Lady at Bergen op Zoom; this supposition is buttressed by the fact that the piece in the Casanatense source bears a Dutch incipit. Van Rode was associated with the confraternity at 's-Hertogenbosch as early as 1471, and regularly recruited musicians for it. He was the successor of record to Obrecht as choirmaster of the Guild of Our Lady at Bergen op Zoom, a position he held from 1486 (or even as early as 1484) until 1489. He composed a requiem (now lost) that the confraternity at 's-Hertogenbosch paid to have copied in 1496 or 1497, and the brotherhood there celebrated a requiem for him in 1514.

Stylistically, Paulus's four extant works form a diverse group. They range in quality from the rather perfunctory and unimaginative compositions in the Glogauer Liederbuch to the impressive canonic piece in the Apel and Leopold manuscripts. Although Paulus had a penchant for imitative writing, he also exploited non-imitative textures and often deployed voices in parallel 3rds or 10ths. He articulated formal divisions with clear cadences but rarely varied the number of voices from one section to another. The canonic *Ave, salve, gaude, vale* is exceptional in that respect; it is a large-scale work that contrasts four-voice sections with alternating duos. It has been argued that, because of stylistic similarities with that work, two anonymous, untexted pieces in the Leopold manuscript are also by Paulus.

WORKS

Ave, salve, gaude, vale, 4vv, *D-Mbs* Mus.3154, ed. in EDM, 1st ser., lxxx (1987); in *D-LEu* Cod.1494 as Vulnerasti cor meum, ed. in EDM, 1st ser., xxxiv (1975)
Carmen, 3vv, *PL-Kj* (formerly *D-Bsb* Mus.40098) and *D-Mbs* Mus.3154 (expanded version); ed. in EDM, 1st ser., iv (1936) and lxxx (1987)

MARTIN STAEHELIN/THOMAS NOBLITT

Pauly, Reinhard G(eorg) (*b* Breslau [now Wrocław], 9 Aug 1920). American musicologist of German birth. He studied at Columbia University, where he took the BA in 1942 and the MA in 1947. Continuing graduate studies at Yale, he worked with Schrade and received the MMus in 1948 and the PhD in 1956. He joined the faculty of Lewis and Clark College, Portland, Oregon, as professor of music in 1948; from 1972 until his retirement in 1989 he was director of the college's music school.

Pauly's principal fields of research are opera and the sacred music of the late 18th century, especially Michael Haydn's church music and the effects on it of Joseph II's reforms. His brief general survey of the Classical period in the Prentice-Hall History of Music gives a particularly lucid account of the transition from the Baroque to the pre-Classical era. He was general editor of Amadeus Press from its origins in 1987 until 1998; he was also active as a translator for many of the Press's publications.

PAULA MORGAN

Pauly [Pauly-Dresden; née Pollak], **Rose** (*b* Eperjeske, 15 March 1894; *d* Kfar Shmaryahn, nr Tel-Aviv, 14 Dec 1975). Hungarian soprano. She studied in Vienna with Rosa Papier-Paumgartner, making her début during the 1917–18 season at Hamburg in a minor role in *Martha*. After singing at Gera and Karlsruhe, she went to Cologne, where she sang the title role in the German première of *Kát'a Kabanová* in 1922. She made her first appearance at the Vienna Staatsoper in 1923, singing Sieglinde, the Empress (*Frau ohne Schatten*) and Rachel (*La Juive*); in 1931 she created Agave in Wellesz's *Die Bakchantinnen*. Engaged at the Kroll Oper, Berlin (1927–31), she sang Leonore, Donna Anna, Senta, Carmen and Maria in Krenek's *Der Diktator*. At the Berlin Staatsoper she was

acclaimed as Marie (*Wozzeck*), Jenůfa and Electra. She appeared at Salzburg as the Dyer's Wife (1933) and as Electra (1934–7), the role of her débuts in 1938 at Covent Garden (where Newman praised her dramatic intensity), and at the Metropolitan. Pauly was a most versatile singer, with a rich, powerful voice, and excelled as Strauss's Electra, Salome and the Dyer's Wife. She made few recordings, but extracts from *Elektra* give an idea of her compelling interpretation of the title role. (*GV*, L. Riemens; J.P. Kenyon and R. Vegeto)

LEO RIEMENS/ELIZABETH FORBES

Paumann, Conrad (*b* Nuremberg, *c*1410; *d* Munich, 24 Jan 1473). German organist, lutenist and composer. He was born blind, probably the son of an established craftsman family in Nuremberg, a free imperial town with a flourishing cultural life. The patrician Ulrich Grundherr, and from 1423 onwards his son Paul Grundherr, sponsored the talented but heavily handicapped young musician. Nothing specific, however, is known about his musical training. From at least as early as 1446 Paumann occupied the post of organist at St Sebaldus in Nuremberg, where the main organ had been built by Heinrich Traxdorff of Mainz in 1440–41. In 1446 he became engaged to Margarete Weichsler of Nuremberg. He undertook at that time not to leave the town without the permission of the town council. He was appointed official town organist in 1447.

He had by then already acquired a reputation as Germany's foremost organist. Hans Rosenplüt's poem eulogizing the town of Nuremberg (1447) praises Paumann as 'master of all masters', instrumentalist and composer as well. In 1450 Paumann broke his promise and left Nuremberg secretly for Munich, where he accepted a post as court organist of Duke Albrecht III of Bavaria. He had a salary and a house in Munich. Only through the intervention of the duchess, Anna, in 1451, was he absolved from his Nuremberg civic duties. He remained in Munich for the rest of his life, from 1460 serving under Duke Sigismund, and from 1467 under Albrecht IV.

From 1450 onwards Paumann visited many towns and countries, but only a few of his travels are documented. In 1454 at Landshut he played various instruments before Philip the Good of Burgundy. Travelling through Italy in 1470, the 'cieco miracoloso' declined attractive offers from the courts at Milan and Naples. At the court of the Gonzagas in Mantua, where his playing on various instruments caused a sensation, he was knighted and received valuable presents from princes. In 1471 he visited the Imperial Diet at Regensburg, and played the organ of the Schottenkloster before Emperor Friedrich III, the German princes of his suite, and a large crowd of notable listeners. As an authority on the organ he was often asked to examine new instruments (e.g. Salzburg, before 1464; Nördlingen, 1466 and 1472).

Paumann was buried at the south side of the Munich Frauenkirche where an epitaph, now inside the church below the loft, shows him with his instruments: portable organ, lute, recorder, harp and fiddle (see illustration); the inscription reads 'Anno 1473, on the evening of St Paul's conversion died and was here buried the most ingenious master of all instruments and music, cunrad pauman, knight, born blind at Nuremberg, God have mercy upon him'. His son Paul Paumann (*b* Nuremberg; *d* Munich, 1517), who had studied with his father, succeeded him at the Munich court of Albrecht IV. Besides him, only Sebald Grave of Nördlingen is known as a direct pupil of Conrad, but the number of his students must have been large. The organ pieces of the fourth fascicle of the Lochamer Liederbuch, and also the bulk of the compositions in the Buxheim Organbook, can be identified as products of the Nuremberg and Munich Paumann schools.

Conrad Paumann: detail from his epitaph, 1473 (Frauenkirche, Munich)

Only a few of Paumann's works have survived, in four manuscripts from these two schools. Presumably Paumann's creative output consisted mostly of improvisations rather than worked-out compositions. Since his blindness prohibited him from writing down his own compositions, they could be recorded only from dictation. For this reason Virdung's attribution to him of the invention of German lute tablature (*Musica getutscht*, 1511) seems quite plausible, for it would have been particularly suitable for dictating music. The transmission of the *Fundamenta* is especially complicated because the extant sources reflect various stages of Paumann's didactic practices. The Buxheim Organbook contains two further, anonymous *Fundamenta* (ff.106*v*–8*v*, 124*v*–42*v*) which include concordances with those listed below.

Despite his very limited surviving output, Paumann must be considered the leading figure in 15th-century German instrumental music, known internationally not only as a virtuoso but also as a composer. Even in the 17th and 18th centuries he was still remembered as 'the very best organist' (H. Canisius: *Lectiones antiquae*, 1601–4) and 'in all musical arts the most expert and the most famous' (J. Staindl: *Chronicon generale*, 1763). His sole surviving vocal work, with its elegant melodic declamation and sophisticated contrapuntal texture, is clearly superior to the polyphonic songs of Paumann's German contemporaries and suggests his familiarity with Franco-Flemish music. All the Lochamer Liederbuch, Schedel Liederbuch and Buxheim Organbook transmit Franco-Flemish repertories among their German material. Paumann's organ works, settings of secular cantus firmi, are obviously the first of their kind to reflect the stylistic

influence of the Burgundian chanson, especially with respect to the skilful handling of the three-part texture.

Characteristic of his organ style is the balancing of a highly ornamented discant, often using standard virtuoso figuration, and a solid tenor-countertenor basis. He deserves credit for refining the practice of the *Fundamentum* as a method of teaching organists. Though his *Fundamenta,* like earlier examples, still rely on formulae for their ornamental discants to given tenor patterns, they cease to be improvisation and become composition in the mature three-part pieces (e.g. no.5).

CHRISTOPH WOLFF

Paumgartner, Bernhard (*b* Vienna, 14 Nov 1887; *d* Salzburg, 27 July 1971). Austrian musicologist, conductor and composer. His father, Hans Paumgartner, was a writer on music and a friend of Bruckner, and his mother was Rosa Papier, a singer at the Court Opera. At an early age Paumgartner came into contact with the giants of Viennese music, including Bruckner, Wolf and Mahler. After a secondary education in the humanities he first studied law, in which he took the doctorate in 1911. He had already been an active musician (as conductor, horn-player, violinist and pianist) at school, and now studied musicology privately with Adler and was particularly influenced by Mandyczewski. His first professional appointment was as répétiteur at the Vienna Opera (1911–12). During World War I he was able to realize a project of his own: based in a military department called 'Musikhistorische Zentrale', he collected the songs of soldiers in the imperial multilingual army. In the course of this work, the results of which are lost, Paumgartner came into contact with Bartók and Kodály.

Paumgartner was subsequently director of the Salzburg Mozarteum (1917–38, 1945–59) and during his tenure this private institute was raised to the status of a state academy (1922) and Hochschule (1953). He found time outside his administrative work to run the conducting department and to be professor of music theory and history; one of his pupils was Karajan. Paumgartner initiated the summer courses that took place at the Mozarteum regularly from 1930, and in 1952 he founded the Camerata Academica, composed of both teachers and pupils, with which he made numerous concert tours and gramophone recordings.

Paumgartner was closely connected with the Salzburg Festival from its first year (1920), when he wrote and conducted music for Hofmannsthal's mystery play *Jedermann*; he composed music for numerous plays, organized performances of unfamiliar works by Mozart, made translations and arrangements, conducted orchestral concerts, serenades, church music, chamber concerts, and as an organizer was a major influence on the character of the festivals. In 1960 he became president of the Salzburg Festival, an office he retained until his death.

Paumgartner's first book was his biography of Mozart (1927), which was translated into many languages and was substantially expanded in its sixth edition; in collaboration with Otto Erich Deutsch, he published the letters of Leopold Mozart to his daughter (1936). He also wrote biographies of Schubert (1943) and Bach (1950) and studies on instrumental ensemble and the town of Salzburg. Many of his 140 published articles concern problems of historical performing practice. During World War II he did research in Florence on the history of musical relations between Italy and Austria, subsequently published in contributions to the first edition of *Die Musik in Geschichte und Gegenwart* and other publications. From 1923 his research was concentrated on Mozart.

Paumgartner edited a considerable amount of music for publication, mostly works of the Classical Viennese and Italian Baroque schools. His adaptation of Mozart's *Idomeneo* was performed in 1956 at the Salzburg Festival, and his version of Cavalieri's *Rappresentatione di Anima et di Corpo* was heard in a series of festival performances from 1968. His compositions include the opera *Die Höhle von Salamanca* (text after Cervantes, Dresden, 1923), the comic opera *Rossini in Neapel* (text by Hans Adler, Zürich, 1935), music for the stage, orchestral works, ballets and songs. Paumgartner was also a distinguished translator of operas (*Idomeneo*) and plays (by Goldoni, Molière and Beaumarchais).

RUDOLF KLEIN

Paur, Emil (*b* Czernowitz [now Chernovtsy, Ukraine], 29 Aug 1855; *d* Frýdek-Místek, 7 June 1932). Austrian conductor, violinist and composer. After early studies with his father, the director of the Vienna Musikverein, in 1886 he entered the Vienna Conservatory, studying composition with Dessoff and violin with Hellmesberger. He became a member of the court orchestra in 1870, and from 1876 held conducting posts in Kassel, Königsberg, the Mannheim Hofoper (1880) and the Leipzig Stadttheater (1891). In 1893 he went to the USA, succeeding Nikisch as conductor of the Boston SO.

In 1898 Paur was elected music director of the New York Philharmonic Society in succession to Seidl, and in 1899 he succeeded Dvořák as director of the National Conservatory of Music in New York. He left both posts in 1902, returning first to Austria and then touring as guest conductor with many leading European orchestras. He conducted German opera at Covent Garden (1900) and in Madrid (1903) as well as in Berlin. His period as conductor of the Pittsburgh Orchestra (1904–10) raised it to international standards and introduced much new European and American music including works by Smetana, Goldmark, Rubinstein, MacDowell and Amy Beach; Paur's own symphony *In der Natur* was performed in 1909. Upon returning to Europe, Paur succeeded Carl Muck as director of the Berlin Opera (1912) but resigned after a few months, remaining in Berlin as a concert conductor. His other compositions include a Piano Concerto in A (1909), a Violin Concerto, and chamber music.

J.A. FULLER MAITLAND/MALCOLM MILLER

Pausa (i) (Lat.). In 15th-century keyboard music, a form of conclusion consisting of formulaic counterpoint over the long-held final note (*ultima*) of a section of the cantus firmus, before reaching a closing consonance. Octaves and 5ths frequently constitute the salient features of the figuration. This procedure was a part of organ-playing practice in the 15th century, the most extensive collections of examples being in Conrad Paumann's *Fundamentum organisandi* of 1452 (*D-Bsb* Mus.ms. 40613) and from his circle of pupils (*D-Mbs cim.3526*), and served to give structure to the course of the musical treatment of the cantus firmus by providing tonal resting places.

See also ORGAN POINT.

KLAUS ARINGER

Pausa (ii) (It., Sp.). *See* FERMATA, PAUSE and REST.

Pausa lunga. *See* LUNGA.

Pause. The sign of the corona or point surmounted by a semicircle showing the end of a phrase or indicating the prolongation of a note or rest beyond its usual value (often called FERMATA in the USA). In French, *pause* means a semibreve rest; in German, *Pause* means any rest.

Historically and in the most general sense, the pause is a sign for one part to pay attention to the others rather than to the beat, and to wait until everybody is ready before releasing or going on to the next note. It is used to mark the ends of phrases, sections or whole pieces, as in chorales, da capo arias, variations, etc; in canons only one of whose parts is written down, it may show where a leading part is to end or it may direct one part to hold and wait for the rest to catch up; in music for a soloist, a pause in the solo part may indicate that an improvised cadenza is called for, while the corresponding pauses in the accompanying parts show that they are to wait for the soloist to finish; in any music it may indicate a suspension of the beat, as in the allegro theme of Beethoven's op.111 or at high notes for the tenor in Italian operas. 14th-century examples of the pause may be found in Jo Cuvelier: *Se galass* and Franciscus: *De Narcissus* (CMM, liii/1(1970), 33 and 51). *See also* ORGAN POINT.

DAVID FULLER

Pautza, Sabin (*b* Calnic, nr Reşiţa, 8 Feb 1943). Romanian composer and conductor, active in the USA. After studying with Ciortea, Ion Dumitrescu, Negrea, Niculescu and Stroe at the Bucharest Academy (1960–65), he received a bursary to study at the Academia Musicale Chigiana in Siena with Donatoni and Maderna. Between 1966 and 1984 Pautza taught at the Iaşi Academy, then took the opportunity provided by a further study grant to leave Romania for the USA, where he found work as a lecturer at the Altan Institute, New York University (1985–8). In 1988 he became musical director and conductor of the Plainfield Symphony, and he has developed a successful

conducting career in Europe and the USA. Pautza's work can be split into his Romanian and American periods. In the former he extended his musical language through improvisation, modal-chromatic techniques and the assimilation of elements of Romanian popular song. In the latter he has formed a synthesis of avant-garde influences which tends towards a simplicity of material. His scores, rich in substance and tension, characteristically explore the natural resonance of sound.

OCTAVIAN COSMA

Pauwels, Jean-Englebert (*b* Brussels, 24, 26 or 29 Nov 1768; *d* Brussels, 3/4 June 1804). Flemish composer, violinist and conductor. His father, Jean Pauwels, was a bass singer and his elder brother, Jean-Joseph Pauwels, was a bass and a violinist at the royal chapel of the Austrian governor of the southern Netherlands. Jean-Englebert was a chorister at the royal chapel by the end of 1780; there he studied the violin with van Maldere and composition with Ignaz Vitzthumb. In 1788 he went to Paris and continued his composition studies with Le Sueur. He played the violin in the Théâtre Feydeau orchestra, and in 1790 became orchestra director in the Strasbourg Theatre. By 1791 or 1792 he was playing first violin in the Brussels Théâtre de la Monnaie where, in 1794, he became director of the orchestra. With Lambert Godecharle he founded the Société Concert des Grands in 1799; this became the best concert organization in Brussels before the establishment of the Conservatory concerts. According to Gregoir, Pauwels was not only a brilliant conductor but a remarkable violinist who became the point of departure for the Belgian violin school, whose members later included Vieuxtemps, C.-A. de Bériot and Alexandre Artôt.

Pauwel's music has not been studied extensively, but his contemporaries evidently thought highly of both his instrumental music and his stage works. According to Vander Linden, his instrumental pieces display graceful virtuosity and harmonic compactness, and his chamber music avoids theatrical effects. Fétis commented that, in spite of many strong sections and good musical organization, Pauwels's operas are hindered by their weak librettos.

Marie-Anne-Jeanne (or Jeanne-Catherine) Pauwels (1795–1839), a pianist and composer active in Brussels, was apparently unrelated to this family.

WORKS
printed works published in Brussels, unless otherwise indicated

STAGE
all first performed at Brussels, Théâtre de la Monnaie

La maisonnette dans les bois (oc, 1), 3 Aug 1796

L'auteur malgré lui (oc, 1, Claparède), 2 Nov 1801

PHILIPPE MERCIER

Pavan [pavane, paven, pavin] (It. *pavana*, *padovana*; Fr. *pavane*; Ger. *Paduana*). A court dance of the 16th and early 17th centuries. There are hundreds of examples in the contemporary sources of consort, keyboard and lute music, among them some of the most inventive and profound instrumental compositions of the late Renaissance period.

The pavan was almost certainly of Italian origin. The earliest surviving source for it, Dalza's *Intabulatura de lauto* printed by Petrucci in Venice in 1508, contains five *pavane alla venetiana* and four *pavane alla ferrarese*, collectively described on the title-page as *padoane diverse*; both 'pavana' and 'padoana' are adjectives meaning 'of Padua', so the town presumably gave the dance its name. Some scholars, however, have suggested a derivation from the Spanish *pavón* (peacock) based on a supposed resemblance between the dignified movements of the dance and the spread of a peacock's tail.

The pavan was similar choreographically to the 15th-century bassadanza; it was sedate in character and was often used as an introductory, processional dance. A useful source of information on the dance is Arbeau, who gave the earliest account (1588) of the basic choreography:

> The pavane is easy to dance, consisting merely of two single steps [*simples*] and one double step [*double*] forward, [followed by] two single steps and one double step backward. It is played in duple time [*mesure binaire*]; note that the forward steps begin on the left foot and the backward steps begin on the right foot.

As suitable music for the pavan, Arbeau gave a four-part setting of the popular song *Belle qui tiens ma vie* (later printed in Morley's *First Booke of Consort Lessons*, 1599, as *La coranta*) to be accompanied throughout by a repetitive minim–crotchet–crotchet drum rhythm (see illustration). He remarked that 'if you wish, you can have it sung or played in four-part harmony without dancing it'; he suggested that it might be played on 'viols, spinets, transverse flutes and flutes with nine holes, haut boys', and noted that the pavan was often used as a wedding march or 'when musicians head a procession of … some notable guild'. A more complex choreography was given by Fabritio Caroso (*Il ballarino*, 1581), apparently intended for professional dancers.

As Arbeau prescribed, the music of a pavan is almost invariably in duple metre (two or four beats to the bar in

'Belle qui tiens ma vie', suggested by Arbeau as suitable music for the pavan, from his 'Orchésographie' (1588)

modern transcriptions) and usually consists of two, three or four sections of regular metrical structure, each repeated. Morley described the pavan as

> a kind of staid music, ordained for grave dancing, and most commonly made of three strains, whereof every strain is played or sung twice; a strain they make to contain 8, 12, or 16 semibreves as they list, yet fewer than eight I have not seen in any pavan. In this you may not so much insist in following the point as in a fantasy, but it shall be enough to touch it once and so away to some close. Also in this you must cast your music by four, so that if you keep that rule it is no matter how many fours you put in your strain for it will fall out well enough in the end.

Not all composers followed Morley's rule of 'casting by four', that is, making the length of each strain a multiple of four semibreves. In the early 17th century asymmetrical phrase structures were particularly common, as, for example, in a keyboard pavan by Gibbons (ed. in MB, xx, 1962, no.16), where the number of semibreves in the three strains, each having a varied repeat, is 14, 13; 14, 14; 19, 20.

In both printed and manuscript sources for the 16th-century dance, the pavan frequently appeared as the first dance in a group, to be followed by one or more after-dances in faster triple metre; often these after-dances, or at least the first, were based on the melodic or harmonic material of the pavan. Italian sources generally labelled such after-dances 'saltarello', as in Dalza's collection, where the editor apparently thought the grouping of thematically related dances in the order pavan–saltarello–piva important enough to be mentioned in the preface ('tutte le pavane hanno el suo saltarello e piva'). Such widely distributed lute collections as G.A. Casteliono's *Intabolatura de leuto de diversi autori* (1536) and the joint *Intabulatura ... del Francesco da Milano et ... Pietro Paolo Borrono* (1546) contain longer suite-like groups (called 'ballo' by Casteliono) in which the opening pavan is followed by three saltarellos, the first of which is melodically similar to the pavan. The most usual pairing later in the 16th century, particularly in northern Europe, was that of pavan and galliard, but it is probably true to say that most existing pavans are not linked to any other dance. Other early sources for the pavan include Hans Judenkünig's *Ain schone kunstliche Underweisung* (1523), containing one *Pavana alla veneciana* taken from Dalza; the *Dixhuit basses dances* for lute issued by the Parisian printer Attaingnant in 1530; and Luis de Milán's vihuela tablature *El maestro* (1536, containing some triple-time pavans). Some tempo indications in Milán's publication and in Alonso Mudarra's *Tres libros de musica en cifras para vihuela* (1546) suggest that the pavan was a fast or moderately fast dance. There is no doubt that, like many other dances, it became slower as time went on.

Early Italian keyboard dances, all anonymous, survive in a small Venetian manuscript of about 1530 (*I-Vnm* ital.iv.1227, ed. K. Jeppesen, *Balli antichi veneziani*, Copenhagen, 1962), with a linked pavan and saltarello, and in two fascicles from the collection at Castell'Arquato (*I-CARcc*) dating from about 1540 (ed. H.C. Slim, CEKM, xxxvii/1, 1975). The latter include 15 pavans each followed by a 'saltarello de la pavana', the two dances normally consisting of two variations on the same harmonic ground (*passamezzo moderno*, romanesca or *passamezzo antico*). The keyboard writing of these pieces is uncomplicated, with a decorative single line in the right hand supported by reiterative left-hand chords. Similar textures are employed in the earliest Italian publication of keyboard dances, the *Intabolatura nova di varie sorte de balli* issued by Gardano (1551). The single pavan in this collection, *Fusi pavana piana*, has sections of four and seven breves in length, each with varied repeat, a structure that distinguishes it from the tripartite *passamezzo moderno* and *antico* settings in the same book.

Solo instruments at this period would probably not have been suitable for accompanying dancing; the dances published for them were decorated versions of ensemble pieces, comparable in nature and function to the contemporary intabulations of chansons and motets. Surviving ensemble settings come mainly from France and the Low Countries until about 1570, and are generally in a simple, homophonic style with the tune in the top part. Lute and keyboard arrangements are sometimes elaborately 'coloured', and display idiomatic figuration of a kind often associated with later instrumental styles. Ex.1 shows the first strain of a pavan for four-part ensemble (superius only) from Attaingnant's *Six gaillardes et six pavanes* (1529–30), the first few bars of a keyboard pavan modelled on the same dance (upper staff only) from Attaingnant's *Quatorze gaillardes neuf pavennes* (1531) and the first few bars of the *Gaillarde sur la pavane* (upper staff) which follows immediately in the latter Attaingnant print.

Of the relatively few Italian ensemble dances extant from before 1560 (listed in Cunningham), about a dozen are of the pavan type, though none has the unambiguous title 'Pavana'. *La paduana del re* (in *GB-Lbl* Roy.App.59–62) is a true pavan with strains of 16, eight and eight

breves. On the other hand, the *Cortesa padoana* in Francesco Bendusi's *Opera nova de balli ... a quatro* (1553) is an example of the triple-time PADOANA. By the mid-16th century in Italy the pavan was already giving place to the passamezzo, a similar dance in which the steps were more lively (according to Arbeau), with music usually constructed over a ground bass, either the *passamezzo antico* or the *passamezzo moderno*. In northern Europe the pavan remained popular, and music for it was adapted from many sources. For example, Susato's *Het derde musyck boexken* (1551) includes a four-voice pavan in three sections derived from Josquin's chanson *Mille regretz* and another based on Janequin's *La bataille de Marignan*.

The earliest surviving English pavans are probably the two in *GB-Lbl* Roy.App.58 (*c*1540), *The Emperorse Pavyn* (in triple time) and *Kyng Harry the VIIIth Pavyn* (ed. in MB, lxvi, 1995, nos.39, 41), both apparently three-part keyboard reductions of four-part consort pieces. The early Elizabethan manuscripts *GB-Lbl* Roy.App.74–6 (dances ed. in MB, xliv, 1979, nos.76–111) contain several consort pavans in a simple, homophonic style similar to that of contemporary collections on the Continent. Towards the end of the century, when the pavan as a dance was dying out, it was given a new significance as a musical form by English composers. Ex.2 shows the first strain of an anonymous pavan from the Dublin Virginal Manuscript (*IRL-Dtc*, *c*1570) in which the texture is elaborated by true counterpoint rather than by decoration of a homophonic original. This technique was greatly extended by Byrd, whose ten keyboard pavans in *My Ladye Nevell's Booke* (1591) display a degree of craftsmanship and an emotional weight unparalleled in any earlier source. Until about 1625 the pavan continued to attract English composers, and examples for lute, keyboard and ensemble abound. Arrangements from one medium to another still occurred, but generally keyboard and lute examples existed in their own right, often exploiting the technique of the instruments to a considerable degree. Pavans for solo instruments normally included written-out varied repeat sections, unlike those for 'whole consort' which tended to be more restrained.

Many pavans have descriptive titles, often referring to technical features of the music, such as Byrd's *Pavan: Canon 2 in 1*, William Tisdale's *Pavana chromatica*, and the *Four-Note Pavan* by Alfonso Ferrabosco (ii), the upper voice of which consists entirely of repetitions of a four-note motif at different pitches and in different rhythms. Pieces called *Passamezzo Pavan* and *Quadran Pavan* are sets of variations on the *passamezzo antico* and *passamezzo moderno* respectively, and thus lack the usual tripartite structure. Other titles are indicative of mood, usually rather sombre, as suggested by Morley's description, such as Bull's *Melancholy Pavan*, Philips's *Pavana dolorosa* and Holborne's *Pavan: The Funerals*. Some pavans were apparently written in memory of recently deceased people, like those by Byrd and Gibbons in *Parthenia* (1612–13) dedicated to the Earl of Salisbury (*d* May 1612), but this is not true of all named pavans.

Relatively few English pavans were printed, but among the publications that include them are John Dowland's *Lachrimae, or Seaven Teares Figured in Seaven Passionate Pavans ... for the Lute, Viols, or Violins, in Five Parts* (1604), Robert Dowland's *Varietie of Lute-Lessons* (1610), and the keyboard book *Parthenia*. Some pavans arranged for mixed consort were included in Morley's *First Booke of Consort Lessons* (1599). Perhaps because of the influence of such expatriate English composers as William Brade and Thomas Simpson, the pavan regained favour in 17th-century Germany as the first movement of consort suites by Peuerl, Schein, Scheidt and others. In Schein's *Banchetto musicale* (1617), for example, all the suites open with movements entitled *Padovana*.

In France, following an isolated keyboard pavan by Jacques Cellier of Reims, dated 1594 (see Ledbetter, frontispiece), there is a handful of examples written by

harpsichordists, among which Chambonnières' *Pavane L'entretien des dieux* and Louis Couperin's only pavan, in F♯ minor, are works of intense eloquence. 17th-century English examples include ten pavans by Tomkins that bear dates between 1647 and 1654, but these belong essentially to the virginalist tradition. The pavans that open some of Locke's suites, and the few independent examples by Purcell, are scored for two or three violins, bass viol and continuo, and retain the structure of three repeated sections. Such examples were becoming rare, however; Thomas Mace (*Musick's Monument*, 1676) defined both the form and its decline: '*Pavines*, are *Lessons* of 2, 3 or 4 *Strains*, very *Grave*, and *Sober*; *Full of Art*, and *Profundity*, but seldom us'd, in These our *Light Days*'.

Like other dance forms of the Renaissance and Baroque periods, the pavan has occasionally been reinterpreted by more recent composers. Delibes (*Airs de danse*, 1882) and Warlock (*Capriol Suite*, 1926) both composed pavans that quote Arbeau's music. Also based on a pre-existing work (from *Parthenia*) is Peter Maxwell Davies's *St Thomas Wake: Foxtrot for Orchestra on a Pavan by John Bull* (1969). The same composer's *Sir Charles* [Groves] *his Pavan* (1992) revives the idea of a pavan as a memorial piece.

Pavans by Fauré (op.50, 1887) and Ravel (*Pavane pour une infante défunte*, 1899; 'Pavane de la belle au bois dormant' from *Ma mère l'oye*, 1908–10) are justly celebrated, and all three exist in alternative scorings made by the composers. But the delicate gravity of Howells's 'De la Mare's Pavane' from *Lambert's Clavichord* (1926–7) could not be effectively transferred to any other instrument. This piece is very much in the Elizabethan spirit, 'cast by four' with a modest use of varied repetition and an undercurrent of polyphony; the overall form, however, is *ABA* rather than *ABC*. 20th-century pavans designed for actual dancing include the 'Pavane of the Sons of the Morning' in Vaughan Williams's *Job* (1930), and the Pavane in Britten's *Gloriana* (1953), which is the first of a group of dances accompanied by an onstage orchestra and woven into the dramatic action.

ALAN BROWN

Pavaniglia (It.). An instrumental dance which originated in the 16th century and became popular in Italy during the first half of the 17th. Its music had the fairly fixed melodic and harmonic structure shown in the lute version in ex.1. The chord progression is similar to that used in the earlier type of folia (*see* FOLIA, ex.2), and both are related to one of the main chordal schemes of the Renaissance dance style (*see* GROUND, ex.1*c*). Occasionally the VII chord in ex.1 is preceded or interrupted by IV, or the i chord in the ninth bar replaced by III. Cesare Negri (*Le gratie d'amore*, 1602) provided two examples, one like ex.1 entitled *Pavaniglia alla romana* and another, entitled *Pavaniglia all'uso di Milano*, which has the same harmonic scheme but a different melody moving generally a 3rd higher.

The earliest pavaniglias are those of Caroso (1581 and 1600) and Negri, both of whom gave the choreography for the dance together with the lute accompaniment. Most 17th-century examples are in Italian tablatures for the five-course Spanish guitar (beginning with Girolamo Montesardo in 1606), where they are sometimes followed by a *rotta della pavaniglia* in triple metre. Other early 17th-century examples of the pavaniglia include several for lute (the Bentivoglio manuscript at *US-SFsc* and *I-Fn* Magl.XIX 105 and 179), for discant and bass (*I-Bc* Q34) and for keyboard (*I-Fn* Magl.XIX 115 and 138 and the Chigi manuscripts in *Rvat*, ed. in CEKM, xxxii/2, 1968); there is also an example for instrumental ensemble by Gasparo Zanetti (1645). In addition, one source (*I-Fn* Magl.XIX 143) gives a text with the instruction 'parole sopra la pavaniglia'.

Several sources refer to the pavaniglia as a Spanish dance, and a relationship to the pavan is indicated by the fact that the same music occurs in Bull's *Spanish Pavan* in the Fitzwilliam Virginal Book, the pieces called *Pavane d'Espagne* by Arbeau (1588), Michael Praetorius (1612), Nicolas Vallet (1615) and Adriaen Valerius (1626), the

Ex.1 Fabritio Caroso: *Il ballarino* (Venice, 1581), *Pavaniglia* (upper- and lower-case Roman numerals indicate major and minor triads)

Pavana hispanica written jointly by Sweelinck and Scheidt, and two sets of *diferencias* on the *Pavana italiana* by Antonio de Cabezón. Most of the pavaniglia pieces are single statements of the music of ex.1, whereas many of the above pavans consist of elaborate sets of variations on the same music. English lute manuscripts of the late 16th and 17th centuries contain numerous examples of the 'Spanish Pavan', whose tune was sometimes used for singing broadside ballads. The beginning of the melody of ex.1 has a resemblance to the opening phrase of the chanson *Jay mis mon coeur*, which first appeared in Kotter's keyboard tablature of 1513.

RICHARD HUDSON

Pavarotti, Luciano (*b* Modena, 12 Oct 1935). Italian tenor. He studied in Modena with Pola and in Mantua with Campogalliani, making his début in 1961 at Reggio nell'Emilia as Rodolfo (*La bohème*) and quickly making an impression for his eloquent lyrical singing. In 1963 he sang Edgardo (*Lucia*) in Amsterdam and made his Covent Garden début as Rodolfo, returning as Alfredo, Elvino, Tonio (*Fille du régiment*), Gustavus III, Cavaradossi, Rodolfo (*Luisa Miller*), Radames and Nemorino (1990). In 1964 he sang Idamantes at Glyndebourne; in 1965 he made his American début at Miami, toured Australia with the Sutherland-Williams company, as Edgardo, and made his La Scala début as Rodolfo, returning for the Duke, Bellini's Tebaldo and Massenet's Des Grieux. At La Scala he also sang in a remarkable performance of Verdi's Requiem to mark the centenary of Toscanini's birth. He first sang at San Francisco in 1967 as Rodolfo, and the following year made his Metropolitan début, again as Rodolfo, later singing Manrico, Fernand (*La favorite*), Ernani, Cavaradossi, Idomeneus, Arturo (*I puritani*), Radames, Rodolfo (*Luisa Miller*, 1991) and the Italian Singer (*Der Rosenkavalier*).

Pavarotti had a bright, incisive tenor with a typically free, open, Italianate production and penetrating high notes. He made it a practice never to sing beyond his own means; and even when he tackled more dramatic roles such as Otello late in his career he never forced his fundamentally lyric tenor. Above all he had a directness of manner that went straight to his listeners' hearts. His voice and style were ideally suited to Donizetti, the early and middle-period works of Verdi (he was particularly admired as Alfredo and Gustavus III) and to Puccini's Rodolfo and Cavaradossi. His impassioned singing of Calaf's 'Nessun dorma' (*Turandot*) turned the aria into a bestseller, though in this role and some of the other heavier parts he essayed he arguably lacked the true *spinto* power.

Pavarotti's art is liberally preserved on disc and video, which give a true reflection of his voice and personality: no opera singer has understood better than he the new power of the media. He has recorded most of his major roles, some of them twice, and was one of the 'Three Tenor' combination (the others were Domingo and Carreras) of the 1990s that brought opera to an unprecedentedly wide public. His genial looks and generous, outgoing personality were ideally suited to that kind of phenomenon; indeed, it might well have not existed without his enthusiastic participation. Despite his enormous popular acclaim, Pavarotti has been anxious to preserve his reputation as a serious artist, and his voice retained its colour and vibrancy into his 60s.

ALAN BLYTH, STANLEY SADIE

Paven. *See* PAVAN.

Pavesi, Stefano (*b* Casaletto Vaprio, nr Crema, 22 Jan 1779; *d* Crema, 28 July 1850). Italian composer. From 1795 to 1797 he studied with Piccinni in Naples. In 1797 he entered the Conservatorio di S Onofrio, just before it became part of S Maria di Loreto, and studied there until 1799 under Fenaroli. Expelled in that year of revolution because of his republican and Francophile ideals, he was deported to Marseilles and then went to Dijon, where he enrolled in the Italian regiment of Napoleon's army as a cimbasso player and took part in the Italian campaign. He left the army at Crema and completed his musical studies under Giuseppe Gazzaniga, who was *maestro di cappella* of the cathedral there. In 1803 in Venice, thanks to the protection of Gazzaniga, he staged his opera *Un avvertimento ai gelosi*, which in the next 20 years was followed by nearly 70 more, both *seria* and *buffa*. In 1818, he succeeded Gazzaniga as *maestro di cappella* at Crema and held the post until his death. From 1826 to 1830 he spent six months of each year as music director of the Hofoper in Vienna, succeeding Salieri.

Among the many opera composers who flourished in Italy between the last great masters of the 18th century and the advent of Rossini, Pavesi stands out for his strikingly individual musical personality. During the Napoleonic period the *Allgemeine musikalische Zeitung* acclaimed Pavesi as one of the five best composers in Italy. He had an original and lively melodic invention, supported by a mastery of the orchestra and polished craftsmanship that were perhaps learnt from Gazzaniga, a musician who had formed his style from a complex variety of European sources. His early symphonies are similar in style to late Haydn and Mozart; his best works are characterized by sparkling orchestration, unusual phrase structure, modal interchange and extensive

development sections. Pavesi's opera *Ser Marcantonio* (1810), similar in subject to Donizetti's *Don Pasquale*, had 54 successive performances at La Scala and was taken up by the principal opera houses of Italy. *La fiera* (Florence, 1804) and *La festa della rosa* (Venice, 1808) also enjoyed great success, as did his last opera, *Fenella, ovvero La muta di Portici* (Venice, 1831).

WORKS

*c*68 operas, incl. La festa della rosa (G. Rossi), Venice, Fenice, 21 May 1808, *I-Mr**; Ser Marcantonio (oc, A. Anelli), Milan, Scala, 26 Sept 1810, *Fc*, *Mr*; Fenella, ovvero La muta di Portici (3, Rossi, after Scribe), Venice, Fenice, 5 Feb 1831, *Mr**

Other works: 1 orat; at least 5 cants.; songs, incl. Il Parnasso italiano (texts by P. Metastasio); masses; other sacred works, incl. Salmi, cantici ed inni cristiani del Conte L. Tadini posti in musica popolare dai maestri G. Gazzaniga e S. Pavesi (Crema, 1818); several syms., incl. C, Venice, 1805, B♭, ?Crema, 1818 (both pubd New York, 1982); 6 cembalo sonatas, *Nc*

Pavlenko, Sergey Vasil'yevich (*b* Sumï, Ukraine, 5 May 1952). Russian composer. He attended the Moscow Conservatory where he studied composition with Sidel'nikov and orchestration with Denisov (1972–7) and then undertook postgraduate studies there (1977–80). He then worked as music director at Yury Lyubimov's Taganka Theatre in Moscow (1976–82) and since 1982 has worked as a composer. He won first prize at the International Competition for works written for a saxophone ensemble (1988, Paris), and first at the 'Musique sacrée' competition (1995, Fribourg).

Pavlenko writes principally for instrumental forces and he rarely has recourse to the human voice. He adheres to the type of composition-drama that was widespread in Soviet music, striving to embody in a work the uniqueness of his ideas, a uniqueness which is often related to the character of the forces he chooses (in particular his predilection for wind instruments and especially saxophones) and to the contrast between the musical material and the manner of the development in large-scale forms. His attraction to symphonic forms is combined with a neo-Romantic language (Symphony no.4); in his chamber works – and particularly in the Symphony no.3 'Symfoniya prichetov' ('Symphony of Lamentations'), written for the 100th anniversary of Stravinsky's birth – the forces are handled in a way that reflects Stravinsky's style, whilst the writing comes close to the polyphony of Russian folk music.

Pavlenko does not restrict himself to any one method of composition, using on equal terms serial or aleatory techniques and tonality while always being sensitive to timbre and texture. His evolution has progressed in favour of a more traditional and simple language that abounds in melodic textures.

WORKS

Stage: Skripka Rotshil'da [Rothchild's Violin] (1, choreographic fantasy, after Chekhov), 1987

Orch: Sax Conc., 1975; Fl Conc., 1977; Vc Conc., 1979; Adagio, d, 1982; Sym. no.2, d, 1982; Sym. no.3 'Simfoniya prichetov' [Symphony of Lamentations], chbr orch, 1982; Vn Conc., 1983; Sym. no.4, 1985; Printsessa gryoz [The Princess of Dreams], sym. poem. 1994

Chbr and solo inst: 3 p'yesï [3 Pieces], db, pf, 1973; 4 p'yesï, cl, pf, 1974; Str Qt no.1, 1974; Pf Sonata no.1, 1975; Sonata, sax, pf, 1975; Liricheskaya poema [Lyrical Poem], fl, pf, 1976; Qnt, fl, cl, pf, vn, vc, 1976; Chbr Conc., ob, cl, hn, vn, va, vc, hpd, 1977; 4 p'yesï, bn, pf, 1977; Sonata, fl, 1977; Portretï [Portraits], fl, pf, 1978; Homage, bn, str, 1979; Pas de trois, fl, vn, pf, 1979; Pf Trio, 1979; Str Qt no.2, 1979; Variations, tpt pf, 1979; Conc. breve, 12 sax, 1980; James, cl, trbn, pf, 1980; Kontsert-serenada pamyati Vladimira Vïsotskogo [Conc-Serenade in Memory of Vladimir Vïsotsky], cl, str, 1980; Message, cl, 1980; Sonata-Continuo, b cl, 1980; Qt, 4 cl, 1980; Rozhdestvenskoye kaprichchio [A Christmas Capriccio], bn, str, 1980; Duo à tre, b cl, vib, mar, 1981; Pf Sonata no.2 'Fantasia quasi una sonata', 1981; Sonata, vc, 1983; Proshchaniye [Farewell], str, 1983; Orgelwerk, double fantasy with fugue, 1984; Intermezzo, a sax, hp, perc, 1985; Conc., ob, str, 1986; Kruzheva [Pieces of Lace], ww qnt, 1987; Pastoral', sax qnt, 1988; Retrospektsiya [Retrospection], perc ens, 1988; Conc., ww, perc, 1989; Posvyaschcheniye [Dedication], ob, a sax, vc, 1989; Quasi toccata, hpd, 1989; Sinfonia humana, str, 1989; Trio-nocturne 'k pamyati Shopena' [In Memory of Chopin], fl, b cl, pf, 1989; Katzenmusik, 6–12 hn, 1990; Lara, cl, perc, 1990 [after M. Jarre's music for the film *Doctor Zhivago*]; Re Marcus, perc ens, 1991; Siren' [Lilac], cl, va, pf, 1991, after M. Vrubel'; Triversiya [Treversium], perc ens, chbr orch, 1991; Res facta, 4 vc, 1993; Ayvz-kompozitsiya [An Ives Composition], concerto no.2, vc, str, 1993; Stansï [Stanzas], concerto no.2, s sax, chbr orch, 1994; V manere Gogena [In the Gauguin Manner], cl, vn, vc, pf, 1994; V podrazhaniye Denisovu [In Imitation of Denisov], bn, pf, 1994

Vocal: Vologodskaya svad'ba [A Vologda Wedding] (song cycle, trad.), 1973; Kantata pamyati Marinï Tsvetayevoy [Cantata in Memory of Marina Tsvetayeva], S, chbr orch, 1976; Kantata pamyati Osipa Mandel'shtama [Cantata in Memory of Osip Mandel'shtam], S, chbr orch, 1978; Syuita vodï [Suite of Water] (F. SVETLANA SAVENKO

Pavlova, Anna (*b* St Petersburg, 31 Jan/12 Feb 1881; *d* The Hague, 23 Jan 1931). Russian dancer. *See* BALLET, §3(i).

Paxman. English firm of horn makers. It was founded in London as Paxman Bros. in 1919 by Harry (Henry Charles) Paxman (1894–1965) and two younger brothers, Bertram and William. Before World War II the firm sold and repaired musical instruments. In 1944 Paxman Bros. moved to new premises on Gerrard Street, where they continued to repair instruments and also built up a reputation for adapting and converting brass instruments to customers' specifications; a letter of 1948 from Dennis Brain testifies to the good work they had done in adapting a Raoux horn for him. Harry Paxman's eldest son Robert (*b* 1929) joined the firm in 1945 and it began to make horns modelled on the German instruments favoured by

British professional players, producing the first British-made rotary valve horn the same year. In 1959 the Australian horn player Richard Merewether introduced the firm to his new ideas on the physics and construction of the instrument; his descant horn in B♭ and F alto quickly found favour. In 1968 he produced a double horn in B♭ alto and B♭ soprano, designed to allow the modern player to cope with the high tessitura of Baroque horn parts; this instrument incorporated a new control valve, in which the windway diverges close to the mouthpiece, then converges in a chamber with a larger tube diameter at the point where the tubing begins to expand into the bell. The new system eliminated the coupled twin control valve previously used and allowed the longer instrument to be given a leadpipe with proper taper proportions. It was also used for Paxman's triple horn in F basso/B♭ alto/F alto, introduced in 1986. Since 1989 Paxman horns have been built with the bores of the cylindrical sections matched to the individual pitch length of each component of the double or triple horn: the triple horn, for example, uses bore diameters of 12·7 mm (F basso), 12 mm (B♭ alto) and 11·5 mm (F alto). The firm also manufactures a compensating double Wagner tuba in F and B♭ and copies of French hand horns from the Classical period. On Harry Paxman's retirement in 1961 Paxman Musical Instruments Ltd. was formed with Robert Paxman as director. The latter retired in 1995 and the firm was then taken over by a management team. In the same year the firm moved to Union Street.

CHRISTOPHER LARKIN

Paxton, Stephen (bap. Durham, 27 Dec 1734; *d* London, 18 Aug 1787). English composer and cellist. Like his brother William (*b* Durham, 8 Feb 1725; bur. Durham, 7 May 1778) and their nephew George (1749–79), he received his early musical training as a Durham chorister under James Hesletine. His arrival in London may have owed much to Spencer Cowper, dean of Durham (1746–74), and his brother, the 2nd Earl Cowper. In London Paxton became a pupil of William Savage 'for singing' and an early member of the band called upon by the Sharp family for their private concerts. 'A zealous and good Roman Catholic' (Argent, 28), he had some influence at the Sardinian Embassy Chapel, where his masses were frequently sung and where his nephew George was organist (before 1769–75). George was also a cellist and played at one Sharp concert and in the Drury Lane Theatre band. Stephen was elected a member of the Society of Musicians in 1757 (George was elected in 1772) and from 1780 was a professional member of the Noblemen's and Gentlemen's Catch Club. The brothers were noted as composers of glees (Stephen won four Catch Club gold medals; William two, both posthumous), and produced attractive and polished examples of the genre.

Stephen was active in London as a cello soloist and ensemble player for 30 years. Some of his instrumental works have been misattributed to William. This error apparently originated in Sainsbury's *Dictionary* (1824), which led to the London cellist being incorrectly identified as William. (Apart from visiting London for three months in 1751 William served as a Durham lay clerk from 1742 to 1778, was well known as a concert performer in Durham and Newcastle, and sang at Handel performances in York in 1769.) Stephen was one of the four principal cellists at the Handel Commemoration in Westminster Abbey (1784) and at other festivals there in aid of the Society of Musicians (1786–7). Among his activities outside London, he played at Hertford in July 1757, played and sang at Newcastle in August 1772 and was called upon when a new concert room was opened in Manchester in September 1776.

As a cello composer Stephen ranked second in England only to James Cervetto. His fluent and graceful melodic style, recalling that of J.C. Bach, is particularly notable in his op.1 cello sonatas, which include some expressive slow movements with elaborate, finely worked, *galant* lines. Although the op.3 *Easy Solos* are technically more assured than op.1, their interest is diminished by the simplicity of style. This is also true of the op.4 solos, and the op.6 *Lessons* are light to the point of triviality. Several works in these later sets incorporate national airs or well-known movements by Handel. The duets for violin and cello show a similar falling-off; the op.4 duets include nothing as striking as the sonorous scoring of no.3 or the rhythmic vitality of the C minor first movement of no.5 in op.2. This tendency towards a simpler, more popular style, to be seen in Paxton's instrumental works, is characteristic of the development of English instrumental music during the 1770s and 80s.

WORKS

all published in London

op.	
1	6 Solos, vc, b (1772)
2	8 Duets, with a Scots air and variations (vn, vc)/2 vc (by 1775)
3	6 Easy Solos, vc/bn, b (*c*1778)
4	4 Duets, vn, vc; 2 Solos, vc, b (*c*1780)
5	A Collection of Glees, Catches etc., 3, 4vv (*c*1782), 19 items, 5 by William Paxton
6	12 Easy Lessons, vc, b (1786)
—	Cello Concerto (*c*1787)
7	A Selection of 2 Songs, 6 Glees and 2 Catches (*c*1789)
—	19 glees, odes and catches in A Collection of Catches, ed. E.T. Warren, 1763–95; others in anthologies, single editions and MSS (*GB-Lbl*, *A-Wn*)
—	2 masses, D (incl. Tantum ergo), G, and Domine salvum fac in A Collection of Masses, ed. S. Webbe (1792); Mass, lost

Hymn, Praise ye the Lord, *GB-DRc*; The moon in saffron drest (in W. Shield, *Rosina*, 1782); March, 2 vn, 2 ob, 2 hn, b, lost

BRIAN CROSBY, STANLEY SADIE

Paxton, William. English composer, brother of STEPHEN PAXTON.

Pay, Antony (Charles) (*b* London, 21 Feb 1945). English clarinettist. He studied with Wilfred Kealey and John Davies, and made his début at the age of 16 playing Mozart's Clarinet Concerto on a European tour with the National Youth Orchestra. He was principal clarinet with the RPO from 1968 to 1978, and from 1968 to 1983 with the London Sinfonietta, with which he gave the first performance of Henze's *The Miracle of the Rose* (1982).

He was also principal clarinet with the Academy of St Martin-in-the-Fields, 1976–86, the Academy of Ancient Music, 1983–94, and, from 1986, the Orchestra of the Age of Enlightenment. From 1986 to 1993 he played with the Nash Ensemble. Pay has appeared frequently as a soloist, and in concertos often conducts from the clarinet. His extensive discography includes the concertos of Mozart, Weber and Crusell, which he plays on reconstructions of period instruments, much chamber music and Berio's Concertino, conducted by the composer. He taught at the GSM from 1982 to 1990, and gives masterclasses throughout the world.

PAMELA WESTON

Payen, Nicolas [Colin] (*b* Soignies, *c*1512; *d* Madrid, after 24 April 1559). South Netherlandish composer. According to Fétis, Payen received his earliest musical education at St Vincent's, Soignies, before becoming a choirboy in Charles V's chapel in Spain. Payen's name is mentioned there from 1525 and appears in the prebendal lists for Mons and Gorinchem. During the 1530s he may have interrupted his service with the emperor for university studies. From 1540 he was in Charles's chapel as *clerc d'oratoire*, *chapelain des hautes messes*, and from 1556 as *maestro de capilla*, succeeding Canis. In 1558 he was granted a canonry in the collegiate church of Tournai and at the time of his death he held numerous prebends. Very little research has been done on Payen's music. Most of his works are sacred, and the two extant state motets show his concern for expressing the emotional content of the texts. In negotiations with the Duke of Bavaria, the imperial vice-chancellor Dr Seld named Payen among the representatives of *musica reservata*.

WORKS

MOTETS

Benedictus Dominus, 5vv, 1554[11]; Carole cur defles, 4vv, 1545[2] (on death of Queen Isabella); Confitemur dilecta nostra, 4vv, 1548[2]; Convertemini ad me, 4vv, 1548[2]; Domine demonstrasti mihi, 4vv, 1548[2]; Domine Deus salutis, 4vv, 1548[2]; Eripe me de inimicis, 4vv, 1554[11]; In Gott gelaub ich das er hat, 4vv, 1544[21], ed. in DDT, xxxiv (1908/*R*); Nisi quia Dominus, 4vv, 1553[6]; Quis dabit capiti, 4vv, 1547[6] (state motet); Resurrectio Christi, 5vv, 1546[7]

CHANSONS

Avecque vous, 4vv, 1544[10]; Fringotes jeune fillettes, 4vv, 1538[19] (lute intabulation 1546[32]); Hau de par Dieu, 4vv, 1538[19]; Il y a de lagnon, 1538[19] (lute intabulation 1548[12]); Je ne me puis tenir, 4vv, 1543[13]

ALBERT DUNNING

Payne, Anthony (Edward) (*b* London, 2 Aug 1936). English composer and critic. He was educated at Dulwich College, London, and the University of Durham, and worked as a music critic first on the *Daily Telegraph*, later on *The Independent*. In 1983 he was visiting Milhaud Professor at Mills College, California, and has since taught composition at the London College of Music (1983–6), the New South Wales Conservatorium (1986) and the University of Western Australia (1996). Although he had written music as a child, the start of his professional composing career dates only from 1965. With remarkable surefootedness, he developed a technique loosely derived from various numerical systems that were increasingly linked to the more musical concept of interval size. All the works of this period embrace both the textural implications of widely spaced harmonies and the more reflective tensions of melodic lines set within a rhythmic framework that alternates the strictly defined and the proportionately indicated. The already more relaxed charm of *A Day in the Life of a Mayfly* (1981) marks a stylistic turning-point that enabled Payne to pick up the threads of an Englishness he had earlier forced himself to deny.

From this point on he began to evolve a kind of 'modernized nostalgia' which he has made recognizably his own and which enables the stylistic developments of the 1980s and 90s now to be understood as the reverse reflection of a period in which the works of the 1960s – such as the *Phoenix Mass* (1965, rev. 1972) and *Paraphrases and Cadenzas* (1969, rev. 1978) – were brought into line with the 1970s developments of a post-avant-garde modernism. Later, a quite different kind of rebirth saw the abandoned sketches for a work first conceived in the late 1950s being put to confident and touchingly autobiographical purpose in *The Spirit's Harvest* (1985), his first work for full symphony orchestra and the first openly to acknowledge his English heritage. But Payne is first and foremost a composer of chamber music, and it is his long list of works for variously-constituted chamber ensembles, both with and without voices, that most clearly trace the imaginative course of his musical journey over the last three decades. He married the soprano Jane Manning in 1966.

WORKS

ORCHESTRAL

Suite from a Forgotten Ballet, 1955, rev. 1985; Contrapuncti, solo str qt, str orch, 1958, rev. 1979; Conc. for Orch, 1974; Song of the Clouds, solo ob, 2 hn, perc, str orch, 1979–80; Spring's Shining Wake, 1980–81; Songs and Seascapes, str orch, 1984; The Spirit's Harvest, 1985; Half-Heard in the Stillness, 1987; Time's Arrow, 1989–90; Symphonies of Wind and Rain, 1991; Hidden Muisc, 1992; Orchestral Variations: the Seeds Long Hidden, 1992–4

BRASS

Fire on Whaleness, brass band, perc, 1975–6; Fanfares and Processional, hn, 4 tpt, 4 trbn, tuba, 1986; Echoes of Courtly Love, hn, tpt, flugel hn, trbn, tuba, 1987; River-race, 4 hn, 4 tpt, 4 trbn, tuba, perc, 1990

CHAMBER AND SOLO INSTRUMENTAL

Paraphrases and Cadenzas, cl, va, pf, 1969, rev. 1978; Sonatas and Ricercars, fl, ob, cl, bn, hn, 1970–71; Paean, pf, 1971; Str Qt, 1978; Footfalls Echo in the Memory, vn, pf, 1978; The Stones and Lonely Places Sing, fl + pic, cl + b cl, hn, pf, vn, va, vc, 1978–9; Miniature Variations on a Theme of E.L., pf, 1980; A Day in the Life of a Mayfly, fl + pic, cl, perc, pf, vn, vc, 1981; Reflections in the Sea of Glass, org, 1983; The Song Streams in the Firmament, cl, 2 vn, va, vc, db, 1986; Consort Music, 2 vn, 2 va, vc, 1987–8; A 1940s Childhood, fl, gui, 1986–7, arr. fl, hp, 1989; Sea-Change, fl, cl, hp, 2 vn, va, vc, 1988; Amid the Winds of Evening, va, 1987; The Enchantress Plays, bn, pf, 1990; Empty Landscape – Heart's Ease, ob, cl, hn, vn, va, vc, 1994–5; Engines and Islands, fl, cl, perc, pf, vn, va, vc, 1996

VOCAL AND CHORAL

Phoenix Mass, SATB, 3 tpt, 3 trbn, 1965, rev. 1972; Two Songs without Words, 5 male vv, 1970; A Little Passiontide Cant (14th-century Eng.), SATB, 1974, rev. 1984; First Sight of Her and After (T. Hardy), 16 solo vv, 1975; The World's Winter (A. Tennyson), S, fl + pic, ob, cl, 1976; The Sea of Glass (Bible: *Revelations*), SATB, org, 1977; A Little Ascension Cant (attr. Cynewulf), SATB, 1977, rev. 1984; A Little Whitsuntide Cant (E. Bronte), SATB, 1977, rev. 1984; Evening Land (P. Lagerkvist), S, pf, 1980–81; A Little Christmas Cant (trad. carol texts), SATB, 1893

Alleluias and Hockets (after Machaut), SATB, 2 ob, eng hn, 2 bn, 2 tpt, 3 trbn, 1987; Adlestrop (E. Thomas), S, pf, 1989; First Sight of Her and After (Hardy), SATB, ob, cl, bn, hn, perc, vn, va, vc, db, arr. 1988; Aspects of Love and Contentment (8 Songs of Peter Warlock), S, fl, ob, cl, hn, hp, str qt, 1991; Break, break, break (Tennyson), SATB, 1996

OTHER

Fresh Dances for the Late Tchaikovsky (ballet), 2 vn, 2 va, 2 vc, pf 4 hands, 1993; Completion of Elgar's Sym. no.3, 1993–7

SUSAN BRADSHAW

Payne, Jack (*b* Leamington Spa, 22 Aug 1899; *d* Tonbridge, 4 Dec 1969). English pianist and dance bandleader. He formed his first band during his World War I service in the Royal Flying Corps, and subsequently led his own small jazz group, in which he played piano. He worked in various Birmingham bands until moving to London in 1925, where he took over the band at the Hotel Cecil. He broadcast with this group from 1925, and recorded from 1927, ultimately enlarging it to ten players, and becoming conductor and singer himself, with Bob Busby as pianist. In 1928, as Director of Dance Music, he took over the BBC Dance Orchestra, with whom he broadcast almost daily, and made numerous recordings for Columbia. The orchestra also undertook theatrical bookings after appearing at the London Palladium in 1930, changing its name in the process to Jack Payne and His Orchestra. Like Jack Hylton, Payne was one of the first bandleaders to acquire popularity through broadcasting, and on leaving the BBC in 1932 he led a successful show band for most of the 1930s and during World War II. He toured South Africa in 1936, and returned to the BBC to direct its dance band (1941–6). His broadcasts and recordings are characterized by his own lightweight vocals, those of his guitarist Billy Scott-Coomber and those of his close harmony trio. His band's arrangements were immensely popular in their day, but lacked the jazz feeling of those by Hylton or Lew Stone. Payne also became a theatrical agent, concentrating on this after the war, as well as having a career as a radio presenter. He did not return to bandleading after 1947, and his last years were beset by financial difficulties. He played himself in the 1932 film *Say it with Music* (the theme which became his signature tune), and his band was one of several groups that appeared in *Sunshine Ahead* (1936). Payne was married to the pianist Peggy Cochrane.

ALYN SHIPTON

Payne, Maggi (*b* Temple, TX, 23 Dec 1945). American composer, flautist and video artist. She studied the flute with Walfrid Kujala and composition with Alan Stout, William Karlins and Theodore Ashford at Northwestern University (BMus 1968). After a brief period at Yale University (1969), she continued her studies at the University of Illinois (MM 1970) with Gordon Mumma, Ben Johnston, Salvatore Martirano and James Beauchamp. Further postgraduate study in electronic music and recording media at Mills College (MFA 1972) led to posts there as recording engineer, assistant professor and co-director of the college's Center for Contemporary Music. Her honours include grants from the NEA and the Mellon Foundation.

Payne composes primarily for electronic tape. Her music often draws on sound sources from the physical world, particularly urban sounds recorded in the San Francisco area (*Airwaves (realities*, 1987; *Resonant Places*, 1992; *Liquid Metal*, 1994). She also frequently combines tape music with visual elements, such as dance (in several collaborations with video artist Ed Tannenbaum) and electronically manipulated video images of natural phenomena, such as moving water or desert landscapes. Several other works are based on flute sounds that have been extensively transformed into unexpected timbres and textures. A great sensitivity to spatial effects is also characteristic of her work.

WORKS

STAGE

Dance scores (all for tape): House Party (choreog. C. Brown), 1974; Synergy II (choreog. Brown), 1974; Inventory (choreog. M. Sakamoto), 1980; Rondo (choreog. B. Kagan), 1984; The Living Room (choreog. N. Bryan), 1987
Other: The Winter's Tale (incid music, W. Shakespeare), 1975

TRADITIONAL MEDIA

Inflections, fl, 1968; Songs of Flight (G. Snyder), S, pf, 1988; Desertscapes (M. Payne), 2 choruses, 1991; Minutia 0–13, 1–3 pf, 1996

ELECTRO-ACOUSTIC AND MULTIMEDIA

Video scores (all for tape, dir. E. Tannenbaum): 3 Movts with 2 Movts, 1982; Maytricks, 1983; Dance, 1984; Hikari, 1984; Contest, 1985; Gamelan, 1985; Hands, 1985; Shimmer, 1985; Back to Forth, 1986; Flights of Fancy (Viscous Meanderings), 1987; Ahh-Ahh (Queue the Lizards), 1987; Heavy Water, 1991; Close-ups, 1999
Video scores (all for tape, dir. M. Payne): Circular Motions, 1981; Crystal, 1982; Io, 1982; Solar wind, tape, video/slide projections, 1983; Airwaves (realities), 1987; Liquid Metal, 1994; Apparent Horizon, 1996
Tape and slide projections: Farewell, 1975; Transparencies, 1976; Spheres, 1977; Spirals, 1977; Lunar Earthrise, 1978; Lunar Dusk, 1979; Blue Metallics, tape, slide projections/film, 1980; Rising, tape, slide projections, opt. dancers, 1980; Ling, 1981

GAVIN BORCHERT

Pāyvar, Farāmarz (*b* Tehran, 1932). Persian *santur* player and composer. He comes from a musical family and for six years, from the age of 17, studied the *santur* with Abolhasan Sabā, followed by further training with other masters of Persian traditional music. Pāyvar has combined a career as a virtuoso performer and composer with scholarship which has yielded a number of significant publications. They include original compositions as well as arrangements and books on the technique of *santur*. His recordings, published both in Persia and abroad, are numerous. They encompass recordings of some of the *dastgāh*s with the inclusion of all known *guše*s, also shorter renditions of *dastgāh*s, original compositions and ensemble pieces written or arranged by him. He has travelled widely and is known internationally for his many concerts and recordings.

Pāyvar has a thorough knowledge of the *radif* of Persian traditional music. He has advanced the technique of *santur* playing to levels not attained by any other *santur* player. His performances of any given *dastgān* generally display exceptional agility and smoothness of hammer action on the *santur*, use of a wide range of sound, and the interpolation of difficult and lengthy composed *čahārmesrāb*s. On the other hand, his performance style is peppered with features of western virtuoso displays such as rapid scale movements, arpeggio patterns and passages in parallel thirds, all of which are essentially alien to Persian music.

HORMOZ FARHAT

Paz, Juan Carlos (*b* Buenos Aires, 5 Aug 1901; *d* Buenos Aires, 25 Aug 1972). Argentine composer and theorist. He studied in Buenos Aires with Roberto Nery (piano) and with Gaito and Fornarini (composition); then, after organ lessons with Jules Beyer, he studied with d'Indy at the Schola Cantorum, Paris. But essentially he was self-taught in composition, and he remained an independent and isolated figure. An enthusiasm for new musical developments brought him, together with his contemporaries Juan José and José María Castro, Gilardi and Ficher, to form the Grupo Renovación (1929). Their aims were to seek out and utilize the latest compositional trends and to give wider currency to their work. Through this they gave a beneficial jolt to Argentine musical life, encouraging constructive criticism and throwing light on the confused musical landscape of the period. Paz worked actively with the group until 1937, when disagreements between him and the other members led to a separation. He then founded the Conciertos de la Nueva Música to present the most innovatory European music, particularly chamber music. In 1944 he was joined by other composers, among them Perceval, Devoto and Eitler, and a new group took shape as the Agrupación Nueva Música. The group grew steadily and remained a force for avant-garde ideas. At the time of his participation in the Grupo Renovación, Paz also took an active role in the work of the Asociación del Profesorado Orquestal, whose orchestra introduced new European works, above all those of the Paris school, as well as giving a hearing to pieces by the youngest and least known Argentine composers.

Throughout Paz's career, his music displays great attention to formal considerations and an extremely economic use of materials. His first period, from the 1920s until the early 1930s, is post-Romantic in style, with influences from Franck and Strauss, e.g. the *Cuatro fugas sobre un tema* (1924–5) and the orchestral *Canto de Navidad* (1927). Next he was drawn to neo-classical Stravinsky and jazz in such works as the *Octeto* for wind instruments (1930) and *Tres movimientos de jazz* (1932), which exhibit a contrapuntal polytonal (at times atonal) language. The pull of Scandinavian literature (Ibsen in particular) at this time on the culture of the River Plate as a whole also surfaces in *Tres comentarios líricos a 'El cartero del rey'* (1926) and in the incidental music to Ibsen's *The Emperor Julian* (1931). Meanwhile Paz was making a profound study of the worldwide musical currents of the 1930s, a period when Latin American composers were somewhat bemused by the diversity of prevailing techniques. It was then that Paz directed his gaze to ideas quite unknown in Argentina at the time: the 12-note theories of Schoenberg. For four years he studied the procedures of Schoenberg and his pupils, particularly Webern, and from 1934 he adopted serial writing, for instance in the Passcaglia for orchestra (1936). But in 1950 he abandoned the 12-note system, convinced that it had nothing fundamentally new to offer, but also convinced that it was much less well known and understood than it deserved. After a period of reflection he surprised the public with these views, expounded in his book *Arnold Schoenberg, o el fin de la era tonal* (1954). From this time he explored a newly experimental, though highly structured idiom, resulting in some of his most notable works, including orchestral compositons *Rítmca ostinada* (1952), *Seis superposiciones* (1954), *Transformaciones canónicas* (1955) and *Continuidad* (1960), and the piano series *Núcleos* (1962–4), at which point he gave up composing.

But this was not the end of his exploratory activity, for he now gave his attention to the theoretical problems which had occupied him almost throughout his life. The result was *Alturas, tensiones, ataques, intensidades* (1970). Of his other books, the *Introducción a la música de nuestro tiempo* (1952) was of great importance in its day, containing as it did the fruit of more than 20 years of research and active participation in new music. Paz was equally an untiring apologist for contemporary aesthetic ideas in his numerous essays, published in over 25 Argentine and foreign periodicals, and in the hundreds of lectures that he gave in cultural and educational institutions. His teaching left an indelible mark on a whole generation of Argentine composers.

WORKS
(*selective list*)

ORCHESTRAL

Canto de Navidad, 1927, orchd 1930; Movimiento sinfónico, 1930; Juliano Emperador (incid music, H. Ibsen), 1931; 3 piezas, 1931; Passacaglia, 1936, 2nd version 1952–3; Música para orquesta: Preludio y fuga, 1940; Passacaglia, str, 1944, rev. 1949; Rítmica ostinada, 1952; 6 superposiciones, 1954; Transformaciones canónicas, 1955; Música para fagot, cuerdas y batería, 1955–6; Continuidad, 1960; Música para piano y orquesta, 1964

CHAMBER AND SOLO INSTRUMENTAL

Tema y transformaciones, fl, ob, 2 cl, b cl, 2 bn, 2 hn, 2 tpt, 1929; Octeto, fl, ob, 2 bn, 2 hn, 2 tpt, 1930; Sonatina no.1, cl, pf, 1930; Sonata, vn, pf, 1931; Conc. no.1, wind, pf, 1932; Sonatina no.2, fl, cl, 1932; Primera composición dodecafónica, fl, eng hn, vc, 1934; Segunda composición dodecafónica, fl, pf, 1934–5; Conc. no.2,

ob, bn, 2 hn, tpt, pf, 1935; Ov., wind qnt, hn, tpt, trbn, str trio, db, 1936; 4 piezas, cl, 1936; Primera composición en trío, fl, cl, bn, 1937
Tercera composición dodecafónica, cl, pf, 1937; Cuarta composición dodecafónica, vn, 1938; Str Qt no.1, 1938; Segunda composición en trío, cl, a sax, tpt, 1938; Tercera composición en trío, fl, ob, b cl/bn, 1940, rev. 1945; 3 comentarios líricos a 'El cartero del rey', fl, ob, cl, pf trio, 1942, [arr. pf work]; Str Qt no.2, 1940–43; Música para fl, sax y pf, 1943; Dédalus 1950, fl, cl, pf trio, 1950–51; Continuidad 1953, perc, 1953–4; 3 contrapuntos, cl, tpt, trbn, elec gui, cel, vc, 1955; Invención, str qt, 1961; Concreción 1964, fl, cl, bn, hn, tpt, trbn, tuba, 1964; Galaxia 64, org, 1964

PIANO

Coral, e♭, 1921; 3 piezas líricas, 1922; Fantasía, 1923; Fantasía y fuga, b♭, 1923; Preludio, coral y fuga, 1923; Sonata no.1, 1923; 4 fugas sobre un tema, 1924–5; Coral, F, 1925; Sonata no.2, 1925; 2 leyendas, 1925–6; 3 comentarios líricos a 'El cartero del rey', 1926, arr. ens, 1942; 6 baladas, 1927–9; Tema con transformaciones, 1928; 3 movimientos de jazz, 1932; 3 invenciones a 2 voces, 1932; Sonatina no.3, 1933; Sonata no.3, 1935; 10 piezas sobre una serie dodecafónica, 1936; Canciones y baladas, 1936–7; 5 piezas de carácter, 1937; Música 1946, 1945–7; Núcleos, 1962–4

OTHER WORKS

Song: Abel (M. Machado), 1v, pf, 1929
Arrs. for band or org of works by Bach, Beethoven and others

SUSANA SALGADO

Pazdírek. Czech family of publishers and musicians.

(1) **Bohumil Pazdírek** [Johann Peter Gotthard] (*b* Drahanovice, Moravia, 19 Jan 1839; *d* Vöslau, nr Vienna, 17 May 1919). Publisher and composer. He was the son of Josef Pazdírek (1813–96), a village teacher and musician. He settled in Vienna in 1855 and worked for various publishers (Spina, Gustave Lewy, Doblinger) until 1868 when he founded his own firm, which published many of Schubert's posthumous works. When his firm was taken over by Doblinger in 1880, he began teaching at the Theresian Academy (1882–1906). He composed five operas, six string quartets, songs, chamber music and sacred music. With his brother (2) František, he published the 34-volume *Universal-Handbuch der Musikliteratur* (Vienna, 1904–10/*R*), which cited all musical editions known by them to be in print and is still a valuable work of reference.

(2) **František Pazdírek** (*b* Citov, nr Přerov, Moravia, 18 Dec 1848; *d* Vienna, 14 Feb 1915). Publisher, brother of (1) Bohumil. After his schooling in Olomouc, he entered his brother's firm in Vienna and gained further experience in Berlin and in Moscow (with Jürgenson). On his return he worked with his brother (3) Ludevít Raimund. He initiated the ambitious but incomplete *Prager Conservatorium Ausgabe*, published the *Musikliterarische Blätter* and worked with his brother Bohumil on the *Universal-Handbuch*.

(3) **Ludevít Raimund Pazdírek** (*b* Citov, nr Přerov, Moravia, 23 Aug 1850; *d* Brno, 30 April 1914). Publisher, brother of (1) Bohumil and (2) František. After training as a teacher in Olomouc, he taught in Citov and other small Moravian towns. In 1879 he founded a publishing business in Horní Moštěnice in which he worked full time from 1889, moving to Bučovice (1891), Olomouc (1897) and finally to Brno (1911). His first publication was the frequently reprinted *Malý koledníček* ('Little carol book'). He specialized in church music and teaching manuals (e.g. Kocián's violin tutor, 1888), and himself composed some church and organ music.

(4) **Oldřich Pazdírek** (*b* Horní Moštěnice, nr Přerov, Moravia, 18 Dec 1887; *d* Brno, 3 Aug 1944). Publisher, son of (3) Ludevít. He took over the family firm in Brno in 1919. He concentrated on the works of Moravian composers, teaching and educational literature (e.g. Ševčk's violin tutor, Černušák's music history). Notable publications included the first editions of Janáček's *Zápisník Zmizelého* (1921) and *Suite for strings* (1926), *Pazdírkův hudební slovník* ('Pazdírek's music dictionary'), which began appearing from 1929 but was stopped by German censorship in 1941, Helfert's *Leoš Janáček*, i (1939), and the historical series *Musica Antiqua Bohemica*. From 1937 he began collaborating with the Prague firm of Melantrich under the name of Melpa. After his death the family business was continued by his son Dušan until nationalized in 1948.

JOHN TYRRELL

Pazovsky, Ary Moiseyevich (*b* Perm′, 21 Jan/2 Feb 1887; *d* Moscow, 6 Jan 1953). Russian conductor. He learnt the violin as a boy and studied at the St Petersburg Conservatory from 1897, first with P. Krasnokutsky and later with Leopold Auer (1900–04). Having begun his career as a violinist, he turned to conducting in 1905, first with provincial opera companies, then with Zimin's opera company, Moscow (1908–10), and successively at Khar′kiv, Odessa and Kiev until 1916. He became musical director of the Petrograd People's Opera (1916–18), conducted at the Bol′shoy Theatre (1923–4, 1925–8), and from 1926 to 1936 was musical director of the opera houses at Baku, Sverdlovsk, Khar′kiv and Kiev. He was artistic director at the Kirov Theatre, Leningrad (1936–43), when he conducted the premières of Oles′ Chishko's *The Battleship 'Potyomkin'* in 1937 and Marian Koval's *Yemel′yan Pugachyov* (1942), as well as memorable productions of operas by Bizet, Glinka, Rimsky-Korsakov and Tchaikovsky. In 1943 he took a similar post at the Bol′shoy, but became seriously ill and was forced to give up conducting in 1948. Pazovsky was an outstanding opera conductor whose attention to detail and painstaking rehearsals were the key to his success, and whose greatest performances were characterized by artistic restraint, a careful balance between music and production and a

deeply personal interpretation that was based on precise concern for the score. He made a detailed study of opera conducting in his *Zapiski dirizhyora* ('The writings of a conductor', Moscow, 1966), which deals with all aspects of the art.

I.M. YAMPOL'SKY

Peabody Institute. Conservatory established in BALTIMORE in 1857 as the Peabody Conservatory.

Peace, Jakub Jan. *See* RYBA, JAKUB JAN.

Peacham, Henry (*b* North Mimms, Herts., 1578; *d* ?London, *c*1644). English author and musician. He graduated MA from Trinity College, Cambridge, in 1598, and spent most of his career as a schoolmaster in Huntingdonshire, Norfolk, Lincolnshire and London, except for a period between 1613 and 1615 when he travelled in France, Germany and the Low Countries. The last known reference to him is a poem that he contributed for an engraving by Wenceslaus Hollar in 1644.

Peacham's musical importance lies in his chapter on music in *The Compleat Gentleman* (1622), a compendium of knowledge intended for the education of children from noble households. Peacham advocated the inclusion of music in the curriculum, though he warned against allowing musical pursuits to distract a gentleman from 'his more weightie imployments': 'I desire no more in you then to sing your part sure, and at the first sight, withall, to play the same upon your Violl, or the exercise of the Lute, privately to your selfe'. Appealing to scripture and to the writings of the ancients, he pointed to music's therapeutic properties. Peacham related music to poetry, the topic of his preceding chapter, and to rhetoric: 'hath not Musicke her figures, the same which Rhetorique?'. Most of his material is derived from unacknowledged sources: he borrowed from Byrd's preface to *Psalmes, Sonets & Songs* (1588) and from Morley's *Plaine and Easie Introduction to Practicall Musicke* (1597). He listed composers in order of preference and tried to impress with his knowledge of continental composers. However, the works that he cited can be traced to sources available in England. For example, Marenzio's *Io partirò* appeared in Yonge's *Musica Transalpina* translated into English and divorced from its original companion madrigals: Peacham's criticism of consecutive fifths which occur only in Yonge's print and his lack of awareness that it is the second *parte* of a tripartite madrigal show that he did not know the original Marenzio print.

Peacham used musical imagery in some emblems in *Minerva Britanna* (1612), included epigrams 'To Maister *William Bird*, the glory of our Nation for Musique' and 'To Maister Doctor *Dowland*' in *Thalia's Banquet* (1620), and drew an analogy between harmonious music and political concord in *The Duty of All True Subjects* (1639). Peacham and John Dowland were neighbours in Fetter Lane, London, in 1608–9; in *Minerva Britanna* he described Dowland showing him compositions by Moritz Landgrave of Hessen-Kassel. He also contributed a dedicatory poem for Robert Dowland's *A Musicall Banquet* (RISM 1610[20]).

Peacham's reference to 'mine own master, Horatio Vecchi' in *The Compleat Gentleman* suggests that he studied composition in Italy, perhaps between 1598 and 1600. A four-voice madrigal headed *King James his quier* survives in one of his manuscripts of emblems (*GB-Lbl* Harl.6855), and is the first work to adapt the Oriana motive to take into account Elizabeth's death. Epigram 70 from *Thalia's Banquet* (1620) refers to 'A set of 4 and 5 partes of the Authors ready for the presse'. This set has not survived; it may be the same as 'my songs of 4. and 5. Parts' mentioned in *Graphice* (1612).

DAVID J. SMITH

Peacock, Kenneth Howard (*b* Toronto, 7 April 1922). Canadian ethnomusicologist, pianist and composer. After studying the piano at Toronto Conservatory (associate 1935) and music at the university (MusB 1942), he was a piano pupil of E. Robert Schmidt and Reginald Godden and a composition pupil of Francis Judd Cooke in Boston and John Weinzweig in Toronto. Initially he worked as a piano teacher in Toronto (1937–47) and Ottawa (1947–54) and appeared as a pianist and composer in live and broadcast concerts; later he turned to ethnomusicology, working first from 1951 to 1972 as a research fellow at the National Museum of Man, Ottawa (now the Canadian Museum of Civilization), and subsequently in freelance field research. His work included an investigation of Anglo-Canadian, French-Canadian and Amerindian music (1951–61) and the organization of fieldwork on the music of Canada's minority cultures (1962–72). During 19 fieldtrips from Newfoundland to British Columbia he studied the music and folk art of 40 cultures and established an archive of over 500 tapes at the National Museum. Besides publishing the results of these projects he produced an edition of popular Newfoundland songs and two records, *Indian Music of the Canadian Plains* and *Songs and Ballads of Newfoundland*. One of the first Canadian folk music scholars with an extensive background in music, Peacock collaborated with the maritime song collector, Helen Creighton, providing transcriptions for *Maritime Folk Songs* (Toronto, 1962) and *Folk Songs from Southern New Brunswick* (Ottawa, 1971); he likewise contributed to Robert Klymasz's *The Ukrainian Winter Folksong Cycle in Canada* (Ottawa, 1970) and more recently *The Ukrainian Folk Ballad in Canada* (New York, 1989). A member of the Canadian League of Composers, Peacock's compositions include several pieces based on folk sources, such as the cantata *Songs of the Cedar*, the orchestral *Essay on Newfoundland Themes* and a series for piano *Idioms*.

GORDON E. SMITH

Peaker, Charles (*b* Derby, 6 Dec 1899; *d* Toronto, 11 Aug 1978). Canadian organist, conductor and teacher. Leaving England in 1913, he lived in Saskatoon until a scholarship took him to Toronto to study with Willan and MacMillan. He gained the FRCO in 1929, after working with Harold Darke, and a DMus in 1936. In 1944 he was appointed to St Paul's in Toronto, and became university organist in 1964. He gave many recitals in Toronto, throughout Canada and the USA, and made two recital tours in England (1956 and 1957). He instituted a series of Advent and Lent recitals at St Paul's in 1945 which brought performances of major choral works with orchestra (including many Canadian compositions) and concerts by distinguished organists to a large public. He taught at both the Royal Conservatory of Music, Toronto, and the University of Toronto. He was president of the Royal Canadian College of Organists from 1941 to 1943, and in 1974 was made a member of the Order of Canada. He retired from St Paul's in 1975.

GILES BRYANT

Pearce [Pearse, Pierce, Perse, Peers], **Edward** (*b c*1560; bur. London, 15 June 1612). English church musician and composer. He was a chorister of Canterbury Cathedral from 1568 to 1575, and a singing-man from 1577 until at least 1581. On 16 March 1589 he was sworn a Gentleman of the Chapel Royal, but in August 1600 he 'yealded up his place for the M[aster]ship of the children of Poules', having effectively succeeded Thomas Giles in that post in May 1599. One of Pearce's pupils at St Paul's was Thomas Ravenscroft, who wrote warmly of him as a trainer of boys' voices and composer for the lute and other instruments. Immediately upon his appointment at St Paul's, Pearce revived the commercial presentation of plays (with music) by the 'Children of Paul's' (inhibited since 1591), mounting some 27 plays in eight years. However, the incipient rehabilitation of the repute of church music, evident since the 1590s, rendered so gross a misuse of cathedral choristers already obsolescent, and following the replacement of Dean Alexander Nowell by the more responsible John Overall the play-house closed in 1607.

No sacred music by Pearce is known, and only two secular pieces (a four-part hunting song and a song for voice and three instruments) have survived; they were included by Ravenscroft in his *Briefe Discourse* (RISM 1614[21]). Three lute pieces survive in *IRL-Dtc*, *GB-Cu* and *Lbl*.

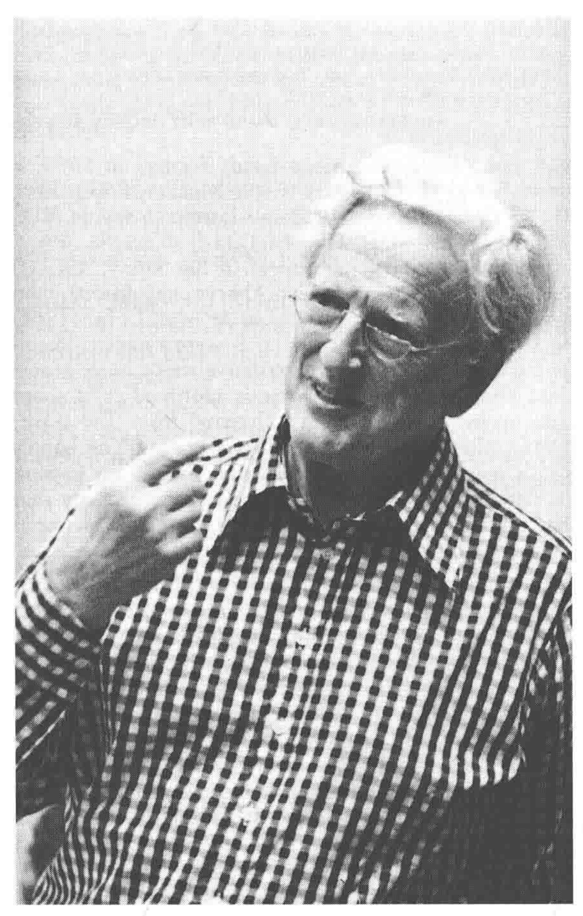
THURSTON DART, DAVID SCOTT/ROGER BOWERS



Pearl Jam. American grunge band. Formed in 1990, it consisted of Eddie Vedder (Eddie Mueller; *b* Evanston, IL, 23 Dec 1964; vocals), Stone Gossard (*b* Seattle, WA, 20 July 1966; guitar), Mike McCready (*b* Seattle, WA, 5 April 1965; guitar), Jeff Ament (*b* Big Sandy, MT, 10 March 1963; bass) and Dave Abbruzzese (drums), who was replaced by Jack Irons (*b* Los Angeles, 18 July 1962) in 1994. Along with Nirvana, they were a major force in popularizing grunge, and alternative music more generally. Vedder's impassioned vocals addressed child abuse and neglect, as in the song 'Jeremy' from *Ten* (Epic, 1981), along with more traditional topics. The band's music was based on distorted guitar riffs, in the fashion of Led Zeppelin, but avoided the guitar virtuosity that had been characteristic of 1980s heavy metal in favour of post-punk directness.

ROBERT WALSER

Pears, Sir **Peter (Neville Luard)** (*b* Farnham, 22 June 1910; *d* Aldeburgh, 3 April 1986). English tenor. He won a scholarship to the RCM, London, where he spent two terms in 1933–4. At the same time he joined the BBC Chorus and then the BBC Singers (1934–8), and took lessons with Elena Gerhardt and Dawson Freer. He met Benjamin Britten in 1936 and a year later they gave their first recital together (which included Britten's *On this Island*). In 1939 they went to the USA, and while there Pears studied with Therese Behr (Schnabel's wife) and Clytie Hine Mundy.

Returning with Britten to London in 1942, he made his stage début in the title role of *Les contes d'Hoffmann* at the Strand Theatre. The next year he joined the Sadler's Wells company, singing Rossini's Almaviva, Rodolfo, the Duke of Mantua, Tamino, Ferrando and Vašek, and, memorably, creating the title role in *Peter Grimes* (1945). These years also saw the notable first performances, given by Pears and the composer, of Britten's Michelangelo Sonnets and the *Serenade* for tenor, horn and strings.

In 1946 Pears was one of the founders of the English Opera Group, with which he sang the Male Chorus in the première of *The Rape of Lucretia* (1946) and the title role in *Albert Herring* (1947), both at Glyndebourne. His other creations in Britten's dramatic works included Captain Vere in *Billy Budd* (1951, Covent Garden), Essex in *Gloriana* (1953, Covent Garden), Quint in *The Turn of the Screw* (1954, Venice), Flute in *A Midsummer Night's Dream* (1960, Aldeburgh), the Madwoman in *Curlew River* (1964, Aldeburgh), Nebuchadnezzar in *The Burning Fiery Furnace* (1966, Aldeburgh), the Tempter in *The Prodigal Son* (1968, Aldeburgh), Sir Philip Wingrave in *Owen Wingrave* (1971, BBC television) and Aschenbach in *Death in Venice* (1973, Aldeburgh). For the English Opera Group he also sang Macheath in Britten's realization of *The Beggar's Opera*, Satyavān in Holst's *Sāvitri*, and Mozart's Idomeneus; and he created Boaz in Berkeley's *Ruth* (1956). At Covent Garden he created Pandarus in Walton's *Troilus and Cressida* (1954), and will be remembered for his acute portrayals of Tamino, Vašek and David (*Die Meistersinger*) during the 1950s. He later took part in the premières of Henze's *Novae de*

Peter Pears

infinito laudes (1963) and Lutosławski's *Paroles tissées* (1965). He was made a CBE in 1957, and was knighted in 1977.

Pears was one of the founders of the Aldeburgh Festival, inaugurated in 1948, and remained a director until his death. He was an eloquent interpreter of Schubert, probably the leading Evangelist of his day in Bach's Passions, an impassioned Gerontius and a noted exponent of British song. He collaborated with Britten on the libretto of *A Midsummer Night's Dream* and on realizations of several works by Purcell, including *The Fairy Queen* (1967).

Britten wrote all his major tenor roles, and many of his solo vocal works, with the particular characteristics of Pears's voice in mind. Clear, reedy and almost instrumental in quality, it was capable of great expressive variety and flexibility, if no wide range of colour. Its inward, reflective timbre, tinged with poetry, was artfully exploited by Britten, from the role of Peter Grimes to that of Aschenbach, but the voice could also be commanding, almost heroic, as was shown in the more vehement sections of Captain Vere's role or in the part of the Madwoman in *Curlew River*; Pears's cheeky vein of humour was given full range as Albert Herring and as Flute. His recital partnership with Britten produced evenings of extraordinary interpretative insights, when line and tone were perfectly matched to the texts of Schubert's and Schumann's song cycles.

Pears continued singing until he was well into his sixties, and after his retirement was active in teaching and promoting young singers at the Britten-Pears School in Aldeburgh. His recordings include virtually all the roles Britten created for him, and his eloquent accounts of the Evangelist in Bach's Passions and Gerontius.

ALAN BLYTH

Pearsall, Robert Lucas (*b* Clifton, nr Bristol, 14 March 1795; *d* Wartensee, Switzerland, 5 Aug 1856). English composer and antiquarian. His father was an army officer and amateur musician, of an old Staffordshire family, resident in the Bristol area, which had made money through ownership of a steel business. His mother was Elizabeth Lucas; Robert was their only child to survive infancy (the prefix 'de' was added to the surname after the composer's death, and was never used by him: hence it is even less authentic than Beethoven's 'van' or Weber's 'von').

Pearsall's father moved to Bristol about 1802 and died in 1813. At his mother's desire he was educated for the Bar by private tutors, and practised as a barrister (1821–5) at Bristol. After a slight stroke in 1825 he gave up his profession and went to live abroad on medical advice. He was then able to devote himself to his interests in history, genealogy, heraldry, painting, and above all music. His earliest known composition, a Minuet and Trio in B♭, is dated 14 July 1825 at Willsbridge, the family house near Bristol.

Pearsall lived for four years (1825–9) at Mainz, where he took lessons in composition from Joseph Panny. In this period he was caught up in the Cecilian movement and composed a number of Latin motets in the style that was regarded as 'pure'. In 1829, leaving his family behind (he had married Harriet Hobday in 1817 and had three children by her), he returned to England for a year. From 1830 to 1842 his home was at Karlsruhe. From there, however, he made many journeys to other European centres where he pursued his antiquarian interests. At Munich in 1832 he met Kaspar Ett, who helped his study of early music by teaching him to transcribe the notation. His composing now included orchestral works, and in 1834 he built a small theatre at his home for which he wrote a 'ballet-opera' *Die Nacht eines Schwärmers* and other pieces. In May 1836 he inherited Willsbridge by the death of his mother, and returned to England again for a year, selling the property in July 1837. During this visit he began composing 'madrigals' in imitation of Morley's balletts (and using the same texts). In January 1837 the Bristol Madrigal Society was founded, with Pearsall as one of the original members, and he had thus an unexpected opportunity to have these pieces performed. Their great success stimulated him to considerable effort in this line, and during the next few years most of his madrigals were written. He visited the society again in 1839, 1840, 1845 (when he was elected its first honorary member) and 1851. He also composed many partsongs for the society; his works became a permanent part of

their repertory, and were kept alive at Bristol when his music was little known elsewhere.

In 1842 or 1843 Pearsall separated from his wife and acquired Schloss Wartensee, above Rorschach on Lake Constance, where he went to live with his daughter Philippa (1824–1917). He became intimate with the monks of St Gallen and Einsiedeln nearby, especially with the Chancellor of St Gallen, Johann Oehler, and in this period composed a quantity of music for the Roman Catholic Church and helped Oehler to edit the St Gallen *Gesangbuch*. He also wrote Anglican cathedral music, most of which was never performed. In 1854 he made over the Schloss to his wife and son, and moved to a small house in St Gallen, but after an attack of apoplexy he returned to Wartensee, where his wife nursed him throughout his last illness. Three days before his death Pearsall was received into the Roman Church, having been until that time a staunch Anglican. Less than a year earlier he had written:

> I can now well understand the feeling of Henry IV of France when he made a cross on his breast as he mounted the walls of a battery under a heavy fire, although he was then only known as a confirmed Calvinistic Protestant – and I like him all the better for having in that manner given way to the dictates of his heart.

The passage illustrates that spirit of romance which found musical expression in such pieces as *Sir Patrick Spens* and *The Song of the Franc-Companies*.

Pearsall was not alone in his interest in reviving Renaissance music, and his German teachers passed on to him a mastery of strict counterpoint which had come down from the 16th century as an ecclesiastical tradition. Nor was there anything new in the revival of the English madrigal; the Madrigal Society of London had performed madrigals consistently since 1741, and had in 1811 offered a prize for the composition of a madrigal in imitation of ancient models. Many composers had written pastiche madrigals, notably Lord Mornington, William Beale (winner of the 1811 prize) and Samuel Wesley. Pearsall, however, was far more successful than any of these in bringing the form to life again. He began by modelling himself rather closely on Morley's balletts, and confining himself to four parts. Then he gradually expanded his resources, and it was here that his German training came to his aid. At the same time he managed to recapture a good deal of the spirit of the Elizabethan composers. His madrigals are not exact copies; on the contrary, their vitality stems from their remarkable ability to extend the madrigal style. He used for special effect chords which, to Elizabethan ears, were quite ordinary, such as the triad on the flattened 7th. In spite of his close study of 16th-century dissonance treatment, Pearsall did not adhere to the strict 'rules', but freely developed the principle of suspension to lengths undreamt of by Wilbye or Monteverdi – as in a passage in *Great god of love* which combined all seven notes of the scale simultaneously. His larger madrigals, notably *Lay a garland*, had a long-breathed phrase structure not found in their models, but derived from Classical music. Hence the element of surprise and interest was retained, as it could not be in a pure copy. Fuller Maitland considered these two eight-part madrigals 'real masterpieces in a form that has seldom been successfully employed in modern times'; the six-part *O ye roses* (singled out by Walker) and *Light of my soul* are little inferior, while the simpler balletts, *Sing we and chaunt it* and *No, no, Nigella* (the early, four-part version), rival the Morley originals for freshness and charm.

Similar qualities are found in Pearsall's well-known setting of the German macaronic carol *In dulci jubilo*, which should be sung in the original version (revived in Parratt's edition) for solo octet and five-part chorus. The partsongs span most of his composing career, from *Take O take those lips away* (1830) to *Laugh not youth at age* (1852). *O who will o'er the downs so free* is unfortunately the only popular example now, but *When Allen-a-dale* and *Why with toil* were once great favourites. Though they often have surprising touches of antique colouring, they are harmonically conceived, in the glee tradition. The church music, on the other hand, is rather austerely contrapuntal, for the most part. Of the English cathedral music the Evening Service in G minor is certainly worth reviving. The Latin church music remains almost unknown, at least in Britain. Pearsall himself considered the Requiem his finest work.

Pearsall was respected in Catholic German-speaking circles as a contrapuntist, and as a pioneer in the rediscovery of Renaissance musical techniques. He also devoted much time and thought to the reform of English church music, though his efforts in this direction were little heeded.

Like many Romantics, especially in Germany, Pearsall was irresistibly attracted to the ideals and manners of the age of chivalry. In music the style of the 16th century seemed as remote as did the Middle Ages in the visual arts. His madrigals are the nearest equivalent, in English music, to the Gothic revival and the pre-Raphaelite school in painting. But they escape the ridicule that was in store for much neo-medieval art, because they are founded on a strong technique, whose demands generally prevail over the fascinations of the sham-antique.

WORKS

printed works published in London unless otherwise stated; MSS in CH-E, GB-Lbl, Bristol Madrigal Society Library and E. Hunt's private collection, Chesham Bois, Bucks

NICHOLAS TEMPERLEY

Pearson, Henry Hugh. *See* PIERSON, HENRY HUGO.

Pearson, Martin. *See* PEERSON, MARTIN.

Pearson, William (*b* ?London, *c*1671; *d* ?London, 1735). English music printer. A former apprentice of John Heptinstall, he set himself up in London in 1698, and in 1699 published *Twelve New Songs* in which he used for the first time a fount which he called the 'new London character'. It was a marked improvement on the older founts in use, and Pearson established a business partnership with Henry Playford. Pearson printed several notable publications for Playford, including *Mercurius musicus*, John Blow's *Amphion Anglicus*, some editions of *An Introduction to the Skill of Musick*, some parts of *Wit and Mirth*, the second volume of Henry Purcell's *Orpheus Britannicus* and parts of *Harmonia sacra*. The partnership broke up in 1703 as the result of a lawsuit and Pearson continued to print independently until 1735. After his death his business was carried on by his widow, Alice Pearson, who continued to use the 'new London character' for a few musical publications, among them John Wesley's 'Foundry' hymnbook, *A Collection of Tunes, Set to Music as They Are Commonly Sung at the Foundery* (1742).

Pearson used his 'new London character' with great skill. It was one of the first used in London that could print round note heads, and quavers, semiquavers etc. in groups as well as separately, and Pearson drew attention to these advantages in his preface to the *Twelve New Songs*. His work is notable for its clear impression, and the attractive layout of the pages gives it a strikingly modern appearance. Pearson was responsible for most of the typeset music produced in London, 1699–1735; his was the only fount of the time which could seriously compete with the work of engravers, who were steadily taking over music printing at the turn of the century.

MIRIAM MILLER/D. ROSS HARVEY

Peart, Donald (*b* Fovant, Wilts., 9 Jan 1909; *d* Sydney, 26 Nov 1981). English music administrator. He was educated at Cheltenham College and Oxford (MA, BMus) where he was an open scholar of the Queen's College, and at the RCM. After army service in Africa and India during the

war he was invited in 1947 to take up the newly created chair of music at the University of Sydney, a post he held until 1974. In 1950 he founded the Pro Musica Society of Sydney University, which has been responsible for many first performances in Australia of operas and orchestral and choral music, including newly commissioned works. In 1956 he reformed the ISCM in Sydney; this became the headquarters of the Australian section and has played a large part in the presentation of new works by younger Australian composers. He became the first president of the Musicological Society of Australia in 1964 and of the New South Wales chapter of the Australian Society for Music Education in 1968. In 1965 he was chairman of the music committee of the Australian National Advisory Committee for UNESCO. In 1957 he was elected FRCM. Peart has edited Jenkins's six-part consort music (MB, xxxix, 1977).

ANN CARR-BOYD

Peasable, James. *See* PAISIBLE, JAMES.

Peaslee, Richard Cutts (*b* New York City, 13 June 1930). American composer. He graduated from Yale University and the Juilliard School, and also studied privately with Boulanger and Russo. His compositional style is eclectic, encompassing jazz influences, folk-like idioms, extended instrumental techniques and electronic sound resources. His early works for jazz ensemble culminated in *Stonehenge* (1963) for the London Jazz Orchestra. Many of his compositions exploit the virtuosity of particular performers. *Chicago Concerto* (1967) was written for Gerry Mulligan (baritone saxophone), *Nightsongs* (1973) for Harold Lieberman (trumpet and flugelhorn), *The Devil's Herald* (1975) for Harvey Phillips (tuba) and *Arrows of Time* (1994–6) for Joseph Arlessi (trombone).

In the mid-1960s Peaslee began composing extensively for the stage. An early success was *Marat/Sade* (1964), a score which juxtaposed diverse elements drawn from 18th century classicism and 20th century compositional techniques as well as folk music and popular idioms. Other musicals include *Animal Farm* (1984), *Miracolo d'amore* (1988) and *The Snow Queen* (1990). He has collaborated with the choreographers Twyla Tharp (*Happily Ever After*, 1976), David Parsons (*Ring Around the Rosie*, 1994; *Touch*, 1996), Elisa Monte (*Feu follet*, 1995) and has composed music for the Joffrey and New York City ballet companies. He has also written several film and television scores.

WORKS
(*selective list*)

DRAMATIC

Musical theatre: The Marat/Sade (P. Brook), 1964; The Serpent, 1970; The Fable, 1975; The Children's Crusade, 1981; Animal Farm (P. Hall, A. Mitchell), 1984; Garden of Earthly Delights, 1984; The Green Knight, 1986; Vienna Lusthaus, 1986; Miracolo d'amore (M. Clarke), 1988; The Snow Queen (Mitchell), 1990

Dance music: Happily Ever After (T. Tharp), 1976; Ring around the Rosie (D. Parsons), 1994; Feu follet (A Cajun Tale) (E. Monte), 1995; Touch (Parsons), 1996

Film and TV scores: The Marat/Sade, 1966; Wild Wild World of Animals, 1977; The Power of Myth (J. Campbell, B. Moyers), 1988; Blown Sideways Through Life, 1995

Incid music for over 40 productions in London, New York and Paris

JOSEPH BRUMBELOE

Peau de buffle. A register of jacks with plectra made from buff leather, occasionally found – especially as an extra fourth register – on French late 18th-century harpsichords.

EDWIN M. RIPIN

Peccatte. French family of bow makers.

(1) Dominique Peccatte (*b* Mirecourt, 15 July 1810; *d* Mirecourt, 13 Jan 1874). Peccatte went at an early age (in 1826, it is believed) to work for JEAN-BAPTISTE VUILLAUME in Paris and his earliest work indicates that he learnt from Jean Persoit. Of his considerable output for Vuillaume, Peccatte seems to have made violin and viola bows almost exclusively, many to Vuillaume's patented 'self-rehairing' design. In 1838 Peccatte took over the shop of the younger François Lupot. A few bows exist that were made by Peccatte but which bear Lupot's brand-stamp. In 1847, shortly after his mother's death – and having earlier bought out his younger brother François' share of her holdings – Peccatte moved back to Mirecourt. In 1852 he purchased a house on the rue des Cloîtres where he lived until his death.

Peccatte's perfect aptitude for his craft, married with a shrewd business sense, won him success and recognition within both the trade and the community. Today Peccatte is generally held to be second only to Tourte, and his bows with their inspired hatchet heads do seem to continue a tradition established by the latter. Their consistently excellent playing qualities have established them as the bows most in demand by players, despite their continually escalating prices. The vast majority of Peccatte bows are round though one occassionally encounters an octagonal cello bow with a head modelled after Tourte.

(2) François Peccatte (*b* Mirecourt, 10 March 1821; *d* Paris, 30 Oct 1855). Brother of (1) Dominique Peccatte. He went to Paris for a short period early in his working life, then returned to Mirecourt and opened a shop in 1842, employing several workers to assist in his commercial production. François had some association with his illustrious brother Dominique, presumably during his stay in Paris and again when Dominique returned to Mirecourt. Indeed, much of François' best work shows the strong influence of Dominique. He returned to Paris not long before his premature death.

(3) Charles Peccatte (*b* Mirecourt, 14 Oct 1850; *d* Paris, 22 Oct 1918). Son of (2) François Peccatte. He was probably trained by August Lenoble with whom he later had a partnership which lasted until 1881. The early work includes very individual bows which can be described as of the Peccatte school but many of which have heads modelled somewhat after the early type of bow by

François Tourte. Charles also made bows for J.-B. Vuillaume which closely resemble those made by F.N. Voirin for Vuillaume.

Peccatte won silver medals at the Antwerp and Paris Expositions Universelles in 1885 and 1889 respectively, and was established on his own at 8 rue de Valois, Paris, by 1885. His work is very uneven in quality, and he seems to have offered a commercial range as well, as there are bows from Mirecourt and Germany which bear his authentic brand-stamp.

PAUL CHILDS

Pecci, Desiderio (*b* Siena, bap. 23 May 1593; *d* Siena, bur. 21 Aug 1638). Italian composer, lawyer and writer, distant cousin of TOMASO PECCI. He cultivated the necessary skills of a nobleman and won praise from his contemporaries not only as an able composer, singer and instrumentalist, but also for his talents as a poet, playwright and author of legal texts. He was regarded as one of Tuscany's leading lawyers, taught at the University of Siena and filled several of the city's prominent governmental offices. He was a member (with the name Ghiribizzoso) of the Accademia degli Intronati, and the Sienese chronicler Isidoro Ugurgieri Azzolini reported that he held concerts and academy meetings in his home. Although less distinguished as a composer than his cousin Tomaso, Pecci skilfully mingled affective and declamatory styles in his arias and madrigals, assiduously attending to the expressive requirements of his texts.

WORKS

Arie del Signor Desiderio Ghiribizzoso intronato, 1–3vv (Rome, 1626)
1 madrigal, 5vv, in A. Gregori: Primo libro de madrigali (Venice, 1617)
Sacri modulatus ad concentium, 2–4vv (Venice, 1629)
Madrigal, *D-Bsb*; Sub tuum praesidium, motet, 3vv, *GB-Cfm*

LAURA BUCH

Pecci, Tomaso (*b* Siena, bap. 8 Oct 1576; *d* Siena, bur. 3 Dec 1604). Italian composer, cousin of DESIDERIO PECCI. He was born to a Sienese family of social prominence and political power. As a nobleman he held no court or church post, but he found a forum for his musical and literary activities in three of Siena's renowned academies: the Accademia dei Filomeli, the Accademia dei Filomati and Ferdinando I de' Medici's Cento Huomini d'Arme. He composed several dozen canzonettas (including two collections dedicated to the Filomeli), two books of madrigals and, for the Compagnia di S Caterina, a set of responsories for Holy Week, gaining recognition as an exponent of the emerging *seconda pratica*. In 1603 Pecci killed a fellow *uomo d'arme* in a duel, and his resultant exile brought him to Rome, where he met the Modenese composer Alfonso Fontanelli. Pecci died the following year and was buried with spiritual privilege by the Compagnia di S Caterina.

Pecci's reputation in the 17th century extended beyond Siena. He was included in Giulio Cesare Monteverdi's list of notable *seconda pratica* composers (published in Claudio Monteverdi's *Scherzi musicali*, 1607) along with Rore, Gesualdo, Fontanelli and others. He was praised by Adriano Banchieri and Pietro della Valle, admired by Fontanelli and lauded in a poem by Marino. The *seconda pratica* informs not only Pecci's madrigals and responsories, but also his canzonettas. He usually chose the concise poetic form of the epigrammatic madrigal as the basis for his secular works, extensively rewriting the original texts for many of his canzonetta settings. He matched the affective *meraviglia* of the texts with unprepared and multiple dissonances, chromaticism, unexpected shifts of mode and of hexachord, expressive melodic intervals, juxtaposed 3rd-relations and unconventional cadential patterns. The madrigal *Era l'anima mia* (1612) and the canzonetta *Mori mi dici* (1603[7]) offer cogent illustration of these devices.

Pecelli, Asprilio. *See* PACELLI, ASPRILIO.

Pecháček, Franz Xaver (*b* Vienna, 4 July 1793; *d* Karlsruhe, 15 Sept 1840). Austrian violinist and composer. He studied with his father, Franz Martin Pecháček (1763–1816), a well-known composer of popular minuets and ländler. At the age of eight he played at the Viennese court and, according to Fétis, gave a concert with his father in Prague in 1803, which included a concerto by Fodor, an Adagio by Rode and some original variations. From 1805 he studied the violin with Johann Kletzinsky and Ignaz Schuppanzigh and composition with Aloys Förster; from 1809 to 1822 he played in the orchestra of the Theater an der Wien. He visited Paris in the autumn and winter of 1821, accompanied by the Danish virtuoso Weckshall, and there, according to the *Allgemeine musikalische Zeitung*, he had great success. From 1822 to 1826 he was leader at Württemberg, and from 1826 he held the same post at Karlsruhe, where he maintained an association with the Duke of Baden until his death. A second visit by Pecháček to Paris in 1832, mentioned by Fétis, has not been substantiated.

During his tenure in the orchestra of the Theater an der Wien, Pecháček appeared frequently in local concerts. A reviewer for the *Allgemeine musikalische Zeitung* (1815) praised his beautiful tone, brilliant staccato and intrepid security in double stopping and shifting, and accorded him 'a worthy place in the ranks of present-day virtuosos'. The earliest of his 37 published works also date from this same period. The predominant genre is the theme and

variations, in accordance with popular taste and Pecháček's own technical skills; but a small number of works, among them a quartet (1817) and three overtures (1820–21), show a developing ability and the desire to be more than a writer of virtuoso violin music.

Péchon, André (*b* Picardy, *c*1600; *d* after 1683). French composer. He was *maître de chapelle* at St Germain-l'Auxerrois, Paris, in the 1640s, and in 1647 he won a prize at the Le Mans *Puy de musique* with a motet in honour of St Cecilia. In 1652 he was appointed *maître de musique* and principal chaplain of Meaux Cathedral, which did not prevent his directing the music at St Germain-l'Auxerrois again on 12 November 1660. Péchon gave up his post at Meaux in advanced old age, some time before 1683. His only known works, in the Brossard collection, are seven *a cappella* motets on a liturgical cantus firmus; only *Pange lingua* has a continuo part. Brossard stated that Péchon was still remembered and revered in 1724 for his compositional skill.

YOLANDE DE BROSSARD

Peçi, Aleksandër (*b* Tirana, 24 April 1951). Albanian composer. After early mandolin and guitar lessons (1961 5) in Shën Saranda, southern Albania, he studied theory, solfège. harmony and the piano at the Jordan Misja Art Lyceum, Tirana (1965–9), and then composition (Zadeja) and orchestration (Ibrahimi) at the Tirana Conservatory (1969–74). After graduation he was musical director (1974–7) in Përmeti (where he was struck by the folk music of the region), composer-in-residence at the Tirana Revue Theatre (1977–9) and director of the State Ensemble of Popular Songs and Dances (1979–86). From 1986 he was salaried by the state to devote himself full time to composition. After the collapse of communism he was able to travel more widely: he participated in the 1992 Amsterdam International Composers' Workshop (with Yuasa, Ton de Leeuw and others) and took further courses in 1993 with Manneke in Amsterdam and with de Leeuw, Charpentier and Méfano in Paris. In 1993 he became president of the Albanian Association for New Music.

Peçi is one of the most successful products of the Albanian music education system set up in the 1960s. After the sober neoclassicism of the early ballet *Kecat dhe ujku* ('The Kids and the Wolf', 1979), he turned in the following decade to symphonic frescoes which echo his experiences of Albanian folklore. In works such as the Rhapsody no.4 (1987) and the *Poema baladike* (1989), he elaborates his thematic material in short motifs, thus producing dense textures in which drama and lyricism alternate poignantly. As he became better acquainted with contemporary musical trends after 1991, Peçi expanded his vocabulary, but without rejecting the past. Rather than yielding completely to the fascination of novel materials, he deployed contrasting elements to highly dramatic and atmospheric effect, often skilfully exploiting female voices (*Dialogue liturgique*, 1993). *Alb-Postmortium 97*, a response to the tragic Otranto Channel incident in which around 80 Albanians drowned attempting to emigrate to Italy in March, 1997, blends echoes of folk dirges and liturgical chant with taped sounds and a soaring coloratura soprano and ranks among the finest achievements of late 20th-century Albanian music.

WORKS

(selective list)

Ballets: Kecat dhe ujku [The Kids and the Wolf] (1, R. Bogdani, choreog. G. Kaçeli), Tirana, 13 Jan 1979; Ajkuna dhe Omeri/Ajunka kujton Omeri i ri [Aïkuna and Homeri/Aokuna Remembers Young Omeri] (choreographic duet, choreog. L. Çakalli), Tirana, 1986; 7 other small-scale ballets

GEORGE LEOTSAKOS

Peckover, Alfred. *See* PICCAVER, ALFRED.

Pečman, Rudolf (*b* Staré Město u Frýdku [now Frýdek-Místek], Moravia, 12 April 1931). Czech musicologist and administrator. He studied musicology under Racek and Štědroň, and aesthetics under Mirko Novák at Brno University (1950–55), graduating in 1955 and taking the doctorate in 1967 with a dissertation on Slavonic elements in Beethoven's works and the CSc in 1968 with a dissertation on Mysliveček. He was awarded the DSc in 1989 for his dissertation on Beethoven's stage works. He was appointed assistant lecturer at Brno University in 1955 but although a productive scholar and administrator (head of musicology department 1972–89), he was barred, as a non-communist, from promotion until 1984, when he became lecturer. After the revolution he was made vice-dean of the Philosophy Faculty (1989–91) and was appointed professor of musicology in 1990.

In 1966 Pečman was co-founder of the Brno International Music Festival, an annual event which, in the communist era, became an important focus of east-west musicological relations. He was general secretary (1966–76), during which period he edited the carefully documented festival programmes; until 1985 he edited the conference reports of the 'Brno Colloquia' linked to the festival. Pečman was the long-term editor of the Brno University faculty journal (*SPFFBU*: philosophy series F1–9, 1957–65; music series H1–30, 1966–95) and edited individual conference reports on Černušák (1984), Moravia in Czech music (1986) and Helfert (1988). He was president of the Musicology Section of the Composers Union (1984–9) and president of the Circle of the Friends of Music, Brno (1994–).

Pečman's prolific output as writer and publicist was influenced by that of his teacher Racek, with its focus on history and aesthetics. It includes studies of Mysliveček, Handel, opera (with a particular interest in the role of the libretto) and a thoughtful examination of the hostility in the Czech lands towards Dvořák. His wide range of interests is exemplified by the 35 volumes of programme books which he wrote for the circle of Music Friends in Brno (1970–97).

JOHN TYRRELL

Pécour [Pécourt], **Louis Guillaume** (*b* ?1651; *d* 11 April 1729). French dancing-master and choreographer. He was one of the finest dancers working under the celebrated royal choreographer Pierre Beauchamp. He is said in one source to have made his début as a dancer in a repeat performance of Lully's *Cadmus et Hermione* in 1674. When, on Lully's death in 1687, Beauchamp left the Opéra, Pécour was appointed in his place. He gave up

Choreography for a minuet by Lully from Pécour's 'Recüeil de dances' (Paris, 1704)

dancing in about 1703 but he held the post of ballet-master and choreographer at the Opéra until his death. His tutelage produced such outstanding dancers as La Fontaine, Subligny, Guiot, Prevost and Menese among the women and Blondy, Ballon, Dumoulin and Marcel among the men. He is credited with changing the 'S' figure of the MINUET to a 'Z', an innovation that helped keep the dancers in a proper relationship to each other and to the figure.

Many of his dances were recorded in the Beauchamp-Feuillet system of dance notation and can to a certain extent be re-created. Both the floor pattern and the steps are given in the notation. The style may be derived from a study of Pierre Rameau's *Le maître à danser* (Paris, 1725; Eng. trans., 1931/*R*), a didactic work that he personally approved. A total of 120 choreographies by him have so far come to light; most of them are for the theatre, but many are for social dancing. Many of the theatre dances include the names of the works for which they were created and of the performers who executed them. The choreographies may be found in *Recüeil de dances* (Paris, 1700/*R*, nine ball dances); *Recüeil de dances* (Paris, 1704/*R*, 35 theatre dances); *Recüeil* (Paris, 1712, nine ball and 30 theatre dances); annual collections published by Feuillet and Dezais (Paris, 1700–22, 26 ball dances); E. Pemberton: *An Essay for the Further Improvement of Dancing* (London, 1711, one jig); miscellaneous manuscript collections, four theatre dances (Little and Marsh contains a complete annotated inventory). Many of Pécour's works appeared in several prints and manuscripts; for example, 12 dances, all published previously, were put into a slightly revised version of the dance notation by Pierre Rameau in the second part of his *Abrégé de la nouvelle méthode* (Paris, 1725).

MEREDITH ELLIS LITTLE

Pécsi, Sebestyén (*b* Budapest, 29 Oct 1910). Hungarian organist. He studied at the Budapest Academy of Music, obtaining his diploma in 1937. From 1938 he appeared as a concert organist both at home and in important European cities, becoming one of Hungary's foremost organists. In 1940 he was appointed a lecturer (later a professor) at the Liszt Academy of Music. His activity as a teacher resulted in a number of different pedagogical works, including an organ tutor (1956, 3/1974), an organ method (1965) and a technical study of the organ (1975). He edited organ music by Hungarian composers, and also composed lieder and works for orchestra and organ. In addition to his extensive recital work he made several recordings, mostly of Bach, Liszt and Kodály (including a work dedicated to him), and also works by contemporary Hungarian and French composers. He was awarded the Liszt Prize in 1957 and the Hungarian National Prize in 1974.

GERHARD WIENKE/R

Pedal (Fr. *pédale*; Ger. *Pedal*; It. *pedale*). Any of several types of lever, operated by the foot and used for a variety of purposes on musical instruments: (1) to change tuning, as in the pedal harp (*see* HARP, §V, 7 and TIMPANI, §V, 7).

(2) To operate the bellows of a chamber organ, REED ORGAN or the like; to operate the bellows and playing mechanism of a PLAYER PIANO, BARREL ORGAN or other MECHANICAL INSTRUMENT.

(3) To sound the bass drum and high-hat cymbals in the performance of popular music. *See* DRUM, §II, 1 and DRUM KIT.

(4) To produce expressive effects, to change the tone-colour, or to alter the volume, as on the PIANOFORTE, types of ORGAN and HARPSICHORD, the vibraphone and some electronic instruments. On the modern piano, the pedal at the right (the 'loud', 'sustaining' or 'damper' pedal) acts to move all the dampers away from the strings so that notes being played continue to sound even after the keys are no longer depressed; strings for other notes may also vibrate sympathetically with those being played. The pedal at the left (the 'soft' or 'una corda' pedal) on grand pianos acts to shift the entire action sideways so that the hammers do not strike all of the strings provided for each note (on upright pianos this pedal moves all the hammers closer to the strings so as to shorten their stroke, producing a sound of less volume). The middle pedal, where present, on grand pianos is a 'sostenuto' pedal. Notes already being produced when this pedal is depressed continue to sound after the fingers have left the keys. On upright pianos the middle pedal is sometimes a sostenuto pedal and sometimes a 'muffler' or a 'moderator' pedal that mutes the sound of the instrument by interposing a strip of cloth between the hammers and the strings. On

pianos of the 18th and early 19th centuries a variety of hand stops, knee levers and pedals were used (*see* PEDALLING). On some modern harpsichords the jack slides, buff battens and coupler are connected to individual pedals by means of which all changes of registration are effected without removing the hands from the keyboard. Pedal control of volume is found on both pipe and electronic organs.

Pedal-operated signal processor units may be used to enhance, distort or change the electrical signal produced by an ELECTRIC GUITAR or other electro-acoustic instruments (*see* ELECTRONIC INSTRUMENTS, §I, 5(i)).

See also COMPOSITION PEDAL; KNEE-LEVER; MACHINE STOP; SWELL.

(5) The term is used most widely for a series of pedals, arranged somewhat like the keys of a piano, to form a keyboard played by the feet rather than by the hands. This has been provided at various times for the harpsichord, clavichord, piano (*see* PEDAL CLAVICHORD; PEDAL HARPSICHORD; PEDAL PIANOFORTE), carillon and, above all, for the organ. On this instrument, the pedals are either keyboards for the feet (pedal keys, contained in a pedal-board) or levers operating an accessory device such as that to change stops (e.g. COMPOSITION PEDAL). Pedal-boards are sometimes also applied to the harpsichord and clavichord. The term is a direct equivalent of certain Latin phrases (for example, the keys 'pro tastandi cum pedibus' at S Maria Novella, Florence, 1379), although early vernacular usages are not at all clear (for example, the *pedalen* at Delft in 1483); the word does not seem to occur in England before *c*1525. Like 'organum' itself, *pes* (*pedes*) is a word belonging as much to medieval music as to medieval instruments (*see* PES(i)).

The early history of the pedal suggests that key levers for the feet could serve many musical purposes. Despite traditional stories, there seems to be no reason to think them a German invention. The protruding sticks for the feet at Halberstadt Cathedral (*c*1361) played a type of large BLOCKWERK, while the little positive organ at Norrelanda, Sweden (*c*1370), had them to play the bass pipes. Many 15th-century organs (e.g. those at Troyes, Haarlem, 's-Hertogenbosch and Utrecht) had a group of large open Bourdon pipes (usually ten) placed on a separate chest on the wall to the side of the organ supported by a pendentive or *trompe* (hence their name, *trompes*) and played in most instances by pedal keys which probably worked by admitting wind along conduits running to the pipes. The Ileborg organ MS of 1448 refers to 'pedale seu manuale'; and the Buxheim Organbook (1450–60) to playing the 'tenore inferius in pedali', probably at written pitch. From 1450 to 1550 pedals were of several types: pulldowns to manual keys or pallets with or without a rank or more of chorus or solo pipes (8′ Trumpet and 2′ Flute were common in the Netherlands by about 1540); pedal-boards playing transmitted stops from a manual; or a pedal organ with independent stops, often including reeds. The compass was ideally up to *c*′ and down to the lowest note of the main manual (*F* to *c*′ according to Schlick, 1511). By 1600 pedals in some areas had immense versatility, for example, the 26 stops on four chests at Grüningen Schlosskirche.

During the 17th century instruments like those at Grüningen and in the big Hanseatic town churches encouraged the development of alternate right–left toe-pedalling (Scheidemann, etc), and the writing of both bass and solo lines for the pedal. Praetorius noted that pedals were rare in England and Italy; but composers in northern France, the Netherlands and Germany developed the idea of pedals taking cantus firmus or solo lines, generally *en taille*, that is, with accompaniment above and below. Moreover many of Schlick's recommendations of 1511 are still valid: the pedal should have separate stops, a compass to *c*′, a tolerable length of key (*c*30 cm for naturals and 6 cm for sharps), a bench high enough to allow quick passage-work, and keys narrower than the space between them to make two- and even four-part playing easy.

While the 17th and 18th centuries saw variety in the shape, size and playing technique of the PEDAL-BOARD, nothing new could be added to the musical use of the department. French organists continued to emphasize *en taille* textures; Italian organists kept pedals for 'organ points'; in England pulldowns were rare before the 1790s; and in the Iberian peninsula pedals were largely reserved for pedal points in certain tonalities (C,D, E and F).

In the fully-fledged WERKPRINZIP organ of Hamburg (*c*1690), the pedal was very important and versatile, both aurally and visually; ideally it sounded an octave below the *Hauptwerk* Prinzipal, itself an octave below the *Rückpositiv*. 'German' pedals, that is, straight pedal-boards with independent stops and a compass of *C* to *c*′ became the norm from about 1820 in northern Europe, not least because J.S. Bach's organ works were then becoming increasingly available. On the grounds that organists' hands needed more than one keyboard for quick changes of sound, E.F. Walcker and others sometimes made double pedal-boards, more admired by such theorists as Töpfer than by players. The desire to extend the expressive powers of the instrument also led some builders (e.g. Walcker, Boston Music Hall, 1863) to practise, and some theorists (e.g. Audsley, *The Art of Organ Building*, 1905) to advocate, the enclosure of some of the Pedal registers in the swell box with the manual registers. Composers continued to exploit the traditional alternate-foot technique even in chromatic music, long after such travelling virtuosos as G.J. Vogler had introduced toe-and-heel pedalling.

EDWIN M. RIPIN, PETER WILLIAMS/DAVID ROWLAND (4), NICHOLAS THISTLETHWAITE (5)

Pedal-board (i). A keyboard played by the feet, chiefly to be found in organs, but also in carillons, harpsichords, clavichords and pianos. It can be connected either to its own pipes (bells, strings) or to the manual keyboard(s) of the same instrument. Early types are for playing with the toes: short sticks protruding from the lower case-front either as simple strips of wood (Halberstadt, *c*1361) or as proto-keys (Norrlanda, *c*1370), small rectangular frames with short straight keys (16th-century Flanders and Italy), the same with longer keys but still for toe-pedalling (16th-century Netherlands and Germany), round or square studs into which the toe or ball of the foot presses (Iberian organs, 17th–18th centuries), flat, shallow, rectangular boxes through the upper board of which pass short separated pedal keys (France and Belgium, 18th century). Eventually, longer and thicker pedals designed for occasional playing with the heel were developed (18th-century Netherlands and Germany); these were called 'German pedals' in English sources from about 1810.

Romantic and modern organs have seen a great variety of pedal-board compasses (up to 32 notes, *C–g′*, in large Anglo-American organs) and styles (with concave, parallel or radiating forms, or combinations of these). Large Italian and German 19th-century organs possessed 'double' pedal-boards, the upper being placed at an angle to the lower. *See also* PEDAL.

PETER WILLIAMS/MARTIN RENSHAW

Pedal-board (ii). A rack of pedal-operated signal processor units for enhancing, distorting or changing the electrical signal produced by an ELECTRIC GUITAR or other electro-acoustic instrument. *See also* ELECTRONIC INSTRUMENTS, §I, 5(i).

PETER WILLIAMS/MARTIN RENSHAW

Pedalcembalo (Ger.). *See* PEDAL HARPSICHORD.

Pedal clarinet. A CONTRABASS CLARINET; a member of the clarinet family pitched two octaves below the soprano clarinet in B♭.

Pedal clavichord (Ger. *Pedalklavichord, Pedalclavier*). A clavichord equipped with a pedal-board like that of an organ. Instruments of this type are mentioned by Paulus Paulirinus of Prague (*c*1460) and Virdung (*Musica getutscht*, 1511), and a 15th-century drawing shows a clavichord with a two-and-a-half-octave compass *B* to *f″*, with a 12-note pedal-board *B* to *b* (with b♭ omitted, perhaps in error) beneath it. Such instruments were primarily used for practice purposes by organists, and this function is specifically cited by Paulirinus. Most of them presumably had pull-down pedals directly connected by cords to the bass notes of an ordinary clavichord, but Adlung (*Musica mechanica organoedi*, 1768) noted that such a system presents problems because the pedal keys must be more widely spaced than the manual and, accordingly, the cords must slant and therefore tend to drag the keys sideways as they are pulled down. This problem could be obviated by the use of a rollerboard, which, however, was noisy and vastly increased the cost of the instrument. A better system was to provide a completely separate instrument to be sounded by the pedal keys; this was set underneath an ordinary clavichord and could be strung with sub-octave as well as unison strings, thereby better approximating the resources of the pedal division of an organ.

The most elaborate pedal clavichords consisted of three separate instruments arranged one above the other and providing an approximation of an organ with two independent manuals and pedal. A single example of such an instrument survives, in the Musikinstrumenten-Museum of the University of Leipzig; it was made by Johan David Gerstenberg of Geringswalde, and comprises two double-strung, fret-free clavichords of normal size with a range of *C* to *e‴* and a much larger instrument set beneath them, also fret-free, which is quadruple-strung – with two strings tuned in unison and two tuned an octave lower – and has a two-octave range of *C* to *c′*. A pedal clavichord in pyramid form about 275 cm high and about 214 cm wide, with ten changes of tone, was made by H.N. Gerber in 1742, and a clavichord with pedal keyboard built into a single case made by Georg Gebel (i) of Breslau (who also made a similar pedal harpsichord) is reported by Mattheson in his *Grundlage einer Ehren-Pforte* (1740). An instrument of this kind is depicted in J. Verschuere Reynvaan's *Muzijkaal kunst-woordenboek* (1789), the accompanying text for which (derived from Claas Douwes's *Grondig ondersoek van de toonen der muzijk*, 1699) states that on a pedal clavichord each course of strings can be struck by three or four tangents, so that only eight courses of strings would be required for its entire compass of two octaves and a note. Douwes claimed that the pedal-board on his instrument could be pushed into the instrument for ease in transporting it, an idea which to his knowledge had not been put into practice by anyone else. Music specially for pedal clavichord was composed by G.A. Sorge, H.N. Gerber, and F.W. Marpurg. The instrument continued to be used by organists until after 1800.

It is highly probable that J.S. Bach at one time owned a pedal clavichord of the kind with two independent manuals – he gave '3 Claviere nebst Pedal' to his son J.C. Bach sometime before his death (the implication derived from Forkel that he also owned a pedal harpsichord does not bear close scrutiny).

The universities of Nebraska, USA, and Göteburg, Sweden, have since 1993 and 1995, respectively, used copies of the Gerstenberg two-manual and pedal clavichord and have found them to be practical and effective training instruments for organists, demonstrating a constructive affinity between the clavichord action and that of the tracker organ. The fingers and the feet must use a positive and firm touch otherwise the clavichord does not speak clearly, and the dynamic sensitivity of the clavichord reveals any unevenness. Consequently, organists who prepare themselves by facing the extra difficulties of the pedal clavichord often find that their playing is more secure than if all their preparation had been on the organ.

Pedalflügel (Ger.). *See* PEDAL PIANOFORTE.

Pedal harpsichord (Fr. *clavecin de pédale*; Ger. *Clavicymbelpedal, Pedalcembalo*). A harpsichord equipped with a pedal-board like that of an organ. Hardly any original examples survive, although a number of Italian harpsichords and virginals show clear evidence, in the form of attachments on the underside of the bass keys and holes in the bottom of the case, that at one time they were equipped with eight to 18 pedals connected to the lowest keys by cords. (Two Italian virginals in the Tagliavini collection, Bologna, of the 16th and early 19th centuries

respectively, have been restored with reconstructions of their missing original pedal-boards.) Although this 'pull-down' system was also known in Germany, it seems that the more usual practice in Germany and France was to build a separate instrument with a pedal keyboard, to be placed on the floor underneath an ordinary two-manual harpsichord. The Weimar court organist J.C. Vogler (1696–1763), a pupil of J.S. Bach, possessed an extraordinary instrument (described in a contemporary advertisement, reprinted in Anthon, 1984) consisting of a two-manual harpsichord (with 2 × 8′, 1 × 4′, a buff stop, and a six-octave compass of *C′* to *c″″*) and a pedal harpsichord in its own case underneath, disposed 1 × 32′, 1 × 16′, 2 × 8′, with two buff stops and a door in the lid to adjust the volume.

The *Encyclopédie méthodique* (i, 1791) mentions a different type of pedal harpsichord in which a second soundboard was applied to the underside of a harpsichord; heavy strings stretched beneath this soundboard were struck by pedal-operated hammers. This system was also employed in some pedal pianos. A large harpsichord made by Joachim Swanen (Paris, 1786; now in the Conservatoire des Arts et Métiers, Paris) has a pedal mechanism of this kind with a range of two octaves, but the mechanism now on the instrument does not appear to date from the 18th century.

Like the more common PEDAL CLAVICHORD, the pedal harpsichord seems to have been made and used primarily as a practice instrument for organists. While harpsichords and clavichords with pedals might be employed effectively in the literal performance of particular passages that J.S. Bach undoubtedly composed with stringed-keyboard instruments in mind (such as the cadenza in the first movement of the Brandenburg Concerto no.5, BWV1050 and the A minor fugue of *Das wohltemperirte Clavier*, i, BWV865) in which there are a few bass notes that cannot be played by the left hand, the belief, advanced by 19th- and early 20th-century scholars including Spitta and Schweitzer, that certain of his works, such as the Trio Sonatas BWV525–30 and the Passacaglia in C minor BWV582, were conceived specifically for the pedal harpsichord rather than the organ is untenable. Nevertheless, organ works of Bach and his contemporaries can be performed effectively on the pedal harpsichord, as surely they were, upon occasion, in their day. During the 20th century, several instrument builders constructed pedal harpsichords.

Pédalier (Fr.). (1) A pedal keyboard attached to a piano and capable of activating its hammers.

(2) An independent PEDAL PIANOFORTE made by Pleyel, Wolff & Cie in Paris, to be placed underneath an ordinary grand piano.

Pedaliter. A quasi-Latin term derived from *pedalis* (a part 'for the feet') to indicate that a piece of organ music so labelled is played by both hands and feet. The word appears to have arisen as an antithesis to MANUALITER and was so used by Schlick (1511). Although it does not indicate a piece played by pedals alone, it does in practice imply one with a developed pedal part. Sometimes composers used it to suggest a large-scale work in several 'voices' (e.g. Scheidt's '*Benedicamus* à 6 voc. pleno organo pedaliter', 1624). However, in the third section of his *Clavier-Übung* Bach seems to have contrasted *manualiter* with a phrase such as 'canto fermo in basso'; but *pedaliter* itself also appeared in music from his circle, chiefly outside the context of organ chorales and pedal melodies, as for example in the autograph manuscript of BWV535a, and in Buxtehude's C major Praeludium in the 'Johann Andreas Bach Buch'.

Pedalling. The art of using the tone-modifying devices operated on the modern piano by pedals. In the earlier history of the instrument similar, and other, devices were operated by hand stops, knee levers or pedals. The mechanisms of these devices are described in PIANOFORTE, §I, and in articles on individual stops and pedals.

1. To *c*1790. 2. *c*1790 to 1830. 3. From *c*1830.

1. TO *c*1790. The number and type of tone-modifying devices on 18th-century pianos varied substantially. Cristofori, the maker of the earliest pianos, used only the UNA CORDA, which is found on two of his three surviving instruments. The *una corda* also appears on an early piano from the Iberian peninsula. The earliest extant pianos from Germany, made in the 1740s by Gottfried Silbermann, were the first to have a sustaining (damper-raising) stop. The effect produced by this stop imitates the sound of the Pantaleon, a type of large dulcimer also made by Silbermann, and was popular in mid-18th-century Germany. The term PANTALON STOP was used for a stop found in some unfretted clavichords (Adlung, 568) and the name 'Pantalon' was given to pianos with wooden hammers and no dampers. Silbermann also used an ivory mutation stop, which imitates the sound of the harpsichord by means of small pieces of ivory brought into contact with the strings just above the hammer's striking point.

A sustaining device was usual on later 18th-century German and Austrian grand pianos, and during the last quarter of the century the mechanism was normally operated by knee levers. The MODERATOR also became common at this time. At first the moderator mechanism was operated by a hand stop, but by the 1790s a knee lever was used for this too. A BASSOON STOP operated by a knee lever is found on some later 18th-century German and Austrian pianos. From Backers (1772) onwards, the standard disposition of English grands was two pedals: sustaining and *una corda*.

It is difficult to generalize about the stops, levers and pedals available on 18th-century square pianos. Whereas many earlier English squares had three levers inside the piano (two to raise the ends of the damper rail and one to operate the BUFF STOP, some later instruments had no levers or pedals. A proliferation of tone-modifying devices, including lid swells (*see* SWELL, §2), was fashionable with some on the Continent, but the trend was much criticized by others. Hand stops were later replaced by pedals in

England, but both knee levers and pedals were used on continental squares towards the end of the century, with a preference for the former.

No pedal markings exist in music before the 1790s and other sources are generally reticent on the subject, although a few authors mention the use of the sustaining lever. C.P.E. Bach commented that 'the undamped register of the fortepiano is the most pleasing and, once the performer learns to observe the necessary precautions in the face of its reverberations, the most delightful for improvisation'. Charles Burney was less enthusiastic about a performance without dampers given in 1770 by Anne Brillon de Jouy in Paris:

> She was so obliging as to play several of her own pieces both on the harpsichord and piano forte [Burney]. . . I could not persuade Madame B. to play the piano forte with the stops on – *c'est sec*, she said – but with them off unless in arpeggios, nothing is distinct – 'tis like the sound of bells, continual and confluent.

Evidently some use was made of the undamped register and presumably of other registers too, but tone-modifying devices do not appear to have been widely accepted throughout most of the 18th century. Their use cannot have been very subtle, since they were often operated by hand stops. Descriptions suggest that they were generally thought of in the same way as organ or harpsichord registers.

2. *c*1790 TO 1830. Daniel Steibelt published the first music with pedalling indications in his *6me Pot Pourri* and his *Mélange* op.10, both of which appeared in Paris in 1793. The pedalling in these pieces is of a somewhat rudimentary nature, with the sustaining pedal apparently held down for several bars at a time. It is possible that these indications simply define the outer parameters of passages in which the performer raises and depresses the dampers at will. However, pedalling indications in a slightly later concerto by Boieldieu suggest that pianists were still accustomed to raising the dampers for several bars at a time, or even whole sections of a movement: the indications 'Grande Pédalle toute la Variation' and 'Sourdine aux accords seulement' mean 'sustaining pedal for the whole variation' and 'lute for the chords only'. In Steibelt's two works, new, distinctively pianistic writing begins to appear, notably the *tremolando* for which he was to become (in)famous and the accompanying texture in which the sustaining pedal allows a bass note to be sustained below other notes or chords which complete the harmony.

While some regarded Steibelt's innovations as mere gimmickry, others began to use similar techniques to develop a new style. Chief among the latter were members of the London Pianoforte School. Cramer seems to have introduced printed pedalling in London, in his second concerto of 1797. However, later commentators singled out Dussek as the most significant pioneer of pedalling in his generation. His first pedal markings appeared in the *Military Concerto* op.40 of 1798, but the technique in this work suggests that he had been using the pedals for some time previously. Clementi, the oldest member of the School, included pedal markings in some works of the late 1790s, but they represent a much less developed approach than that of his younger contemporaries.

Some German and Austrian musicians were very conservative in their use of the pedals (or levers). For example, while Beethoven's approach shared many similarities with that of members of the London Pianoforte School, Hummel was cautious: 'Hummel's partisans accused Beethoven of mistreating the piano, of lacking all clearness and clarity, of creating nothing but confused noise the way he used the pedals' (Czerny, 1842). Hummel later wrote that 'though a truly great artist has no occasion for the pedals to work upon his audience by expression and power, yet the use of the damper pedal, combined occasionally with the piano pedal (as it is termed), has an agreeable effect in many passages'. At around the same time, Kalkbrenner observed that 'in Germany the use of the pedals is scarcely known'. Pedal markings appeared in music by German and Austrian composers a little later than in England and France.

The terminology of early pedal markings has caused some confusion. In England, the term for the sustaining pedal was 'Open Pedal' while in Vienna it was 'Senza Sordini' ('S.S.').

Shortly after 1800 Viennese-style grands acquired something of a 'standard' disposition of tone-modifying devices. The knee levers were replaced by four pedals: *una corda*, moderator, bassoon and sustaining. To these were sometimes added a second moderator and 'Turkish music' ('Janissary stop'), a stop with bells, drum and triangle or cymbal. A similar four-pedal disposition existed in France, although a LUTE STOP often replaced the bassoon. Pedals other than the sustaining, moderator and *una corda* were never highly regarded by professionals and largely died out in the 1830s. In England, the only pedals generally used were the *una corda* and sustaining. The latter was sometimes divided (as was the damper rail itself) to allow selective sustaining.

Refinements in pedalling technique developed quickly at the beginning of the 19th century. Accounts of Dussek's playing suggest that he gave the effect of continuous pedalling while retaining clarity in his playing. This effect requires syncopated pedalling, in which the pedal is raised on the beat and depressed again shortly afterwards. Dussek's notation is too imprecise to show this, but syncopated pedalling is suggested by the markings in Clementi's Fantaisie op.48 (1821).

3. FROM *c*1830. As 19th-century pianos became more resonant, increasingly sophisticated pedalling was called for; it is clear that Chopin, Liszt and some of their contemporaries exhibited all the essentials of a modern technique. These pianists had individual pedalling styles distinguished, for example, by the clarity of their playing and the extent to which they used the *una corda*. Some, including Beethoven, Kalkbrenner and Thalberg, made extensive use of the *una corda*, but others objected to the changes of timbre that its use caused in the middle of phrases, and reserved it for special effects in discrete sections. Extensive use of the pedals was condemned by a few writers: Friedrich Wieck lamented what he perceived as the excesses of pianists he associated particularly with Paris.

After the middle of the 19th century, the only significant development in pedalling was the invention of the selective tone-sustaining pedal. J.L. Boisselot exhibited such a device at the Paris exposition of 1844 and other mechanisms designed to achieve the same, or similar, effect followed. However, the principle of selective tone-sustaining became established only after Steinway patented the SOSTENUTO PEDAL in 1874. A few composers indicated this pedal in scores, but many others were

reluctant to use it, especially in Europe, and its adoption by leading makers was a gradual process.

Pedalling has been acknowledged as an extremely important element of performance. Following the emergence of pedalling in piano music of the 1790s, some tutors devoted significant space to it (Milchmeyer, Adam, Steibelt), but it was not, however, until the pioneering work of Schmitt (1875) and Lavignac (1889) that the subject received detailed treatment.

DAVID ROWLAND

Pedal note. The lowest of the series of notes that can be sounded on a brass instrument with a given setting of any slide or valves. The term derives from the association of deep sounds with the pedals of an organ. The lowest octave of the serpent and the ophicleide consists of pedal notes (*C–c* for the most common size). Pedal notes have been used on the trombone from Berlioz onwards: on the B♭ trombone, the pedals are *B♭′* down to *E′*. French horns with shorter tube lengths (such as the B♭ side of the double horn) can sound pedal notes easily; they are difficult on instruments with longer lengths such as the horn in 12′ F. Pedal notes are used frequently on tubas and euphoniums, but rarely on trumpets and cornets, and then only in showy solos. For instruments with a high proportion of cylindrical tubing, such as trombones, the air column does not have a mode of vibration at the correct frequency to support the fundamental (first harmonic) of the pedal note, which can only be sounded because of a 'co-operative regime' in which its higher harmonics are supported by higher modes of resonance of the tube. As a result, these pedal notes have a bright but hollow tone quality.

See ACOUSTICS, §IV.

ARNOLD MYERS

Pedal organ. Strictly the chest, towers, chamber, etc., given to the pipes of the pedal department, as distinct from the pedal-keys or PEDAL-BOARD which play them or which, in instruments without a Pedal organ, play the stops of the manual(s). Since the late 14th century the largest organs had some kind of Pedal organ, though this may not have included the largest pipes or have been more than an extension of the manual, itself playing a BLOCKWERK. By 1600 in central Germany, the Pedal organ often contained three distinct chests, themselves often divided, and including as well as the biggest bass pipes some of the highest flute and reed solo stops. In other regions (e.g. France) the Pedal might be in a separate enclosure behind the main case and have no registers below 8′ pitch. The preponderance and eventual monopoly of bass stops in the 18th- and 19th-century Pedal organ meant that the department became less versatile than it had traditionally been.

PETER WILLIAMS/NICHOLAS THISTLETHWAITE

Pedal pianoforte (Fr. *piano à pédalier, clavier de pédales*; Ger. *Pedalflügel, Pedalklavier*; It. *pianoforte organistico*). A piano equipped with a pedal-board like that of an organ. Four types are known: those in which the pedals operate separate hammers to strike the same strings as the keys; those in which a separate set of strings with its own soundboard is installed below the main soundboard; those with a separate box containing pedals, action and strings, on which the piano itself is set; and uprights, where wire pull-downs on the keys are activated by the pedals. The pedal notes usually sound at the 16′ pitch over a two-octave range. Some 18th-century instruments have a SHORT OCTAVE arrangement, such as the Johann Schmidt piano of the first type, now in the Metropolitan Museum of Art, New York. The third type was also known in the 18th century; Mozart had such an instrument, made probably by Anton Walter, and his father reported to Nannerl that the box was extremely heavy.

Some pedal pianos may have been used, like the PEDAL CLAVICHORD and PEDAL HARPSICHORD, as practice instruments for organists. Mozart, however, improvised on his instrument in public, and perhaps performed the Piano Concerto in D minor K466 on it. A large number of pedal pianos, mostly of the third type, were made in the 19th and early 20th centuries; a few American examples exist, as well as European makes. In Paris, an instrument of the third type was invented by Pleyel, Wolff & Cie; the Viennese maker Joseph Brodmann also built instruments of this type (see illustration).

Schumann persuaded Mendelssohn to institute classes in pedal piano playing at the Leipzig Conservatory and wrote two works for the instrument: the *Studien* op.56 and *Skizzen* op.58. Other 19th-century composers who wrote music specially for the instrument include Alkan (*Benedictus* op.54, *11 grands préludes et une transcription* op.66, *Impromptu sur le choral de Luther* op.69 and some études and fugues) and Gounod (*Fantaisie sur l'hymne national russe* and *Suite concertante*, both with orchestra).

EDWIN M. RIPIN/EDWIN M. GOOD

Pedal pianoforte by Joseph Brodmann, Vienna, c1815 (Kunsthistorisches Museum, Vienna)

Pedal point. A long, sustained note held through many bars while movement continues in other parts of the piece. The expression is derived from organ playing, where the technique exploits the organist's ability to hold down a low pedal note indefinitely while playing above it with the hands. 'Pedal point' generally refers to a low bass note, but it may also be applied to a long-held note elsewhere in the texture. The note most commonly note chosen for pedal point is the dominant, but the tonic is also sometimes used. As is to be expected, examples abound in organ music. One of the most celebrated outside that idiom is the low D held throughout the fugue 'Die Gerechten Seelen sind in Gottes Hand', which concludes the third movement of Brahms's *German Requiem*. Pedal point is a required element in the FUGUE D'ÉCOLE, where it is placed just before the stretto (*see* STRETTO (i)), but it is otherwise no more characteristic of fugue than of any other genre of composition.

PAUL M. WALKER

Pedal steel guitar. A development of the lap steel guitar (*see* HAWAIIAN GUITAR) in which the application of pedals enables the player to change instantaneously from one tuning to another. As performing technique developed, players of the Hawaiian guitar came to depend on using a variety of open tunings. In order to be able to move between these tunings at will, players began to use instruments with more than one neck. However, this meant that instruments became increasingly unwieldy as more necks were added. In the 1940s makers such as Bigsby in California and Epiphone in New York started to offer a solution by limiting the number of necks to two but adding pedals which, attached to a system of 'changers' and 'fingers' on the instrument, would enable the player to alter tunings as desired. At first players were happy to operate the systems as designed, using the pedals to move to new tunings as if they had changed necks. But gradually guitarists adapted the system to provide some novel musical effects, and used the pedals to change the pitch of one string while another was sounding. One of the first recorded examples of this 'slurring' effect, which is now considered to be the pedal steel guitar's most characteristic sound, is featured in a solo played by Bud Isaacs on Webb Pierce's 1954 song *Slowly*. From about that time the pedal steel guitar almost completely replaced the lap steel guitar, especially in country music where the pedal steel guitar became a virtually compulsory component.

The standard number of pedals for a twin-necked instrument is eight. Pitch-changing knee-levers (usually four in number) were added later, giving the instrument even greater versatility. Most pedal steel guitars are fitted with ten strings on each of two necks, although some have eight, 12 or 14. Twin-neck guitars usually have one set of strings tuned to a chord of E^9, and the other to C^6. Until the 1970s many of the large guitar manufacturers such as Fender and Gibson made pedal steel guitars, but as manufacturing costs increased and demand subsided, the market was largely left to small, independent makers such as Sho-Bud and Emmons, joined in the 1990s by newer makers, such as Matses and Morrell, all in the USA.

TONY BACON

Pedardo [Pedart], **Antonio.** *See* PATART, ANTONIO.

Pedersøn [Pedersen], **Mogens** [Petreo, Magno] (*b* c1583; *d* ?Copenhagen, ?Jan/Feb 1623). Danish composer and

instrumentalist. He was one of the four musicians led by Melchior Borchgrevinck who were sent by King Christian IV to study with Giovanni Gabrieli in Venice in 1599. On their return in 1600 he continued his apprenticeship to Borchgrevinck until, in August 1603, he was appointed an instrumentalist in the royal chapel. He must have shown exceptional promise since in the spring of 1605 he was given leave to travel 'wherever he can advance himself in his art and learning', and, provided with a handsome personal recommendation in Italian from Christian IV to Gabrieli, he returned to Venice. This time he remained for four years; before returning home he published there his first book of madrigals, dedicating it to Christian IV in gratitude for the privilege of studying with Gabrieli and as a demonstration of what he had learnt. He rejoined the royal chapel in September 1609, but in 1611 the king sent him to England in company with Hans Brachrogge, Jacob Ørn and Martinus Otto to serve his sister Anne, James I's queen, since he was involved in a war with Sweden and would thus for a time have no use for them. There is no record of the activities of the four musicians in England, but they seem to have been in contact with Francis Tregian, since some of their music is found in manuscripts that he copied while imprisoned for recusancy between 1609 and 1619. One of the manuscripts (*GB-Lbl* Eg.3665) contains ten five-part madrigals identified as from 'Magno Petreo Dano Libro secundo 1611'. This second book of madrigals by Pedersøn is otherwise unknown; it is not known where it was published (if indeed it ever was) or whether Tregian made his copies from the composer's manuscript. No doubt also dating from his stay in England are two five-part pavans for viols (his only known instrumental music) of which only three parts survive (in *GB-Lbl* Add.30826–8). In July 1614 Christian IV made a brief, unofficial visit to England and took three of his musicians home with him; Pedersøn remained behind for another month. In 1618 he was appointed assistant director of the royal chapel under Borchgrevinck and given charge of six choirboys, the first native musician to achieve such a high position in the musical establishment of the Danish court. He was granted a vicariate at Roskilde in 1621. His name occurs in the official records for the last time in January 1623; his wife received payment for the maintenance of the six boys in February, and his post was taken over by Hans Nielsen in April, so it is reasonable to suppose that he died in January or February of that year.

Pedersøn is the most important Danish composer before Buxtehude and the only one of the Danish musicians educated by Christian IV who seems to have persevered with composition – or at least by whom enough music remains to allow a reasonably balanced impression of his abilities as a composer to be formed. His madrigals (31 for five voices, and two three-part madrigalettos) are generally of a very high standard and can bear comparison with their Italian models. Their style may be described as post-Marenzio, i.e. they are up to date and expressive without departing from the polyphonic tradition. There are parallels in them with Italian pieces. That Pedersøn was familiar with Monteverdi's latest music, for example, is apparent from his setting of Guarini's *T'amo mia vita* (1608), in which he unmistakably borrowed material from Monteverdi's setting of the same text (book 5, 1605), though he did not follow him in his addition of a continuo part.

Pratum spirituale (1620) reveals quite a different side of Pedersøn. It is a collection of church music – the earliest surviving substantial example of settings of Danish words by a Danish composer – which provides five-part polyphonic versions of some of the liturgical melodies set out for use in the post-Reformation church in Denmark in Hans Thomissøn's *Salmebog* (1569) and Niels Jespersen's *Graduale* (1573). In his dedication to Crown Prince Christian, whom he said he taught, Pedersøn expressed the hope that his collection would not only be of use to the nation but would also be performed in schools, by which he no doubt meant the cathedral schools and larger grammar schools, which provided choirs to lead the singing in the larger churches. This practical intention is apparent in the essentially homophonic style of the settings of the Danish psalms, the melodies of which would also be sung by the congregation. Of the 37 pieces in the collection, 31 are settings of either Gregorian melodies or Lutheran chorales. These are systematically arranged, with the pieces proper to Christmas, Easter and Whitsun first, followed by a number of psalms not restricted to any particular feast. The last six pieces, also for five voices, are freely composed and comprise two sets of responses, one to Danish, the other to Latin words, an abbreviated Latin mass for Lutheran use, and three fine Latin motets. They are in a masterly early Baroque polyphonic style which reveals Pedersøn as a composer of character who was not obviously dependent on Venetian models. He represents the highpoint of Christian IV's achievements for Danish music.

JOHN BERGSAGEL

Pederzuoli [Pederzoli, Pedezzuoli], **Giovanni Battista** (*d* after 1691). Italian composer and organist, partly active in Austria. He was *maestro di cappella* of S Maria Maggiore, Bergamo, from 12 February 1664 until 26 January 1665. In 1677 he was appointed organist at the court of the Dowager Empress Eleanora in Vienna and in

1682 succeeded Antonio Draghi as her Kapellmeister, a position he retained until her death in 1686. He may have remained in Vienna as a member of the emperor's Kapelle, but only one work attributed to him, the oratorio *L'anima in transito* (1692), bears a date later than 1686. During his service in Vienna, music at the Habsburg court was almost entirely dominated by Draghi, but he composcd more sacred dramatic works than any other late 17th-century Habsburg musician except Draghi. He provided Eleonora's Kapelle with a new *sepolcro* (a type of oratorio performed at Vienna during Holy Week) every year from 1683 to 1686. Like the works of Draghi his operas and oratorios are in the rather conservative middle Baroque style favoured by the Emperor Leopold I. His sinfonias show both French and Venetian influence. In his arias he occasionally called for some unusual instrumental colour, such as three viols in two arias of the oratorio *Sant'Elena* (1683), but in general he scored for voice and continuo only. In *Sant'Elena* he achieved another unusual effect by writing the chorus of demons for a quartet of basses. His ensemble numbers are usually simpler than Draghi's, as are his recitatives, which contain no florid arioso patterns. His melodies include occasional expressive chromatic writing reminiscent of the early 17th century. Among his smaller works are ten *accademie* or philosophical cantatas, which are the earliest examples of this genre written for Vienna. They were probably performed at sessions of the Italian academy founded at Vienna in 1657, of which Pederzuoli's patron Eleanora and his chief librettist, Minato, were members. All begin with four-part sinfonias in dance forms.

WORKS

in A-Wn unless otherwise stated

DRAMATIC

I presagi della sorte (festa musicale) Vienna, 6 Jan 1677, music lost
Vienna festeggiante (serenata) Vienna, 1679
Ragguaglio della fama ('servizio di camera') Vienna, 18 Nov 1680
Il giudice di villa (intermedio), Vienna, 1681, perf. with A. Scarlatti: Amor non vuole inganni [= Gli equivoci nel sembiante]
Il monte Chimera (trattenimento musicale, N. Minato), Vienna, Augarten, 9 July 1682
Le fonti della Boezia (festa musicale, Minato), music lost (prepared for Vienna, 1682, but unperf.)
Introduzione d'una festa e ballo di zingare (Minato), Vienna, carn. 1684
Didone costante, Vienna, Hofburg, carn. 1685, music lost
Le ricchezze della madre dei Gracchi ('introduzione a un balletto') Vienna, 6 Jan 1685, *A-Wgm* (lib only)
Scherzo musicale in modo di scenica rappresentazione (Minato), Vienna, carn. 1685
Musica, pittura e poesia (trattenimento musicale, Minato), Vienna, Bellaria, 24 July 1685
Musica per una festa di carnevale (Minato), Vienna, carn. 1686
L'ossequio della bizzarria ('introduzione a un balletto') Vienna, carn.
L'ozio ingannato ('musica di camera', Minato)

ORATORIOS

La sete di Cristo in croce (Minato), Vienna, 15 April 1683
Sant'Elena (Minato), Vienna, 1683
Le lagrime più giuste di tutte le lagrime (Minato), Linz, 30 March 1684
La bevanda di fiele (Minato), Vienna, 20 April 1685
La sorte sopra la veste di Cristo (Minato), Vienna, 11 April 1686, music lost
L'anima in transito (Pezuoli), Vienna, 1692
San Pietro piangente

LAWRENCE E. BENNETT

Pedrazzini, Giuseppe (*b* Pizzighettone, nr Cremona, 13 Jan 1879; *d* 19 Oct 1957). Italian violin maker. He was a pupil of Romeo Antoniazzi in Milan, then began to work on his own there. He quickly gained recognition and won awards at various exhibitions, including those in Rome in 1920 and in Cremona in 1937. He modelled his instruments after various patterns, especially those of Stradivari, G.B. Guadagnini and Amati, all of which he interpreted freely. Tonally his work is among the best of the early 20th-century Italian makers. He was a meticulous and elegant craftsman; the scrolls of his instruments are always deeply carved, and the symmetrically rounded curves of the bouts and flanks provide a distinctive touch. Besides new instruments, he made a number of skilful antiqued copies. He used a variety of different labels and, depending on the period, one of three different brands. A good part of his output was exported, and he had particularly close ties with Hawkes & Son (later Boosey & Hawkes) in London. Among his pupils and associates were Ferdinando Garimberti, P. Parravicini and his nephew N. Novelli.

ERIC BLOT/JAAK LIIVOJA-LORIUS

Pedreira, José Enrique (*b* San Juan, Puerto Rico, 2 Feb 1904; *d* San Juan, 6 Jan 1959). Puerto Rican music educator and composer. He took piano lessons in San Juan with Ana and Rosa Sicardó before studying piano and composition in New York with Zygmunt Stojowski for five years. In 1928 he returned to Puerto Rico, where he established himself as a teacher of piano, founding his own academy in Santurce in 1931. Among his pupils were Alba Rosa Castro, Irma Isern and José Raul Ramírez. Although he was primarily a teacher, Pedreira is acknowledged as the most significant Puerto Rican composer of his generation. His stylistic evolution was gradual, from

Romanticism through an identifiably Puerto Rican Impressionism to a more personal idiom that is especially evident in his eloquent *danzas*. He represents the transition between Quintón (1881–1925) and the nationalist composers of the 1950s.

GUSTAVO BATISTA

Pedrell, Felipe [Felip] (*b* Tortosa, 9 Feb 1841; *d* Barcelona, 9 Aug 1922). Catalan composer, musicologist and teacher. He began his musical studies at the age of seven while a chorister at Tortosa Cathedral, receiving instruction in solfège, harmony and the transcription of popular song from Juan Antonio Nin y Serra. He was otherwise self-taught in music. During his early career he wrote a great deal of vocal music, mostly sacred, but devoted himself increasingly to opera and zarzuela after moving to Barcelona as deputy director of the Light Opera Company of the Teatro Circo in 1873. His operas *L'ultimo Abenzeraggio* (1874) and *Quasimodo* (1875) had their premières at the Gran Teatro del Liceo in that city. A year in Italy (1876–7) aroused his interest in musicology, and in Roman libraries he researched music history, aesthetics, folklore and early music. Subsequently he spent two years in Paris, where he composed opera and came under the influence of Wagner. After returning to Spain he settled in Barcelona and concentrated on musicology. He began publishing two journals in 1882: *Salterio sacro-hispano*, in which he published many works by earlier Spanish composers, and *Notas musicales y literarias*. In 1888 he intoduced the periodical *La ilustración musical hispano-americana*, which contained some of his most important research, and also contributed numerous articles to other periodicals, especially *La España musical*. His operatic activities resumed with *Eda* (1887), *Little Carmen* (1888), and *Mara* (1889), all commissioned by a friend in New York. In 1890 he began work on his monumental *Els Pirineus* (*Los Pirineos*), an operatic trilogy with prologue, which blended the quotation of medieval and Renaissance music with modern harmony and Wagnerian leitmotif. In conjunction with its completion a year later he published the book *Por nuestra música*, in which he set forth his views regarding Spanish national opera.

Pedrell moved to Madrid in 1894 and was appointed professor of choral singing at the conservatory, professor of higher studies at the Ateneo, and was elected to the Real Academia de Bellas Artes. He spent ten productive years in the capital composing, promoting the performance of sacred music, founding the Isidorian Choir, organizing concerts, editing music, and giving lectures. He also composed the opera *La Celestina*, intended as the second opera after *Els Pirineus* in a triptych dedicated to *Patria*, *Amor*, and *Fides*, the motto of the Catalan Jocs Florals ('Floral games'). The third opera was never written. Although he completed a final dramatic work *El Comte Arnau* upon his return to Barcelona in 1904, he gradually abandoned composition and spent his remaining years arranging the large amount of material he had collected, publishing it in several major works, and rearranging or re-editing existing work.

Pedrell was the founder of modern Spanish musicology and contributed greatly to the revival of church music in Spain. He wrote extensively on Spanish liturgical music and made substantial collections and editions of both early and contemporary Spanish sacred music. His most important editions include the complete works of Victoria and the series Hispaniae Schola Musica Sacra. His biographical writings include a series in *Revista musical catalana* (1904–10) entitled 'Musichs vells de la terra', biographies of Victoria and Eximeno, and a bio-bibliographical dictionary of Spanish, Portuguese, and Latin American musicians. His critical writings include a study of Spanish popular song. One of his major works was the *Catàlech de la Biblioteca musical de la Diputació de Barcelona*, in which he collated much of what he had already published in books and articles. His endeavours inspired the succeeding generation of scholars, and he encouraged the early career of Anglès. The Festschrift *Escritos heortásticos*, published in his honour in 1911, contains a complete list of all his publications and compositions up to that date; subsequent lists based on this are not always representative, for although he was at first ambitious to become a Spanish equivalent of Wagner, in his later years he destroyed many of his scores, recognizing that his major talents lay elsewhere. His lack of success as a composer was a source of frustration to him, and it is difficult today to assess his stature because much of his music remains in manuscript, with few modern editions or recordings. He strove to make a major contribution to national music in Spain, especially Catalonia, and was prolific: his output includes not only songs, choral works, and operas but many chamber and orchestral compositions as well. His works for the piano consist mostly of salon-style dances as well as arrangements, fantasias, rhapsodies, and variations based on popular operatic themes. None of this music, however, has found its way into the standard repertory. Perhaps his most important achievement in composition was to inspire other composers through his writings, lectures and private instruction. Albéniz, Granados and Falla all benefited from his tutelage and held him in high esteem.

WALTER AARON CLARK

Pedrini, Teodorico (*b* Fermo, 30 June 1671; *d* Beijing, 10 Dec 1746). Italian composer, theorist and instrument maker. He was the first Lazarist missionary to settle in China, and contributed to the cultural exchange between China and the West during the late Ming and early Qing dynasties. He was educated in Rome and arrived in China in 1711 after an arduous nine-year journey. There he succeeded the Portuguese Jesuit Tomás Pereira as court musician to Emperor Kangxi. Pedrini remained in China until his death, working closely with the emperor and

simultaneously fulfilling his religious life and missionary goals. Life in the Chinese court was politically complex, and Pedrini was deeply involved in intrigues between the emperor, the Jesuits and Rome during the Rites controversy. Despite earning Kangxi's esteem, he was twice imprisoned by the emperor.

There were many harpsichords at the Chinese court, gifts from foreign visitors, and there is evidence that Pedrini himself built instruments in China. His musical abilities were highly regarded by the emperor, who declared Pedrini's lack of the Chinese language to be unimportant, since 'harpsichords are tuned with the hands, and not with the tongue'. Pedrini's op.3 sonatas (MS, Beijing National Library; the title-page bears the anagrammatic name 'Nepridi') are his only known extant compositions; they are strongly influenced by (and include several quotations from) Corelli's op.5 set, to which they pay homage in the style, number, structure and types of movements. Pedrini also completed the fifth volume of *Lulu Zhengyi* ('A True Doctrine of Music'; Beijing, 1713), on Western music theory, begun by Tomás Pereira.

JOYCE LINDORFF

Pedro del Puerto. *See* ESCOBAR, PEDRO DE.

Pedrollo, Arrigo (*b* Montebello Vicentino, 5 Dec 1878; *d* Vicenza, 23 Dec 1964). Italian composer. He studied first with his father Luigi, an organist and band conductor, and later at the Milan Conservatory with Gaetano Coronaro, Amintore Galli and Luigi Mapelli, earning a diploma in composition in 1897; his graduation composition, a symphony, was first conducted by Toscanini (June 1900). After a short career as a pianist, he began a successful career as an opera composer: between 1908 and 1936 he had eight operas performed, some several times, in Italy and abroad. In 1912 his *Juana* won the Sonzogno competition. He was also active as a conductor and founded the Milan and Turin radio symphony orchestras (1928–34). In 1920 he was appointed director of the Istituto Musicale in Vicenza (where he also held conducting appointments 1922–9). He later taught composition at the Milan Conservatory (1930–41). From 1941 to 1959 he was director of the Liceo Musicale Cesare Pollini, Padua. His pupils included Galliera, Maderna, Scimone and Santi.

The dramatic conception and musical language of Pedrollo's operas are strongly reminiscent of 19th-century ideals, and his debt to the Italian tradition, as well as to Wagner and Strauss, and to Berlioz and Debussy, is equally evident. The originality of his work lies mainly in the subtleties of his harmonic language and especially in the wonderful palette of his orchestration, but the dramatic tension of Pedrollo's his operas is not consistently sustained.

WORKS

OPERAS

Terra promessa (quadro lirico, C. Zangarini), Cremona, Ponchielli, 18 Feb 1908; rev. (poema drammatico, 3 pts), after 1913 [pt 2 'La morte di Mosè' corresponds, with variants, to version of 1908]

PIERLUIGI PETROBELLI

Pedroso, Manuel de Moraes (*b* Miranda do Douro; *fl* 1750–70). Portuguese theorist and composer. After several years' residence at Oporto he published there a 47-page *Compendio musico, ou Arte abbreviada* (1751, 2/1769) divided into three parts: rudiments, accompanying and counterpoint. The last part gives rules for composing arias, recitatives, duets, minuets, concertante pieces and symphonies. An autograph Lamentations for soprano and organ dated 1751 survives at the Biblioteca Nacional in Lisbon. An imposing *Te Deum* for four voices with strings and organ (1762; published in A. von Gavel: *Investigaciones musicales de los archivos coloniales*, Lima, 1974) and a brilliant soprano aria, *Dichoso seras*, with violins, flute and continuo, are now in the Archivo Arzobispal, Lima. (*DBP*; *StevensonRB*)

ROBERT STEVENSON

Pedrotti, Carlo (*b* Verona, 12 Nov 1817; *d* Verona, 16 Oct 1893). Italian composer and conductor. He was intended for a business career, but showed exceptional musical talent at an early age, composing orchestral pieces and organizing a group of fellow students to perform them under his direction. After a period of study with the Veronese teacher Domenico Foroni he turned his attention to opera; his first two attempts were not performed, but the third, *Lina*, was successfully given at the Teatro Filarmonico in Verona in 1840. Its successor, *Clara di Mailand*, may not have been performed, but his reputation was growing and won him the appointment of conductor at the Italian opera in Amsterdam, where he stayed for

four seasons, gaining valuable experience and producing at least one more opera of his own, *La figlia dell'arciere*.

In 1845 he returned to Verona, where he remained until 1868, at first supporting himself by teaching but later doubling the posts of opera coach and conductor at the Teatro Filarmonico and the Teatro Nuovo. This was the time of Pedrotti's main work as a composer: the ten operas he produced during this period, especially those in the *buffa* or *semiseria* style, established his reputation throughout Italy; his first major success, *Fiorina* (1851), carried his name outside Italy as well, and in 1856 his best work, *Tutti in maschera*, was quickly recognized as a minor masterpiece of *opera buffa*, reaching Vienna in 1865 and Paris in 1869. Another important success came with *Guerra in quattro* in Milan in 1861.

In 1868 Pedrotti was appointed director of the Liceo Musicale and director and conductor of the Teatro Regio in Turin. He threw himself into the musical life of the city, making radical improvements in the style and quality of the performances at the opera, and founding in 1872 a weekly series of Concerti Popolari at the Teatro Vittorio Emanuele, using the orchestra and chorus of the Teatro Regio. These concerts, which introduced many of the works of Beethoven, Wagner and other foreign composers to Italian audiences, were the first of their kind in Italy and constitute a landmark in the late 19th-century revival of Italian interest in instrumental music. In both these undertakings Pedrotti was sustained by the appointment, in 1876, of Giovanni Depanis as impresario of the Teatro Regio (whose son, Giuseppe, had already been deeply involved in the foundation of the Concerti Popolari and was later to write their history). Depanis was an admirer of Wagner, and his first season included an important performance of *Lohengrin*, preceding which Pedrotti went to Munich for a personal meeting with the composer. Following its successful Italian première, conducted by Angelo Mariani (1871, Bologna), the opera had proved a spectacular failure in Milan in 1873, but the Turin production was a success and gave a new impetus to Wagner performances in Italy. Pedrotti was also responsible for a number of Italian premières at the Teatro Regio, as well as the third Italian production of *Carmen* – which had to be cancelled after two disastrous performances, only to return in triumph at the end of the same season.

Pedrotti's 14 seasons put the Teatro Regio on a level that rivalled La Scala, and placed Turin beside Milan as one of the chief musical centres of Italy. But in the process the composer Pedrotti was extinguished: in 1870 he produced *Il favorito*, the only one of his own operas given in Turin during his entire directorship, and shortly afterwards wrote his last opera, *Olema la schiava* (Modena, 1872), for the singer Isabella Galletti-Gianola.

In 1882 Pedrotti left Turin for Pesaro, where he had been appointed the first director of the Liceo Musicale established by the *comune* of Pesaro in accordance with the terms of Rossini's will. He spent ten years administering and inspiring the new institution and in 1892 organized the celebrations for the centenary of Rossini's birth; but early in the following year ill-health forced him to tender his unwillingly received resignation. He returned to his family home at Verona, where he suffered from acute nervous depression and after only a few months of retirement committed suicide by throwing himself into the river Adige.

As a composer, Pedrotti was highly regarded in his day. Technically accomplished and a brilliant orchestrator (he was selected in 1869 to write the 'Tuba mirum' for Verdi's projected Rossini requiem), he was at his best in *opera buffa*, where his cultured eclecticism, rhythmic vitality and lightness of touch made an immediate appeal. His masterpiece, *Tutti in maschera*, is full of happy invention and tuneful ensemble writing, and has deservedly been revived well into the 20th century. But even here (and more so in his serious operas) he was the representative of a dying style. He was perfectly aware of Verdi, and by the 1880s regarded his own works as 'roba da vecchi' ('old men's stuff') and strenuously opposed their performance. His influence as an orchestra director was more significant: he was probably the first Italian conductor in the modern sense of the word, the eldest of an important group of late 19th-century composer-conductors that included Bottesini, Mariani, Faccio, Mancinelli and Mascheroni. It was he who prepared the orchestra and public that gave Toscanini his first sustained success at Turin in 1895–8.

MICHAEL ROSE

Peebles, David (*fl* 1530–76; *d* ?1579). Scottish composer. A canon of the Augustinian Priory of St Andrews, he is described as 'ane of the cheiff musitians into this land' by Thomas Wood (i), whose contemporary partbooks (*IRL-Dtc, GB-Eu, Lbl, US-Wgu*) contain all his surviving music. According to Wood, Peebles composed the motet *Si quis diligit me* in about 1530 and presented it to James V 'being a musitian, he did lyke it verray weill'. The motet is a cantus firmus composition in post-Josquin style, incorporating some structural imitation and revealing a striking melodic gift. Other music of this period by Peebles must be lost. The anonymous Mass '*Felix namque*' for six voices (MB, xv, no.4) is stylistically similar and may be his work.

In 1550 'David Pablis, canonicus' signed a matriculation roll of students at St Leonard's College in the University of St Andrews. In the 1560s, at the time of the Reformation, Lord James Stewart, half-brother of Mary Queen of Scots and Prior of St Andrews, turned Protestant. When Earl of Moray and regent, he commissioned Peebles to set the psalm tunes for four voices. There are 106 of these settings with the tune in the tenor, according to contemporary practice. All are written in a simple chordal style; but as might be expected from an able polyphonist, individual parts are always interesting and harmonic propriety is strictly observed.

After the Reformation canons often lived on at their priory or convent – with the ground divided among them – and many of them married. A charter of land rent was granted in 1571 to David Peebles and his wife Katherine Kinnear by the commendator of the priory, the Catholic Robert Stewart, 7th Earl of Lennox (another half-brother of Mary's). Peebles seems to have remained a Catholic: Robert Stewart commissioned from him a Latin motet, *Quam multi, Domine*, in 1576, a setting for four voices of Psalm iii, which shows a knowledge of contemporary European developments in dramatic and madrigal-inspired sacred music. Peebles died in December 1579, according to Laing (see Johnson, 3/1853), who cited the 'Register of Confirmed Testaments' kept at the Scottish Record Office, Edinburgh. Unfortunately, the volume for 1579 is now missing. He had certainly died by 1592: his wife is described as 'relict of David Peablis' in her will of that year.

KENNETH ELLIOTT

Peeling-horn. *See* WHITHORN.

Peellaert [Pellaert], **Auguste** [Augustin] (**-Philippe-Marie-Ghislain**), Baron **de** (*b* Bruges, 12 March 1793; *d* Saint Josse-ten-Noode, Brussels, 10 April 1876). Belgian composer. The son of one of Napoleon's chamberlains, he spent his youth in Paris and studied the piano and harmony with J.-J. de Momigny. In 1813 his family returned to Bruges, where he intended to pursue an artistic career, but in 1815, when his father became bankrupt, he decided to join the army, eventually reaching the rank of lieutenant-colonel. Peellaert was a prolific composer who devoted himself chiefly to vocal music. Claiming musical kinship with Rossini, whose friend he became in 1860, he concentrated on *opéra comique*, often writing his own librettos. His sense of local colour and dramatic expression also induced him to try his hand at *grand opéra*. Although several of his works were well received at La Monnaie, the simplicity of their melodies ensuring them a certain success, they were never staged in Paris. Some fragments of his operatic works were published in Brussels. He also wrote many songs, church music and orchestral and chamber works. After 1850 he confined himself to unpretentious operettas, and at the end of his life he wrote, in disillusionment: 'I have done a little of everything without succeeding at anything' (*Cinquante ans de souvenirs recueillis en 1866*, Brussels, 1867).

HENRI VANHULST

Peerce, Jan [Perelmuth, Jacob Pincus] (*b* New York, 3 June 1904; *d* New York, 15 Dec 1984). American tenor. He studied with Giuseppe Borgatti and from the mid-1940s was chosen by Toscanini to sing in his broadcasts and recordings of *La bohème*, *La traviata*, *Fidelio*, *Un ballo in maschera* and the last act of *Rigoletto*. He made his stage début in Philadelphia in 1938 as the Duke of Mantua and joined the Metropolitan in 1941, making his first appearance as Alfredo; he stayed with that company until 1968. He toured abroad with many ensembles, specializing in the Italian and French *spinto* repertories, and in 1956 he became the first American to sing with the Bol'shoy since the war. In 1971 he made his Broadway début as Tevye in *Fiddler on the Roof*. He also appeared in films, and recorded popular songs in addition to Jewish liturgical music. In his prime Peerce was most admired for a remarkably even scale, a strong technique, and a voice with a dark vibrancy in the middle register and a metallic ring at the top, points confirmed by his recordings under Toscanini. Though his diminutive size precluded an ideal romantic illusion, he was an actor of restraint and dignity.

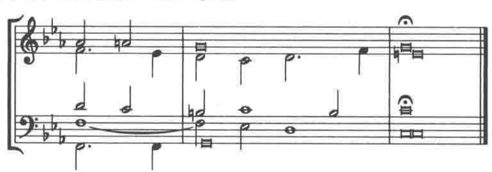
MARTIN BERNHEIMER/R

Peers, Edward. *See* PEARCE, EDWARD.

Peerson [Pearson], **Martin** (*b* probably at March, Cambs., between 1571 and 1573; *d* London, bur. 15 Jan 1651). English composer, virginalist and organist. He was probably the son of Thomas and Margaret Peerson of March: evidence of his parentage can be derived from his will and the March marriage registers. This couple married in 1570, but it seems likely that Thomas died during the next few years and that Martin's mother was the 'Margaret Peersonn' who married in 1573: hence the suggested date of birth for the composer. Probably at a comparatively early stage in his career he came under the patronage of the poet Fulke Greville. On May Day 1604 his setting of *See, O see, who is heere come a maying* was performed as part of Ben Jonson's *Private Entertainment of the King and Queene* at the house of Sir William Cornwallis at Highgate (now in London). In 1606, on the same occasion as Jonson, he was convicted of recusancy and thus most probably had Catholic sympathies at that time. A letter of 7 December 1609 states that he was then living at Newington (Stoke Newington, London) and had composed several lessons for the virginals, his principal instrument. Peerson took the BMus degree at Oxford in 1613 and for this would have had to subscribe to the Thirty-nine Articles and thus to Protestantism. From 1623 to 1630 a 'Martin Pearson' was sacrist at Westminster Abbey: this was probably the composer. Between June 1624 and June 1625 Peerson took office as almoner and Master of the Choristers at St Paul's Cathedral; there is evidence to suggest that he was later made a petty canon. Although all cathedral services ceased at the end of 1642 following the outbreak of the Civil War, he retained the title 'almoner' and along with the other petty canons and the vicars-choral had special financial provision made for him. He was buried in St Faith's Chapel under St Paul's.

The first 14 pieces in Peerson's *Private Musicke* are ayres for solo voice with accompaniment of three viols, nos.15–23 are duets or dialogues, and *See, O see, who is heere come a maying* (for mixed forces a 6) completes the set. All are secular, and all except the last have short choruses at the ends of the verses which, even when contrapuntal and imitative, could as a rule be easily memorized, thus allowing any onlookers to participate in the music-making. The volume contains some attractive songs and is notable for using and combining elements from a number of different genres, e.g. the ayre, madrigal, consort song (especially of the type in Thomas Ravenscroft's publications) and verse anthem. Although it presented no novelties of style in 1620, it was up to date in including fragments of declamatory rhythm in some of the voice parts, and the specific suggestion of extemporized accompaniment on virginals or lute over the bass line was an original feature.



The 'organ part' of Peerson's *Mottects or grave chamber musique* of 1630 consists of a two-part score (a *basso seguente* and usually the uppermost vocal or instrumental part) with some figures added to the bass – the first instance of a figured bass in an English published collection; in none of the numbers is the organ part essential (although it might substitute for other parts) and it could in many cases have been a later addition. Nor does one find in this music any of the melodic clichés of the *stile nuovo* or rhythms or textures basically dissimilar from those already established in the English madrigal, verse anthem or secular song. Thus the collection differs markedly from Walter Porter's *Madrigales and Ayres* of 1632 and in general derives from the past. It is worth noting too that Peerson's weakest pieces are to be found here: some of these might in fact be of much earlier date. However, certain pieces show interesting, individual traits. Although there are a few lively songs, an impressive feature is the intense, introspective gloom of a good deal of this music, created by minor keys, low-lying parts, chromaticism and especially by the frequent use of augmented chords.

A sombre mood characterizes a number of Peerson's anthems, which in the main belong to the second decade of the 17th century. Here he stands out as one of the most modern composers of that decade in employing dramatic solo melodies, madrigalian harmonies and sometimes quite elaborate word-painting. Many of his anthems, verse and full, contain individual and expressive music, and a work such as *Fly ravisht soule* bears comparison with the anthems of Gibbons. The motets to Latin texts probably date from about the turn of the century. Their quality is hard to assess because of the loss of the cantus part, but they, too, probably contain some of Peerson's finest music. Like the verse anthems, however, they do not always sustain the interest of their initial ideas.

The four surviving keyboard pieces show a range of style and genre that may reflect the range of Peerson's total output for keyboard. *The Fall of the Leafe* and *The Primerose* are attractive genre pieces that have found enough favour in modern times to be performed and even recorded fairly often: like the *Alman*, they are reminiscent of his older contemporary Giles Farnaby's miniatures. *Piper's paven* is however a fine large-scale reworking of Dowland's piece, and suggests that the lost keyboard music could have included substantial works of considerable interest. Peerson's skill in instrumental construction is seen, too, in the works for string consort, which have a freshness of design, and a textural and melodic beauty, that make them well worth playing and hearing. In general they are polyphonically uncomplicated but far from superficial. While Peerson makes use of such devices as 'chain-canon' imitation, in passages which are harmonically static or increasing in tension (see bars 14–44 of Fantasia no.4, entitled *Delicate*), these are only a part of his technical repertory. He is capable of springing surprises, as in the bass-viol flurry of quavers in *Delicate*: and in this regard the five-part fantasia *Attendite* is especially notable, with a wealth of invention and a beautiful passage in D♭ followed by a perfectly convincing return to the home key of D minor in only 28 beats.

Two idiosyncrasies of Peerson's music are the use now and again of unprepared 4ths, rare at the time, and a strange, mannered kind of degree inflection (ex.1). While

Ex.1 *O Love thou mortall speare*

counterpoint of any complexity was beyond his technique and probably alien to his temperament, his experiments with form and unusual harmonic procedures are interesting. It seems likely that keyboard playing and extemporization had considerable influence on his musical style and were the source of much of his unconventional treatment of dissonance.

ANTHEMS

verse unless otherwise stated

All laude and praise, a 5, *GB-Lbl* (also attrib. T. Ravenscroft)
Blow out [up] the trumpet, a 5, *Cp*, *DRc*, *Lbl*, *Ob*, *Y*
Bow down thyne eare O Lord (2p. Preserve thou my soule; 3p. Be mercifull unto mee O Lord), a 5, *Cp* (inc.)
By Euphrates flowrie side, full, 5vv, *Lbl* (inc.)
Fly ravisht soule (2p. Rest thee [there] awhile; 3p. Muse still thereon [Nayle prints]; 4p. Raine eyes), a 5, *Lbl*, *Ob*
I am brought into so greate trouble (2p. My heart panteth), a 5, *Lbl*
I am small (2p. Thy word is tride; 3p. Trouble and heaviness), a 5, *Ob*
I called upon the Lord (2p. All nations compassed mee; 3p. They kept mee in on every side; 4p. They came about mee like bees), a 5, *Ob*
I will magnifie thee O Lord (2p. O Lord my God; 3p. Which sitteth in the heavens), a 6, *DRc*, *Lbl*, *Och*
Lord ever bridle my desires, full, 5vv, 1614[7]; ed. in EECM, xi (1970), 150–54
O God that no time doest despise, full, 4vv, 1614[7]; ed. in EECM, xi (1970), 69–71
O God when thou wentest before the people (2p. It is well seene O God), a 5, *Lbl*, *Ob*
O goe not from me (2p. Many oxen; 3p. They gape upon me), a 5, *Lbl* (also attrib. H. Palmer), *Ob*
O Lord in thee is all my truste (2p. No, no, not so thy will is bent; 3p. Haste thee O Lord), a 5, *Och* (inc.)
O let me at thy footstoole fall, full, 5vv, 1614[7]; ed. in EECM, xi (1970), 124–29
O Lord thou hast searched me out (2p. Thou art about my path; 3p. Thou hast fashioned me; 4p. Whether shall I goe then), a 5, *Lbl*
O that my wayes (2p. I will thanke thee), a 5, *Lbl*
O that my wayes (2p. I will thanke thee), a 6, *Lbl*
Pleade thou my cause, a 5, *Lbl*
Praise the Lord (2p. Yea as long; 3p. O put not your trust), a 5, *Ob*
Who will rise up (2p. But when I said), full, 5vv, *Lbl*

MOTETS ETC

all motets, 5 voices, in Ob, lacking cantus part

Deus omnipotens; Hora nona dominus Jesus (2p. Latus eius lancea miles perforavit); Laboravi in gemitu meo; Levavi oculos meos in montes (2p. Ecce non dormitabit); Mulieres sedentes (2p. Christus factus est); Nolite fieri sicut equus et mulus (2p. Multa flagella peccatoris); O Domine Jesu Christe; O Rex gloriae; Pater Fili paraclete; Quid vobis videtur de Christo; Redemptor mundi
1 psalm-tune harmonization, 1621[11] [setting used for Pss l, lxx, cxxxiv]

SECULAR VOCAL

Private Musicke or The First Booke of Ayres and Dialogues ... being Verse and Chorus, 4, 5, 6vv/viols, acc. virginals/lute/b viol (London, 1620) all ed. in Heydon:

Ah were she pittifull, W iv, 26; At her faire hands (W. Davison), W vi, 34; Can a mayd?; Come pretty wagge and sing (2p. Then with reports); Disdaine that so doth fill mee; Gaze not on youth (2p. I onely seeke to please mine eye); Hey the horne the horna; Is not that my fancies queene?; Locke up faire lids (P. Sidney); Love her no more

Now Robin laugh and sing, W iv, 21; O I doe love; O pretious time, W iv, 13; Open the dore; Pretty wantons sweetly sing; Resolv'd to love (H. Constable); See, O see, who is heere come a maying (B. Jonson); Since just disdayne; Sing love is blinde; The spring of joy is dry; Upon my lap my soveraigne sits (R. Verstegan); What neede the morning rise

Mottects or Grave Chamber Musique ... some Ful, and some Verse and Chorus, 5, 6vv/viols, org/virginals/b lute/bandora/Irish harp (London, 1630) [all texts, except Where shall a sorrow, from F. Greville: *Caelica Sonnets*]; all ed. in Baxter and Foote:

Cupid my prettie boye; Farewell sweet boy; Love is the peace; Love the delight (2p. Beautie her cover is; 3p. Time fayne would stay); Man dreame no more (2p. The floud that did); Man dreame no more; More then most faire (2p. Thou window of the skie)

O false and treacherous probabilitie; O love thou mortall speare (2p. If I by nature); Selfe pitties teares; Under a throne; Was ever man so matcht with boye; Where shall a sorrow (2p. Dead noble Brooke); Where shall a sorrow (2p. Dead noble Brooke); Who trusts for trust (2p. Who thinkes that sorrows felt); You little starres (2p. And thou O love)

Wake sorrow (2p. Arbella), a 5, *GB-Lbl* Add.29372–6 [mourning song for Arabella Stuart]

CONSORT MUSIC

6 fantasia-almain sets and a seventh almain, a 6, *IRL-Dm* Z.3.4.1–6 [no. 5 only], *GB-Lbl* Add. 17786–91, *Och* 423–8 [only fantasias nos.1–4, entitled 'Acquaintance', 'Beauty', 'Chowse' and 'Delicate'], no.4 ed. in MB, ix (1955, 2/1962), 165–70; the anonymous fantasia a 6 preceding Peerson's work in *IRL-Dm* Z.3.4.1–6 is probably also by him
1 fantasia, a 5, inc., *GB-Lbl* Add. 37402–6 [entitled 'Attendite'], *Och* 716–20

AUDREY JONES/RICHARD RASTALL

Peer-Southern. American firm of music publishers. It was founded in New York in 1928 by Ralph Peer as the Southern Music Publishing Co. in cooperation with the Victor Talking Machine Co. Peer had spent several years in the southern USA collecting ethnic music and jazz, and the company became a major publisher and distributor of this music. In 1932 when Victor withdrew, Peer, who was

president of Southern, became its sole owner (he remained at the head of the firm until his death in 1960). In 1940 he established the Peer International Corporation. This, together with Southern, became known as the Peer-Southern Organization, which from 1940 included the American Performing Rights Society, from 1941 Melody Lane Publications and La Salle Music Publishing Company, and from 1943 the Charles K. Harris Music Publishing Company.

Peer-Southern is the principal publisher of Ives and the sole publisher of David Diamond, Fuleihan, Rudolf Maros, Orrego-Salas, Manuel Ponce, Revueltas, Saygun, Serebrier and Shapero. Peer also represents the catalogues of Ediciones Mexicanas de Música, Pan American Union of Washington and Wagner & Levien of Mexico City; Southern Music Publishing Co. is the exclusive representative of A. Cranz of Brussels, Editorial Argentina de Música of Buenos Aires, Editorial Cooperative Interamericana de Compositores of Montevideo, Enoch & Cie of Paris (partial catalogue), C. Gehrman of Stockholm (partial catalogue), Israeli Music Publications, Liber-Southern of London and R.E. Westerlund AB of Helsinki.

W. THOMAS MARROCCO, MARK JACOBS

Peeters, Flor [Florent] (*b* Tielen, province of Antwerp, 4 July 1903; *d* Antwerp, 4 July 1986). Belgian composer, organist and teacher. At the Lemmens Institute, Mechelen, he studied Gregorian chant with van Nuffel, the organ with Depuydt and composition with Mortelmans. He won the highest distinction, the Lemmens-Tinel Prize, was appointed professor at the institute in 1923 and succeeded Depuydt as professor of organ in 1925. Also in 1923 he was made assistant at St Rombouts Cathedral, Mechelen, where he later became organist in succession to Depuydt. He was professor of organ at the Ghent Conservatory (1931–48) and professor of organ and composition at the Tilburg Conservatory in the Netherlands (1935–48). From 1948 to 1968 he was organ professor at the Antwerp Conservatory, which he directed between 1952 and 1968. He received many honours: in 1958 he was made a Commander of the Order of St Gregory the Great and he was awarded honorary doctorates by the Catholic universities of America (1962) and of Leuven (1971). In 1971 he was elevated to the peerage by King Baudouin with the personal title of baron; he was the third Belgian musician since 1830 to receive this honour.

Peeters won renown as a teacher both in Europe and the USA, where he often gave masterclasses at Boys Town, Nebraska. In 1968 the Belgian Ministry of Flemish Cultural Affairs commissioned him to give an annual masterclass at Mechelen Cathedral, providing 20 scholarships for students from countries having cultural links with Belgium. Peeters's didactic publications include a practical edition of old Flemish music, *Oudnederlandsche meesters voor het orgel*, and a summary of his teaching methods, *Ars organi*, published with text in Flemish, French, German and English. He also wrote a *Practische methode voor gregoriaansche begleiding* based on the Vatican edition of plainchant, which was simultaneously published in French and English. As a performer he made numerous commercial recordings and gave over 1200 recitals throughout Europe, the Philippines, South Africa and the USA, where he completed ten transcontinental tours during the period 1946–71. His programmes featured Bach, the Flemish masters and contemporary works including his own compositions, and invariably contained a work by Franck.

Although Peeters composed chamber music, piano works, songs and much sacred choral music, the development of his technique and his highly individual style may best be studied in the organ works. Certain influences early in his career were quickly absorbed into his own idiom: as a student at the Lemmens Institute he followed a tradition of highly disciplined training for Roman Catholic church musicians. His fluent melodic line is influenced by Gregorian chant, Flemish Renaissance polyphony and often by Flemish folk themes. Of contemporaries, an admiration for Dupré is reflected in the dedication and design of the *Variationen und Finale über ein altflämisches Lied* op.20; the *Toccata, fuga en hymn op 'Ave maris stella'* op.28 is dedicated to Peeters's greatest friend, Tournemire, and has some resemblance to the improvisatory techniques characteristic of Tournemire's style, as do other works of the same period. The friendship between the two organist-composers was long and close. Tournemire began an intensive correspondence with him in 1930, but their only meeting was in 1936, when Tournemire invited Peeters to give his début recital at Ste Clotilde, Paris, where he was *organiste titulaire*. In 1939 Tournemire bequeathed to Peeters the organ console that Franck had used at Ste Clotilde.

Peeters's works are characterized by a preference for classical forms. From the start he explored many possibilities of variation technique and his vast output of chorale preludes shows great skill in handling miniature form. He frequently experimented with polyrhythm, polytonality and complex contrapuntal devices, as in the *Passacaglia e Fuga* op.42. The Sinfonia op.48, dedicated to Peeters's wife, was composed in August 1940, directly after the German invasion. Its severe, dissonant harmonic language expressed his rebellion against the occupation. Peeters's refusal to play for the Germans during the war resulted in the confiscation of his passport, but he continued to travel to the Netherlands for masterclasses and to act as a courier between Belgian and Dutch cathedral authorities. Peeters worked on his Organ Concerto op.52 throughout 1944. The family had to flee their home at the height of the Allied bombing, but returned in the summer, and this joyful, optimistic work was completed during the liberation of the city by British troops. The Concerto is the emotional antithesis of the Sinfonia. It is gay and spontaneous, with strong melodic and contrapuntal interest and a suave, lyrical middle movement. In this work the chief departure from conventional form is the placing of the cadenza at the beginning of the last movement. This cadenza gives a fine exposition of the themes in clear, bright textures featuring virtuoso pedal passages; with some modifications it was later published as the Concert Piece op.52a.

Typical of the longer works is the contrast of vigorous, contrapuntal, rhythmic outer sections with subdued, contemplative material for the second subject where the influence of plainchant and folksong is discernible in the melodic shape. (A good example is the *Vlaamsche Rhapsodie* op.37). After the period of the *Lied Symphony* op.66 Peeters's style changed, gradually becoming more introspective and restrained in the chorale preludes and other pieces of the early 1950s, reaching a culmination in the Six Lyrical Pieces op.116. Peeters was much in demand as a consultant and by the early 1970s a further stylistic

development reflected his increasing interest in modern tracker-action instruments; notable examples are the Concertino op.122 and the *Paraphrase on 'Salve regina'* op.123, where open textures, thematic economy and an emphasis on linear interest particularly suit the clear-cut timbres of these organs. Perhaps the most important example is the *Sonata quasi una fantasia* op.129 where all the thematic material derives from the major 7th and minor 2nd at the opening.

After 1978 a fracture in the spinal column and increasing osteoporosis terminated further extensive touring, although he was able to give occasional concerts and continued composing. His last public recital was in Mechelen Cathedral during the 1982 Flanders Festival. Two weeks later, his wife Marieke died. He reworked an earlier piece, *Adagio* (the name of their last family home), into the Ricercare op.134, and dedicated it to her memory. During the last years, his contribution to music brought further international awards and a new Prix Flor Peeters was created by the Société Belge des Auteurs, Compositeurs et Editeurs (SABAM) in Belgium.

JENNIFER BATE

Peetrinus [Peetrino, Peeters], **Jacobus** [Giaches] (*b* Mechelen, *c*1553; *d c*1591). Dutch composer, active in Italy. Doorslaer suggested that he was the same person as Jacobus Pieters who is recorded as a boy chorister at St Rombout, Mechelen, on 28 August 1561. A singer known as Petrinus is mentioned in the *Liber punctorum* of the Cappella Sistina, Rome, in 1572. Peetrinus dedicated his first compositions, *Il primo libro de madrigali*, from Milan in 1583, which suggests that he was probably living there at that time. His two books of spiritual canzonettas were published in Rome, and, according to the dedication of the *Liber primus motectorum*, he spent the latter part of his career there under the patronage of the Count of Montfort, a relative of the Fugger family. The canzonettas proved to be Peetrinus's most popular works, not only in Italy, but also in northern Europe where several of them were reprinted in collections published in Antwerp, Dillingen and Frankfurt. The five-voice motet *Surge illuminare* from the 1591 volume was also copied, within a few years of its publication, into the choirbooks of the Egidienkirche, Nuremberg (now in *D-Nlā*).

WORKS

SACRED VOCAL

Il primo libro delle melodie spirituali, 3, 4vv (Rome, 1586); 1 ed. in vander Straeten
Il primo libro del Iubilo di S Bernardo con alcune canzonette spirituali, 3, 4vv (Rome, 1588, enlarged 2/1589 with 6 new works)
Liber primus motectorum, 5vv (Venice, 1591)

Spiritual canzonetta, 1586[2], canonic motet, 1591[26] (doubtful, attrib. 'Paul: Peet')

SECULAR VOCAL

Il primo libro de madrigali, 4vv (Venice, 1583), inc. [incl. inst work]
2 works, 3vv, 1589[11]

IAIN FENLON

Pegbox (Fr. *cheviller*; Ger. *Wirbelkasten*; It. *cassa dei bischeri*). In violins and bowed string instruments generally, the wooden box-like structure, generally open on top (sometimes partly or wholly open at the back as well), into which are fitted the tuning-pegs that hold the strings and regulate their tension (*see* VIOLIN, fig.2). In most bowed string instruments, the wooden pegs are inserted laterally into the pegbox; that is, the holes for the pegs are bored in the sides of the pegbox, and the tapered pegs run from one side through the other side of the pegbox, the shank of the peg being at right angles to the string.

In some bowed strings, as in the *lira da braccio*, the pegs are not lateral but frontal, the pegs being inserted not at the side but from the front (top) downwards, the pegbox being open below (*see* LIRA DA BRACCIO, figs.1 and 2). This type of pegbox is often leaf- or heart-shaped. In the case of frontal pegs whose pegheads are on top, the strings are strung either directly to the peg-shanks on top, or the strings run through holes, bored just above the nut, down to the peg-ends below.

Plucked string instruments often use pegboxes with lateral pegs, but sometimes a 'pegboard' is employed instead. The latter generally consists of a surface or 'board', approximately rectangular, into which pegs are inserted so that for the most part the peg-heads are regulated from the back, and the peg-ends protrude from the front surface of the pegboard, the strings running directly from the pegs to and over the nut (*see* GUITAR, fig.9). The pegboard or pegbox is often thrown back at an angle to the fingerboard in many guitars; in some lutes this angle is as much as 90 degrees.

Conventional pegs are maintained in place by friction from the pegholes. Modern instruments, however, often rely on worm-gear mechanisms to achieve more accurate tuning and to secure holding by mechanical means (*see* GUITAR, fig.1). On earlier instruments the functions of pegs and pegbox were occasionally performed by comparable mechanical means of tightening the strings, such as the 'watch-key' tuner of the ENGLISH GUITAR.

DAVID D. BOYDEN

Pegg, Bob (*b* Long Eaton, Derbyshire, 5 Dec 1944). English songwriter, singer and musician. He was much influenced by British traditional music. After performing, while still at school, in the eclectic world of the early English folk revival, Pegg went to Leeds University (1963–9) where he did fieldwork on the musical traditions of the Yorkshire Dales and edited a pioneering journal on traditional and folk club music called *Abe's Folk Music* (1966–9). His conclusion that 'folk' or 'traditional' music could not be defined usefully outside its social context was not universally accepted in Britain at the time, and caused a stir even in 1976, when it was propounded in his book *Folk*. The instrumental composition of the Dales dance bands and chapel orchestras influenced the line-up of the folk-rock band MR FOX, which Bob and CAROLE PEGG formed in 1970. At this point Pegg began to work seriously as a songwriter, producing material that was characteristically narrative and melody-based. He became best known for extended pieces of storytelling like *The Gipsy* and *Bones*. The formation of Mr Fox was also the beginning of 20 years as a touring musician. In 1975, Pegg moved to the West Yorkshire Pennines, an area that became the subject of his Calderdale Songs, commissioned by the Hebden Bridge Festival in 1978 and released on the CD *The Last Wolf* (1996). During this period he also produced music for radio, television, theatre and film. He moved in 1990 to the Highlands of Scotland, where he is now an arts worker in Ross and Cromarty. Recent projects have included: scores for the community dramas Macbeth and Storm; the introduction of American Sacred Harp singing to the Highlands; investigations into Pictish music with harpist Bill Taylor; research and performance of music of the Great Glen with E. Mairi MacArthur; and creation of soundposts for Pictavia visitor centre in Brechin.

DAVE ARTHUR

Pegg, Carole (Anne) [Carolanne] (*b* Nottingham, 19 Sept 1944). English folk-rock and neo-traditional singer, fiddle player, songwriter and ethnomusicologist. In the early 1960s she was a resident singer at the Nottingham folk club. From 1964 to 1969, she and her husband BOB PEGG ran the traditional club the Sovereign in Leeds, and performed together on the national folk circuit. She introduced to the folk scene the English fiddle style (comprising short choppy bow strokes, double-stopping, drones and no vibrato), learnt from traditional fiddlers, including Jinky Wells, Peter Beresford and Harry Cox.

The Peggs recorded their interpretations of Sydney Carter's songs on *And Now it is So Early* (Galliard), and their own songs on *He Came from the Mountains* (Transatlantic, 1971), by which time they had launched the experimental and controversial folk-rock band MR FOX. Carole Pegg's singer-songwriter album *Carolanne* (1973) mixed traditional English influences with rock and country music, and featured the guitarist Albert Lee. She went on to form Magus with Graham Bond while continuing to perform solo.

From the mid-1970s Pegg studied anthropology at the University of Cambridge. After completing a PhD on music and society in Suffolk, she has continued to lecture on the anthropology of music and performance in the University's Department of Social Anthropology. During the late 1980s and throughout the 1990s, she undertook field research in Mongolia and Inner Mongolia. She was chairperson to the UK chapter of the International Council for Traditional Music (1989–94) (now the British Forum for Ethnomusicology), a founding co-editor of the *British Journal of Ethnomusicology* and is currently its reviews editor.

ROBIN DENSELOW

Pegolotti, Tomaso (*fl* Scandiano, nr Modena, *c*1698). Italian composer. The title-page of his only extant work, *Trattenimenti armonici da camera a' violino solo, e violoncello* (Modena, 1698), dedicated to Foresto d'Este, Marchese di Scandiano, indicates that he was from Scandiano. He designated himself 'Vicesegretario, e Cancelliere della medema A.S.', implying that he was a skilled amateur or dilettante. The 12 works in the collection, the first a *sonata da chiesa* and the others *sonate da camera*, are in four movements. The opening movements are slow, the second fast (alternately Capriccio and Balletto), and, except in the first sonatas, these are followed by two dance movements. Neither instrument is required to play beyond third position, but the passage-work and string crossings are demanding and indicate a familiarity with current string styles and technique. As the cello part has no figures and participates on almost equal melodic terms with the violin, it seems that the works were intended as true duos; the etching of a cellist and violinist on the title-page strengthens this conjecture.

NONA PYRON

Peguilhan, Aimeric de. *See* AIMERIC DE PEGUILHAN.

Pehr, Joseph. *See* BEER, JOSEPH.

Peinemann, Edith (*b* Mainz, 3 March 1937). German violinist. At four she began lessons with her father Robert Peinemann, leader of the Mainz Stadtorchester. From 1951 she studied with Heinz Stanske in Heidelberg and from 1953 to 1956 with Max Rostal at the GSM in London. In 1956 she won the Munich International Competition and began to tour Europe, quickly becoming recognized as one of the best German soloists. In 1960 she formed a duo with the Austrian pianist Jörg Demus, specializing in the Beethoven and Brahms sonatas, and in 1962 she started her regular visits to the USA which have taken her to many of the major festivals there. Her New York orchestral début was made in 1965 with the Beethoven Violin Concerto accompanied by the Cleveland Orchestra under George Szell; and soon after that she played Bartók's Second Concerto with the New York PO under William Steinberg. She has also toured South America, Japan and South Africa. In 1964 she became professor of violin at the Musikhochschule in Frankfurt. A sensitive player with an ample, well focussed but occasionally slightly hard tone, she excels in Bach and the Classical and Romantic repertory, although she is also a fine interpreter of the Berg and Stravinsky concertos. In 1990 she made an outstanding recording of the Reger Concerto. Her other recordings include the Dvořák Concerto with the Czech PO under Peter Maag.

TULLY POTTER

Peire Cardenal (*b* Le Puy-en-Velay, ?1180; *d* ?Montpellier, ?1278). Troubadour. His place of birth, in the modern département of Haute-Loire, is known through his *vida*; a number of members of his family are also traceable there. The estimated date of his birth is based on a document which mentions a certain 'Petrus Cardinalis' who was employed as a clerk in 1204 by Raimon VI, Count of Toulouse. The *vida* tells us that Peire lived to be nearly 100 years old, and that he probably died in Montpellier, the principal residence of Jaime I, King of Aragon (1213–76). As a small boy, Peire attended a clerical school in order to learn reading and singing. It is doubtful whether he ever became a priest, but he did write a large number of Marian poems.

Over 90 poems have been attributed to him, of which three only have survived with melodies. It is evident from the *vida* that at least some of the others were intended to be sung: we are told that he kept a *jongleur* to sing his sirventes. Topical references and bitter attacks on both the nobility and the clergy are often the dominant themes of his poems, many of them inspired by the Albigensian crusade. Two of the three extant melodies are contrafacta of songs by troubadours of an earlier generation.

ROBERT FALCK

Peire d'Alvernhe (*fl* 1149–70). Troubadour. He was possibly the son of a burgher in Alvergne, and may have sought the patronage of the counts of Barcelona, Provence and Toulouse. His famous sirventes, *Chantarai d'aquest trobadors* (whose melody does not survive), satirizes several contemporaries, including Raimbaut d'Aurenga, Giraut de Bornelh and Bernart de Ventadorn. The song was once thought to have been composed in conjunction with the procession from Bordeaux to Tarazona in 1170 of Aliénor, daughter of Henry II of England and Eleanor of Aquitaine, to marry Alfonso VIII of Castile, but that has been shown to be improbable. Peire composed about 24 poems, but only two survive with melodies (ed. in van der Werf): a *tenso* with Bernart de Ventadorn (PC 323.4; *F-Pn*fr. 844) and a *canso*, *Dejosta·ls breus jorns e·ls loncs sers* (PC 323.15; *F-Pn* fr.20050 and 22543). The latter is through-composed, and in its conservative texture and range it resembles the melodies of Bernart. The *tenso* is one of the most melismatic of troubadour melodies, and differences between the two extant versions suggest that the melismas are ornamental.

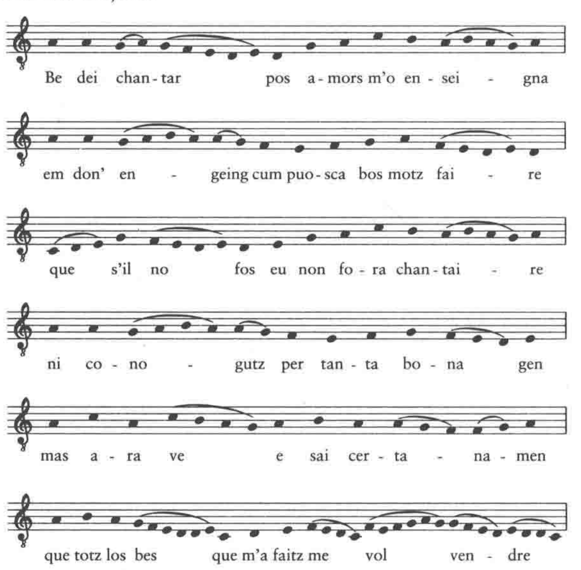
ELIZABETH AUBREY

Peiró, José [Joseph]. *See* PEYRÓ, JOSÉ.

Peirol (*b* Peirol, Auvergne, ?1160; *d* after 1221). Troubadour. He was born in Peirol Castle, and is described in his *vida* (*I-Rvat* 5232, f.147) as 'a poor knight of Auvergne' ('paubres cavalliers d'Alverge'). Information in the *vida* and his own works indicates that he may have been in the service of the Dauphin of Auvergne at Clermont until about 1202. The earliest firm date that can be established is 1188 – the probable date of composition of *Quant amors trobet partit* and the period of preparation for the third crusade. This 'crusading *tenso*' (see Aston) is Peirol's best-known work, and takes the form of a debate with Love as to whether it would be better to take the cross or serve his lady. The only other work containing biographical allusion which may be dated with any certainty is *Pus flum Jordan ai vist e·l monimen* (PC 366.28), written in Jerusalem at the conclusion of the fifth crusade in 1221 or 1222. It seems likely that he did not live much beyond 1221. One version of his *vida*states that he died in Montpellier, but this cannot be documented.



Ex.1 *I-Ma* R71, f.48

Although there are references in his poems to Vienne (PC 366.1 and 20), Blacatz (PC 366.5 and 25) and possibly Marseilles (PC 366.5, and in one version of his *vida* in *F-Pn* fr.1749, f.208), these are not definite indications of his whereabouts or service. A 'Marqueza' is mentioned in one poem (PC 366.4) but not identified further; the 'Seign En Heralh' in another (PC 366.27*a*) is Heraclius of Polignac, to whom the poem is addressed. The joint authorship of some poems with Gaucelm Faidit (PC 366.17) and Dalfi d'Alvernha (PC 366.10 and 30) gives an indication of the literary circle within which Peirol worked. (It is doubtful that this was the Peirol of the poem jointly composed with Bernart de Ventadorn, PC 366.23.)

Of the 34 poems attributed to Peirol, 17 survive with music. Of these, only *Per dan que d'amor m'aveigna* inspired later imitations. In the opening stanza of *M'entension ai tot' en un vers meza*, Peirol stated his intention to compose a *vers*; he next considered that a *chansoneta* would be more readily learnt, but that such songs are too frivolous; he finally concluded that it would be better to compose a *vers* in order to demonstrate his skill (*saber*). A number of the songs call themselves *vers* (e.g. *D'un bon vers*), but more are termed *sonet*. Both *D'un sonet* and *En joi que·m demora* are designated *sonet* in the first stanza, and *chansoneta* in the last, suggesting that the two terms may be related. Musically it appears possible to distinguish the two genres: the *vers*, although it may have a repeated *AB* structure at the beginning, is more often through-composed and richly melismatic (see

Ex.2 *I-Ma* R71, f.48*v*

Be dei chantar, *D'un bon vers* and *M'entension*); the *sonet* is slightly less melismatic and employs repeating melodic schemes – it is in essence more concise and tonally clear than the rather diffuse style of the *vers*. The *sonets D'un sonet vau pensan* and *En joi que·m demora* both begin with the leap of a 5th, and the latter employs only four melodic phrases for 12 lines of text (ex.1). *Be dei chantar* is not entirely through-composed, but even the incipient repeated *AB* form at the beginning is largely disguised. The final line is likewise a varied and even more richly melismatic version of the first line (ex.2). In addition, the cadential plan seems less clear than that of ex.1 and the final cadence appears to be completely unmotivated by what has gone before.

ROBERT FALCK

Peitsche (Ger.). *See* WHIP.

Peixinho, Jorge (Manuel Rosado Marques) (*b* Montijo, 20 Jan 1940; *d* Lisbon, 30 June 1995). Portuguese composer. After completing his studies in piano and composition at the Lisbon Conservatory with Artur Santos and Jorge Croner de Vasconcelos (1951–8), he studied with Boris Parena and with Petrassi at the Accademia di S Cecilia in Rome, where he obtained the diploma in composition in 1961. In 1960 he also worked with Nono in Venice and with Boulez and Stockhausen at the Musik-Akademie in Basle. He took part in the Darmstadt summer courses (1960–70) and from 1962 directed contemporary music courses in Portugal and South America. In 1970 he founded the Grupo de Música Contemporânea de Lisboa (GMCL), with whom he played an important part in promoting the works of contemporary Portuguese and foreign composers. He performed with GMCL in many European countries. At the same time he gained a reputation as a teacher, pianist and lecturer. As a composer he received various prizes and took part in various festivals in Europe and South America. He was professor of composition at the Lisbon Conservatory (1985–95).

Peixinho was an outstanding figure in Portuguese music during the second half of the 20th century and in the 1960s played a pioneering role in opening up the country to the musical language of the avant garde. His solid formal training was complemented by a great creativity, resulting in a large and varied, politically relevant output. According to Luis de Pablo, one detects in his music 'an enormous effort to discipline a volcanic temperament within a set of rules, self-imposed with great lucidity'.

WORKS
(*selective list*)

GMCL denotes the Grupo de Música Contemporânea de Lisboa, an ensemble with a variable instrumental combination

ADRIANA LATINO

Pejačević [Pejacsevich], **Dora** (*b* Budapest, 10 Sept 1885; *d* Munich, 5 March 1923). Croatian composer. She studied at the Croatian Music Institute in Zagreb then briefly in Dresden with Sherwood and in Munich with Courvoisier. For the most part, however, she was self-taught and developed her musical talents through contact with other artists and intellectuals, such as Karl Kraus. Her ancestral home was at Našice (near Osijek), but she also travelled extensively to Budapest, Munich, Prague and Vienna. After 1921 she lived mainly in Munich.

Her works were performed most frequently outside Croatia; part of her Symphony, for example, was first given in Vienna (25 January 1918) and the complete work was performed later in Dresden. Her late Romantic idiom, enriched with Impressionist harmonies and lush orchestral colours, evolved as she strove to break free from drawing-room mannerisms and conventions. She introduced the orchestral song into Croatian music, though among her vocal works her greatest achievement is the *Drei Gesänge* op.53 for voice and piano. Her late piano miniatures are lyrical and meditative evocations, such as the two nocturnes op.50, or else robust dance movements containing grotesque elements, as in the *Humoreske und Caprice* op.54. The Piano Quintet op.40, String Quartet op.58, the Symphony and the Piano Concerto display both an accomplished technique and a striving towards integration of motivic and thematic material. In the *Phantasie concertante* op.48 for piano and orchestra and in the Piano Sonata in A♭, op.57, she followed the Lisztian concept of the single movement sonata-fantasy.

In Croatia her work concurred with the modernist movement in literature and the secession in the visual arts: without breaking new ground she helped to bring a new range of expression into the traditional musical language. Almost all of her 57 known compositions survive as a single collection, in the Croatian Music Institute in Zagreb.

KORALJKA KOS

Pejović, Roksanda (*b* Belgrade, 11 Dec 1929). Serbian musicologist. She studied at the Belgrade Academy of Music (MA 1964) and the University's department of art history. She gained the doctorate from the University of Ljubljana in 1975 with a dissertation on musical instruments on medieval monuments in Serbia and Macedonia. She taught at the Stanković School of Music in Belgrade (1957–75) and at the Faculty of Music (1975–95). Her chief musicological interests are medieval musical instruments as represented in Byzantine and Serbian medieval art, Serbian Romantic music and the study of musical life in Serbia in the 19th and 20th centuries.

MELITA MILIN

Pękalski, Jozef Tadeusz Benedykt (*d* ?Kraków, *c*1761). Polish musician. He was probably ordained a priest in Warsaw, for it is known that he studied theology there in

1726–7. In 1739 he was appointed director of the vocal chapel of the Rorantists at Wawel Cathedral, with which he may have been connected before (perhaps as a member of this chapel). As the director of the Rorantist chapel, he must be given credit for the survival of the music of that group. A considerable part of this music (several hundred works, some dating back to the 16th century) has survived, copied or with additions in his own hand. The authorship of a manuscript treatise on music, *Discordia concors, sive de magna arte musica tractatus IV* (destroyed in World War II), is also attributed to him.

ZYGMUNT M. SZWEYKOWSKI

Pekelis, Mikhail Samoylovich (*b* Kiev, 29 July/10 Aug 1899; *d* Moscow, 20 March 1979). Russian musicologist. He graduated from the Kiev Conservatory in 1922 and two years later became a member of staff of the Moscow Conservatory. He was appointed senior lecturer in 1925 and professor in 1930; he held the chair of Russian music history (1934–5), and the chair of history of the music of the Soviet peoples (1937–41). After teaching at the Sverdlovsk, Kiev and Gor'ky Conservatories (1943–55) Pekelis returned to Moscow, where from 1955 he was professor and chairman of the faculty of music history at the Gnesin Musico-Pedagogical Institute. Pekelis's research was concerned with the history of Russian music. He devoted three books to his main interest, the life and work of Dargomïzhsky, and wrote articles and papers on Glinka, Musorgsky, Borodin and Mikhail Gnesin. He was general editor of and contributor to the two-volume *Istoriya russkoy muzïki* (1940) and edited and wrote articles for the journal *Muzïkal'noye nasledstvo*. Although he was a scholar of impressive erudition and wide experience, he was severely criticized by the Soviet authorities in 1948.

JOACHIM BRAUN

Pękiel [Pechel, Peckel, Pekel, Pekell, Pekiel, Penckel], **Bartłomiej** (*d* ?Kraków, *c*1670). Polish composer and organist. Mattheson claimed that he was of German origin. The contents of a charter given to him in 1641 show that he entered the service of the Warsaw court during the reign of Władysław IV (i.e. not before 1633). On 27 March 1637, when he appeared as a godfather in the records of the collegiate church of St Jan, Warsaw, he was described as 'organarius S[acrae] R[egiae] M[aiestatis]'. At the court he was associated with Marco Scacchi, director of music from 1628 to 1649, and he became deputy director from 1641 or 1644: Feicht maintained that from 1633 Scacchi was occupied only with opera and secular music in general at the court and entrusted the sacred music to Pękiel. The task of educating the choirboys had long been entrusted to him, and after Scacchi's departure from Warsaw in 1649 Pękiel took sole charge of the administration of the royal chapel, although the title of director was not assigned to him until 1653. Later that year, because of the war with the Cossacks, he was appointed to serve and protect the queen, and after the capture of Warsaw by the Swedes in 1655 and the dissolution of the court he left Warsaw. He moved to Kraków, where in 1658, after the death of Franciszek Lilius, he became director of music in the Wawel cathedral chapel. He was also in close touch with the Rorantist chapel, in particular with its director, M.A. Miśkiewicz. The last archival reference to him as director of music dates from 1664, but as a new director (Daniel Fierszewicz) did not take up his post until 1670 or 1671 it may be assumed that he died at or shortly before this time. Evidence connected with the lost *Missa super 'Veni sponsa'* and *Missa Wąchocianna* seems to indicate that during his stay at Kraków he had contacts with Cistercian abbeys and monasteries in southern Poland.

Pękiel was the leading Polish composer of the middle Baroque period. One can distinguish in his work a Warsaw period and a Kraków period. In the former he composed dramatic concertato works (e.g. the dialogue *Audite mortales*), polychoral masses accompanied by numerous instruments (mainly wind) and with independent instrumental passages (*Missa 'La Lombardesca'*, and the 14-part mass), and purely instrumental pieces such as the canon, in the style of a variation ricercare, in *Xenia Apollinea*. The organ fugue discovered by Gołos also probably dates from this period, as do the arrangements of dances for lute attributed to Pękiel in a manuscript at Gdańsk but more likely to be by a number of different composers. During his Kraków period he composed only sacred works for the cathedral chapel and also – indeed primarily – for the male Rorantist chapel. They embrace masses (for four to eight voices) and *a cappella* motets (which, however, were doubtless performed with organ accompaniment). From both melodic and rhythmic points

of view Pękiel's polyphony is decidedly Baroque in character, even in works written in a traditional *a cappella* style, and even though he did not renounce the religious modes it is emphatically tonal. A particularly significant work is the four-part mass that Miskiewicz named *Missa pulcherrima ad instar Praenestini* (the reason for this use of Palestrina's name has not been established). It is recognized as the outstanding Polish work of its type of the entire 17th century. Pękiel derived the themes from his own works (mainly of the Warsaw period), from Gregorian chant and particularly from Polish sacred songs, especially carols. Pękiel's music was known in Germany as well as in Poland, as manuscripts in Berlin and Lüneburg testify.

WORKS

Edition: *Pękiel, B.: opera omnia*, i–ii, ed. Z. DobrzańskaFabiańska, MMP, ser. A, i (1994), 6–106

MASSES

Missa brevis, 4vv, 1661; ed. in WDMP, lxii (1966)
Missa 'De resurrectione Domini', a 6, formerly *PL-GD*, now *Kp* (inc.)
Missa in defectu unius contraltus, 4vv, ?1661–9, *Kk*
Missa 'La Lombardesca', 8vv, 2 vn, 3 trbn, bc (org); ed. in WDMP, lxxiv (1976)
Missa paschalis, 4vv, bc (org), 1662; ed. in WDMP, lviii (1965, 2/1978)
Missa pulcherrima ad instar Praenestini, 4vv, 30 Jan 1669; ed. in WDMP, xvii (1938, 4/1972)
Missa secunda, 4vv, 18 March 1661, *Kk*
Missa senza cerimonie (i), 8vv, bc (org), ?1661–9, *Kk*
Missa senza cerimonie (ii), 8vv, bc (org), ?1661–9, *Kk*; ed. in Opieński
Missa super 'Veni sponsa', 8vv, *PL-Wu* (inc., frag. only) (see Perz, 1970)
Missa Wąchocianna, a 13, lost (see Perz, 1974)
Missa, 4vv, 1664, *Kk*; ed. M. Pielech (Warsaw, 1993)
Missa, 5vv, 5 insts, lost (see Perz, 1974)
Missa 'a 14', 8vv, 2 vn, 3 va (ad lib), 2 cornettinos, 3 trbn, bombard, bn, db, bc (org) [Ky and Gl only]; ed. in WDMP, lxix (1971, 2/1980)
2 masses, a 12–13, lost, (see Maciejewski)

OTHER SACRED VOCAL

Assumpta est Maria, 4vv, ?1661–9; ed. H. Feicht, *Muzyka staropolska* (Kraków, 1966)
Audite mortales, dialogue, 6vv, 2 va da gamba, db, bc (org), before 1649; ed. in WDMP, iv (1929, 2/1968)
Ave Maria, 4vv, ?1661–9; ed. H. Feicht, *Muzyka staropolska* (Kraków, 1966)
Canite bene, sumite, 3vv, 2 va, bn, bc (org), lost, formerly *D-Lm*
Domine, ne in furore tuo, 4vv, ?1661–9, *PL-Kk* (inc.)
Dulcis amor Jesu, 5vv, bc (org); ed. Z.M. Szweykowski, *Muzyka w dawnym Krakowie* (Kraków, 1964)
Magnum nomen Domini, 4vv, ?1661–9; ed. in WDMP, xix (1948, 3/1971)
Nativitas [conceptio] tua, 4vv, ?1661–9; ed. H. Feicht, *Muzyka staropolska* (Kraków, 1966)
O adoranda Trinitas, 4vv, ?1661–9, *Kk*
O salutaris hostia, 4vv, ?1661–9, *Kk* (inc.)
Patrem rotulatum (i), 4vv, 1661; ed. in WDMP, lii (1963, 2/1969)
Patrem rotulatum (ii), 4vv, 1664; ed.in WDMP, lii (1963, 2/1969)
Quae est ista, 4vv, ?1661–9, *Kk* (inc.)
Resonet in laudibus, 4vv, ?1661–9; ed. in WDMP, xix (1948, 2/1964)
Salvator orbis, 4vv, ?1661–9, *Kk*
Sub tuum praesidium, 4vv, ?1661–9; ed. H. Feicht, *Muzyka staropolska* (Kraków, 1966)
5 lits., a 5–11, 2 motets: all lost (see Maciejewski)

INSTRUMENTAL

40 dances, lute, ?1649–55, *PL-GD* (authenticity doubtful); ed. in WDMP, xxx (1955, 4/1965)
Canon in tres partes, a 6, in Xenia Apollinea (Venice, 1643); ed. in Kmicic-Mieleszyński (1958)
Fugue, org; ed. in Gołos (1973); facs. in Gołos (1972)
1 sonata, a 2, lost (see Maciejewski)

MIROSŁAW PERZ

Pekinel. Turkish piano duo. The twin sisters Güher and Süher Pekinel (*b* Istanbul, 29 March 1953) began their studies in Ankara with their mother, gave their first duet concert at the age of six and subsequently studied at the Paris Conservatoire, the Frankfurt Hochschule für Musik, the Curtis Institute, Philadelphia (with Rudolf Serkin), and the Juillard School. They won prizes as a duo in several international competitions, and in 1984 were engaged by Karajan for the Salzburg Easter Festival. Since then they have given numerous recitals throughout the world and performed with leading conductors and orchestras. While technically a match for any of their fellow duettists, their playing is marked by a meticulous and probing musicianship, and their chosen repertory, much of which they have recorded, reflects their essential seriousness. Their Mozart is full of subtle inflections, but kept within a relatively narrow dynamic range, while their Schubert is emotionally rich and impressively moulded. Their playing in general is characterized by breadth of vision and a pervasive lyrical impulse, but they can suspend their natural cantabile where appropriate in favour of a more angular and percussive approach, as can be heard in their pioneering recording of the two-piano version of Stravinsky's *The Rite of Spring*.

JEREMY SIEPMANN

Peking. *See* BEIJING.

Peking opera. *See* BEIJING OPERA.

Pēktis. One of the more common and earlier terms for the Greek angular harp (*see* MAGADIS, and TRIGŌNON). The word appears a number of times in the Eastern Greek author Anacreon (*fl* 6th century BCE). Although the term itself is Greek (from *pēgnuein*, 'to fasten'), the instrument is associated with the territory of Lydia by authors such as Pindar, Herodotus and Sophocles, and there is no reason to doubt that it came from that area.

See also GREECE, §I, 5(iii)(b).

JAMES W. McKINNON

Pelé, Robert le. *See* ROBINET.

Pelemans, Willem (*b* Antwerp, 6 April 1901; *d* Berchem-Sainte-Agathe, Brussels, 28 Oct 1991). Belgian critic and composer. He began studying harmony and counterpoint at the age of 18 with Paul Lagye, but as a composer he is mostly self-taught. After World War I he participated in the experiments of the avant-garde theatre group 'Rataillon', conducted by Albert Lepage. His early experimental compositions were performed there. Meanwhile he was very active in cultural circles in Brussels, promoting Flemish musical life. For a few years he taught musical history at the conservatory of Malines. From 1944 until his death he was the influential music critic of the liberal newspaper *Het laatste nieuws*. As president of the Union of Belgian Composers he successfully promoted Belgian music. His output was prolific and varied. He held his place among Flemish composers because of his autodidactic and empirical approach to music. Simplicity and clear expression are the main characteristics of his music.

WORKS
(*selective list*)

Op: La rose de Bakawali (chbr op, A. Lepage, from Hindustani), 1938; Le combat de la vierge et du diable (chbr op, J. Weterings), 1949; De mannen van Smeerop (M. Kröjer, after C. de Coster), 1952, Antwerp, 1963; De nozem en de nimf (chbr op, L. Bruylants), 1960, Radio Brussels, 1961
Other dramatic: De geschiedenis van het tinnen soldaatje (radio play, after H.C. Andersen), 1945; Miles gloriosus, ballet, 1945; Herfstgoud [Autumn Gold], ballet; Pas de quatre, ballet, 1969

Pelesier, Victor. *See* PELISSIER, VICTOR.

Pelham, Peter (*b* London, 9 Dec 1721; *d* Richmond, VA, 28 April 1805). American organist, harpsichordist, teacher and composer of English birth. He was the son of Peter Pelham, a mezzotint portrait engraver who settled in Boston in 1726. The earliest recorded public concert of secular music in the New World was held at the family's house on 30 December 1731, and the family also supported other musical activities in the city. Pelham studied with Charles Theodore Pachelbel for nine years from the age of 12, first in Newport, Rhode Island and later in Charleston, South Carolina. There Pelham taught the spinet and the harpsichord, his students describing him as 'a Genteel Clever young man' and 'verey chomical and entertaining'. He was the first organist at Trinity Church, Boston (1744–9), and was organist of Bruton Parish Church in Williamsburg, Virginia, from 1755 to 1802; his evening performances (1769) at Bruton Church included works by Handel, Vivaldi and William Felton. He conducted the Virginia Company of Comedians' production of *The Beggar's Opera* in 1768 and performed a dirge (now lost) at a Masonic funeral at Bruton Church in 1773. Pelham also held non-musical posts in Williamsburg: he was supervisor for the printing of money (1758–75) and town gaol-keeper (1770–80). He became blind in 1802, after which his daughter Elizabeth briefly succeeded him as organist of Bruton Church.

The only surviving piece definitely by Pelham is a minuet melody (ed. J.S. Darling, *A Little Keyboard Book*,

Williamsburg, VA, 1972). His 1744 manuscript copybook of harpsichord lessons (M. Myers private collection, Bloomington, IL) contains two further minuets that may also be by Pelham. These simple, didactic works are well crafted and appealing. The book also includes works by Handel, Arne, Pepusch, Maurice Greene, Davidson Russel, Marchant, Robert Valentine, Jean Baptiste Loeillet (i) and Charles Pachelbel.

H. JOSEPH BUTLER

Peli [Pelli], **Francesco** (*b* ?Modena, *c*1680; *d* ?Munich, 1740/45). Italian composer and teacher. Nothing is known of his early years. From 1708 to 1731 he was chamber composer to Rinaldo d'Este, Duke of Modena, and in 1720 he was described as a citizen of Modena, where he is thought to have directed a highly regarded singing school from 1715. In 1731 he may have been in Brno, where his oratorio *L'ultima persecuzione di Saule contro Davidde* was performed for Cardinal Wolfgang Hannibal von Schrattenbach, Bishop of Olmütz. On 6 November 1734 Peli arrived at the court of Elector Karl Albrecht of Bavaria in Munich with three Italian-trained female singers, including his own pupil Christina Monchicca. In the same year he was appointed music teacher to Crown Prince Maximilian Joseph, who succeeded as elector in 1745. Peli composed operas for the Munich court for the carnivals of 1736 and 1737. French influences are apparent in his musical style.

ROBERT MÜNSTER

Pelinski, Ramón (Adolfo) (*b* Corpus, 31 Aug 1932). Argentine musicologist and pianist. After studying piano and composition at the Conservatory of Córdoba he moved to Paris (1959) and studied musicology with Chailley and analysis with Messiaen. He later studied philosophy in Kraków with Roman Ingarden and musicology in Munich, where he wrote an essay on Spanish vocal music at the beginning of the 17th century (1971). He settled in Canada (1973) where he first taught musicology until 1977 at the University of Ottawa before moving to the University of Montreal. He then specialized in, wrote on, and recorded traditional Inuit music. Pelinski also founded tango ensembles: 'Tango X 4', the first group dedicated to tango in Canada; 'Tango X 3', specializing in traditional tango, and 'Métatango', devoted to contemporary tango in the style of Astor Piazzolla. Pelinski has also worked for the restoration of the Ermita de S Cristóbal in Spain where he has organized festivals of traditional music since the early 1990s. In 1995 he retired from teaching and settled in San Cristóbal, Spain.

JEAN-PASCAL VACHON

Pelio, Giovanni. *See* PELLIO, GIOVANNI.

Pelison [Peliçon, Peliso, Pellisson, Pellissonus; Johannes de Bosco (*fl* 1399). French composer, possibly identifiable with BOSQUET.

Pélissier [Pellissier], **Marie** (*b* 1706/7; *d* Paris, 21 March 1749). French singer. She married the impresario Pélissier soon after her début at the Paris Opéra in 1722, and sang at his theatre in Rouen. After her husband's bankruptcy, she returned to Paris and appeared at the Opéra in a revival of Collasse's *Thétis et Pélée* on 16 May 1726 to considerable acclaim. Later that year she attracted even greater applause for her creation of Thisbe in Rebel and Francoeur's *Pyrame et Thisbé*. Sensing danger, Cathérine-Nicole Le Maure returned in December from one of her 'retirements', and a fierce rivalry developed between the two singers and between their respective supporters, the 'mauriens' and 'pélissiens'. On 15 February 1734 Pélissier was dismissed after a scandal involving her lover Dulis. She fled to London, but returned to sing at the Opéra on 19 April 1735, remaining there until her retirement in October 1741. Among the many roles she created were five in operas of Rameau: Aricia in *Hippolyte et Aricie*, Emilie in *Les Indes galantes*, Telaira in *Castor et Pollux*, and Iphise in both *Les fêtes d'Hébé* and *Dardanus*.

Pélissier's voice was small and, initially at least, somewhat forced. She was nevertheless regarded as an heir to the famous Marthe Le Rochois in the emotional power of her declamation and the eloquence of her gestures and facial expressions, though she never equalled Le Rochois' stature.
